which she lived were right good, save that during the last winter she occupied a somewhat damp dwelling. Since about six years ago she suffered from time to time with palpitation of the heart, which occurred in paroxysms without any previous exertion or well developed cause. In May, 1890, she began to cough, expectoration was abundant and rather thin, without any mixture of blood; simultaneously she began to have a cardiac uneasiness. and there was also burning sensation in the left scapular region. By midsummer, on account of further severe cough and debility, she was compelled to take to her bed, which she has never left since then. She now began to suffer from a sense of oppression in the throat as if about to suffocate, by a spasmodic contraction of the muscles of the neck. She suffered from constant dryness of the mouth and throat, but there was no difficulty in deglutition, and no swelling of the neck was observed while at her home. Her strength diminished and she seems to have become considerably emaciated. Cough continued the whole of this time, which was rather harsh and barking, without any real hoarseness, nor was there any considerable dyspnœa. At the time of admission to the hospital, the patient complained of great fatigue, and difficulty in expectoration, with sense of suffocation and constriction in the neck. Cough very severe, occuring in longer or shorter paroxysms, during, which respiration was quite difficult. There was constant sensation of dryness of the mouth and throat, and, besides this she complained of pain in the right arm, and also, pain here and there in the muscles of chest. The patient meantime in bed showed a preference for position on the right side, or on the back, nutrition was bad, countenance pale, sleep disturbed by cough, appetite poor, bowels sluggish, no tremor, pulse eighty to the minute, regular and full, urine normal, temperature afebrile. Her voice was not markedly hoarse, no difficulty in deglutition, expectoration abundant, amounting to about four cuspidors per twenty-four hours." (These cuspidors, are little cups, kept for the convenience of the patient in bed.) "It consisted of a colorless, watery, frothy fluid, which contained a considerable quantity of mucous, but no yellow elastic fibres or tubercular bacilla. In the lower part of the neck appears a swelling of half the thyroid gland, the right lobe being larger than left. In the right supraclavicular fossa, there are some large infiltrated glands; in the left supra-clavicular fossa, there are a number of smaller similar glands, one of them somewhat tender under pressure. Upon laryngoscopic examination it was found that the right vocal cord was immobile during intonation, abduction movement during inspiration absent; the left vocal cord was perfectly mobile. Over both lungs were hard moist râles and ronchi, no dullness anywhere. Nothing abnormal noticed in regard to the heart, or of the abdominal organs. On the 9th of August, the dffiiculty in respiration had recently increased. When a laryngoscopic examination was about to be made to-day, the patient was seized with alarming dyspnoea that tracheotomy seemed imperative, and on which account she was transferred to the surgical ward, where this operation was immediately performed. No marked improvement in regard to the dyspnoea was effected by the operation. Twenty-third of August, to-day she was returned to the medical section. Twenty-ninth of August, the canula was removed and respiration performed quite well without it. Thirty-first of August—during the past night the patient was suddenly seized with a severe attack of dyspnœa, blood poured abundantly from her mouth; she endeavored, herself, to open the wound in the trachea; when the physician arrived the canula was inserted, but she died almost immediately.

"The autopsy demonstrated as follows: It took place on the first of September, 1890—After opening the pharynx and œsophagus, the mucous membrane was found to be the seat of a tumor which rose to the height of between three and five millimetres, and extended from a level with the larynx down about seven centimetres; it surrounded the whole pharynx in an annular manner, becoming narrow upwards and toward the lower end, leaving the posterior wall and downwards over portion of the anterior wall, free. The surface of this neoplasm is of peculiar formation, consisting of small nodules, these nodules are of greenish white color, and very firm to the touch. On a level with the lower portion ofi the neoplasm was found on the right lateral aspect of the œsophagus, an opening, which was about the size of the little finger, with rather

smooth, grayish red margins, which orifice opened into an elongated, perfectly incapsulated excavation, filled with dark, dirty, reddish colored fluid contents. This measured in length about seven centimetres, and in width between four and five centimetres. Its walls throughout its whole extent covered with numerous closely adjoining small nodules, which are most variable in appearance, roundish, elongated, periform, club-shaped, etc. Some of them quite slender, others project into the excavation having the the form of polypi, hanging by one or more quite slender stalks. These excrescences are of light, grayish red color, and quite firm. The walls including these excrescences have a thickness varying from three to nine millimetres where this sack-like formation projects between the œsophagus and trachea, and to the right of them. It is situated behind the sheath of the vessels and reaches upward to the middle portion of the thyroid gland, both lobes of which are somewhat hypertrophied. In the upper anterior portion is a rupture about eight millimetres in diameter through which it communicates with the trachea. In the lower part it is adherent to the apex of the right lung, over a surface, I suppose, about the size of a five cent piece. Upon incision into the lung this formation is well defined and distinct from the adjoining parenchyma which in the immediate vicinity appears somewhat firm and indurated. As regards the changes in other organs, nothing need be mentioned, save that the trachea and bronchia were filled with a dirty, reddish fluid like that in the cavity just described, and in both lungs was found numerous small recent hæmorrhagic foci, without any indication of the inflammatory irritation apparent in the surrounding area. Microscopical examination shows that both the tumor in the pharynx and the excrescences in the above described saculated formation, had the structure of chancroid. It is very certain that the excavation communicating with the œsophagus and trachea is to be regarded as a pre-existing diverticulum of the œsophagus, which had become the seat of chanchroid formation.

"According to Zenker and Zeimssen the present case should be designated as a pulsion diverticulum, which is of considerable interest, because of the secondary changes which have arisen by neoplastic formation in the mucous membrane lining it, and also on account of its unusual situation in the anterior portion of the right lateral wall of the œsophagus. Usually pulsion diverticulum are situated in the posterior wall between the pharynx and the œsophagus. The very considerable dyspnœa which had more and more developed during the patient's stay in the hospital, and which led to the performance of tracheotomy, was not satisfactorily explained by the paralysis of the right vocal cord, and, as no material improvement was obtained by means of the operation, it was quite apparent that some other respiratory difficulty must have existed. The case is one in which we have to look to the pressure upon the trachea by the enlarged thyroid gland, but this was very moderate. The pathological processes in the œsophagus which were present did not give any well marked symptoms during life. The patient never complained of difficulty in swallowing, and there never was any evacuation of the diverticulum contents by the mouth, the œsophagus was not sounded, as there was no inducement to adopt this procedure, and, possibly, such a manipulation might have hastened the final catastrophe—the rupture of the diverticulum into the trachea."

I have never seen a case at all like this; have never seen a case of diverticulum of the œsophagus, but, upon general pathological grounds, I am not surprised that when such a formation takes place, it should become later on the seat of a malignant growth, a tendency to the development of malignant formations in a number of analogous conditions, is quite common. I remember that a number of years ago, I saw a patient who had an incarcerated testicle in the inguinal canal; the testicle had never descended, and, upon working up the subject I found that a German surgeon in Breslau had collected a large number of such cases, and found a large proportion of them had terminated in malignant growth. Under certain circumstances morbid conditions involving chronic irritation, are likely to develop malignant disease. A very good illustration of this, is the tendency to development of malignant diseases of the liver in connection with the protracted irritation from gall stones.

PNEUMONIA.

I have to report two cases of pneumonia in which the most remarkable feature was

the mode of death: I saw the first one in consultation, probably in 1874, it was a case of right-sided pneumonia, the patient getting along remarkably well until the fourth day: He was propped up in bed, and was in the act of eating some oyster soup, when all of a sudden he tumbled over, dead.

The second case was a female patient, who, several years ago, had presented symptoms of tuberculosis, which had become latent. She was seized with symptoms of croupous pneumonia and by the eighth day the temperature had gone down to 99. At one time evidence of commencing resolution had been observed in the way of returning moist râles. These disappeared, very well marked bronchial breathing with marked dullness returned. The patient seemed to be in a fair way of recovery, the only unpleasant feature was, that while fever had gone down, there was no indication of incipient or even approaching resolution.

On the eighth day she was sitting up slightly, and wanted to drink some lemonade, when all of a sudden she fell back, dead. I think both of these were cases of heart clots. It is not likely that there was sudden cardiac paralysis, because there was no evidence in either case of great cardiac asthenia; the appearance was good in both the man and in the woman, there was not great rapidity of the pulse, in fact, there was nothing to indicate danger in that direction, other than that which is always present in every case of croupous pneumonia. It is a rare termination of this disease, and I think, it is a danger that we ought always to have before our eyes in the treatment of such cases. The occurrence of heart clots is due, first, to the well known excessive hyperinosis that is always present in this disease; secondly, to the over-action of the heart, which naturally leads to cardiac fatigue, if nothing more.

ELIXIR OF COCAINE.

Prof. Huchard, of Paris (*Le Bulletin médicale*, No. 1, 1892), employs, in the treatment of painful dyspepsia, gastralgia and vomiting the following elixir of cocaine:

℞ Muriate of cocaine.....grs. xv.
Hydrochloric acid.....f ʒ j¼.
Elixir de garus.....f ʒ xvj.
Distilled water .....f ʒ iijss.
A small wineglassful after each meal.

SELECTED FORMULÆ.

ASAFŒTIDA IN HABITUAL ABORTION.

Dr. Negri, of Venice, Italy, besides his cases formerly reported where he successfully used asafœtida in habitual abortion (*Centralbl. f. Gynækologie*, 22, 1887), has recently employed it in three more cases with good results. The remedy has also been given by Laferla and Cazanne with similar results.—*Centralbl. f. Gynækologie*, 39, 1890.—*Norsk Magazin for Laegevidenskaben*, 11, 1890.

CATARRH SNUFF.

℞ Finely powdered cubebs .....ʒj.
" " borax .....ʒiij.
" " camphor.....ʒiij.
" " alum.....ʒij.
" " soap bark.....grs. vj.—M.

INCONTINENCE OF URINE.

℞ Tinct. nucis vomicæ.....f ʒvj.
Ext. damianæ fl.....f ʒijss.
Glycerini.....q. s. ad f ʒiv.—M.
S.—ʒ j three times a day, after meals, in a wineglassful of water.

AN ANTI-NEURALGIC MIXTURE.

Dr. Hightoner employs the following:

℞ Bromide of ammonium,
Salicylate of sodium.....āā grams 5.
Tinct. hyoscyamus..... " 8.
Water..... " 80.
Syrup..... " 30.
A teaspoonful every thirty minutes until the pain disappears, without exceeding four teaspoonfuls.

—*Lo Sperimentale*, No. 1, 1892.

PERMANGANATE OF POTASSIUM IN DIPHTHERIA.

Dr. Netzetzky says that his twenty-two years' practice convinced him that the best treatment of faucial diphtheria consists in an energetic use of permanganate of potassium.

The drug should be administered in the shape of paintings and gargle. The following strong solution should be employed:

℞ Potassii permanganatis.....ʒ j
Aquæ destillatæ.....f ʒ j
M. Sig.—To paint the affected surface every three hours.

For gargling, which is to be repeated as often, a teaspoonful of the same solution should be mixed with a tumblerful of boiled water.

In those cases in which the child is unable to gargle, the following mixture should be given internally:

℞ Solutionis hydrogenis superoxydati, two per cent.....f ʒ ij.
Glycerinæ.....f ʒ ij.
M. Sig.—A teaspoonful every two hours.

— *Medical Record.*

COMEDONES.

Blondel's formula is as follows:

℞ Magister bismuth.,
Acid. boric. pulv.....āā grams 3.
Rad. ratanh. pulv.....gram 1.
Tragacanth... .....grams 2.
M. A dusting powder.

—*Deutche Med. Zeitung.*

PAINFUL MENORRHAGIA.

The following is recommended in menorrhagia with pain:

℞ Tinct. hydrast. canad.....f ʒ j.
Extr. hydrast. canad. fl .....f ʒ iv.
Sig.—Twenty drops three times a day.

—*Il Raccoglitore Medico*, 11, 1890.

A FORMULA FOR SYCOSIS.

Dr. Rosenthal (*La Semaine médicale*, No. 11, 1892) speaks highly of the following salve in the treatment of sycosis:

℞ Tannin.....grams 2.
Lactate of soda.....grams 5.
Oxide of zinc } .....
Powd. starch } .....āā grams 15.
Vaseline.....grams 40.

Apply this salve twice a day upon the previously well-shaved parts.

ACUTE ANGINA.

℞ Sodium benzoate.....gr. x.
Tincture of benzoin.....f ʒ ss.
Infusion of rose leaves.....f ʒ ss.
M. Sig.—Use frequently as a gargle.

—*L'Abeille Méd.*

TRAUMATIC TETANUS.

Dr. Mayer, of Amberg, reports a cure from the use of a mixture containing in each dose:

℞ Muriate of morphine..... 1-65 grain.
Chloral hydrate.....1½ grains.
Bromide of sodium.....2¼ "
Sig.—To be taken three to six times a day. Fifteen grains of morphine were taken in all.

HÆMOPTYSIS.

L'Union Médicale states that Bamberger recommends the following prescription in cases of hæmoptysis:

℞ Powdered alum.....gr. xxx.
Hydrochlorate of morphine.....gr. ½.
Powdered white sugar.....ʒ i.
Make into six powders, and give all of them in divided doses, in the space of three or four hours, in case of profuse hæmoptysis with cough.

Keep the patient absolutely quiet, and apply mustard-plasters and external heat to the extremities.

FOR OTORRHEA.

℞ Acid. boric.....ʒijss.
Glycerini } .....
Aquæ } .....āā fʒj.—M.
S.—Instil a quantity sufficient to fill the auditory canal three or four times daily.

TREATMENT OF DIPHTHERIA.

Gaucher (*Gaz. des Hôpitaux*, 1891, No. 122) recommends the local application of the following formula in the treatment of diphtheria:

℞ Acid. tartaric.....gr. xxiv.
Acid. carbolic.....ʒij.
Spts. vini rect.....fʒiv.
Olei ricini.....fʒvj.
Camphoræ.....ʒj.—M.

The membrane upon the affected surfaces is first gently removed. The application is then carefully made. After an interval of ten minutes, the parts are generously irrigated with boiled water, or a 1 or 2 per cent. solution of carbolic acid. If symptoms of laryngeal obstruction arise, a 2 per cent. solution of carbolic acid is constantly vaporized in the sick-room.—*Centralbl. für die gesammte Therap.*, x, 3, p. 172.

TREATMENT OF LUPUS ERYTHEMATOSUS OF THE FACE AND EYELIDS.

Dr. Brocq (*Le Bulletin médical*, No. 17, 1892) advises the application of the following salve:

℞ Salicylic acid.....dgms. 5.
Lactic acid ..... " 5.
Resorcin..... " 7.5.
Oxide of zinc.....grms. 2.
Pure vaseline..... " 17.

Pyrogallic acid is a topical application of great service in the treatment of lupus erythematosus. It has been employed in the most different manners. He uses the following:

℞ Salicylic acid.....gram. 1.
Pyrogallic acid.....grams. 2.
Pure vaseline..... " 20.

This salve is applied at night, and is well tolerated; during the day one may use the resorcin salve.

SUBSTITUTE FOR MUCILAGE OF ACACIA.

The following mixture was recommended by Mr. H. D. Sykes, at the last meeting of the Wisconsin Pharmaceutical Association, as a substitute for mucilage of acacia for technical purposes:

℞ Dextrin, white.....6 ounces.
Acetic Acid, dilute.....1 ounce.
Oil of cloves.....10 drops.
Glycerin.....1 ounce.
Water.....to make 16 ounces.

Mix the dextrin thoroughly with 6 ounces of cold water, add 8 ounces of boiling water, boil five minutes, stirring constantly; add hot water sufficient to make 14 ounces. When it is cold, add the acetic acid, oil of cloves, and glycerin. The oil must be thoroughly mixed with the remainder.

THE

MEDICAL and SURGICAL REPORTER.

ISSUED EVERY SATURDAY.

DIRECT COMMUNICATIONS TO
P. O. Box 843, Philadelphia, Pa.

EDWARD T. REICHERT, M. D., Editor.
(Professor of Physiology, University of Penna.)

BUSINESS OFFICES:
29 to 35 North Tenth Street, Cor. Filbert.
EDITORIAL OFFICE:
Southeast Cor. 36th and Woodland Ave

TERMS: Five dollars a year, strictly in advance, unless otherwise specifically agreed upon. Sent three months on trial for $1.00

REMITTANCES should be made payable to THE MEDICAL AND SURGICAL REPORTER, and when in sums of five dollars or less should be made by Postal Note, Money Order or Registered Letter.

—o—

Pocket Record and Visiting List.

Two sizes. Prices to Subscribers of THE REPORTER.
For 30 patients a week (with or without dates)....$1.00
For 60 patients a week (without dates)..... 1.25
Prices to non-subscribers, $1.25 and $1.50 respectively.

The Model Ledger.

Physicians who keep their own books will find this of great value. It enables the Physician to make out his bills with great ease and gives at a glance the amount earned, received and due in any quarter. Sample pages sent on application. Price, $5.00.

Binders.

Patent binders for the Reporter, each lettered on the back in gilt "**The Medical and Surgical Reporter**" and made to hold the issues of six months. Price, 50 cents.

Vaccine Matter.

Bovine Crusts.....$1.50 each.
Bovine Points or Quills..... 1.00 a doz.
Humanized Crusts..... 1.00 small.
Humanized Crusts..... 2.00 large.
Guaranteed in every respect.

Books.

Books will be supplied to our subscribers, transportation prepaid, at the regular prices.

☞Please accompany orders with the money, and address all communications to

LEADING ARTICLES.

THE MANUAL TREATMENT OF NOCTURNAL ENURESIS.

Nocturnal enuresis, or bed-wetting, is one of the most frequent troubles met with in young children. Not only in sickly, delicate, rachitic and scrofulous children, but those which are in vigorous health suffer from this weakness. Unfortunately the treatment of this most annoying ailment is far from always being crowned with success. Various drugs have been used for the purpose and occasionally internal medication is productive of good results, nux vomica and belladonna being the foremost among the drugs thus used, although recently the spiced tincture of rhubarb has been employed with decided success. Then again the local treatment with the Faradic current has not infrequently given still better results.

However, neither one treatment nor the other seems productive of permanent good. It is for this reason that the mechanical treatment of nocturnal enuresis, as suggested by Dr. Julius Csillag, will be welcomed by the profession, both for its comparative simplicity and its asserted efficacy.

Csillag takes the same view of this affection as Ultzmann, viz., that it is caused by a lack of innervation and weakness of the sphincter of the bladder. The cases which Csallig has successfully treated with this mechanical method included many which had resisted all other treatment, both internal and local.

The method was originally suggested by Thure Brandt—whose contributions in the field of massage are so well known—and Csillag has slightly modified it. Briefly described it as follows:

1. The patient is placed in the lithotomy position, and the physician introduces his right forefinger into the rectum, and seeks the urethra below the symphysis. Then following its course in the direction of the neck of the bladder, presses the urethra

against the bone and executes a slight vibrating pressure with the finger. This is repeated five or six times. In the meanwhile the fingers of the left hand press externally in the direction of the internal finger and simultaneously execute this vibratory pressure. This act which, as has been said, is repeated five or six times is designated by Csillag as pressure of the vesical sphincter. That the bladder should be emptied previous to this part of the treatment is obvious.

2. The patient is kept in the same position, and the physician, holding his hand parallel with the axis of the body, presses deeply into the pelvis with the finger tips and again executes a vibratory pressure. This is repeated twice or thrice, and is called by Brandt a pressure of the hypogastric plexus.

3. The patient is laid upon the back with the limbs outstretched and lying parallel to each other. The physician then grasps the patient by the ankles and pulls them apart, encouraging the patient, meanwhile, to endeavor to resist his movements. Now the patient brings his legs together, the physician resisting the movement.

4. The patient is again placed in the lithotomy position, but with his knees together. The physician stands at the side of the patient and presses the knees apart, the patient meanwhile offering resistance. Then the patient brings his knees together while the physician offers resistance. By means of these last two exercises the adductors and abductors of the thigh and the recti abdominalis muscles are brought into play, but simultaneously also the muscles of the floor of the pelvis are exercised. The anal sphincter contracts forcibly, and with it the vesical sphincter, owing to the synergism of the two muscles.

5. The patient stands, bending slightly forward, and resting his hands against a table crosses his legs, and then upon command of the physician, contracts the anal sphincter as though he were endeavoring to restrain a movement of the bowels. This exercise which can be intrusted to the care of the parents of the child, should be repeated four or five times in succession and repeated hourly. It tends to greatly strengthen both the anal and vesical sphincters.

6. The physician then stands to the left of the patient, and with the tightly closed fist strikes the sacrum. The movement of striking should proceed from the wrist only. The striking of the sacrum slightly excites the nerves leading from the spinal column to the organs in question.

While the technique of this method seems at a first glance to be complicated and perhaps tedious, yet in reality is most easily carried out, and is excellently borne by the little patients, who seem to look upon it more as an amusement than otherwise. The beneficial results are not long in becoming manifest, and if continued recovery will be complete and permanent.

In conclusion we would say that very frequently both parents and physicians are apt to regard nocturnal enuresis as a habit and not a weakness, and commonly endeavor to break the child of the trouble without any treatment other than admonition and punishment. Such a course is grossly unjust and brutal.

Finally, we would draw attention to a cause of enuresis, that is a long foreskin. Not only is phimosis in children a frequent cause of this difficulty but often leads early to masturbation. If this defect exists circumcision is necessary.

Csillag's method is based upon sound physiological and hygienic principles and is well deserving of thorough trial.

DIABETES INSIPIDUS.

Professor DaCosta prescribed the following to stop the large flow of urine:

℞ Antipyrine .....gr. v.
Quininæ sulph.....gr. ij.—M.

To be given twice a day, and if this does not act satisfactorily, increase to three times a day.—*Col. and Clin. Record.*

BOOK REVIEWS.

THE INTERNATIONAL MEDICAL ANNUAL AND PRACTITIONER'S INDEX FOR 1892. Edited by P. W. Williams, M D, assisted by a corps of thirty-two collaborators in this country and Europe. Illustrated. Price, $2.75. New York: E. B. Treat.

This book of reference has reached its tenth annual edition, and the list of thoroughly competent men by whom it has been compiled is sufficient evidence of the reliability of the work performed. The volume is intended especially as a complete résumé of medical treatment, particularly with regard to the many new remedies that have made their appearance since the last edition of the book, and to new modes of therapeusis by means of old remedies.

It is a well executed attempt to define as clearly as possible the real medical progress of the past year in every department of therapeutics. It is divided into three parts, the first of which deals with new remedies, with a review of their therapeutic applications; the second part is devoted to new treatment, and contains a wide range of information regarding the advances made in 1891; the third part includes reports of progress in bacteriology, medical photography, sanitation, and also details of the improvements made in pharmaceutical preparations, medical instruments and appliances.

Although we wish that more references had been incorporated in certain important departments of the book, we regard it as largely fulfilling its claims as most comprehensive review of new drugs and new treatment, and that to the general practitioner few books will be more welcome and serviceable.

TRANSACTIONS OF THE MEDICAL AND SURGICAL FACULTY OF THE STATE OF MARYLAND. Ninety-third annual session Held at Baltimore, Md, April, 1891. Baltimore: Griffin, Curley & Co.

This edition of the transactions contains a very full report both of the Semi-Annual Meeting held at Cambridge, Md., Nov. 1, 1890, and the regular meetings held in Baltimore during the following April. At both meetings numerous excellent papers were read, so that the volume will be a welcome contribution. The Annual Address was delivered by Prof. Wm. H. Welch, the brilliant pathologist of Johns Hopkins University, who chose for his subject "The Causation of Diphtheria"—a most interesting topic, and dealt with in his masterly style. The article should be widely read because it gives the best that has been written during the last decade on the subject of the bacillus diphtheriæ.

Among other interesting papers we would mention particularly the following: "Eye Diseases of the Unborn" by Dr. Julian Chisholm;" Obstetrical Antiseptics" by Dr. J. Edwin Michael; "Treatment of Diphtheria" by Dr. Joseph T. Smith; "The Relation of Albuminuria to Puerperal Eclamptia;" and a valuable statistical paper by Dr. Randolph Winslow on "Innominate Aneurism."

If all medical contributions were passed upon by a competent body of educated physicians very much less worthless reading matter would appear in our libraries to confuse and mislead the searcher after truth. The publication committee of any large society occupies a most important position, and should freely exercise their right to exclude from publication articles which have not a distinct intrinsic value. Additional care in the admission of members seems also imperative as a preventive measure. At the present rate at which members are promiscuously added to our societies, and at which articles are appearing upon every conceivable topic, it rather startles one to contemplate where the future will land the bibliophile.

THE PEPSIN STANDARD ADVANCED.

There are many varieties of pepsin in market, differing widely in purity, activity and adaptability for therapeutic use.

Whether pepsin be prescribed with success or failure depends on its quality. The physician prescribing pepsin should demand in his prescription a pepsin product which he has convinced himself is pure and active and can be relied upon.

By prolonged investigation of digestive ferments the standard has been again and again advanced. It is announced by a leading pharmaceutical firm that they have succeeded in making a pepsin capable of digesting 4,000 times its weight of coagulated egg albumen under the conditions of the pharmacopœial test.

This product is prepared by a new and original process which renders it aseptic, free from odor, agreeable in taste to the most sensitive palate.

PERISCOPE.

THERAPEUTICS.

THE ACTIONS OF ERGOTINE AND ERGOTININE UPON THE CIRCULATION AND THE MOVEMENTS OF THE STOMACH.

From a study of the subject, made by E. Wertheimer and Magnin (*Arch. Physiol. Norm. Pathолog.*, January, 1892.) the following conclusions have been arrived at: 1. Intravenously injected, Yon's ergotine, like Bonjean's ergotine, causes a marked lowering of the arterial pressure, often preceded and followed by an increase. The simultaneous diminution of the volume of the kidney, shows that the fall of the pressure is not due to a vaso-motor dilatation. The direct examination of the intra-ventricular pressure indicates that the fall is dependent upon a weakness of the cardiac contractions; 2. A hypodermatic injection of both ergotines produces an elevation of the arterial pressure, without a previous fall; 3. When injected into the blood, both ergotines produce marked contractions of the stomach; the same results are obtained, though less pronounced, when the drugs are administered subcutaneously; 4. Tanret's ergotine, when given intravenously, causes a rise of the blood-pressure and a slowing of the heart; but it does not seem to act upon the stomach, either in small or moderate doses.

CHLOROFORM IN THE TREATMENT OF TYPHOID FEVER.

Paul Werner (*St. Petersb. Med. Woch.*, 1892, No. 3.—*Revista de Ciencias Médicas de Barcelona*, March 25, 1892.) makes a comparison between the character of the typhoid fever of to-day and that exhibited by the disease 20 years ago. He then showed how the malady can be treated by means of chloroform, condemning, in passing, the employment of iodoform which he thought would have given good results. The author came to use the anæsthetic in the treatment of typhoid fever, after the suggestion of a German physician, and following the results obtained from the experiments of Behving and Salkososke on the action of chloroform as a disinfectant. Werner administers the drug in an aqueous solution, in the strength of ¾ per cent., of which he gives one or two tablespoonfuls every hour, day and night, until the symptoms subside; then the dose is reduced to one tablespoonful, and afterwards this latter quantity is given only every 2 or 3 hours until deffervescence is established. Under these circumstances the patient is allowed only a tablespoonful during the day, in the afternoon. The author has employed this method in 130 patients in the course of 13 months, and has never observed any disagreeable effects. Notwithstanding that the remedy may be considered as only symptomatic, Werner believes that success in the treatment of the disease in question could be insured, by using the anæsthetic as described, during the first days of the disorder; and that even in the latter stages of the disease, chloroform does good. The drug acts primarily by relieving meteorism and the diarrhœa; it likewise prevents cerebral phenomena, bed-sores, relapses and other disagreeable symptoms observed during the period of convalescence.

THE TREATMENT OF BURNS BY EUROPHEN.

Dr. Siebel (*Berlin. Klin. Wochenschr.*, No. 8, 1892) speaks as follows on this subject: I have employed europhen for almost one year in the treatment of burns and injuries resulting from corrosive substances, which, as is well known form the main contingent of accidents at chemical manufactories, and have been for some time past treated almost exclusivley with iodoform. I have treated, with equally good results, about thirty patients suffering from burns and the effect of caustics from the slightest forms to the third degree and arising from all sorts of injurious agents [as for example, hot soda, lye, boiling glycerine, sulphuric and hydrochloric acid, burning alcohol.] My method is this: Apply the europhen in the same manner as is customary to use iodoform; that is, after cleansing the parts, opening the bullæ, etc., cover the burned places lightly with europhen powder, then apply a dressing of sterilized gauze and cotton and fix with bandages. If the burned areas are extensive or could not be readily covered with the powder, I dress the wounds with 10 per cent. gauze, renewing the dressing as often as necessary. Under this treatment exuberant granulations are formed, and the cicatrix is firm, yet elastic. The only disadvantage of this dressing occa-

sionally observed was the firm agglutination of the gauze to the wound, and this could not be completely obviated by interposing a layer of gutta percha paper. In consequence of this adhesion the exuberant granulations were frequently torn on renewal of the dressings and slight hæmorrhages produced.

To avoid this disagreeable feature I made use of europhen in the form of ointments, and at first 10 per cent. strength. As the latter, however, produced irritation in some instances, and in one case a slight eczema, I diminished its strength and finally adopted a 3 per cent. ointment with vaseline and lanolin (europhen 3.0. grammes, ol. oliv. 7.0 grammes; adde vaselin. 60.0 grammes, lanolin 30.0 grammes). I obtained the best results from this ointment, and what was especially remarkable was the marked diminution of the secretions. Owing to the latter effect it was found possible to leave the dressings in place three or four days and to renew them easily and without pain (many patients were enabled to continue work under use of a starch dressing). Severe burns of the third degree healed completely after three or four dressings. The longest period of healing (twenty-two days) was observed in a case of severe injury from hydrochloric acid, extending from the elbow to the wrist over a breadth of five centimeters. It should also be noted that europhen ointment relieved the pains from the moment it was applied. Unfavorable effects or symptoms of poisoning have been never observed by me, aside from the irritation produced by the stronger ointments. In children europhen can also be employed without risk, since it may be regarded as inocuous, at least in the doses which obtain here. I have myself taken internally for a period of three weeks from 5 to 8 grammes of a 20 per cent., solution in oil every day, that is about 1½ grammes of europhen daily without experiencing the slightest discomfort, or even as much an impairment of appetite.

On the ground of these observations I would highly recommend the 3 per cent. europhen ointment in burns of all degrees of severity. The results are better than the use of iodoform, and besides the absence of all disagreeable odor, there is no danger of the toxic effects which, although fortunately rare, are sometimes observed from the application of iodoform."

MEDICINE.

EXPERIMENTAL PANCREATIC DIABETES

According to the *Mercredi Médical.* September 30, 1891, before the French Academy of Medicine, Dr. Lancereux exhibited for Dr. Thiroloix a dog which had undergone extirpation of the pancreas. The animal presented the typical condition of pancreatic diabetes, or what the French call thin diabetes. This condition had developed in thirty-five days after the operation. Glycosuria appeared within two days of the operation, ceasing twice for a period of one week, then was replaced by azoturia. In order to make the animal really ill, complete ablation of the pancreas was necessary, for simple ligation of Wirsung's canal had caused him no inconvenience whatever. The subject of pancreatic diabetes was then discussed by Drs. Germain Sée, Lancereaux, Ollivier, and Semmola. The foregoing interesting experiment Dr Sée considered a valuable addition to those made by Minowski, Mering, Hédon, and Lépine. It confirmed Dr. Lancereaux's earlier studies and discovery of the clinical picture of pancreatic diabetes. As the function of the pancreas upon general nutrition was as yet unknown, the substitution of azoturia for glycosuria in this experiment proved highly interesting. Not all "thin" diabetics could be called pancreatic. Three recent autopsies made by the speaker were negative in this particular. Dr. Sée recalled to the Academy his own experiments, made by the introduction of fluorhydzine. The remedies considered panaceas in the treatment of diabetes, Vichy and opium, were tried. Vichy proved unavailing, and opium hurtful. Dr. Sée strongly recommended antipyrin, and spoke of Dr. Panas's case that under the influence of this drug supported well the extraction of a cataract. In reply, Dr. Lancereaux said that pancreatic diabetes was a more precise term than "thin diabetes." There were several forms of diabetes: the fat form, or the diabetes of lithæmics that become fat at the end of the period of growth, with but little glycosuria, who were but slightly diabetic, slightly polyphagic, and who often live to the age of eighty. With these, diabetes was more a manner of being than a disease. Then there was pancreatic diabetes, and traumatic diabetes (Claude Ber-

nard). Dr. Semmola objected to the interchangeability of the terms glycosuria and diabetes. The first was a symptom merely; the latter a terrible disease that might be nervous, traumatic, lithæmic, or alimentary in origin. There was either insufficient destruction of sugar or excessive production. Dr. Sée replied that, while agreeing with his confrère that an error in nutrition lay at the bottom of all diabetes, he thought the apparent fine condition of certain persons suffering from glycosuria should never mislead as to the gravity of the case, and referred to Dom Pedro, the late emperor of Brazil, who set up a serious gangrene of the foot while at Vichy, by simply trying to cure a corn. In summing up, Dr. Lancereaux said that slight and temporary diabetes was the same thing as permanent traumatic diabetes that soon became fatal, the difference lying solely in the degree of gravity, as in variola and varioloid. Earlier in the discussion Dr. Ollivier spoke of hereditary diabetes and of nervous emotional diabetes. The latter he had seen develop instantaneously upon a sudden loss of fortune. Fifteen years later the patient died of diabetic pneumonia.

THE POISON THEORY AND PHAGOCYTOSIS.

Sanarelli says (*Centralb. f. Bakt. u. Parasit.*, October 31st, 1891) he showed in Nos. 14 to 16 of the same journal how the lymph from the posterior lymph sac of the frog possessed the property of rendering anthrax foci inert whether these latter contained spores or not. Pieces of the spleen taken from animals dead of anthrax and introduced beneath the frog's skin, or cultivations brought into contact with this lymph (free from leucocytes), lose their virulence. The lymph acts, not upon the vitality, but on the virulence of these organisms. Experiments have not shown that the lymph is a true and specific antiseptic capable of destroying the anthrax foci, but that it is an unfavorable cultivation medium. The organisms rapidly regain their virulence when transferred to a suitable medium. All are agreed that the cells quickly seize upon the bacteria, for they may be seen containing bacteria three to four hours after inoculation. Even while in the cells the organisms may excrete toxic substances, which irritate the heat centres and cause a rise of temperature. Metchnikoff has certainly seen movements in the bacilli in these cells, and this must be evidence of life. He has also seen the partly taken up bacilli grow and capable of forming virulent cultures. The question arises as to the value of phagocytosis as compared with the bacteria-killing properties of organic fluids in refactory animals. Sanarelli says that he cannot believe, with the exclusive supporters of this poison theory, that the leucocytes can only take up the bacilli when these are dead, nor yet with the extreme partisans of phagocytosis that there is a veritable conflict between the leucocytes and the bacteria. He prefers to think that, owing to the unfavorable soil, the pathogenic organisms have their growth checked, and that the leucocytes gradually take them up and remove them from the body. This confirms Petruschky's view that the bacteria-killing action is able to explain of itself, and without the least help from the leucocytes, the immunity of frogs against anthrax.—*Brit. Med. Jour.*

SURGERY.

PREHISTORIC TREPHINING.

Although looked at from a modern standpoint the knowledge of surgery possessed by the ancients was of the most rudimentary character, it must not be forgotten that we are indebted to them for many of the operative procedures which the surgeon of the present day is called upon to perform. Necessity, as the saying goes, is the mother of invention, and it is certain that the ancient medical man, although profoundly ignorant of pathology was frequently led by common sense reasoning—some might call it intuition to devise operations, the knowledge of which became lost in the course of time. A familiar instance of this is the operation of rhinoplasty, which was practised from a remote period in India and owned its invention to the custom of punishing criminals by cutting off their noses. Notwithstanding its ancient origin, however, rhinoplasty was not employed to any extent in Europe until the present century. An interesting chapter to the history of ancient surgery has been recently contributed by Professor Hal C. Wyman, of Detroit. In a paper published in the *American*

Lancet, Dr. Wyman describes a skull which was exhumed from a mound on the banks of the Detroit River, and which, in his opinion, presents evidences of having been trephined for surgical purposes. Through the top of the cranium three holes had been bored, bearing such relations to each other that lines drawn connecting them would have formed a triangle. The apertures are remarkable for the smoothness of their sides and their almost perfect circular circumference. Dr. Wyman thinks that no stone or flint instrument could have produced them, but that the material used was obsidian, a species of very hard lava, with the properties of which the ancients were acquainted. From the same mound which furnished this interesting speciman four other skulls had been exhumed at different times, and two of these were also perforated. An investigation of this subject by the author revealed that a number of such skulls had been found in the western part of this country, but especially in Michigan, Illinois and Ohio, while numerous specimens have been discovered in nearly every country of Europe, in Asia Minor and Algeria. It is noteworthy that there still exists a race in Algeria called Kabyles, who employ trephining for cranial fracture making use of instruments which, though of the most simple pattern, are well designed for the purpose. The question of surgical interest is whether these crania of prehistoric races were trephined before or after death. Dr. Wyman states that the perforated skulls in Europe and Asia Minor bears better evidence of trephining as a surgical proceeding than those of America, many, and perhaps most of which appear to have trephined post-mortem. It is generally believed that the trephining was performed for religious rather than surgical purposes, but as the author pertinently remarks, if this were true it is strange that more perforated skulls have not been found since religious observances are practised commonly by the masses. The fact that the openings usually show no signs of cicatrization is, in the author's opinion, no valid objection against the view that they were made for surgical purposes, since the operation may have been resorted to too late to prolong life until repair could establish permanent traces. Moreover, the perforations are so small that, if the operation was successful, the openings would close entirely in a few weeks, leaving no traces which would be likely to be detected by any one but a skilled archæolgist. The author, therefore, concludes that the valley of the Great Lakes once contained a race of people who practised surgical trephining, and this view is in keeping with the teaching of Broca, the foremost authority on this subject, who says that in the stone age young children were frequently trephined for internal maladies.

THE TREATMENT OF STRICTURES DUE TO INCOMPLETE RUPTURE OF THE PERINEAL URETHRA.

Guyon, in a clinical lecture at the Hospital Necker (*Le Mercredi Médical*, 1891, No. 51), spoke of strictures following incomplete rupture of the deep urethra, and exhibited five cases.

These cases are characterized by rapid formation of the stricture, with a persistent tendency to recurrence. The contractile power of the new tissue is never entirely overcome.

In case of complete rupture of the urethra, the rule is to incise the perineum at once, without making any attempt at catheterization, and to join the two ends of the urethra after having passed a sound. Guyon has been a strong advocate of this true surgical principle, and advises in addition the immediate sewing of the ends of the urethra, if they are not too irregular. If the ends are not sufficiently even they may be resected.

This treatment would probably be satisfactory in cases of partial rupture of the urethra, if done at once; but when one is compelled to operate for conditions due to lesions already formed it is better to remove the cicatricial constriction by partial resection of the urethra. The results, both primary and remote, are satisfactory in the highest degree, the more so when compared with other plans of treatment, including external urethrotomy.

The object of the resection of the urethra is to remove the hard, thick, and retractile cicatrix and to obtain linear union, with the result of a smooth scar. Total primary union is frequently obtained —even more frequently than could be expected—and uninterrupted healing takes place in spite of slight contamination by urine.

OBSTETRICS.

PUERPERAL SEPTICÆMIA FROM MEPHITIC AIR.

Guéniot (*Bull. de l' Acad. de Méd.*, 3rd series, vol. xxvii, No. 9) read before the Paris Academy of Medicine on March 1st, 1892, a paper on this subject, which raised a very active discussion. It was based on four cases, in which the mothers all recovered after running great peril; the children were all born alive. The house where the patients lived was in each case malodorous. In the first case, the poisonous air from an untrapped sink pipe in a dressing room attached to the patient's bedroom. A similar insanitary arrangement existed on each floor. In the second case, a filthy privy on a staircase close to a large library room was the source of infection; the patient's apartment was on the other side of the library. In both these cases, the forceps was used with every precaution; Guéniot has employed instruments repeatedly without any similar accidents. In the remaining cases, no forceps was required; the mephitic air came from a privy in the third, and from a ventilating pipe connected with a cesspool in the fourth. Free carbolised intrauterine injections and other precautions saved the patients. Guéniot declared that mephitic poisoning during pregnancy occurred in the respiratory tract; after pregnancy it entered through raw surfaces contaminated by liquids and solids already infected by the poisoned air. The septicæmia so produced was not of a suppurative type; its chief focus was the uterine cavity, where the septic vibrios met, in fluids holding the products of mephitism, a first-rate cultivating medium. M. Alphonse Guérin, who claimed to have discovered the germ theory of sepsis many years before the modern antiseptic doctrines were first promulgated, and M. Charpentier alike scouted the theory of infection through the lungs. That way of infection only occurred in paludal fever. Had the mephitic poisoning occurred through the lungs in M. Guéniot's cases, the patients would have been taken ill during pregnancy, not after delivery: and M. Guéniot did not explain how it was that the other inhabitants of the houses where the patients lived managed to escape infection. M. Charpentier considered that injections were insufficient, the curette should be used as well, but M. Guéniot maintained that the curette often made these cases worse. The septic symptoms only appeared after delivery because then a far larger dose of the poison was taken into the system than before.—*Brit. Med. Jour.*

AN OBSTETRICAL BUNDLE.

This bundle I have found very useful. I have such a bundle prepared for every obstetric case, and its cost, seventy-five cents, is more than made up by the saving of time and subsequent visits. It contains the following:

1. One square yard of rubber cloth to be placed under the patient's hips and thighs—rubber side up, of course.

2. One square yard of canton flannel to be placed on top of the rubber, between it and the patient's body. In this way I make sure of having the bed protected and kept clean, and an aseptic environment, and the rubber can be quickly arranged to carry off the fluids into a suitable receptacle in case of operative procedures.

3. A number of pieces of cheese cloth to use as small towels, and also when dampened with bichloride solution, as pads for the vulva.

4. A new and clean nail brush for each case. These brushes cost three cents, and hence one can afford a new one each time.

5. Safety pins.

6. A narrow bobbin, consisting of three strands, for ligating the umbilical cord.

7. An obstetrical eye bandage. This consists of a strip of cheese cloth, the two edges of which are rolled in and then doubled over a second time. While waiting for the pulsations of the cord to cease I wipe out the baby's eyes, and wrap this bandage around the head and eyes, and pin it. When this is not done the child often rubs its dirty fingers into the eyes before the attendants have had time to wash the child. Since I have adopted this plan I have never had any cases of ophthalmia neonatorum.

8. A small wooden vial containing tablets of bichloride of mercury. I prefer these small ones to the larger size, as they are just sufficient for each dressing without splitting the tablet.—G. E. Abbott, M. D., in *Post-Graduate.*

THE TRANSLUCENCY OF SOLID TUMORS.

Dr. Poncet (*Bulletine de l' Académie de Médecine*) has recently called attention to the fact that translucency is not a characteristic of fluid tumors only, but that this property is shared by certain solid formations. Thus he had noticed translucency in four cases of lipomata of the hand, forearm and axilla, in chondromata of the bones and soft parts, in fungous synovitis, in dermoid cysts with solid contents, etc. It follows from these observations that the mere translucency of a tumor is no positive indication of its fluid character and can therefore be regarded as only of comparative diagnostic value. But even in cases where there is no doubt as to the presence of a fluid accumulation, the fact that it is translucent does not throw much light upon its nature. The contents may be more or less turbid or more or less admixed with blood, without arresting the passage of the rays of light. Dr. Poncet has observed this several times in cases of hydro-hæmatocele and other cysts with bloody contents, and in a case of hæmatoma of the ear upon which he operated the tumor was entirely translucent. He thinks therefore that the translucency of a tumor depends chiefly upon its size and especially upon its thickness.

GYNECOLOGY.

EUPHORIN IN GYNÆCOLOGICAL PRACTICE.

L. M. Bossi (*Rif. Med.*, December 15th. 1891) reports the results of some clinical experiments with euphorin made by him in obsteric and gynæcological cases. He employed it in powder in twenty cases of ruptured perineum, and found that it promoted rapid healing both in slight cases and in more severe lacerations where sutures had been required. He also used it as a dressing to the stump of the umbilical cord in twenty-one newborn babes. In no case did suppuration take place, nor was there any sign of the drug having heen absorbed. In none of the cases was there any appearance of icterus neonatorum. In twenty-nine gynæcological cases euphorin was employed as a fine powder, applied by means of a special atomiser (vaginitis, ulcerations of the os, cervicitis with abrasions of the portio vaginalis and parenchymatous cervico-metritis) or small pessaries about 4 centimetres in length and containing 40 to 50 per cent, of euphorin, which were introduced every two or three days into the uterine cavity (in cases of acute and chronic endometritis). In both these classes of cases the results of the treatment were satisfactory, and Bossi concludes by saying that his experience leads him to think that euphorin acts both more efficaciously and more rapidly than any other substance hitherto in use, not excepting iodoform. —*Brit. Med. Journ.*

URETHRAL CARUNCLE.

Christopher Martin, writing in the *Birmingham Medical Review*, thinks this neoplasm has hardly received the attention it deserves. He classifies it among the vascular tumors. It is exceedingly doubtful whether the connection between the majority of causes usually assigned to it and the disease is more than accidental. On the other hand, he thinks it likely that in many cases the exciting cause is a highly acid or irritating condition of the urine. Uric acid is peculiarly responsible for many cases. At the end of each act of micturition a drop of highly concentrated urine loaded with sharp crystals is left at the meatus. The crystals settle on the mucus membrane, and possibly lodge in the glandular crypts which are so abundant there, and the repeated irritation of their presence determines the new growth. This irritation is partly mechanical, partly chemical. Whether or not it actually causes it, certain it is that, after the growth has developed, a highly acid urine frightfully aggravates the patient's sufferings. The great symptom is pain. The suffering is out of all proportion to the size of the growth. The distress is present on walking, passing urine, during coition or at any time the parts may be impinged upon. The diagnosis is made complete on inspecting the external genitals. On drawing apart the labia, there is seen at the meatus urinarius, or just within it, a small, bright crimson growth. It varies in size from a pin's head to a cherry, but is generally about the size of a pea. It is usually situated on the posterior lip of the meatus. It is very soft and friable, and bleeds readily on manipulation. If care-

fully prepared sections of a caruncle are examined with a moderate power, the growth is seen to consist of very numerous and widely dilated capillary loops imbedded in a delicate connective tissue stroma. The treatment consists in the *complete* removal of the growth. The patient is anæsthetized and placed in the lithotomy position. An elliptical incision is made in the mucus membrane of the vestibule around the meatus, and about one-sixth of an inch distant from it. By means of fine scissors this incision is deepened, and the entire lower end of the urethra, for about one-third of an inch of its extent, is separated from the surrounding tissues. The piece of the urethral canal thus isolated is gently drawn down and removed by a snip of the scissors. The edge of the divided urethral mucous membrane may then be united to the edge of the divided vestibular mucus membrane by a few sutures, or the raw surface may be allowed to granulate. Cicatricial stricture may be prevented by the regular passage of a soft bougie. If a stricture should form it may be easily remedied by slitting the urethra up for about a third of an inch. The prognosis as to the likelihood of recurrence after removal should be guarded.

HYDRASTININ.

Strassmann (*Deutsche med. Wochenschrift*, No. 47, 1891) employed this drug, both per os and by subcutaneous injection, in twenty-seven gynæcological cases. In three of the cases the length of time under observation was too short to draw any conclusions. Of the remainder, six received injections (ten per cent.) and eighteen took the drug by mouth. The largest dose by mouth per diem was 0.15 and the maximum injection 0.2. The drug per mouth was given in the form of pearls 0.025, and by injections 0.05 to 0.1. From forty to sixty pearls were taken in from two to three weeks. The indications were: menorrhagia, after difficult operative labors, endometritis, chronic parametritis, subserous fibroids, metrorrhagia due to some nervous origin, hydrosalpinx, tubercular salpingitis, perimetritis, enlarged ovaries, subinvolution of the uterus post partum, post abortum, atrophy of the uterus, myoma, and subinvolutio uteri without hæmorrhage. No other treatment except rest in bed, which was enjoined in all of the cases. In three cases, tubercular peritonitis, salpingitis, and in one case in which a portion of a retained placenta was afterward removed, the drug proved useless. In the remaining twenty-one cases the action was decidedly beneficial. Hæmorrhages were entirely controlled in from two to three days, menstruation less profuse, not lasting so long, and usually postponed for a few days.

PEDIATRICS.

SURGICAL TREATMENT OF TUBERCULAR PERITONITIS IN CHILDREN.

Alexandrof (*Rev. Mens. des Mal. de l'Enf.*, September, 1891), reported the following case. The patient was a girl three-and-one-half years of age. Two of her paternal uncles were tubercular. She was born at term and nursed by her mother. At the age of two years she had whooping-cough, which lasted five months. A short time afterward she was attacked with diarrhœa, and the belly began to enlarge and show clear evidence that it contained fluid. The heart and lungs were normal, the liver and spleen were not hypertrophied the urine was normal. A diagnosis of tubercular peritonitis was made and the child was kept under observation one month. At the end of this period she was worse, and the abdominal section was performed. Nearly two litres of transparent yellowish-green fluid were removed from the abdomen. The peritonæum was injected and tubercles were scattered over it. There was no irrigation, the wound was sutured, a drainage-tube was used, and iodoform dressings were applied. At the end of three weeks fever and diarrhœa recurred and the fluid began to accumulate again. The wound was reopened and the peritonæum found thickened and œdematous. Adhesions sprinkled with tubercle united the folds of the broad ligaments. The cavity was irrigated with boracic acid solution, iodoform was sprinkled upon the peritonæum, a drainage-tube was applied and the wound sutured. This operation was followed by complete success, the patient going home cured in six weeks. Twenty cases of abdominal section for tubercular peritonitis have been reported in children from two to fifteen years of age. All resulted in apparent cures.

PERTUSSIS.

Dr. Hallet says that under the influence of ozone inhalations lasting a quarter of an hour each day, the number of attacks diminishes, the general condition improves, and the appetite returns in a few days. Dr. Chibret claims that by sprinkling powdered iodoform over the pillow on which the child sleeps, the attacks of coughing are quickly arrested. Dr. Galvagno enploys the following formula:

℞

Resorcin,		
Antipyrin,	āā gr. xv.	
Acid. hydrochloric,	gtt. x.	
Syr. simp.,	f ʒ j.	
Aquæ dest.,	f ʒ iij.	M.

Sig.—Three to five teaspoonfuls daily.

The average duration of cases thus treated does not exceed fifteen days. Dr. Noevius advises an infusion of thyme (100 to 700 parts water), to which are added fifty parts of syrup of marshmallow, and of this from a teaspoonful to a dessertspoonful is given eight or ten times a day, according to the age of the child.—*Bul. Gen. de Therapeutique*, November, 1891.

Ungar, after six years' experience with quinine in the treatment of whooping-cough, is convinced that this remedy will moderate the violence and shorten the duration of this affection. Failures heretofore are due to the administration of too small doses. One and a half grains for every year of age up to four should be given three times daily, and the drug continued in small doses for several days after the paroxysms cease. He prefers the hydrochlorate, administered to young children in aqueous solution, with a few drops of muriatic acid, and flavored with raspberry syrup. Capsules may be given to older children, and should always be followed by a draught of an acidulated solution.—*Weiner Med. Wochen.*, 1891, No. 18.

THE TONGUE IN SCARLATINA.

Neumann (*Deutsche med. Zeitung* 1891, No 63, p. 715) states that in this disease the tongue passes through three stages of change: 1. Tumefaction of the mucous membrane with disturbance of the epithelium; 2. Desquamation; 3. Regeneration of the desquamated epithelium. The appearance of the characteristic "strawberry" tongue is caused, as is well known, by the swelling of the filiform and fungiform pipillæ deprived of their epithelium. Of 48 patients examined for this symptom, the "strawberry" tongue was found in 38 (79 per cent.) in 4 the tongue was in one of the three stages mentioned above; while in 6 no modification was observed. Dyspeptic troubles precursory to the disease often so modify the tongue that the mucous membrane shows no new modification under the influence of the exanthem. The "strawberry" tongue was observed to last for one day in 3 cases; two days in 5 cases; three days in 6; four days in 4; and more than four days in the other 20 cases. It appeared during the first three days in 32 per cent. of the cases, and upon the fourth day in 68 per cent. The intensity of the cutaneous eruption seemed to bear no relation to the modifications of the tongue.

CONGENITAL BALDNESS AND PEMPHIGUS.

Bar (*Arch. de Tocol. et d'Obstet.*, December, 1891) has had a case of a child born with circular patches of baldness on the hairy scalp and a bulla of the character of pemphigus on the right hand. The suggestion is made that the bald spot may be pemphigus in its late stage, rarely seen, however, after birth, on the head. There was talipes, and the pregnancy was rendered more difficult by hydramnios. A syphilitic history could not be elicited.—*British Medical Journal*, February 6, 1892.

HYGIENE.

TYPHOID AND SALADS.

At a time when the profession is interested in discovering every channel through which the poison of enteric fever may be communicated, I should like to call attention to a mode of contagion which has generally escaped notice. We all know the peril of drinking water which has been in the slightest degree contaminated by sewage, but do we realize the danger of eating salads which during their growth have been irrigated by the market gardener with liquid manure? I chanced two years ago to observe a gardener bearing a long-spouted can in his hand, from which he poured two or three ounces of a brown evil-smelling fluid upon or round a row of young lettuce plants. Inquiring the source of this fluid, I was informed that it came from a neighboring cess-pool. Being a constant eater of salads, this little incident caused me to meditate, and also

to make further investigation from other gardeners as to the culture and bringing up of salad plants, and I discovered that it is usual for fluid composts to be thus used, wherever they can be obtained, to encourage the growth of lettuce, endive, celery, and similar vegetables. In the course of this frequent affusion with sewage it must happen that portions of the fluid fall upon the plant itself and percolate between its leaves. The watery portion will be absorbed or will evaporate, meanwhile the close circles of flattened stems and leaves of a celery or lettuce plant form a trap or filter which will hold and retain all solid particles such as the bacilli and other solid contagion of enteric fever, if any be present.

The gardener, of course, never thinks of inquiring into the source of his liquid manure; it is no part of his business to consider whether enteric fever has existed in any adjacent cottage which drains into his cess-pool or manure pond. Thus it may happen that the householder who has strictly guarded his water supply and his drainage from all possibility of enteric contagion, has lettuce or celery plants brought into his house which carry disease and death hidden within their delicate white leafage. Whether he and his family are poisoned or not may now depend upon the washing the vegetable receives. It is not easy to cleanse celery and lettuce in such a manner as to remove all solid particles, if such exist, from the close-gathered leaves about the heart of the plant; moreover, not one cook in fifty knows the importance of thorough washing. Since discovering the above facts I rarely eat any salad which is not grown in my own garden, and dressed by a cook who knows the perils of imperfect washing, but I always contemplate other salads with interest, and I have repeatedly discovered in them minute scraps of decaying organic matter, apparently derived from the market gardener's liquid manure can.

One meets occasionally with cases of enteric fever the origin of which is difficult to ascertain. I must confess I have never yet been able to prove contagion from this source, but the difficulty of such proof is overwhelming—to trace back the lettuce a patient consumed a fortnight ago to its birthplace in some French or English country garden, and to ascertain whether typhoid existed in the vicinity, passes the wit of man. I have, however, had grave reason to suspect such an origin in certain cases where every other cause seemed excluded—it is evidently possible. I should like to know if any of your readers agree with me in the opinion I have expressed, and, if so, I feel strongly that the public ought to be warned of the danger.—*British Medical Journal.*

HOT BATHING IN JAPAN.

In hygienic matters the Japanese have everywhere a habit which may have a lesson for us. In their nightly bath and morning wash the water is never cold, never warm, but always as hot as it can be borne. To foreigners this habit seems very surprising, but the most inveterate Englishman, if he stays in the country long enough, abandons his cold tub in its favor. The cold-taking which it is suspected must follow it is found not to occur if the water has been hot enough. This heat is maintained by a little furnace beneath the bath. In the bath the bather or bathers take a prolonged soaking, the washing proper being done on the bath-room floor; then follows a second and final soaking, drying with towel, and a lounge in bathing wrapper. This habit seems to promote softness and suppleness of the skin, and by persons inclined to rheumatism is soon found to be altogether preferable to the cold bath in every particular. The poorest of the Japanese hear of a cold bath with amazement, and would be sure the man who used it must be a barbarian. With respect to the superiority of the hot bath over the cold, I have come to find that in my own case certainly the Japanese are right.—Dr. Benjamin Howard, in the *Lancet*, January 16, 1892.

MEDICAL CHEMISTRY.

A PERMANENT FEHLING'S SOLUTION.

Fehling's solution by the usual formula is quite unstable. The following modification is suggested by Rossel in *Schweiz. Wochenschr.*: 34.56 grains pure cupric sulphate are disolved in some distilled water; 150.0 grams glycerin and 130.0 grams caustic potassa and then made up to one litre. One c. cm. of this solution corresponds to 5 mg. of glucose. The solution is said to be a permanent one.

TYLOPHORINE, A NEW EMETIC.

Mr. Hooper has extracted from the root of the *Tylophora asthmatica*, a plant of the family *Asclepiadeæ*, growing in East India, an alkaloid to which he has given the name tylophorine. The root has long been used in India as a sure and harmless emetic, and the new alkaloid is expected so have highly emetic properties. Tylophorine is crystalline, slightly soluble in water, but soluble in alcohol and ether. With hydrochloric and nitric acids it forms crystalline salts, which are readily soluble in water.

ALBUMIN TEST FOR URINE.

Dr. E. Speigler suggests the following: Mercuric chloride, 8.0; tartaric acid, 4.0; sugar, 20.0; water, 200 c. cm., as the reagent. Some urine is acidulated with strong acetic acid and filtered. Into a test-tube half filled with the reagent and behind which is placed a piece of black paper, add the urine so it will float on the reagent. If the albumin be only one part in 50,000, either at once or within one minute there will be produced a white ring at the surface of contact.

GLYCERITE OF IODIDE OF IRON.

Within a few months past an English writer brought forward a formula commending this as an improvement for permanency over the use of syrup of the pharmacopœia. A comment was made in our pages that the glycerite was made and dispensed by the editor while a clerk in 1858, and subsequently in his own business established that year. He did not claim that he was the originator of the preparation, for he was not, but the name of the person who had introduced it he could not then remember. It has since recurred to his mind—James C. Leamy, a graduate of the Philadelphia College of Pharmacy, who in 1857 and 1858 was a clerk with W. J. Oliffe at 809 Broadway.

NEWS AND MISCELLANY.

VISITING NURSE SOCIETY OF PHILADELPHIA.

The following cases are cited as illustrations of its work:—One Sunday, a man applied for help not knowing where else to turn. He is an independent American, but what could he do? His wife lay very ill with typhoid fever, his children were mere babies, two, four and six years old, the only relative able to assist him was his mother, who could not reach him for two weeks. After a period of idleness he had just secured work in the Pennsylvania Railroad shops, but that would be lost if he could not be regular in his attendance. He had been forced to spend all his small savings, but promised to pay what he could spare from present earnings. With our "Special Fund" money, we sent him a woman to help with the care of the wife and children until his mother should arrive. A Visiting Nurse also gave daily attention, not only to his wife, but also to his child who was found to be suffering from a neglected attack of croup. It was too late to save this life, but the mother soon began to improve, and the nurse carried daily some of the nourishing food so kindly provided for us by the ladies, who all winter long take turns in sending diet for their patients.

One day recently the nurse was sent to a woman, ill and alone, except for a small dog. At first all offers of help were refused, but by degrees the nurse won her way and learned a sad story of a deserted life, wrecked by the misdeeds of others. In time the necessary cleanliness spread over the patient and her surroundings, even the dog improved and grew more cheerful. There was no one else in the house, but its owner came daily and was kind to the lonely inmate. One afternoon, when the nurse had washed her patient, combed her hair, tidied the room and cooked some oysters to leave behind her the distrustful air softened, and a few earnest words of gratitude were spoken. By the next morning death had come, and the poor little dog lay faithfully watching his silent mistress.

All the cases are not so sad as these. There is often an old woman living alone, and growing more and more infirm until she finds, to her distress, that she can no longer attend to her own cleanliness. At first she distrusts the Visiting Nurse and will almost rudely repel the offered service. By degrees the patient kindness has its effect, and it will be found that the weekly or semi-weekly visit is eagerly awaited, and that from the small pension or the careful savings of years, the nurse

must take her car fare and be urged to accept a trifling present.

An old lady living with her nephew and his family is one of the cases where the nurse's visit brings daily pleasure. Miss L. is becoming too infirm to go down stairs and while the family are kind to her, still there is no one who can attend to her as she now requires. She pays the car-fare for each daily visit and thanks the nurse warmly for the sense of comfort she leaves behind her. The patient sent a sum of money to the Society on its Donation Day.

Then there are the babies, such a lot in one year! pretty little Russian Jews with the rich color in their cheeks, bright eyed children of Africa, Italians with now and then a Madonna-like mother, and the funny twins which always seem to enjoy the double trouble and fuss they make. Fancy twins in a household where the mother proudly displays only one entire suit of baby clothing in preparation for the event. What should we do in such a case without the help of the small bundles given by King's Daughters, the Needle-work Guild, etc.

Often a mother speaks gratefully to the nurses after ten days care, telling them how much better and stronger she feels than ever before after such a period, for their care has saved her strength and prevented any of the complications common in neglected cases.

Those of us who have known the comfort of trained nurses, who have felt perhaps, that precious lives depended on their care, surely can give generous support to send similar help to our poorer neighbors.

AMERICAN SURGICAL ASSOCIATION

The Association will meet in Boston, Mass., Tuesday morning, May 31st, and June 1st and 2d, 1892, in the hall of the Natural History Society on Berkeley street.

Special Subjects for Discussion. — 1. "The Treatment of Uncomplicated Fractures of the Lower End of the Humerus and of the Base of the Radius," by John B. Roberts, M.D., Philadelphia, Pa. 2. "Fibroid Tumors of the Uterus," by John Homans, M.D., Boston, Mass. 3. "Surgical Operations in Persons Suffering from Diseases not Connected with that Necessitating the Operation, such as Chronic Malarial Poisoning, Diabetes, Organic Heart Disease, etc.," by W. T. Briggs, M.D., Nashville, Tenn. 4. "Surgery of the Tongue," by N. P. Dandridge, M.D., Cincinnati, Ohio. 5. "Conditions Demanding Excision of the Globe of the Eye," by W. H. Carmalt, M.D., New Haven, Conn. 6. "Ancient Contractures of the Hip and Knee Joints," by T. F. Prewitt, M.D., St. Louis, Mo. 7. "Report of Operations upon Spina Bifida and Encephalocele, with Remarks." By A. T. Cabot, M.D., Boston, Mass.

PHINEAS S. CONNOR, *President.*
J. R. WEIST, *Secretary.*

A CLEAR STATEMENT:

Being a brief summary, from the note-book of an undergraduate, of a lecture on tuberculosis by a professor of liberal but uncertain opinions.

The microbe of consumption that Koch has hunted out,
I beg to say we know most clear and plainly *all* about.
And I myself, as you all know, have always held it wise
To tell at once what knowledge new pathology supplies.
And so I wish to state, with no periphrasis or doubt,
Bacillus' source, course, consequence, within us and without.
This troublesome bacillus *perhaps* may—might be—cause
Of phthisis—*or* might not be—our logic has such flaws!
This troublesome bacillus, a most annoying kind,
In various herbivora, as well as man, we find,
But, whether really dangerous, as modified by cow—
I—well—I'd really rather not state definitely how.
The question of contagion, too, a *most* important one;
I'm nearly, quite, almost convinced the thing cannot be done.
Each wavering pathologist has views as yet quite dim,
Aud how can we clinicians be more accurate than him?
Therefore, I think (as I have said)—that is—I should suppose—
The tubercle-bacillus is—oh!—everybody knows!

BAKER'S EMULSION

WITH HYPOPHOSPHITES OF LIME AND SODA.

Among many points in which this preparation excels are:

1st—In quality of the Pure Oil used in its composition, being the finest Norwegian of a special manufacture, receiving the highest prizes at late European Expositions.

2d—In the Proportion of Oil it contains.

3d—In mode of manipulation and thorough incorporation, rendering it Permanent and Palatable, and of proper consistence, about that of Rich Cream.

4th—In Size of Bottles, containing 16 ounces.

Confidence in the merit of our preparation leads us to respectfully ask a specification of our Brand when prescribing.

ESTABLISHED 1830.

JOHN C. BAKER & CO., Philadelphia.

Most Powerful Purgative Water Known

1/4 THE QUANTITY REQUIRED BY OTHERS

ABSOLUTELY HARMLESS AS IT CONTAINS ALMOST EXCLUSIVELY SULPHATE OF SODA.

NO REPULSIVE SMELL NOR BITTER TASTE

NO GRIPES

Clinical Lectures.

EXERCISE IN CHILDHOOD AND YOUTH.

By J. MADISON TAYLOR, A. M., M.D.

PART OF A LECTURE DELIVERED AT THE FRANKLIN INSTITUTE, PHILADA., DEC. 7, 1891.

Gentlemen:—The normal states of the infant are feeding and sleeping. There is little more needed during the first year of life than comfortable, clean surroundings and abundant food at suitable intervals, supplemented by ample rest. Plenty of air should be allowed and not much light. The little one should be left alone as much as possible. In certain foundling asylums abroad, I am told the babies are fed and put into well ventilated, darkened compartments immediately, and under this system they seem to do best. Distinct harm results from over-much attention, and the excitement which comes from fond parents or curious relatives is one of the most hurtful influences exerted in early infancy. Absolute freedom should be allowed to the limbs, yet it is true that certain savage nations keep their infants in rigid dressings until they are able to make attempts at walking, and among such there result exceedingly fine physiques. This custom on the part of these savages may reasonably be a hint to us that enforced rest to the limbs is wiser after all. Then, as the child gives distinct evidence of wishing to be more aggressive in its movements, it will probably be high time to encourage it. At any rate, in the second year freedom might be allowed, and a good plan is to place the infant upon a soft substance on an even surface, like the floor, and encourage all spontaneous movements, and to supply it with the simplest kinds of toys. Try few educational measures yet.

With the eruption of the first set of teeth, about the end of the second year, a more varied diet is admissable also a wider range of object lessons, though these should be still of the simplest. At the first plain indication of weariness the child should be encouraged to sleep. As the motor energies become more plainly manifested, so may they be cautiously aided and abetted. In all this be guided by the greatest caution lest unwise interference be hurtful. Take lessons from experience, especially of the natural promptings of the youngster, and beware of all fine-spun theories of childless philosophers and narrow minded grandparents. As soon as the child makes definite efforts at standing, reaching out for objects, etc., supply it with harmless toys, especially washable ones which can be kept chemically clean, as of rubber or metal. Let it exercise its senses; its muscular sense, teaching it dimensions of external objects, its eye in judging of distances and colors, etc., as well as the co-ordination of its limbs. Let it pull things about, and put them into its mouth. All animals wish to taste or put objects to their mouth, because the lips are equipped with the most sensitive nerves, and here it can obtain most accurate impressions. The hands have not yet learned nicety of touch, but by handling blocks, etc., soon accuracy comes.

The eye in the child is a perfect organ, and so, indeed, is the digestive tract, with limitations, of course, as to capacity. Not so, however, the limbs and trunk, which have much to learn and large need for exercise. It is best that the objects which immediately surround the babe should be of uncomplicated shape and color, such as the dawning comprehension may compass and use for comparison as contact is had with more complex ones. Bear in mind

that the best human animals come from simplest households, as nearly as possible to nature, whose phenomena offer the best object lessons. Civilized comforts and safeguards are not to be despised, but these should not offer elements for confusion. A child is best left much alone. Avoid artificial constraints. When wearied out with joyous spontaneous movements which quicken its circulation and expand its lungs, and when feasted with slow contemplation of surrounding objects, it should be able to lie down comfortably and sleep.

By and by the bewilderment of early impressions will be replaced by a growing confideuce in the maturing powers and values of surrounding objects. All childhood should be passed in a series of simple object lessons. Some small encouragement is very well, but no distinct teacher of any kind is needed until the motive powers are well established and a fair stock of intelligence has been acquired by unaided mental digestion.

The homunculus when fully able to cruize about the room or garden may do so, clambering up and tumbling down. So shall there come consciousness of its own powers and limitations, so learn to save its own head with the hands and gleefully secure coveted objects. Thus little by little stores of information may be acquired, a knowledge which is all its own, because come at through abundant slow contemplation in its own time and manner and by its own unaided powers. These powers, too, grow by what they feed on. Selection is thus exercised; eye and hand and leg are brought to the fullness of their strength, and the highest human faculty, judgment, is soon or late acquired. In the mere bodily activities a healthy child may be trusted to do enough and not too much. If urged beyond its own choosing, the element of excitement comes in, always a confusing factor in measures or results.

Soon the greatest joy will be to play with others of its kind. Impressions from inanimate and other objects will no longer satisfy. Then comes the period of childish games, when running, shouting, rolling about, give tone to muscle and prompt conduction to brain. The cerebral part of this partnership, by the way, is first largely limited to balancing and the motor functions generally. When in the course of progress a certain time comes, by common consent, wherein systematic teaching should be had, then must the bodily powers and parts receive the closest scrutiny. No school system is adequate which does not consider the training of the body as of almost equal consequence with the mind. I venture to assert with small fear of contradiction that no school is fit for your children or for mine which does not supply intelligent medical supervision. Among the more comfortable classes this will be supplied by the family physician, who may have at one time or another sufficiently looked after our boys or girls. When this is not done among those who use the large public schools, a skilled medical supervisor should be provided who shall pass judgment upon every single scholar. Thus will be brought to light heretofore unrecognized weaknesses, and, moreover, a surprising number of deformities; or in the needful repetitions of these examinations hurtful tendencies may be early recognized. In the matter of the eye supervision is becoming pretty generally exercised, and much good already accomplished thereby. Of even more importance, however, is the question of weak hearts, unsymmetrical backs and limbs, narrow chests and twisted pelves. Soon or late calisthenic exercises, military drill, class singing, or some systematic form of body training will be a regular part of the day's instruction in most schools. A steady advancement is being made in the wisdom of educational authorities in all lands. To be sure, we may never attain to that almost perfect system of education pursued by the early Greeks the products of which are types of physical and mental beauty which shall serve as models for all time. Then, the pedagogue, the man who walked and talked with his scholars, was equipped with wisdom as well as learning, and capable of intelligently directing the activities of his pupils in body as well as mind. We may hope to have more of this open air object teaching by stream and field, which now is used to supplement the the didactic in many large schools and colleges. As parents become more thoroughly aware of the economic needs of educational measures, they will demand as much, or more, of physical care for their children at the hands of instructors.

Let us turn for a moment to the subject of spinal deformities. This is a common result of the ordinary school life, when

either unduly prolonged or unprovided with proper safeguards in the way of daily supplies of opportunities for exercise. I quote from Dr. J. K. Young, a well known orthopædist of this city: "The great majority of cases of this curvature originate in children from the age of five or six and upward and young persons who have been recently in school. This might be thought a mere coincidence, for the school period is necessarily that of development and curvature is a disorder of development. But there is evidence to show that school work and customs are genuine causes, not the sole causes certainly, but very prominent ones. The origin of latent curvature depends chiefly on two things, weakness of the muscles which supports the spine and bad position of the body. Weakness, though not a necessary circumstance, is an extremely common and important one. A bad position constantly maintained will twist the most athletic frame."

Again, Dr. Buckminister Brown says: "A most pernicious habit, and one which I have very often noticed in school girls, and less often in boys, is that while we are talking to them or during recitations, they stand on one leg. This position is assumed involuntarily, and it is almost always on one and the same leg to which the weight is thrown. The effect of this is easily understood. One side of the pelvis is lifted up, curving the spine on the loins; the opposite leg is advanced in front of the other, twisting the pelvis and rotating the vertebræ. Of course, the curve of compensation takes place between the shoulders; one is depressed, the shoulder blade gradually projecting, and with the change, and, in fact, assisting to produce it, occurs the spinal twist."

These various warping agents which are inevitable among children confined to the school seats, or to the small variation of standing at their tasks, produce a large amount of actual damage, which remains as seed from which trouble grows, or simply impairs constitutional vigor. A large proportion of these are transient effects and overcome by wholesomer living later, hence never are recognized *per se.* Statistics on the subject are not yet sufficient, a single illustrative instance, however, is significant:

Guillaume, in 1864, examined the schools of Neufchatel, and found in 350 boys, 18 per cent. affected with spinal warping, and among 381 girls, 41 per cent. Careful searching in other schools would give at least analogous results. Now, what is the preventive for this. I quote the uniform opinion of several authorities, who one and all recommend varied muscular activities taken at suitable times as the most important measure. The best are vigorous outdoor movements, games, leaping, running, climbing, and all sorts of hard play, the more varied the better. These should, of course, be not unduly prolonged; especially for girls, it is harmful for them to make large scores at the skipping rope and long match games at tennis or even croquet. Indeed, the best forms of exercise for children are those which speedily shift from consecutiveness and interspersed with ample periods of rest. In girls there exists an inherent, ofttimes ineradicable indolence, a delight in sacrificing themselves to the proprieties, a misguided sense of decorum which early hinders their right indulgence in active sports. In this their mothers encourage them blindly; even the best of mothers. This early subordinating of their physical impulses leads also to a disregard of the calls of nature, coupled with a silly squeamishness about attending to prompt evacuations and lays the train for lifelong discomforts and disturbances. No one but an active practitioner of medicine can believe how universal is the prevalence of torpid bowels and inactive bladders among the female sex. They seem to revel in the discomforts which arise from the neglect of these most vitally important functions. Again, this inactivity lessens their taste for water, since they rarely sweat as they should daily do. Hence, in unnumbered ways it is important to insist upon much activity among children.

The ordinary sports of boyhood and youth are invaluable. If ample opportunities by stream and field are afforded excellent results follow in healthful and beautiful forms. The tendency is, however, to work along lines of least resistance to specializations and to emphasize already well-marked aptitudes.

This pursuit of outdoor competitive sports is necessarily limited to very few, Dr. Sargent says to probably less than one per cent. of our vigorous young men. Even among the members of athletic organiza-

tions only 10 per cent. are really active. He goes on to say: "The cause for so little general interest in athletics is due to the increasing tendency with us, as a people, to pursue sport as an end in itself rather than as a means to an end." In making excellence in the achievement the primary object of athletic exercises we rob them of half their value in various ways—by (1) increasing the expense of training; (2) by increasing unduly the time devoted to practice; (3) by reducing the number of active competitors; (4) by relying upon natural resources rather than upon cultivated material; (5) by depriving the non-athletic individuals of incentive to physical exertions; (7) by depriving them of their efficacy as a means to health. He points out the fact that the harmonious development of the physique and the building up and broadening out of highest types of manhood and womanhood ought to offer inducements enough to work for.

As to how this may be best accomplished deserves special and constant study—not only for means but incentives. When obvious defects exist judicious, skilled direction is needed in such matters. At Amherst systematic class work obtains good results. In Princeton this was done in my day by compulsory drill work with Indian clubs, etc. Military drill has immense value. In the German Turngemeinde all over this land as well as the Fatherland classes from the youngest to the oldest drill in calisthenics regularly and these are supplemented by outdoor work—long walks in vacation times and to a moderate degree field sports. The best results come from systematic measures.

For those who need remedial training by movements the system of Ling is beyond all praise. A host of followers have taken up his suggestions and variously elaborated them and claimed originality for their view, more or less falsely indeed, but all acting upon his clearly defined principles. The Delsarte system of expression promises to be a useful corollary to physicial training.

One conclusion stands out clear and distinct from all this inquiry. It may be accepted as almost an axiom that no instance of organic lesion is yet demonstrated to be the direct and sole result of bodily exercises or competitions in one adequately trained.

NEW OUTLOOKS IN THE PROPHYLAXIS AND TREATMENT OF TUBERCULOSIS.*

By FRANCES P. KINNICUTT, M. D.

NEW YORK CITY.

The lecturer introduced his subject by an allusion to chemotaxis and phagocytic immunity, and their important bearing upon the subject of the prophylaxis of disease. Prophylactic measures directed against tuberculosis had for their object, to destroy the vitality of the bacillus outside of the body, to minimize the sources of infection, and to render the tissues insensible to its presence. It was not long after Koch's discovery of the tubercle bacillus, in 1882, that it was observed that the bacilli were not found in the air exhaled by tuberculous patients, but that they were abundant in the sputum, and that dried sputum was the most common source of infection. The stools of human beings afflicted with tuberculosis of the bowel are a less frequent, but an undoubted source of infection, as are also milk and meat from tuberculous animals. Experiments carried on in Germany upon the dust taken from hospital wards, living rooms of phthisical patients and other places, have yielded interesting results as to the dissemination of tuberculosis. Out of 94 animals inoculated with dust from the hospitals, 20 became tuberculous, and virulent bacilli were obtained from 15 out of 21 medical wards. Negative results were obtained on the other hand, from dust of surgical wards, and from the streets and inhalation rooms which were investigated. Virulent bacilli were obtained in a private house six weeks after the death of an inmate who had been suffering from tuberculosis. The collective investigation committee of the British Medical Association, in 1883, received, in answer to a series of questions concerning the infectiousness of tuberculosis, 1,078 communications from various medical practitioners. Of these, 673 were to the effect that cases of tuberculosis originating in infection had not come under their notice; while 261 gave what was considered positive proof of its

* Abstract of the Middleton Goldsmith Lecture, which was deliverd under the auspices of the New York Pathological Society, at the New York Academy of Medicine, May 11th, 1892.

occurrence, 39 were doubtful, and 105 were negative. There were 192 cases of probable infection of a husband by a wife, and *vice versa*, and in most of these, there was no hereditary predisposition. Very striking facts are brought out by a study of statistics gathered from the Catholic Nursing Orders in 32 convents, during the twenty-five years previous to 1889. The general annual death-rate from tuberculosis is one-seventh to one-fifth of all deaths, but in these convents, the death-rate from tuberculosis alone is shown to be 62.88 per cent., and in some of the convents, it even rose to 75 per cent. The average age at which death occurred was 36.27 years, which is lower by ten years than the average in those trades which are notoriously the most unhealthful. In considering these startling statistics, it is also to be remembered that the health of all persons entering these orders is excellent, as their admission depends upon medical certificates. The speaker said that he had collected a large number of cases illustrating the infectiousness of tuberculosis, several of which he cited. A healthy girl of fourteen years, without hereditary predisposition, contracted tuberculosis from wearing the earings of a consumptive. A male child, vigorous at birth, had eczema of the abdomen when three years old, but an examination at this time showed no tubercle bacilli here, but about one year later, after sleeping constantly with his consumptive mother, the bacilli were found in the eczematous vesicles.

In considering methods of attacking the tubercle bacilli, one is at once struck with their enormous numbers, thus: Dr. T. Mitchell Prudden, of this city, has computed that 24,460,000 tubercle bacilli are present in the daily sputum from a single phthisical patient. Tuberculous sputum has been dried and kept under the ordinary conditions found in dwelling houses, and has been found to preserve its infectious properties for two and a half months, and other experiments seem to show that its virulence may continue for a period of three years. Most chemical disinfectants exert but a very feeble action upon the tubercle bacillus. A ten per cent. solution of carbolic acid is found to have no effect upon the bacillus in sputum after a period of twenty-four hours, while corrosive sublimate is valueless on account of its coagulating the albuminoids in the sputum. A ten per cent. solution of creolin, or of aseptol, has no more action than carbolic acid, but lysol in the same strength will sterilize the sputum after an exposure of only twelve hours. These results show that we possess no practical means at present of efficiently disinfecting sputum by chemical agents. The bacilli are usually killed by a temperature of from 90 to 100° C., but simple rinsing of sputum cups with boiling water is not sufficient, and is not without danger to the attendants, as numerous observers report cases of infection of cuts with sputum. Both in hospital and private, paper sputum caps are the safest and the most convenient, as every day the soiled ones are burned, and new ones supplied. Public sentiment should be sufficient to compel the proprietors of hotels and other places of public resort to adopt more stringent measures than at present for cleansing and disinfecting the rooms and preventing the spread of this disease, and legislation is urgently needed which shall provide for a proper inspection of dairies and slaughter-houses. Such a bill will probably be introduced into the legislature of New York state during the present session.

Turning now to the remedial measures, it is found that three possibilities present themselves: (1) The discovery of a method of treatment capable of destroying the bacillus within the body; (2) the discovery of some substance, organic or inorganic, which may deprive the bacillus within the body of its harmful effects; and (3) the discovery of a principle which when introduced into the human economy, will increase the germicidal power of the fluids of the body by stimulating cell activity.

It is supposed that the bacilli in their growth produce in the living tissues, as in artificial cultivations, certain substances, which have various, but always deleterious effects upon the surrounding cells and that among the substances produced by their action, is one which destroys the living protoplasm, and produces a coagulation necrosis, which, in turn, diminishes the supply of nutriment to the bacilli, and checks their development. Koch believes that by the introduction of tuberculin, the extent of this necrosis is increased, and consequently, the nutrition of the bacilli more seriously impaired. Rosenbach, however, denies that tuberculin

possesses any specific action, and claims that the reaction observed after injections of tuberculin is due to general irritation. Similar constitutional disturbances follow the injection of cantharidal salts, or of other bacteria. He believes that when necrosis occurs, it is rather secondary to an acute inflammatory necrosis. William Hunter, of England, and Klebs, of Germany, have conducted experiments with the object of separating the deleterious ingredients of tuberculin from the remedial ones, and Hunter has found, (1) that the remedial and inflammatory actions of tuberculin are connected with the presence of certain albumoses, while the fever-producing agent is a non-albuminous substance ; (2) that by chemical methods, the fever-producing agent can be removed; (3) that the fever has nothing to do with the remedial action ; (4) that a truly remedial action resides in an albuminous substance derived from the plasma of the bacilli themselves, and not from their action on the surrounding tissues ; (5) that this substance can be isolated. The principal modifications of tuberculin with which he has experimented are, A, C, CB, and B. A differs but slightly from tuberculin; C causes scarcely any local inflammation, but produces a high fever; CB contains the remedial agent, but does not cause the usual constitutional disturbance; and B contains the remedial properties of CB, and also excites local inflammation, but produces no ill effects. Klebs' experiments though undertaken quite independently, have yielded very similar results. Dr. Prudden has made some experiments which indicate that dead bacilli, freed as far as possible from the products of their growth, are capable of stimulating cell activity enormously, and of producing lesions morphologically similar to tubercle, but which are not indefinitely progressive, and do not induce an infectious disease. The legitimate conclusion from his observations is, that coagulation necrosis is dependant upon a metabolic product of the growth of the bacillus. Whatever beneficial effects were obtained from the original tuberculin were *in spite* of the production of coagulation necrosis. The lecturer agreed with Trudeau, Schede, and others, in the opinion that in some modification of tuberculin would be found a truly valuable remedial agent in tuberculosis.

The speaker then referred to several new methods of treatment. Professor Liebreich had hoped by the administration of the salts of cantharides, not only to cause an effusion of serum but a stimulation of cell activity, and consequently an increase in the germicidal action of the serum on the bacteria. Potassium and sodium cantharidates were administered hypodermically in doses of $\frac{1}{640}$ to $\frac{1}{320}$ of a grain, at intervals of forty-eight hours or more. The results, however, have been rather disappointing. Another method of treatment had been tried founded on the claim that in rabbits which had been inoculated with the tubercle bacillus, the evolution of tuberculosis can be arrested by a subsequent inoculation with the serum of dog's blood. As fibrinous induration is to be regarded as the natural curative process in tuberculous lesions, it has also been suggested that as chloride of zinc when injected in small quantities causes such an induration, injections of this substance at the site of the disease, would prove beneficial. Twenty-two patients were subjected to this treatment in France, and while the results showed that it is possibly useful in tuberculous disease of the joints and glands, the use of intra-pulmonary injections of a ten per cent solution are hardly practicable, and are of doubtful efficacy. Renewed interest in the use of creasote in tuberculosis has been awakened by the labors of Dr. Beverly Robinson, of New York, and at the present time, the literature of the subject, is quite voluminous, and is exceptionally favorable. It is generally admitted to exert a favorable influence on nutrition by reason of its action upon digestion, and it is also probable that its local antiseptic action is also beneficial. Some experiments which have been recently carried out for the lecturer by Dr. John S. Ely at the pathological laboratory of the College of Physicians and Surgeons, tend to confirm Guttmann's experiments in test-tubes on the germicidal action of creasote on the tubercle bacilli; but still more recent investigations indicate that creasote immediately upon gaining entrance to the circulation, enters into chemical combinations in the blood, forming substances which are without specific germicidal power. Trudeau has conducted some experiments which show that even in heroic doses, creasote is incapable of preventing the development of experimental tuberculosis or

of arresting its progress. As guaiacol constitutes from sixty to ninety per cent. of beech-wood creasote, it may be considered as the active principle of this drug, and a more suitable preparation for internal administration. The carbonate of guaiacol, however, being a simple, definite, crystalline substances, which can be obtained chemically pure, is still more eligible. It is tasteless and odorless, does not cause digestive disturbance, and is decomposed in the intestine into guaiacol and carbonic acid. The speaker said that he had made some use of this drug in his cases at St. Luke's Hospital. It had a favorable effect on the night sweats, but not on the hectic, and in one case, complicated by chronic diffuse nephritis, there was a marked increase in the albuminuria, until the drug was withheld. It was administered in doses of from four to six grammes daily without discomfort. Seven cases in the hospital of well marked tuberculosis were treated with the modified tuberculin, three for three months, and the others, for about two months. There was no appreciable change in two of them; in a third, there was a remarkable improvement in the physical signs; of the four remaining cases, there was no improvement in one, marked improvement in one, less marked improvement in another, and in one, at least temporary arrest of the disease. The speaker thought that tuberculin exerted its effect chiefly on the specific lesion, while creasote more particularly affects the nutrition. Modification "B" seemed to be the preferable one, as the patients can be continuously about the wards or out of doors. The bacilli were found to be constantly present in the sputum in undiminished numbers. Both creasote and guaiacol may be safely given in large doses and by subcutaneous injection, but they are equally efficacious when given in much smaller doses, and by the mouth. Whatever method be adopted, these drugs must be administered for a long time to secure any marked benefit.

FOR COCCYDYNIA.

The following suppository, employed at bedtime, will afford relief from the pain of coccydynia and permit sleep:

MOLLUSCUM FIBROSUM. *

BY E. A. COBLEIGH, M. D.
CHATTANOOGA, TENN.

My subject is one of much clinical rarity. No one man can have very large observation or experience with this affection. Hardaway, of St. Louis, has seen but 3 cases of it in his special practice covering 6,724 dermal cases of all kinds. Anderson, of England, has seen but one out of a total of 24,891 in hospital practice. Duhring is authority for the statement that the annals of the American Dermatological Association gave but 9 cases in their total of 16,863, and Morrow, mentioning the same statistics when they had swelled to a total of 112,863, gives only 86 cases of molluscum of all kinds.

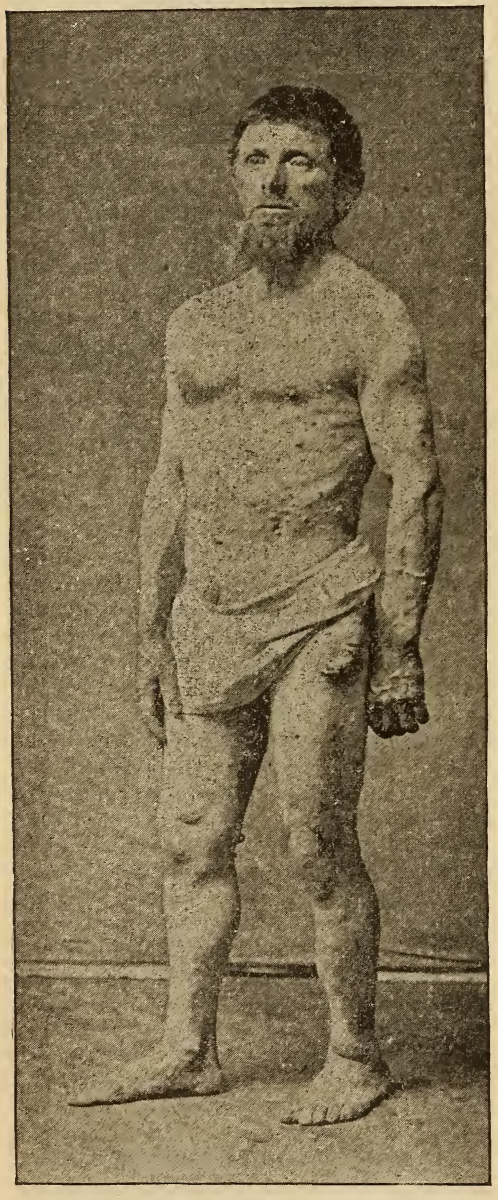
So it may seem a little out of the usual line to bring such a subject here but possibly it may, by reason of its departure from the routine, likewise prove refreshing; and certainly to me it has had an interest from the fact of one of these very cases falling under my rather recent observation, it being the second I have seen in a practice of about a score of years. Furthermore the patient resides within the bounds of your immediate territory, lending further interest, and I intend herewith presenting photographs of him before you, taken at the date he was seen by me, to illustrate my paper.

The affection has been variously designated at different periods since its first recognition as a separate disease and by different writers. Its several names are Molluscum Fibrosum, Fibroma Molluscum, Molluscum Pendulum, Molluscum Simple, Arelo-Fibrosum, Molluscum Albuminosum, and by Fox referring to its single lesions, Polypus of the skin. The name I have here used comes from *Mollis*, "soft, resembling mollusks," and *Fibra*, "fibre."

Generally speaking, the term is applied to a generalized dermal fibromata. Van Harlingen divides it further into multiple or small-tumor form and the single or sparse variety. And other authors state that these patients—referring to the generalized kind—are liable to coincident der-

* Read before the Tennessee State Medical Society, at Knoxville, April 12, 1892.

matolysis, pachydermatocele or cutis pendulum as they variously designate the accompanying manifestations. Fox likewise refers to a fungating form with rapid development and evolution which differs from any described by other writers and



seems to border rather on dermal sarcoma than true molluscum as the term is limited of late years.

Bateman was the first observer to accurately describe this affection. It is most common in the East and the Orient—also to dark skinned races as the negro, therein resembling keloid; but it is by no means absolutely confined to them. Some authorities aver that females are the most frequently affected, while others declare that the sexes are about equally liable.

The disease consists, in its generalized form, of pea to egg-sized superficial and integumentary neoplasmic nodules, more or less firm in consistency, well circumscribed, occuring singly or but few in number, these are mostly found on nose or cheeks, and regarded by their possessors as moles or warts. Occasionally met with on the hairy scalp, they are there designated *nævi pilosus*. Soft, filamentous warts of old people are a species of new growths bordering at least on molluscum, into which it is not unusual for them to actually develop as growths manifesting all the true characteristics of those tumors, and indistinguishable from such as are common to that affection. Berry-like nævi materni are also regarded by some competent observers as closely allied to molluscum. All move with the derma and are confined to it.

In the multiple form, as already stated, the tumors show varying dimensions and forms, from a small pea up to an egg or even larger. Later I shall speak briefly of a larger variety. These nodules are roundish, button- or plaque-shaped, embedded or seemingly subcutaneous, pyriform or polypoid when pendulous, generally pedunculated but sometimes sessile. In consistence they are either firm, fibrous and tense; or gelatinous, flaccid and flabby; most commonly the former at first and later becoming soft by absorption of the contents of their alveoli. The larger ones are frequently glistening and show a tense surface as if œdematous. Their overlying integumentary layer is mostly of normal hue but may be pinkish or purplish. Hairs and comedones sometimes occupy the surface particularly of the larger ones. Their general consistency is like a mammary gland, but firm pressure always yields a harder, vaguely defined central core over which the walls roll under the finger and give the peculiar condition variously denominated "empty purse," "scrotum without testicles," "seedless raisins," "loose bag." Virchow alleges that the small growths are sometimes protuded from the superficies of the larger.

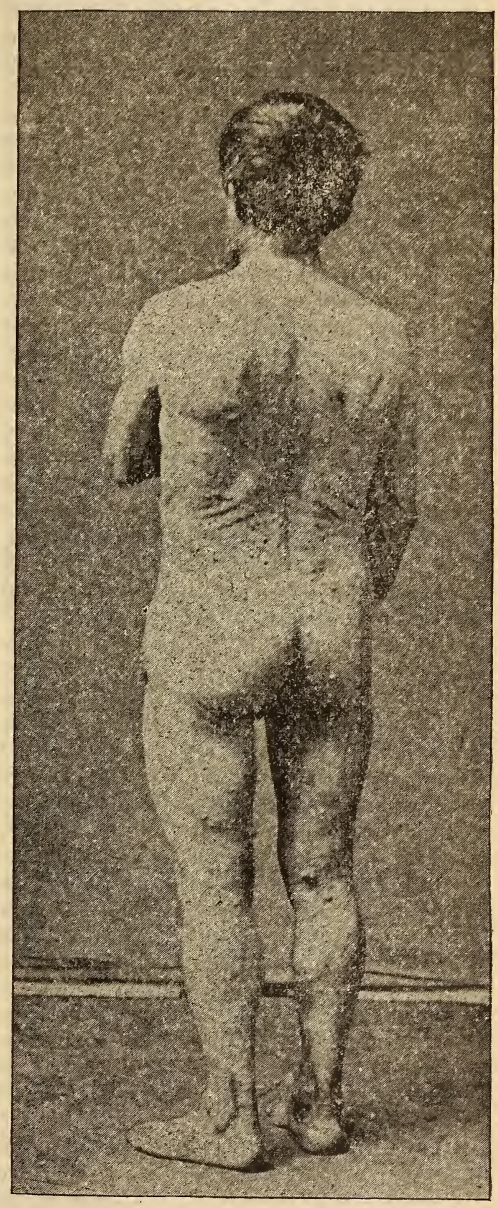
In special situations we find the fa-

vorite sites of predilection of the circumscribed molluscum at the last cervical vertebra, on the chest under the breasts, on the temples, the upper eyelid, behind the ears, on the hips and the labia majora, and when found in these situations it is rare for more than two or three tumors to exist. In the generalized form—which is the most classical and the one specially dealt with in this paper—the neoplasms present in numbers from a few to thousands and up to large size, for among the majority of minute ones a few quite extensive of area are usually found. These show a preference for the trunkal surface where they are occasionally more or less confluent, but the face does not often wholly escape nor the extremities. And they have been found in rare cases on the palms and soles as well as in the internal organs of the body.

Regarding subjective symptoms the affection is utterly devoid of inconvenience other than from the size, appearance, numbers or location of the nodules. They show not the least contractile tendency such as marks the kindred neoplasm keloid. They are indolent generally and of remarkable tardy growth. Dr. Hasnimoto, of Japan, exhibited before the Medical Society of Tokio a case of forty-two years standing wherein the patient carried on his person a counted total of 4,503 tumors of various sizes. Rarely the growths degenerate into carcinomatous conditions or sarcoma or epithelioma. Marasmus and tuberculosis are sometimes coincident states, and Hebra observed that persons affected with molluscum were uniformly stunted in their physical and mental growth though not imbeciles. Hebra's observation has been confirmed by most later dermatologists though the general health of these unfortunates is not commonly impaired to any marked degree.

Authorities mention true fibromata, myo-fibromata, nævi keloid and dermatolysis as kindred formations if not simply differing varieties of similiar pathological processes, and I confess that it seems to me as if all properly belong in the molluscous group as overgrowths of connective tissue of the dermal structures. And I do not know but Elephantiasis Arabum should share the same classification, just as eczema in its diverse forms was formerly confused by undue refinement of classification.

The commoner variety of molluscum consisting of one or few growths deserves passing mention—I refer to the form showing very large tumors, not the small nodules with facial predilection. This variety is generally called fibroma pendulum, pachydermata, dermal hypertrophy, etc.



These neoplasms attain sometimes enormous proportions as shown by the weights of some removed by various surgeons, notably one of 32 1/2 pounds taken off by Heyland. Most molluscum growths show a tendency after attaining certain indefinite

size to cease growing further, merely remaining thereafter as cumbrous bodies without growth. This is likewise true of the vast majority even of the smaller tumors of the generalized variety. And as bearing on the probable unity of the forms of skin hypertrophy already mentioned Anderson figures, in his excellent work on dermatology, a striking case of a collier in the old country who manifested, simultaneously in his person, all of the allied forms even to a leg like elephantiasis, the left being 7 inches larger in the circumference than its fellow, and the affection having been in progress from childhood. It seems as if persons with a dermal tendency to fibrous neoplasms may manifest it either by an extensive and almost universally existent energy of production in the way of multiple tumors or conversely by an absorption of the dormant powers of systemic overgrowth in one locality by the evolution of one or two enormous dermatolysis. And in these latter cases, as pointed out specially by Wilson, vascular increase or enlargement goes hand in hand with the fibrous hypertrophy giving venous dilatation to prodigous extent and rendering operative procedures for their removal particularly bloody.

The ætiology and pathology of this disease can be considered best jointly. With regard to the former, little seems to be known. It is generally thought to be either an hereditary affection or at least one of congenital beginning. Certain it is that all authors are agreed that it usually commences to manifest itself in childhood, though this is not an invariable rule if the histories of these patients can be given credence as my own case shows. Virchow cites a case where a man suffering from molluscum had a grandfather, a father and brothers and sisters all of whom were likewise affected. It is said never to have been seen among the high classes by clinicians or private practitioners so far as recorded evidence goes. The true cause is unknown.

There is a difference among pathologists as to whether the beginning of the neoplasms is in the connective tissue of the corium, in the connective tissue framework of the fatty subcutaneous structures, or the connective tissue of the walls of the hair follicles. Von Recklinghausen regards it as a fibroneuromata developed from connective tissue surrounding the fasciculi of the nerve fibres (the endoneurium), and the neurilemma is only secondarily implicated. Hardaway confirmed this by one necropsy, and others allege that this condition is always found postmortem. The nerve fibres themselves are unaffected save by pressure and are never degenerated. Smaller tumors of the skin sometimes allow nerve fibres running through them while the larger ones do not, and it is reasoned that this is because in the ones of older growth absorption has caused disappearance and connective tissue (fibrous) then predominates minutely, the stroma of these neoplasms shows intimately interlacing fibres holding in their interstices a whitish or yellowish semi-fluid material which can be squeezed out by firm pressure, and it is the final absorption of this material which gives the soft consistence and empty-purse feel to the individual tumors.

Dr. Taylor, of New York, directs attention to an occasional manifestation of molluscum following injuries, which has likewise been noticed by other writers, and which he explains on the hypothesis of nerve injury thus corroborating and emphasizing Atkinson and Von Recklinghausen in their neurotic theory of the origin of all molluscous growths.

As to the tendency of these tumors, it is worthy of note that spontaneous involution has happened in rare cases but so infrequently as to be more a matter of curiosity than of clinical moment. Generally the prognosis involves a gradual increase in size up to the uncertain limit already referred to, and numerically they multiply slowly from time to time. This increase is particularly liable to be hastened about the periods of puberty, pregnancy and the attainment of adult age.

Diagnostically the affection is one easy of discrimination even by the novice. Its multiple tumors of indolent character and without special subjective annoyance, of long persistence as a general thing when first presented before the physician, often dating back to very early life, its peculiar flabby empty bag feel, and the pedunculated aspect of some or all of the numerous tumors mark it distinct from all other skin affections. From Molluscum Epithiale, it is known by the absence of a characteristic central depression inseparable from that disease, or if there be a central comedo it is readily expressed, such neoplasms are in

or on the skin which is tightly stretched over them, not subcutaneous as is fibroma. Then, too, in fibroma the integument seldom presents any abnormal hue. Multiple sarcoma is sudden in its onset, generally in adult life, and often pigmentated. Lipomata are flatter, almost never pedunculated, and lobulated distinctly, as well as numerically not multiple. In sebaceous cysts the contents are easily squeezed out leaving them entirely empty. Multiple true neuromata are exquisitely painful and hyperæsthetic.

The treatment is simple to consider. It is practically wholly operative, notwithstanding that Fox advises, and avers his own success with acid nitrate of mercury to the small tumors and this combined with the use of the ligature to larger growths. But the knife or galvanic therapeusis are really all we have to aid us of reliable measures. Electrolysis sometimes succeeds, perseveringly resorted to, and is specially applicable to the facial region where cicatrices are undesirable, the cathode being used to the growths. In larger tumors galvano-causty is desirable when applicable at all by reason of their excessive vascularity and resultant hæmorrhage under the knife. Other plans of treatment have proved utterly useless and mean only a waste of time with ultimate disappointment.

Now, briefly, the salient points regarding the case. It is not such a startling one as to its array of great numbers of neoplasms as many others which have been pictured by various writers of text-books on skin affections, but it is a well marked one even in this particular and the photographs will speak for themselves. The patient, J. B., hails from Bledsoe County this state. He is 5 feet 2 inches high, stunted in stature, as most of these patients are. Weighs 115 pounds. Age 33 years. Spare of build and dirty in appearance. Skin abnormally oily with tendency to seborrhœa oleosa. Flesh firm and natural, palms of hands show that he labors hard and continuously. Certainly is not an invalid as to general health if present physical appearance count for anything. Mentally he seemed to be a fair average of his class, though not by any means bright. The photograph was taken at my request July 8th of last year, with the patient wholly stripped except a towel to humor natural modesty.

The history given by this party must be taken with a grain of allowance, because of the fact that he is earnestly desirous of securing a pension from the Government on account of his affection and therefore the date of appearance of this eruption is given as 28 years ago—at the age of 25, you see—and while he was a prisoner in Andersonville. He attributes it to a precedent attack of scurvy, and alleges that the tumors appeared in large numbers all at once, which is hardly credible in the light of common history of these attacks. He is likewise emphatic in his averment that it produces great, even excessive, discomfort by pruritus, which is not the rule in such cases. The tumors are not very large, but numerous, though not nearly so much so as many of the figured plates exhibit in the works already mentioned. The reliability of his statements you can form your own conclusions upon when you allow for his relation to the prosecution of a pension claim based on disabilities caused by army service. Further than his picture and history, I can give you no light touching the case as it has had no treatment from me, nor is it now under my observation. But applying to it the general rules governing these manifestations we should conclude as a probability that this dermal trouble began in early life—likely in childhood—and will continue with possible slow increase as long as he lives, without great inconvenience except as regards its cosmetic effect which to him I presume is not a factor that would count very far. He denied its existence, of course, in any other member of his family of the present or past generations, and I had no way to verify his assertions.

HEMIHYPERTROPHY.

Möbius (*Münchner med. Wochenschrift, 189, No. 44,*) reports the case of a boy fourteen years of age, whose parents were neurotic. The skull was symmetrical; the left cheek larger than the right. The left extremity in all parts was stouter and firmer than the right. Sensibility and reflexes were normal and equal on both sides. The hypertrophy was looked upon as a pathological change. It is worthy of note that the vaso-motor disturbances of the skin were the greatest over those parts which were not hypertrophied.

TWO CASES OF DISLOCATION OF THE END-BONE OF THE THUMB.

By J. S. WIGHT, M. D.,
PROF. OF OPERATIVE AND CLINICAL SURGERY AT THE LONG ISLAND COLLEGE HOSPITAL, BROOKLYN, N. Y.

Dislocation of the end-bone of the thumb is of much interest and importance to the surgeon for the following reasons: The injury is rare; it is not easy to treat; a disabled thumb is more or less serious; and perhaps we do not know all about this injury, since systematic writers have not considered it fully. Two cases of dislocation of the end-bone of the thumb have recently come under my care: it seems to me that they deserve reporting.

Case 1.—Inward dislocation of the end-bone of the left thumb.—M. B., a laborer, age 50 years, Jan. 26th, 1892, was standing near a ten-foot high pile of bags containing rice, when one of the bags fell upon him and knocked him down, injuring his left hand and cutting and bruising his face. He was brought to the College Hospital soon after the accident, where I examined him. He said he struck the end of his left thumb upon the floor planking of the dock. The thumb presented the following appearance: The end-bone was adducted and bent inward; the base of the bone was prominent on the inner aspect of the thumb; it was carried slightly backward, but not enough to make it a backward dislocation; the head of the middle thumb bone was projecting under the integument of the outer aspect of the thumb; the end of the thumb was inverted toward the index finger; there was marked immobility at the seat of the last joint of the injured thumb. There was an inward dislocation of the end-bone of the thumb, and the patient complained of severe pain when I made an attempt at reduction. The tendons of the flexors and the extensors were carried away from the head of the middle bone, and the base of the end-bone had torn the capsule and escaped from it; the outer aspect of its base was resting against the inner side of the middle bone. I did not think it expedient to attempt reduction without anæsthesia for two reasons: under anæsthesia I would be more apt to succeed; and in case of failure, my patient would be ready for an operation.

Reduction.—After anæsthesia I seized the end of the thumb, my index finger grasping the dorsum of its base and my thumb pressing upon the palmar aspect of the dislocated bone; I bent the end bone over backward so as to meet the next bone at a right angle, and at the same time pushed the base of it toward its normal position; the projection on the side of the base of the bone, by means of rotating it, engaged in the rent of the capsule; and then by pressing firmly and carrying the bone outward the reduction was brought about with a "click," and as this movement was completed the thumb was straightened out. The forearm, hand and thumb were placed upon a wire-cloth splint made in the form of a trough. The case did well and good motion of the end-joint of the thumb was recovered.

Case 2.—April 5th, 1892, Mrs. B. was sent to me by my colleague, Prof. Skene. She said that she fell down stairs three weeks before with a baby in her arms, and injured her right thumb. The end of it was projecting directly backward, and the doctor who saw it pulled it out straight, and told her to poultice it. When I saw her the thumb was still very painful, and showed the characteristic deformity of a backward dislocation of the end-bone.

Reduction—I was assisted by Dr. Welty, the family physician and Drs. Cochran and Wm. Skene. The patient was put under the influence of ether. Then I pushed the end-bone of the thumb upward and backward to a right angle with the next bone; next I hooked my index finger around the base of the dislocated bone; while I pressed against the palmar aspect of the thumb of my patient. I pulled with my index finger as forcibly as possible; in a few moments the base of the dislocated bone slipped over the head of the next bone; at last I flexed the end-bone of the thumb, making pressure over the dorsum of its base, and at the same time making pressure backward upon the head of the middle bone. The two bones had to be held in place until the splint was applied. During reduction crepitus was felt, showing that the edge of the articular cavity of the end-bone had been slightly fractured. The splint was made of wire-cloth, and embraced the thumb, the wrist, and part of the forearm. There was a

constant tendency for the end-bone to get out of place again, which was not easily controlled even by the splint. Firm extra pads were applied: one over the dorsum of the base of the end-bone, and the other on the palmer aspect of the head of the middle bone. Every three or four days I made passive motion of the end-joint of the injured thumb. While the bone appears to remain in place well enough, there is a tendency to anchylosis. Nor do I believe that the patient will ever regain the entire use of her thumb, yet it will be a good opponent of the fingers, and be very useful.

POST-DIPHTHERITIC PARALYSIS.

By FRED W. D. EVELYN, M. B., C. M.

CLINICIAN MEDICAL DEPT. UNIV. CAL. AND CLINICIAN DISEASES OF CHILDREN SAN FRANCISCO POLYCLINIC.

The subject of post-diphtheritic paralysis is one that must ever prove attractive, containing, as it does, factors not merely of diagnostic and immediate prognostic value, but conditions which can not be ignored in the deduction of final or ultimate prognosis. And I question if we are justified clinically, whatever we may be pathologically, in considering diphtheria, or any of its so-called classical concomitants, as distinct, isolated, well-defined morbid processes, constant in their manifestations or lending themselves to a uniformity of intensity in their effects directly proportioned to the extent or the locality of the areas primarily involved.

Paralysis, it is true, does not, as a general rule, make its appearance until the disease, or, perhaps, more correctly, the more evident indications of its presence, are on the wane, or passed away altogether; but this fact, to me, does not seem sufficient to warrant the conclusion arrived at by some, that post-diphtheric paralysis is simply an integral and essential stage of the disease. To do so would be equivalent to saying that those cases (leaving out those severe examples which are too rapidly fatal) not exhibiting paralytic phenomena had been aborted, and did not pass into the third, or final stage. I prefer, rather, to consider paralysis as a side issue, a resultant, and not a definite phase of the primary disease. Even in those cases where there has been an absence of marked symptoms, where, for example, a supposed simple catarrhal pharyngitis, or nasal voice, are followed by the familiar symptoms of paralysis, I conceive an antecedent diphtheria, so modified in its manifestations that its true character was not surmised until a super-induced condition, viz., paralysis, furnished an interpretation of the true character of the disease.

The paralysis, in the early stage, at least, has some features which assist in its differentiation, not merely its relation to an attack of diphtheria; but the character of mutability, shifting from one area of involvement to another, this peculiarity being altogether independent of any alteration in the other evidences of the presence of diphtheria; in other words, its manifestations are discrete rather than progressive.

It is also to be noted that when it simulates more profound organic lesions its phenomena in their order of appearance are exactly reversed; e.g. bulbar crises in organic lesions appear late in the attack, in diphtheria early, and, furthermore, exhibit a tendency to sudden onset and marked intermissions.

I have noted also that, with the exception of palatine paralysis, motor involvement is in excess of sensory, in palatine both are equally intense. In recovery, however, sensation, in most cases, takes the precedence of motor improvement;—and, again, I have noted that voluntary contractions are directly proportioned to those artificial contractions produced by electrial stimuli, a point of interest, differing in its relation from the phenomena observed in the recovery of those forms of paralysis which have demonstrated the qualitative changes known as the "reaction of degeneration," where the power of producing voluntary contractions is regained before contraction can be elicited by either the interrupted or continuous current.

The order of the appearance of paralytic symptoms is not always constant. In a few cases observed the loss of the tendon reflex, which is generally considered the earliest symptom, was preceded by a nasal voice with well-marked palatal involvement; once recognized its duration is more persistent than other symptoms, except in those cases where permanent paralysis is established, when the knee reflex may be ultimately returned to normal action.

Again, in many cases, we have to recognize a condition of general, or, more correctly, a multiple paralysis. One of my cases exhibited this in a marked degree; a double strabismus; lower extremities useless; muscles of trunk and neck so involved that the body was limp and the head moved after the manner of a universal joint; organic reflexes, with the exception of deglutition, which was difficult, were unaffected; hearing normal, and actual vision only modified by the presence of the strabismus; but there was a complete absence of any trophic changes. This latter point is worthy of emphasis as I consider it an evidence of the early stage of paralysis, *i. e.* a stage prior to any actual quantitative changes, and, therefore, of important prognostic value, as, in their absence, a very favorable prognosis may be given. This naturally leads up to the consideration of the morbid changes manifested, which consideration lends itself to a natural division, or, perhaps, I should say that, clinically reviewed, we should recognize two distinct stages, and two separate tissues, (nerve and muscle), involved.

The recognized fact that in many cases the sudden disappearance of the paralysis in one group of muscles, to re-appear in another, would scarcely admit of the conclusion that an actual alteration, a pathological condition, had been induced, either centrally or peripherally, but simply a functional perversion without any molecular or structural deviation. We have, in short, a transient cause producing a transient effect. Let, however, mere functional perversion become persistent, then irritation will become inflammation, and precipitate pathological conditions which in turn can *per se* inaugurate changes not essentially dependent upon the the primary cause. This sequence of events is readily admitted in other forms of paralysis; e. g. a progressive muscular atrophy continuing to extend long after the exciting cause has ceased to exist, and I think progressive post-diphtheritic paralysis warrants a like deduction, whether the cause acts from a central or a peripheral origin.

The origin of the paralysis as *centric* has been advanced, but that is not easily maintained when we note that the ramifications of a nerve trunk are not equally involved, some fibres, indeed, maintaining a perfect normal function; again, it is difficult to conceive a lesion so selective in its action that nerve centres closely adjacent are not, in a measure, at least, correspondingly affected.

As to the peripheral degenerative changes stated to be observed in certain cases, whilst admitting their existence I am in favor of considering them secondary—super-induced conditions called into existence but not further dependent upon the primary excitant for their subsequent progression—for observations made at this stage reveal, not a simple neuritis with a concomitant interstitial inflammation, but an actual necrotic degeneration, affecting the component parts of the nerve structure.

The second tissue to be considered is the muscle itself; its fibres are found to exhibit cloudy swellings and fatty degeneration, and, in some instances,—especially when the muscle is in contact with a super-imposed diphtheritic deposit—the appearance presented suggests a penetration of cellular elements, either leucocytes or modified blood corpuscles, forming foci capable—as it were—of producing necrobiotic changes in the tissues which they invade. This may possibly account for the slough-like character assumed by traumatized areas on which a pseudo-membrane has formed.

The more vital forms where the cardiac, or cardio-pulmonary system become implicated I have not had sufficient opportunity to investigate,—but I would favor the idea —in case of cardiac paralysis—that the action took place reflexly, through the plexus of innervation, and was not analogous to the asystolia as found in dilated heart or mural degeneration.

Reviewing these data I feel justified—to a degree, at least, in endorsing the theory that paralytic changes are primarily due to a morbific factor—a ptomaine—generated by the specific productant of diphtheria, and at first instituting a profound functional disturbance,—which disturbance ultimately reaches a stage of independent activity, establishing a clinical line of demarcation, if you permit the term, not demanding, prognostically or therapeutically, undue consideration of the original cause.

Reaching this stage the ultimate prognosis must be based upon the actual extent of the neurotic changes elicited by the usual methods of testing a nerve case, and treated as the symptoms demand. Thera-

peutic agents will not now require to be the so-called specifics for diphtheria, but must appeal to the condition actually present—asthenia or anæmia, as it may be.

During the stage of simple functional disturbance, or ptomaine activity, we are called upon to treat the diphtheritic poison as the active cause, and in measure as we prevent tissue irritation we reduce the tendency to secondary complications.

A clinical division such as this will, I presume, be beneficial, and in endeavoring to follow its suggestions we shall avoid much of the disappointment experienced in the indiscriminate treatment of diphtheritic sequelæ. I shall not now refer to treatment in detail, for such a clinical division as the above sufficiency suggests the treatment required.

MECHANICAL TREATMENT OF CHRONIC RHEUMATISM.*

L. P. WALBRIDGE, M. D.
DECATUR, ILL.

You have all had come to you from time to time for relief cases of chronic rhumatism. By rheumatism in its widest sense I mean shifting pains in the joints, the parts surrounding the joints and in the muscles. These poor sufferers come to us in various phases. In a few the nutrition and general health of the patient seem not to be materially altered, but in a great majority of cases there will be found altered nutrition with its resulting change in the blood, nervous system and muscular tissues. Rheumatism affecting the muscles in its various locations upon the body is amenable to treatment by remedies both local and constitutional. Those remedies that have an alterative process upon nutrition seem more potent for good. For instance, the salicylates changing the quality of the blood; iron a constituent of the blood to the red corpuscles of which it gives color; morphine and atropine increasing the heart's action and sending the blood with greater force thereby setting up molecular changes; strychnine, alchohol, arsenic, antipyrin, ammonia, guaiacum, iodide of potassium, sulphur, cod liver oil, counter-irritants, friction and food consisting of all these, setting up metabolic changes altering the blood, nervous system, and general nutrition of the parts. Sometimes a single drug of this list, or a combination of some of these, will act in some cases admirably, but in some cases this plan of treatment must be continued for some time until there is brought about an altered condition existing either in the blood, nervous system or muscular tissues, each case peculiarly adapted for a certain line of treatment. But undoubtedly we will have cases come to us that will seem to resist all medication, then we will have to devise some mothod by which we can cure our patients or they will slip out of our hands and go from physician to physician and at last become discouraged and give up all hope of ever becoming well. The class of cases that will resist all medical treatment is that affected with chronic rheumatic arthritis which presents the clinical features of pain, impairment of function in joints, muscles, contraction of tendons, swelling and adhesions. These cases are not benefited by any form of treatment other than that relative to the joint. Then what is the proper method of treatment and indications for treatment? They are to relieve pain, promote absorption, hasten the removal of adhesions and set up molecular changes in the surrounding parts. Only by mechanical means including calisthenics with its healthful exercise of body and limbs can we then hope to break up existing adhesions, to smooth the roughened articular cartilages, strengthen the contracted tendons and nerve tissues and restore the joint to its former suppleness. First, by a process of stroking and kneading in a centripetal direction, stimulating the lymphatics and venous currents and surrounding tissues to greater activity, carrying the lymph with greater rapidity toward the centre. By these means the lymphatics and circulating system are stimulated, setting up changes in the nutrition, causing healthy activity in the parts. In cases where there is perceptible defective nutrition constitutional remedies with dietetic medication must be employed. I will give you a few cases that came under my care. After exhausting all other methods of treatment, the patients becoming tired of treatment and threatening to go to some springs for relief, I began mechanical treatment by manipulation of

*Read before the District Medieal Society of Central Illinois at Pana, April 20th, 1892.

parts, stroking, kneading with active and passive moments.

Case 1.—Mr. H. J.., a day laborer, age 46, came to me in April of last year. Complained of severe pain in back and right thigh down to the knee. He was scarcely able to walk by use of cane, could not raise foot to stair steps without the help of both hands grasping and lifting it up. He said his right leg had troubled him for two years and had constant pain on posterior part of thigh. While seated he could not raise himself without the aid of his cane. While he was seated he could not raise his foot from the floor with leg extended more than one foot, it causing him severe pain in posterior part of thigh in knee and hip. There was great sensitiveness at the point of exit of sciatic nerve and at different points along its course and in popliteal space. Knee slightly flexed and steps on toes. Patient well nourished and otherwise in good health. After faithfully trying medicinal means without any benefit, I began mechanical treatment by kneading and stroking of parts, all kinds of movements being very painful to the patient. It being very difficult for patient to raise foot or thigh, I laid him on the table and began the simplest movements, as raising the affected member as high from table as possible, desist when the pain becomes severe, for in these cases flexion or extension are very painful in hip and knee joints. As the distance in raising the foot is increased so will the pain become lessened when the patient is up and about. Rest patient and try again increasing the height each time. By the manœuver the sciatic nerve and the muscles and tendons are put upon a stretch, for in most cases these tissues become shortened, their physiological action impaired, and by our endeavor to put these tissues on a stretch can we hope to bring back their normal physiological action. Alternate by stroking posterior part of thigh in a centripetal direction and kneading the muscles, having for its object the alterative changes that will follow in muscles and nerves improving the circulation and stimulating lymphatic resorption. Change movements by letting patient step over some object, say one or two feet high. It is a good plan to direct patient, for by partial disuse the cerebral powers causing the requisite contractions seem to be lost, so by directing patient this lost power is gradually restored. Then direct patient to bend knee on floor raising himself up several times. All of these movements can be increased each day. I then instruct patient to walk properly stepping on heel instead. By this manner of walking all the parts are kept on the stretch. These various exercises should be gone through every day. The object is to keep the parts active and giving patient all the movements you can employ. This patient had been affected about two years. When under treatment eight weeks was discharged cured. More than a year has elapsed and he has had no return of rheumatism. The daily exercises lasted about twenty minutes, long enough to keep parts thoroughly exercised and not exhaust patient. In these cases the physician will become tired, and he will find that if he does his full duty it will be work for him as well as the patient.

Case II. Mrs. H. K., aged 36, sent for me to go and see her at her home in June of last year. She came to the door on crutches. She said that she had been troubled with her feet and right knee for 18 months and had been compelled to use the crutches for the past ten months. On examination I found both ankles swollen, would pit some on pressure, movements entirely lost by her own effort, and any effort in making active or passive movements caused her so much pain that all such efforts were delayed for some days. Right knee joint affected with constant pain, synovial exudation quite abundant, could not put knee on extension the pain was so sickening. The general nutrition was impaired. The heart was in proper position, and I could distinguish no murmurs, but the first sound of the heart was weak. It seemed to beat no stronger than second sound. It was easily excited and she complained of being faint at times and thought her heart would stop beating. For her heart I put her on a mixture of tr. iron, quinine, strychnine and magnesia sulphate with a vehicle of glycerine and water, to be shaken and taken three times a day in plenty of water. After taking this mixture for a few days she began to improve in strength, her heart increasing in force, but her ankles and knee remained unchanged. I began by using hot and cold water on parts, alternating until the sensitiveness of parts was diminished, then gradually beginning by stroking and

manipulating parts, followed by active and passive movements. This plan of treatment was continued for two weeks, increasing the movements each day at which time I took her crutches from her and told her not to use them any more, but to walk without them and try to walk properly. Her strength in ankles gradually returned and the swelling in ankles subsided. The active and passive movements were continued for six weeks, and at that time she was well enough to stop active and passive movements. The constitutional treatment was continued for two months.

Case III. Mr. J. Mc K., a plasterer, age 46, sent for me in April of last year. I found patient confined in bed, could not turn over in bed without help. On examination I found some tenderness in loins on either side of spine in lumbar region, but no change of structure was apparent. I prescribed for him quinine and sodium salicylate, two grains of the former, and four of the latter, to be taken every two hours until the physiological action of the drugs was produced. This followed after they had been continued for ten hours, but no relief of the symptoms followed their use. I followed by using phenacetine in ten grain doses every three hours until the effect of the drug was produced. This in a measure reduced the pain, but the weakened condition of the heart that followed and general prostration compelled me to to discontinue the drug, and resort to stimulants. I immediately administered a hypodermic of morphine and atropine, which was followed by improvement of all symptoms, but after the effects of the hypodermic had passed the pain returned with as great a force as at first.

Three days had now passed and my patient was no better. I then resorted to mechanical treatment, first by kneading muscles of back and stroking them. After I had proceeded in this manner for a few minutes my patient could turn over in bed, and said that he was feeling better. The next day I got patient out of bed and began active and passive movements by having him stoop down and raise up several times, then bend backwards several times. From this time patient kept on improving and remained up. It astonished me to see how fast this patient improved after active and passive movements, suffering with such a severe lumbago.

Case IV. Mr. J. D. A., machinist, aged 47, came to my office last October, walking unsteadily by use of cane, complained of pain in back and right hip and thigh. Said he could not lift foot so he could walk well. On examination I found tenderness over exit of sciatic nerve and in popliteal space, knee slightly flexed, stepped on toes. While seated, when I lifted his foot he cried out that he came "to be cured and not killed." I explained to him that he must make up his mind to bear a little pain and that he would get well. I laid him upon the table and began by lifting foot as high as possible, stroking and kneading hip and thigh, gradually increasing height. I then changed his movements by having him walk and step over some object increasing height. I instructed him to kick as high as he could several times a day with this leg and keep it active for it needed activity and not rest. I took his cane from him and instructed him not to use it any more. I increased all movements as I had in case one, and after three weeks' treatment patient was discharged cured.

Case V. Mr. C. A., merchant, aged 66, came for treatment in March. He complained of pain in right shoulder, arm and fore arm at night so bad that patient could sleep only by the use of a hypnotic. Examination revealed tenderness at points on shoulder, on inner surface of arm along course of median and musculo-cutaneous nerves. The grip of hand was so perceptibly lessened in right hand that patient could not hold a glass of water. This condition had lasted nearly two years and was constantly growing worse. I began by stroking, kneading and manipulating muscles of shoulder, arm and forearm, then directed patient to extend arms over head, which was very difficult for him to do. He could not fully extend arm, it gave him so much pain. I directed him to strike up using all the force he could, first with one arm, then with the other arm, then directed him to strike out from body, then strike down, then throw arms backward as far as possible. By degrees these movements were increased in force and became more easy for patient. I then gave him weights to hold out, increasing the weight until patient could hold out as much with one arm as with the other. All of these movements were kept up every day for four weeks when patient could sleep without pain. This patient had re-

sorted to medicines for more than a year for the relief of this cervico-brachial neuralgia without any benefit. To give more cases will make this paper too long and tiresome. These cases being unusually severe ones will illustrate the method of treatment and its results, contradicting the old teaching that these cases need rest.

What physiological effects are produced? The primary effects are upon the joints, muscles and nerves. In the joints stiffness, adhesions and contracted tendons are broken up and got into a proper condition for absorption. The secondary effects are produced upon the circulation and lymphatic system. The muscles and nerves are surely elongated, heat must necessarily be evolved by the manipulations, changing the molecules of the muscles from an inactive to an active state, causing internal work, setting up molecular changes in all the surrounding tissues. The circulation and lymphatic system are stimulated. By stroking in a centripetal direction the lymph and venous currents are increased, altering the whole process of nutrition. The waste material is carried away by increased action of the lymph and circulation, and new nourishment is more readily carried to all parts, feeding them and enlivening the whole organism.

HYPNOTIC EFFECT OF WARM BANDAGES

Warm baths, as is well known, produce a calming effect, and tend to bring on sleep, and Alldorfer has attempted to apply such a method in patients where a sedative effect is desired and yet where a bath is inapplicable. His method consists in wrapping the lumbar region and belly with linen cloths soaked in warm water, and then covering them with oiled silk or rubber cloth, so as to prevent evaporation, while the whole is kept in place and loss of heat prevented by a flannel cloth. This procedure is of ready performance, and the author says that by this simple means he has obtained the most astonishing results in the treatment of insomnia. By dilating the large vessels of the intestinal tract, by the warmth applied, a condition of anæmia of the brain is produced, favoring sleep. These large intestinal vessels have very properly been termed the waste-gates of the circulatory system.—*Jour. de. Med. de. Paris.*

Society Reports.

THE CLINICAL SOCIETY, OF LOUISVILLE.

Stated meeting, April 19th, 1892.

Dr. P. Guntermann, President, in the Chair.

BOILS AND THEIR TREATMENT.

Dr. W. C. Dugan: I shall not apologize for selecting the unpretentious subject of Boils and their Treatment for this evening's discussion, for, be it remembered that no field of minor surgery has been so ignored for the more attractive themes of major surgery. Text books and works on special surgery are given over largely to abdominal, cerebral and thoracic diseases, and give the subject of boils a mere passing notice, or else forget it entirely. While the journalist discusses at length appendicitis, cerebral localization, operation of microcephalus, pelvic and other forms of major surgery, and rarely finds a moment to review one of the most common of all surgical diseases, that of boils. Another reason for selecting the subject, is, that it is one of uniform interest, alike to the surgeon and general practitioner. Before discussing the treatment of boils, which is the real purpose of my paper, I shall first invite the Society to a brief review of the pathology of the disease. We hear patients say that they are the product of bad blood, to humor of the blood, to the season of the year, etc., and we are not slow to criticise them; but they are as nearly right as the teachings of some of our works on surgery, in which we find that they are caused by certain forms of kidney disease, diabetes, etc., etc. While they are met with oftener in patients with bright's disease, diabetes, etc. than in healthy subjects, we must not jump at the conclusion that these constitutional conditions are the cause. Not infrequently we have patients say that Doctor so and so told them that their successive crop of boils was due to high living, bad digestion, etc. Yet, you can look back over your experience and recall many cases of bright's disease, diabetes, indigestion, without developing these troublesome pets, about which we hear so much of their depuratory action, purifying the

blood, and their value of $5.00 each, in the spring of the year.

The relation of the conditions above mentioned to boils is indeed rather intimate, but they are not the essential causes by any means; they are the accessory causes and act by simply lowering tissue resistance, and thereby make way for the real cause of the disease. If pus from these foci of inflammation be carefully examined, it is always found to contain certain forms of vegetable life, which belong to the family of pus-forming microbes. The numerous infections from patient to patient, or patient to surgeon, is so frequent, that the infectious character of the disease is hardly to be questioned. But that, to the minds of the hyper-skeptical, is not sufficient to prove the microbic origin of the disease. But since the disease can be produced by the inoculation with pure culture, there is hardly room to longer question the microbic origin of the disease. The same kind of pus-microbe causes all forms of suppuration in boils and carbuncles, which is in fact but a number of foci placed very close together. I am surprised to see in modern works on surgery, the old idea still adhered to regarding the cause of carbuncles. They are not caused by the anthrax bacillus which is found in the malignant pustule, but the staphylococcus and streptococcus. *Treatment*: The common way of treating boils is but little better than leaving them to nature unaided. We are apt to say to the patient, go home and put on a poultice, and come to see me in the course of a day or two. The patient obeys instructions, and how is it done: 1st. He does not know how to make a poultice. He feels that the poultice has some specific action, entirely unmindful of the fact that its virtue is in the heat and moisture. He applies a little half-cooked poultice and goes to bed. It is cold by the time it is on. The next morning it is taken off. If the patient could have done anything more conducive to the growth of the germs and the development of secondary crops of boils, I am unable to see it. The moisture of the poultice at or about the body heat is certainly the best condition for the growth of microbe life. Poultices as generally made and applied are absolutely harmful, and should be discarded.

I would not like to be understood as denying the relief of moist heat, which has a two-fold action; 1st it lessens tension and thereby mitigates pain, and if the heat be 104 to 110 F. as should be, it arrests the development of microbes. There is but one form of poultice to be relied upon, in my judgment, and that is hot bi-chloride gauze wrung out of boiling water and applied in a thick pad over the parts and extending some distance from the inflamed centers, covered with oil silk, rubber tissue, waxed paper or oiled paper. It has all the advantages of the old flaxseed poultice, without the objections. The moist heat is sure to give the patient much relief, by lessening microbic action and causing tissue relaxation.

Another line of treatment is the painting of parts with pure carbolic acid, tincture of iodine, turpentine or some other powerful antiseptic. It is found that this will abort a certain per cent. of the cases if done in time. But, since it seems settled beyond all reasonable doubt, that it is a microbic disease, it appears, that anything but applying the remedy directly to the focus of the disease, either by free incision and the application of antiseptics, or the injection into the tissue of the same, are less trustworthy and should be discarded.

The habit of waiting for pus formation is a bad one. Nature has by this time mastered the situation, and will soon get rid of the pus without aid of the surgeon's knife. I make it a rule to treat these cases of acute phlegmon, as soon as they come under observation, and the following plan has proven eminently satisfactory: Parts washed thoroughly and four per cent. solution of cocaine injected, which if not done carefully will give unnecessary pain. The solution should be placed in the deeper layer of the skin. It will be found that the tissue can be laid freely open after the injection without pain. Then a probe wrapped with some absorbent cotton saturated with pure carbolic acid, is applied to every part of the wound, pushing the probe out into the tissue to be certain that no part of the boil cavity escapes. Then the wound is packed with cotton saturated with the pure acid and some gauze dressing applied. The relief is almost instantaneous. The operation can be done without local anæsthetic. The acid, after the first few seconds, acts as an anæsthetic.

I have not found it necessary in all cases

to incise the phlegmon but just inject the pure carbolic acid into the inflamed tissue. I am much pleased with the injection and shall give it the preference until convinced that it is less to be relied upon, than the incision; but, so far, have not had a failure.

Dr. T. Satterwhite: I think the paper read is a very interesting and valuable one. I have not used a poultice for any purpose for many years, not even in pneumonia. I use fomentations with spongio-piline covered with oil silk, which I find to be much lighter, handier and cleaner than poultices. I have often opened boils in their incipiency, and have never found relief before the cellular structure has melted and suppuration taken place. It is something like whitlow—if you open before the structure is broken down, before pus has accumulated, no relief follows the opening. If the injection of carbolic acid is followed by cauterization with nitric acid, I think it is an exceedingly interesting and valuable suggestion. Its simplicity makes it that much more interesting to me, because we have very few suggestions on the treatment of these simple, yet common troubles.

Dr. J. M. Krim: I want to ask Dr. Dugan if he thinks it advisable to use the injection in all cases of boils, irrespective of their indurated condition.

Dr. W. C. Dugan: Yes, sir, sometimes it is necessary to make several injections.

Dr. J. W. Irwin: The treatment of boils for the most part, spoken of by Dr. Dugan, is original with himself, although the antiseptic treatment of boils has been broached for several years; but how to perform the antisepsis seems to have been a great problem in the treatment of boils. I think, however, that in so far as the pathology of the disease is concerned, that he lays too great weight on the microbe,—that cannot be the pathology of the disease, it would be an exciting cause, which gives rise to an altered condition of the tissue involved. I think that is probably what the doctor intended rather than to say "The microbe was the pathology of the disease." So far as the pathology is concerned, we all know that it is nothing more than the result of ordinary inflammation, having, according to later ideas, a microbe for its origin or cause. When boils first make their appearance, it is not common to have more than one, two or three at a time, but, if we produce undue pressure on these boils, or if we prick them we are very much more likely to have a crop of boils in the neighborhood of where the first one made its appearance, than if we had soothed them by proper applications. My experience with boils has been quite considerable, have recently had a case of a gentleman who had one-hundred and three boils consecutively on his body. The man had had severe nervous prostration for some time preceding the outbreak of these boils, and that condition of the system is one favorable to the production of that class of disease. This was not the only case nor the first one, where I thought I could trace the cause of the boils to a disturbance of the nerve centers. Whether due to wasting diseases, such as consumption, dysentery, typhoid fever, gastro-intestinal disorders, to diseases of the kidney, including diabetes, and Bright's disease, diseases of the liver, or of the other internal organs, I have found boils, generally speaking, most frequently to occur in cases where the nervous system was involved in some form of disorder, especially some form that had greatly impoverished that system. I have also found that boils occur quite frequently in persons suffering from disease of the bladder, enlargements of the prostate gland, and so on. Therefore, I have come to the conclusion that the true causes which underlie that class of disease are, as before stated, due to disturbances which lower vitality and weaken the nervous centers of the individual. So far as the microbic origin of the disease is concerned—I have seen mention of it a number of times; whether it is true, or not, I am not prepared to say—I assume that it must be true. One thing is very certain that the microbe has a better soil to do work where we have this kind of nervous disturbance.

As to the management of boils in incipient stages—I have never applied anything to the surface of a boil that arrested its progress, and, so far as I remember have never made use of anything in the form of a poultice that cut short the progress of a boil. I have had hot water applied, which is the domestic remedy, as hot as the patient could bear it, temperature of 212° and probably higher than the boiling point without the effect of arresting the progress of the boil; I have applied iodine locally, carbolic acid locally, and I have applied,

as Dr. Dugan states, antiseptics, after making an incision. I have applied carbolic acid in the wound, and have never been able to arrest boils, or furuncles, with any of the applications named. I have never found any single remedy as beneficial in the treatment of boils as arsenite of iron. In those cases where boils have occurred most frequently, I have found that unless some constitutional remedies were given, such as arsenite of iron, that my patient would have a great many boils before he got well. I have not found poultices to do very much good, except for their soothing effect. I have found, however, that as soon as my patient could be placed under the effect of arsenite of iron, the number of boils would very materially diminish. I have never tried injections as mentioned by Dr. Dugan, but see no reason why they should not be useful;—I fear for the most part, however, their use would be impracticable because very few people would be willing to have a needle introduced into the tender parts. I think we should have some regard for our patients' feelings. Whether boils are caused by, or the result of, some impurities of the blood, seems to be a question that is hard to solve. But, we do know that it is an uncommon thing for boils to occur in a perfectly healthy subject. It has long been believed that boils were a source of drainage to the system, but in my opinion they leave the blood in much worse condition than it was at first. I think a man is rendered more susceptible to other forms of disease, owing to the waste they cause.

I do believe that what underlies the majority of boils is some morbid condition of the nerve centers.

Dr. W. Cheatham: I see no reason why boils should not be relieved by incision, the same as periostitis, and our experience with periostitis is, that it is often permanently relieved by incision, and in many cases without the formation of pus. In considering the subject of boils, lately the question of sty has come up, and examination has shown that not only the acute, but the chronic sty to be microbic or parasitic in origin. Carbolic acid is used very largely about the eye; in a great many cases we abort abscesses of the cornea, or are supposed to, and relieve existing abscesses, by the application of pure carbolic acid:—We scrape out the ulcers of the cornea, thoroughly cleansing them, and apply carbolic acid well to the base with good effect.

Dr. P. Guntermann: Speaking of whitlow not being relieved until pus has formed,—the reason for that is, the periostitis is perhaps only confined to such an infinitesimally small place, that in making an incision you do not strike the whitlow, and, consequently, it is not relieved. Concerning the use of poultices,—I suppose a great many have discarded them by this time, that is, flaxseed poultices, using other preparations in the form of fomentations in preference to flaxseed; slippery elm, &c. The fact that one boil is followed by a crop of boils in the same neighborhood, would rather point to septic origin of the first boil, or, if not the real origin of the first boil, at any rate that there are microbes at work, and spread very rapidly, otherwise you would not have so many boils near the first one, you would have them on other parts of the body. The treatment spoken of by Dr. Dugan is nothing new, as the same line of treatment has been followed for at least twenty-five or thirty years.

Dr. T. Statterwhite: Where boils are isolated, or just confined to one locality, is it not very often due to diseased follicles? Now, in patients who are suffering from an aggravated form of acne, we often find good sized boils. I have always understood that these were due to a closure of the mouth of the glands, from disordered and pent up secretion of them, so causing enlargement and suppuration.

Dr. W. C. Dugan: In regard to the pathology of boils, which is but the pathology of infection—there is no form of infectious disease known to-day, but what is microbic. We used to speak of the pathology of inflammation being caused by trauma, bruises, etc., etc.; they simply open up the unions through which the various microbes enter the system. I think it is now accepted by all modern pathologists, that the essential cause of every form of inflammation, so for as is known, is microbic. It is quite true that dysentery, diseases of the liver and kidney, and so on, lower the physiological resistance and so produce favorable conditions for disease. We have two great forces continually acting; one is to build up, the other to tear down. If the building up process is weakened by certain constitutional disease, as a matter of course, it invites disease. The

resistance that we all have against disease is overcome by certain microbes. The healthy cells of our bodies have what is known as phagocytic action, which means that they have an affinity for germs and destroy them. Now, if this action by disease is weakened, abscesses, boils, etc., take possession.

In regard to crushing boils—that is a point which I intended to mention. If we take a boil between our fingers and crush it, (a method practiced by some to get the core out,) it is quite true that we aggravate matters very decidedly: The reason is this, we tear the membrane which nature has thrown out to prevent the microbe invading the surrounding tissues. When this membrane is ruptured, it allows the microbe to invade the tissues surrounding it. Any patient that has had a nervous disease, who loses to a certain degree his personal hygiene, who neglects bathing, who neglects the changing of his linen, lays himself liable to this disease. Constitutionally, the treatment of all boils is good in so far as it increases our resistance against disease, no further. Probably the most important treatment is the prophylactic treatment. Whenever patients have one-hundred boils, fifty boils, or, boil after boil, I take it that we could prevent this in quite a per cent. of the cases, provided we have a patient that we can control. We should instruct this patient to take a bath often, using the very best soap, cleansing the skin thoroughly, then taking a bichloride of mercury bath. In addition to this his linen should be changed often. If he has a boil on the back of his neck, his coat should be discarded for another.

Dr. J. W. Irwin: According to the latest ideas of the subject, Dr. Dugan has stated exactly what is now the order of the day. I endorse his remarks so far as that goes, but, from personal experience, I am not able to quite agree with all he says.

Dr. W. C. Dugan: I would like to report one or two cases: Some time ago a young man, a dentist, in extracting teeth, came across one that was septic, and some of the pus lodged in his moustache. He called at my office a day or two afterward, with his lip very badly swollen. I suggested to him that I shave off his moustache, and open the lip thoroughly. He said he would willingly undergo any torture to save the moustache, so I decided to inject some carbolic acid. I did not use any cocaine, and injected about twenty minims of pure carbolic acid into the swelling. He left the office, came back in about an hour and said he had been suffering quite a little pain, but was perfectly easy then. I told him if he suffered any more pain that afternoon, to call back and I would make a free incision. The next morning I was very much pleased to find that the swelling had subsided more than one-half, and in forty-eight hours it had disappeared entirely. There was no further pain and no suppuration. I want to say that the injection treatment is not new to me.

Another young man came to my office a few days ago, having a boil on the back of his neck. Said he was a clerk at the L. & N. R. R. Offices, and had been laid up for several days on account of the boil. I laid it open thoroughly after using cocaine, then applied carbolic acid, as described, taking great care to see that it was passed to every part of the boil. The next morning he went back to his work. The operation gave him no pain, and he says he slept that night for the first in three nights.

EHRLICH'S REACTION IN TUBERCULAR CHILDREN TREATED WITH KOCH'S LYMPH.

It is known that Ehrlich's reaction may also occur in the urine of those suffering from tuberculosis. As tuberculin causes an exacerbation of the tubercular process, experiments were undertaken by Amiel Feer(*Jahrbuch für Kinderheilkunde*, Vol. XXXIII, No. 3.) to determine whether or not the sulphanilic test would respond more frequently in those who had been previously treated with Koch's lymph. Seventeen children suffering from tuberculosis of the bones, joints and lymph glands gave the reaction in only two cases, while fourteen marked reactions were obtained after the lymph had been used. The earliest time in which the reaction occured was in five hours, reaching its height in twenty-four hours, and extending at times to the third and fourth days. It seems to bear a direct relation to the height of the temperature. That the reaction may not positively occur is shown by the fact that it failed in cases which were undoubtedly tubercular. The author considers that this reaction occurs more readily in children than in grown persons.

Selected Formulæ.

SORE NIPPLES, CHAPPED LIPS, HANDS, ETC.

℞ Cocaine hydrochlor.....gr. i.
Vaseline.....ʒ i.
M. Sig.—Apply ad libitum.

LEG ULCER.

Dr. Weismueller praises the action of a dusting powder thus composed:

℞ Acid. salicyl.....ʒ iv.
Acid. borici.....ʒ ij.
Zinci oxidi.....ʒ ss.
Amyl.,
Talc.....āā ʒ v.

PEDICULI PUBIS.

℞ Hydrarg. ammoniat.....gr. xxxv.
Balsam. Peruvian.....ʒ j.
Olei petrolei.....ʒ ijss.
Lanolini.....ad ʒ viij. M.

HEMATEMESIS FROM GASTRIC ULCER.

℞ 1. Powd. acetate of lead.....gr. iii.
Hydrochlor. of morph.....gr. iss.
White sugar.....ʒ iss.
Mix and divide into six doses. S.—One every two hours.

℞ 2. Powdered tannic acid.....gr. x.
Powdered opium.....gr. ii.
White sugar.....ʒ iss.
Mix and divide into six doses.
S.—One every two hours.

—Bamberger, *Union Médical.*

FACIAL ERYTHEMATOUS LUPUS.

Brocq recommends the following formulæ in the local treatment of this disease:

℞ 1. Salicylic acid.....0.50 gramme.
Lactic acid.....0.50 "
Resorcine.....0.75 "
Oxide of zinc.....2.00 grammes.
Vaseline.....17.00 "
M. Sig.—Locally applied.

℞ 2. Salicylic acid.....1.00 gramme.
Pyrogallic acid.....2.00 grammes.
Vaseline.....20.00 "
M. Sig.—Apply at night.

—*Le Bulletin Medical*, Feb. 28, 1892.

GRIPPAL PNEUMONIA.

According to Fiessinger, the most valuable drug in the treatment of the above affection is caffeine. The author recommends the following combination, in hypodermic injection:

℞ Caffeine.....2.50 grammes.
Benzoate of sodium.....3.00 "
Distilled water.....q. s. for 10 c. c.
Of this solution, 25 centigrammes should be administered at each injection.

—*Le Bulletin Medical*, March 2, 1892.

CORYZA WITH ANOSMIA.

Having reduced the hypertrophic condition of the mucous membrane by the ordinary means, Ragoneau institutes the following: 1. Twice a week the membrane touched with a ten per cent. solution of chloride of zinc; 2. During the following eight days, insufflations are applied four to five times a day, of this powder:

℞ Acetanilide,
Iodol.....āā 2.40 grammes.
Oxychloride of bismuth.....15.00 "

For the following eight days the author recommends the following powder:

℞ Sulphate of strychnine (neutral).0.08 gram.
Pulverized tobacco,
Oxychloride of bismuth.....āā 6.00 grams.

The alternate use of these two powders in the manner indicated has given the most satisfactory results.

—*Rev. de Laryngologie, d'Otologie et de Rhinologie*, No. 5, 1892.

FOR NEURALGIAS.

Gouguenheim (*Rev. gen. de clin. et de Therap.*) recommends the following in the treatment of the above:

℞ Exalgine.....0.25 to 0.75 gramme.
Alcohol (90 p. c.), q. s. to dissolve.
Syrup.....10.00 grammes.
Distilled water.....90.00 "
M. Sig.—To be taken in the course of the day, one-half at 2 o'clock, and the other at 5, in the afternoon.

—*Gazette Medicale de Paris*, March 12, 1892.

OINTMENT FOR CRACKED NIPPLES.

Vinay recommends the following:

℞ Aristol.....4.00 grammes.
Liquid vaseline.....20.00 "
M. Sig.—To be applied by a camel's hair brush.

—*Gazette de Gynæcologie*, No. 137, 1892.

CHRONIC TONSILLITIS.

After the excision of the tonsils, Gampert (*These de Paris*) recommends the local application of the following mixture to the operated parts:

℞ Iodine.....0.20 gramme.
Iodide of potassium.....0.50 "
Glycerine.....60.80 grammes.
Water.....10.00 "

After the application, the same author advises the use of a borated or iodated gargle.

—*Rev. de Laryngologie, d'Otologie et de Rhinologie*, March 15, 1892.

INJECTIONS FOR CHRONIC CYSTITIS.

ULTZMANN recommends the following prescriptions in the treatment of this troublesome condition:

℞ Crystallized carbolic acid.....gr. xv.
Distilled water.....ʒ iiiss.
Dissolve, and mix with equal parts of hot water at the moment that the liquid is to be injected.

Or the following:

℞ Boric acid.....ʒ ss.
Glycerin.....ʒ i.
Distilled water.....ʒ x.
Make a solution, and mix with equal parts of warm water at the moment of employment.

Either one of these solutions, when warm, may be used for washing out the bladder in cases of chronic cystitis. When the vesical secretion is catarrhal and has a bad odor, the following injection is useful:

℞ Nitrite of amyl.....gtt. v.
Distilled water.....ʒ iv.
Mix, and add a tablespoonful of this solution in the proper quantity of water for a vesical injection.

—*L'Union Médicale*, No. 12, 1892.

HYPERCHLORIDRIA.

Dr. L. Boaz (*La Semaine médicale*, No. 6, 1892) advises the following in dyspepsia with over-acidity:

℞ Calcined magnesia.....grams 15
Carbonate of bismuth } .....āā grams 5
Carbonate of soda }
Extr. belladonna } .....āā grams 10-20
Ext. nux vomica }
A teaspoonful of this powder thirty minutes after each meal.

HYDRASTIN IN UTERINE HÆMORRHAGES.

Instead of being employed hypodermatically in severe menorrhagia and metrorrhagia from myomas, hydrastin may be given internally according to formula:

℞ Hydrastini hydrochl.....gr. viij.
Pulv. et. succi. liquoritiæ q. s. ut fiant pill. No. 10. Consp.
Sig.—One to two pills daily. If there be hæmorhage, two pills daily. In cases of menorrhagia, one pill daily may be given for several days before the time of the expected hæmorrhage.

—*Therapeutische Monatshefte*, No. 6, 1890.

HYPODERMIC TREATMENT OF METRORRHAGIA.

Dr. Baroni has used the following successfully in metrorrhagia from myomata of the uterus:

℞ Ergotin crystallizat
Acid lactic.....āā gr. iij.
Aqua lauroceras.....fʒ v.
Aqua distillat.....q. s. ad fʒ iij. M.
Sig.—Inject hypodermically twelve to sixteen drops at a time.

—*Gazetta degli Ospitali*, No. 22, 1890.

FOR GOUT.

The new medicament, piperazine, has been employed by Vogt and Bardet, with asserted success in the treatment of gout. One gramme of the drug is dissolved in some mineral water (500 grammes), to be taken in glassfuls in the course of the day. The same authors recommend the following as a local treatment:

℞ Piperazine.....1.00 to 2.00 grammes.
Alcohol.....20.00 "
Water.....80.00 "
M. Sig.—External use.

—*Journal de Medecine de Paris*, March 20, 1892.

PASTE FOR INFANTILE ECZEMA.

℞ Tr. campho-phenique.....1.00 grammes.
Bismuthi stbnitrat.
Zinci carbonat.
Amyli
Vaselini
Lanolini anhydr.....āā 2.00 grammes.

As a carminative, the following mixture is excellent:

℞ Tr. columbæ.....ʒ iij.
Spts. ammon. aromat.....ʒ jss.
Tr. cardamomi comp.....q. s. ʒ iij.
M. Sig.—ʒ ss pro re nata.

—WENDE, *Buffalo Medical and Surgical Journal*, January, 1892.

FAVUS.

Dr. Henry W. Stelwagon gave the following treatment for Favus: Wash the head, using sapoviridis, and allow the lather to remain on the head for ten to thirty minutes. Remove the hair from the affected area and apply the following ointment:

℞ Unguent sulphuridis.....ʒ iv.
Unguent picis liquid.....ʒ ij.
Unguent hydrarg. nitratis.....ʒ ij.
Acid carbolici.....fʒ ss. M.

DEATH IN AN INFANT FROM LARYNGEAL OBSTRUCTION BY VOMITED MILK-CURD.

Demme (*Bericht des Jenner's schen Kindersp.*, Berne, 1891) has reported the sudden death of a dyspeptic child, ten months old, without recognizable cause, in which at the autopsy the esophagus and entrance to the larynx were found occluded by a coagulum of cows' milk ejected from the stomach by vomiting and causing asphyxia.—*Centralbl. für die gesammte Therap.*, x, 3, p. 171.—*News.*

THE

MEDICAL and SURGICAL

REPORTER.

ISSUED EVERY SATURDAY.

DIRECT COMMUNICATIONS TO

P. O. Box 843, Philadelphia, Pa.

EDWARD T. REICHERT, M. D., Editor.

(Professor of Physiology, University of Penna.)

BUSINESS OFFICES:

23 to 35 North Tenth Street, Cor. Filbert.

TERMS: Five dollars a year, strictly in advance, unless otherwise specifically agreed upon. Sent three months on trial for $1.00

REMITTANCES should be made payable to THE MEDICAL AND SURGICAL REPORTER, and when in sums of five dollars or less should be made by Postal Note, Money Order or Registered Letter.

—o—

Pocket Record and Visiting List.

Two sizes. Prices to Subscribers of THE REPORTER.
For 30 patients a week (with or without dates).... $1.00
For 60 patients a week (without dates)..... 1.25
Prices to non-subscribers, $1.25 and $1.50 respectively.

The Model Ledger.

Physicians who keep their own books will find this of great value. It enables the Physician to make out his bills with great ease and gives at a glance the amount earned, received and due in any quarter. Sample pages sent on application. Price, $5.00.

Binders.

Patent binders for the Reporter, each lettered on the back in gilt "**The Medical and Surgical Reporter**" and made to hold the issues of six months. Price, 50 cents.

Vaccine Matter.

Bovine Crusts.....$1.50 each.
Bovine Points or Quills..... 1.00 a doz.
Humanized Crusts..... 1.00 small.
Humanized Crusts..... 2.00 large.
Guaranteed in every respect.

Books.

Books will be supplied to our subscribers, transportation prepaid, at the regular prices.

☞Please accompany orders with the money, and address all communications to

Leading Articles.

THE ÆTIOLOGY OF PLEURITIS.

In early medical history the problem regarding any disease which the physician was called upon to answer, was the question as to the most efficient therapy. With the gradual advance of medicine the question of the pathology of the disease, and closely connected with this its ætiology, assumed the greater importance. The precise study and investigation of the ætiology of disease has one great end in view apart from the therapeutics, viz., prophylaxis. The most important problem before the profession is prevention rather than cure.

It has been but a few years since that both profession and laity considered certain contagious and infectious diseases incident to childhood as entirely unavoidable; and, indeed, mothers of not many years ago were wont to expose their children when in robust health to these diseases, when consequently likely to endure them with safety. It was with a feeling of almost boastful security that our parents would tell of their children having had measles, diphtheria, whooping-cough, scarlet fever, mumps, etc., but would perhaps add with regret "but he has yet to have chicken-pox." Prior to the introduction of vaccination, small-pox was regarded as being one of the most likely of diseases. Poor children! Is it not a wonder that the startling infant mortality of a few years ago was not even greater?

As the profession has gradually awakened to the possibility of the prevention of disease, and dare even look forward to a not distant period when many of the scourges of mankind will be stamped out, the study of the ætiology is asuming an ever-increasing importance.

Pleuritis is a disease the ætiology of which has been most obscure until the discovery of the tubercule bacillus by Koch seemed to throw additional light upon the

subject. In this connection we would refer our readers to a most interesting contribution on the subject: a lecture by Dr. A. Fiedler, delivered before the Society of Natural and Physical Sciences of Germany, and discussed at length in the *Medicinische-chirurgischen Rundschau*, the *Meidcinische Neuigkeiten* and elsewhere.

Although phthisis plays the most important rôle in the ætiology of pleuritis, and the majority of pleurites spring from a tubercular origin, yet there remain a number of inflammatory processes of the pleura —without reference to the carcinomatous and pyæmic pleurites—that have nothing whatever to do with tuberculosis. We refer to the frequent and suddenly developing cases of bilateral pleuritis. The majority of these inflammations Fiedler regards as true rheumatic affections, occasioned by the same noxious element—a plasmodium, bacillus or coccus—that is the ætiological factor in acute articular rheumatism. Again, the same infectious matter which to-day in one individual may cause rheumatic polyarthritis, may to-morrow in another cause pleuritis—that is, inflammation of another serous membrane. The localization of the rheumatic poison may occur in the most varied organs. At one time, as is the rule, it may invade one organ, while at another it may affect several organs simultaneously. Although the pathogenic organism may as yet be unknown to us, yet the entire affection and the entire course of acute polyarthritis point to the correctness of the theory of the infectious character of the disease.

As the most probable entering portal of the infectious substance, Fiedler, as well as many other authorities, regards the tonsils as such, and also the mucous membrane of the pharynx. This for the reason that at the outset of rheumatic disease these parts are very frequently reddened, swollen, and indicative of an irritated condition quite different in character from an angina follicularis, and which is in all probability due to an invasion of streptococci. Fiedler believes in the existence of a rheumatic angina, and claims that under certain circumstances the infectious matter may be confined to the tonsils, in which case the activity of these may prevent a general infection.

For this reason it would be well to treat this class of anginæ with salicylic acid or other anti-rhuematic remedies, in order to abort, if possible, a general infection. Regarding the nature of the infectious matter, Fiedler is of the opinion that in this class of pleurites we are dealing with an amœboid or plasmodium similar to that of malaria. Quinine, as is well known, acts directly upon the plasmodium of malaria, and in polyarthritis salicylic acid and its salts are most efficient, while either drug is entirely wanting in action in infections due to cocci or bacilli. Consequently, Fiedler advances the plasmodium theory. In connection with this theory, Fiedler calls attention to certain confirmatory points observable at the bedside:

I. That acute rhuematic polyarthritic is very frequently associated with inflammation of the pericardium, endocardium and pleura.

2. That frequently the most intense cases of articular rheumatism are entirely unaccompanied by any affection of the heart or pleura during their entire course, while on the contrary slight cases of articular rheumatism, hardly worthy of the name, so slight, indeed, as to be frequently overlooked, cause the severest complications in the heart and pleura.

We are, therefore, forced to admit the existence off a rheumatic polyarthritis unaccompanied by swelling, painfulness or reddening of the joints—similarly are we forced to acknowledge the possibility of scarlatina sine exanthem.

3. That frequently the same patient during the period of his illness may in turn

be affected by simple articular rheumatism, during a second with pleuritis or pericarditis, and during a third articular rheumatism complicated by cardiac troubles.

Feidler in his discourse cited the histories of illustrative cases confirming the second and third points mentioned.

He believes that the infectious matter of rheumatism, be it what it may, as soon as it enters the circulation, causes primarily certain general disturbances of the organism (fever etc.,) and then localizes itself upon and in the serous membranes, and as a rule causes irritation and inflammation of the synovial membranes, or of the endocardium or pericardium, and frequently of the pleura.

Many affections which do not in the least resemble the symptomological picture of acute articular rheumatism as taught in text-books, nevertheless concur with this disease ætiologically. This fact has already been called attention to by Immermann. Many cases of pericarditis with adhesions of the cardiac sac, and many cases of endocarditis and their valvular complications, and certain cases of moycarditis undoubtedly are caused by rheumatic infection, without the previous or simultaneous existence of articular rheumatism.

In many cases of cardiac trouble in patients who have previously not had acute rheumatic polyarthritis or any acute or chronic infectious disease (scarlet fever, syphilis, etc.), Fiedler claims that if the patient is young, and the existence of atheroma can be excluded, he always suspects that a rheumatic affection has previously occured, and a slight endocarditis has existed.

That the same pathogenic microörganism which is the ætiological factor in certain forms of acute pleuritis (and inflammation of the cardiac sac) is also the cause of acute rheumatism, Fiedler endeavors further to prove by the undeniable favorable action of salicylic acid and its salts upon the former diseases. In these, as in the latter, the drug seems to check the development of or even kill the microörganism. On this account Fiedler recommends that such a therapy be instituted as early as possible before there is any extended effusion. He is convinced that large doses of salicylic acid (1 gramme every two hours, or about 6 grammes daily) are frequently able to abort pleuritic inflammations, as well as affections of the joints. If the effusion already exists this therapy, of course, is of no avail. The same may be said (as has frequently been noted by other writers) for the cases of so-called genuine pericarditis.

Fiedler also believes that erythema nodosa, certain neuroses, especially acute polyneuritis, are due to a similar rheumatic infection to that of articular rheumatism.

It may be that Fiedler goes too far, but it must be understood that his arguments do not tend to prove that rheumatism is the cause of certain forms of pleuritis, pericarditis, etc.; simply that their ætiological factor, or in other words the pathogenic germs of these diseases are indentical. His arguments, based upon clinical researches, besides experience and careful study, are not only well-grounded, but based upon plausable and rational theories, and backed by many indisputable facts.

It remains now for the bacteriologist to prove or disprove the correctness of his assertions. At all events, his work forms an interesting and valuable addition to medical literature.

In conclusion, we would call attention to a point upon which we laid stress in the beginning of this article: the all-important and ever-increasing value of the study of the ætiology of diseases, which we consider well illustrated in what has been said.

INTESTINAL ANTISEPSIS.

℞ Salol,
Salicylate of bismuth,
Bicarbonate of sodium.....āā 150 grains.

Sig.—To be devided into 30 powders in capsules. One capsule to be taken before breakfast and before dinner.

—*Dujardin Beaumetz.*

Book Reviews.

PSYCHO-THERAPEUTICS or Treatment by Hypnotism and Suggestion. By C. Lloyd Tuckey, M.D. Member of the Medico-psychological Association; Membre Fondateur de la Sociètè D'Hypnologie; late Visiting Physician to the Margeret St. Infirmary, London: Baillière, Tindall & Cox, 1891.

The fact that this elementary treatise upon psycho-therapeutics has attained a third edition proves that it has been widely read and approved by the profession. The first edition, which appeared in 1889, was only intended by the author as little more than an introduction to the subject, but each subsequent edition has received such additions that the present volume may be said to fairly represent a synopsis of most of the modern theory and practice of hypnotism.

The book as a whole is an explanation of the scope and limitations of hypnotism in the treatment of disease, of its mode of application, and is also a discussion of the views of such men as Charcot, Liebault and others having practical familiarity with hypnotism as a therapeutic agent. The whole subject is fairly represented, and while the writer of the work is a follower of Liebault in both theory and practice, he does not fail to present the views of the more extreme school, of which the best example is perhaps Charcot. Such careful and scientific studies of this at present much abused and neglected subject are needed, so that, as soon as possible, we may arrive at some definite ideas respecting its proper place in medicine. A careful reading of this work will go far towards dispelling the natural prejudice which has hitherto existed against the use of hypnotic suggestion in the treatment of disease, and cannot fail to convince one that there is a proper field of usefulness for it in medical science.

The work contains an interesting account of Dr. Liebault's treatment as practiced by him at Nancy. The important physiological and psychological facts concerned in hypnosis are fully and accurately stated. The relation of hypnosis to sleep is noted, and the theories of the production of the hypnotic state are carefully presented. The latter half of the book deals with the practical use of hypnotic suggestion, besides giving a large number of clinical cases which were successfully treated by the author and others.

The volume is certainly an addition to the literature of the subject and offers a most excellent rèsumè.

A TEXT BOOK OF NURSING, by Clara S. Weeks-Shaw. Second edition, revised enlarged, with illustrations. New York: D. Appleton & Co., 1892.

The present edition of this comprehensive manual of practical nursing presents several improvements over its predecessor. A chapter has wisely been added upon the management of gynæcolgical cases, and is thoroughly in accord with the modern advances in that branch. The advances in surgery in recent years have necessitated the addition of many good practical things to the book. It is especially intended as a text-book for training schools, but practitioners will also find it instructive reading, since it contains a number of facts relating to the care of all sorts of cases, from which one may gather helping hints, representing as they do the combined experience of many competent men. The book is creditably printed and bound, contains very few typographical errors, and this improved and modernized edition will no doubt be welcome to those who have occasion to use a modern text-book on this subject. It is a vast improvement on the first edition issued six years ago, and we commend it freely to nurses, and families needing a useful household book, as well as to physicians who may desire to note the latest modes of the art of nursing.

NATIONAL CONFERENCE OF STATE BOARDS OF HEALTH.

The Eighth Annual Meeting of the conference of State Boards of Health will be held in Lansing, Michigan, June 6th, 1892.

The meeting will convene at 10.00 A. M., in the Senate Chamber of the State capitol.

Governor Winans will informally receive the members of the Conference in the Executive Rooms in the State Capitol during the day or evening of June 6th. The Local Committee has expressed the hope that the time of the members of the conference will permit of their visiting the three other State Institutions located at Lansing.

Headquarters will soon be at the Hotel Downey, where special rates have been secured.

C. O. PROBST, M. D.,
Secretary.

Correspondence.

PREMATURE BALDNESS AND ITS CURE.

EDITOR OF THE MEDICAL AND SURGICAL REPORTER:—In the issue of April 23rd, 1892, I notice an extract taken from the *Lancet* on "Premature Baldness and its Causes." This article is a criticism on a previous article of Dr. Tyson's on the same subject. Dr. Tyson's idea is that men are more frequently bald than women, because they wear a heavier and more complete head covering than women. The *Lancet* disputes this cause, and lays it to the natural difference between the heads of men and women as regards hair growth, and gives as this natural difference a superior vascularity of the scalp of women as compared with men. Now it appears to me there is not so great a natural difference as the *Lancet* seems to think, but that dress is really to blame. The place to look for this natural difference is among the savages, who do not wear modern head gear, or perhaps none at all. I think in that case the natural difference would disappear, just as it has in regard to the difference in the manner of breathing between the sexes. Women breathe in the upper part of the lungs, because their clothes will not let them do otherwise, and when observations are made on savage women, they are found to breathe all over the lungs just as much as men. Now in regard to the difference in the vascularity of, especially, the top of the head in men, I think it probably is less than in women, because men generally wear short hair, and a hat that is tight enough to stay on even in a wind. Women seldom do so, but pin the hat to the hair to make it stay on, or else fasten it by an elastic band under the coil of hair back of the head. Now we all know that one can do a comparatively bloodless operation upon the scalp, by placing an Esmarch bandage around the head just above the brows, because by the bandage, the flow of blood is cut off from the top of the head; and I think the close-fitting hat acts very much in the same manner as the Esmarch bandage. Men and women are *sexually* different, in other respects there is not really so much difference as many think.

THERAPEUTICS.

HYDROCHLORATE OF HYOSCINE AS A HYPNOTIC IN INSANE CASES.

Willerup has given hydrochlorate of hyoscine internally, in doses of ½ to 3 milligrames ($\frac{1}{125}$ to $\frac{1}{20}$ grain) twice a day, to calm insane patients and to produce sleep. Shortly after taking the hyoscine some mydriasis is observed, the frequency of the pulse is greater, and the pulse becomes full and hard; later, the face is pale and the frequency of the pulse diminishes. When turbulent insane patients were given hyoscine twice a day they were, as a rule, more quiet and somewhat sleepy during the daytime and slept well at night. In some cases the condition of the patient was evidently ameliorated by the use of the hyocine; in others the effect was only transitory.—*Hospitals-tidende*, 1891, p. 389.

THE THERAPEUTICAL APPLICATION OF PIPERAZINE.

Piperazine possesses not only the property of dissolving a large proportion (1:2) of uric acid at normal temperature, but forms with excess of uric acid a neutral, readily soluble urate salt. One part of urate of piperazine will dissolve in 50 parts of water at 17° C. (62.6° F.) If we consider that the solubility of urate of lithium at 19° C. (66.2° F.) is stated as 1:368, i. e., that urate of piperazine is at least seven times more soluble than the urate of lithium, and that furthermore piperazine is neither caustic nor toxic, the preference must surely be given this product over all other so-called uric-acid solvents. To learn from personal observation what influence piperazine would exert on human metabolism, in addition to other experiments elsewhere reported, we instituted a series of trials on human subjects. The literature on the therapeutic application of piperazine is as yet meagre. Our sole information was derived from a circular published by the manufacturers, quoting the results achieved by a French physician who had experimented with a sample on himself, and who reported that after taking piperazine the total quantity of uric acid was reduced one-third, and that an excess of urea was eliminated.—Drs. W. Ebstein and Charles Sprague in *Berliner Klin. Wochen*, Nov. 14, 1891.

SYZYGIUM JAMBOLANUM IN DIABETES.

Hildebrandt (*Berl. klin. Woch.*, January 4th, 1892) says it is generally accepted that diabetes mellitus is chiefly brought about by increased sugar production and by its diminished decomposition and consumption. The first factor presupposes an abnormal fermentation under the influence of a sugar-forming ferment. In diabetic urine an increase in diastatic ferments has been found, but no such experiments have been made in regard to the blood. A destruction of ferment takes place in the normal organism, and the author has found that certain organs, like the pancreas, render vegetable ferments inert. Degeneration of the pancreas has been frequently found in diabetes, and extirpation of this organ may induce diabetes in animals. Among the antifermentative remedies used in diabetes, syzygium has been much recommended. The author's experiments show that this drug has a decidedly hindering action, both on plant diastase, as also the sugar-forming ferments in the blood, serum, saliva, and pancreatic extract, but no corresponding effect on pepsin and trypsin. Salicylic and lactic acids, etc., also used in diabetes, gave mostly a negative result in this respect. Syzygium so alters the substratum (starch, glycogen) that it is unassailable by the ferment. Its active principle is not a ferment, nor yet tannic acid. In the body syzygium may act by hindering the conversion of starch into sugar in the alimentary canal and of glycogen into sugar in the tissues. It does not interfere with proteid digestion.—*Brit. Med. Jour.*

THE ACTION OF STRYCHNINE ON THE STOMACH.

The *Khirurgicheski Vestnik* publishes an account of some experiments by Gamper on the action of strychnine on the stomach. Observations were made on seven persons, five of whom were in health, one suffered from gastralgia with excessive secretion of gastric juice, and the last (Gamper himself) from gastric catarrh. The observations extended from twenty to thirty days, and during the first and last week no strychnine was given to excite the stomach. Ewald's test-breakfast was given, and observations were undertaken to determine the volume of gastric juice, the percentage of total acidity, the proportion of hydrochloric acid by weight, the digestive power of the juice, the result of fermentation and the absorbent power and movements of the stomach. Nitrate of strychnia was given at breakfast time in doses varying from 0.002 gramme to 0.005 gramme, but sometimes increased to 0.015 gramme. The activity of the stomach was increased in all respects, with the exception of that due to the ferment and the lactic acid. Gamper attributes the usefulness of the drug to the increased excitability of the medulla caused by the strychnine.—*Lancet.*

STROPHANTHUS IN THE TREATMENT OF GOITRE.

Dr. S. Yount-Lafayette (*La Semaine Médicale*, No. 54, 1891) has obtained very good results in goitre from the use of the tincture of strophanthus, administered three times a day in a gradually increasing dose of ten to sixteen drops.

HYDROGEN PEROXIDE IN EYE DISEASE.

Dr. S. S. Golovin, of Kütaïs, (Cuacasian Med. Soci., May 14, 1891) relates his experience with hydrogen peroxide in ophthalmic practice. The following is a summary of his conclusions:

1. In healthy eyes hydrogen peroxide causes only trifling smarting, and transient conjunctival congestion; in diseased eyes —especially when deep corneal ulcers are present—the medicament may give rise to a more or less intense burning sensation, which, however, quickly disappears of itself.

2. Solutions of hydrogen peroxide are somewhat unstable; but decomposition can easily be prevented by the addition of a small quantity of ether, and by preserving in dark bottles in a dark place.

3. For lotions or irrigations, a 3 per cent. solution may be employed; for collyria, 10-15 per cent. solutions.

4. The best results from hydrogen peroxide are obtained in corneal affections; simple ulcers rapidly disappear, without being complicated by purulent infiltrations; suppurating ulcers speedily become cleaner and healthier; infiltrations undergo absorption; and healing takes place without perforation of the cornea occuring. In hypopyon-keratitis, hydrogen peroxide is also valuable; if the instillations be made

regularly and thoroughly, even cases in which operative interference would be necessary are found to yield to the remedy.

5. Hydrogen peroxide is serviceable also in conjunctival affections—particularly phlyctenular conjunctivitis, and acute gonorrhœl ophthalmia (the instillations being repeated not less than 4-5 times a day, or even every two hours.) In simple acute and chronic diffuse conjunctival catarrhs, and in trachomatous or follicular conjunctivitis, hydrogen peroxide seems to be useless.—*Mercks Bulletin.*

MEDICINE.

TUBERCULOUS LARYNGEAL TUMORS.

Avellis (Frankfurt-a-M.) gives an interesting paper on Tuberculous Laryngeal Tumors, in the *Deutche Med. Woch.*, Nos. 32–33, of 1891. He speaks extensively upon the subject and relates his own cases, which tend to show that polypi, which resemble in every way fibromata, are sometimes of a tuberculous nature.

1. Patient, 25 years old, had been hoarse for some months; on the right vocal band, upon its free margin, was made out a polypus the size of half a pea; the growth being pedunculated, the growth resembled a fibroma, but upon microscopical examination it was found to be of a tuberculous character; not until ten months later was the first indication of lung trouble observed.

Female, aged 40, had a tumor springing from the left vocal cord; growth much resembled a polypus, but further examination showed typical tuberculosis.

3. Patient, aged 19 years, had large tumor on right vocal band, ulceration of posterior wall; lung affection came on later.

4. Patient, 32 years of age, growth on right vocal band; operation, seven months later, ulceration took place and disease of lungs quickly followed.

5. Patient, aged 39; upon the posterior wall was observed a small tumor, which was looked upon as phthisical, but upon further examination it proved to be simply thickened mucus membrane; sometime later, however, a typical tuberculous ulcer appeared upon the posterior wall and lung disease followed.

6. Patient, aged 49 years; in the anterior angle (commissure) was discovered a red-grayish tumor, about the size of a cherry; operation was performed with Gollstein forceps; typical tuberculous ulcer followed and the following year an ordinary laryngeal phthisis was present.

This report tends to show that tumors of a tuberculous nature are not so rare as sometimes supposed, and in every case where a tumor is present the lungs should be examined and if such tumor be removed, careful microscopical examination should be made.

THE SEMEIOLOGY OF VERTIGOS.

Paul Blocq and Ovanoff (*Le Mercredi Medical*, October 7, 1891) divide vertigos into apoplectic, and vertigos proper. Of the latter they write: Vertigo is essentially a sensation. The patient loses his equilibrium, feels as if falling, or as if turning rapidly, or as if objects about him were moving. The sensation may be present not only while standing, but while lying down. At the same time there is usually a feeling of anguish, often described as a sense of falling. Often the loss of equilibrium causes a fall, but the patient never loses consciousness. Various affections of the senses are also observed, as roaring in the ears, flashes of light and peculiar colors. Sometimes retractions of the skin, cold sweats and especially nausea and vomiting are noted. Opening or closing of the eyes has a different effect in different varieties of vertigo. In some, closing the eyes lessens the sensation; in others, increases it. They divide vertigo into *acute* or *accidental* and *chronic* or *habitual.* Of the latter, there are the *constant* and the *frequent* forms. The causes of vertigo are very numerous. They are conveniently arranged in four classes: (*a*) So-called physiological vertigo; (*b*) toxic. Of the physiological, are those caused by rotation, high altitudes, the sight of rapidly moving bodies. Seasickness is between these and nervous vertigos. Of these, they note neuropathic, hysterical and tetanic. Certain cerebral affections also give rise to vertigo, locomotor ataxia and disseminated sclerosis. The organs of sense give rise also to vertigo, especally those of sight and hearing. The symptomatic vertigos are those which depend on lesions of the great organs, as gastric, uterine, laryngeal and those due to arterial sclerosis and heart disease. Under the

toxic vertigos they place those due to diathesis, to infections and intoxications. It seems proved that all of these, whatever be the ultimate cause, are due to affection of the organ of equilibration. This organ comprises the semicircular canals and the cerebellum, the trunk of the auditory nerve and its ganglia, the cerebellar peduncles and the parts of cerebrum and medulla near them. In the diagnosis of vertigo, one excludes the epileptic form by the accompanying loss of consciousness, and the apoplectic by the history of an attack. Syncope also is accompanied by unconsciousness. Hysterical vertigos are distinguished by the other signs of hysteria. When we have excluded these, the question of cause arises. First distinguish the acute from the chronic forms. The cause of the acute vertigos is generally very evident, as the toxic and physiologic. The nervous are of more importance. Among the chronic vertigos, the most important, because most common, is that of Meniere's disease. Others are those of defective vision, of brain tumors and of the diatheses. These can be distinguished by the other characteristic symptoms.—*Univ. Med. Mag.*

SURGERY.

OPERATIVE TREATMENT OF DEFORMITIES RESULTING FROM INFANTILE SPINAL AND CEREBRAL SPASTIC PARALYSIS.

In the *Medical News*, Dec. 19, 1891, De Forest Willard, M.D., Ph.D., states that the deformities of infantile paralysis are preventable by apparatus, but if distortion has occured, secure the best possible limb by immediate surgical procedure, and in some way make the patient walk. Apparently hopelessly distorted cases can be put upon their feet, and even great deformity does not contra-indicate an attempt to straighten the limb and give the individual the power of locomotion. Atrophied limbs can be straightened and incorporated as a part of the locomotive apparatus. Exercise will develop even badly shrunken limbs and continuous improvement may be expected. In the majority of cases surgical measures are preferable, after which mechanical appliances should be employed. Tenotomy or myotomy, while not curative, promotes the health and happiness of the patient. In spastic cases relapse is more common than in infantile paralysis, but the great benefit to body and mind secured by locomotion amply repays for the attempt at rectification.

ARTIFICIAL CORNEA.

The *Berlin. Klin. Wochenschrift* publishes a seventh case of transplantation of cornea by Professor V. Hipple, of Konigsberg. There was a dark-brown central discoloration of the cornea, three millimeters in diameter, and reaching down to the membrane of Descemet, which has been caused by the action of nitrate of silver. Cocaine having been applied, the non-transparent part of the cornea down to the membrane of Descemet was cut into by a little trephine, the crown of which was four millimeters in diameter, and carefully removed. The author then excised by the same means a similar piece from the whole thickness of the cornea in a young rabbit, and transplanted this to the eye of his patient. It filled the wound exactly, and was on a level with the rest of the cornea. Iodoform was applied, and both eyes were bandaged. Healing proceeded without any trouble, and in six weeks the patient was discharged with a completely transparent cornea.—*Lancet.*

A NEW SURGICAL PROCEDURE.

A paper was recently read before the Practitioners' Society of New York which was entitled "How to Raise Sunken Noses." At first sight this very descriptive title is calculated to create somewhat distressing reflections with regard to the kind of statement which the author is about to make. "Sunken wrecks" are at once recalled by the term used, and pumping operations, making good leaky defects, and bringing into service balloon arrangements, after the fashion of Baron Munchausen, rush into the mind as possible details in raising above the surface the author's cases of noses which have sunk. But although the author has thus perhaps unwillingly led us astray, in our calculation he soon lets us into the secret of what he really means. He narrated the case of a young lady whose nose had sunk from the absence of the septum. By making an incision underneath the lip and skin he was enabled to introduce a platinum bridge, which held up the skin, while its feet rested on each side of the nasal sep-

tum. At the end of six weeks the result was still satisfactory. The nose was well held up, and no unseemly scarring had occurred, which was likely to result from other operations undertaken for the same purpose.—*Med. Press.*

DIFFUSE FIBROMA OF BOTH BREASTS.

C. B. Porter (*Boston Med. and Surg. Journ.*, March 3d, 1892) reports the case of a woman, aged 38, who three years before coming under notice discovered a hard lump in the upper part of the right breast. The whole breast gradually increased in size. Three months later the left breast also began to enlarge. In course of time they attained such a size that the woman could not work, and could stand only for a short time. At no time was there any pain. On admission to the Massachusetts General Hospital the following were the dimensions of the two breasts: Right: greatest circumference, 38 inches; length from chest wall to nipple, 17 inches; circumference at base, 23 inches. Left: greatest circumference, 28 inches; length from chest wall to nipple, 14 inches; circumference at base, 23 inches. The skin over them was œdematous and thickened. Throughout both breasts could be felt movable, hardened masses, of irregular outline, varying in size from an orange to a closed fist. There was no tenderness. The left breast was first removed; then, after an interval of three weeks, the right, special precautions for the prevention of hæmorrhage being taken on each occasion. The wound healed well, and the patient made a good recovery, but, when discharged from the hospital, insisted, contrary to advice, on going home, the journey involving a sea voyage in mid-winter, in which she suffered much from cold and sea-sickness. She reached home much exhausted, and in about a week developed erysipelas, first in the region of the right breast, and then spreading over the back and the abdomen. This in four days had markedly faded, when she suddenly aborted of a five to six months' fœtus, and died three hours later in collapse. Her condition was not suspected till she was convalescent from the second operation. Microscopic examination showed the bulk of the growth to be made up of fibrous tissue rich in cells, and holding a good deal of thin serous fluid in its interstices. Embedded in this were glands acini and ducts widely separated, into the openings of which the fibrous tissue had forced its way. In structure, therefore, the growth was essentially a diffuse intracanalicular fibroma, and not a true hypertrophy of the breast. A table of nineteen cases collected from various sources is given. Sixteen of these were operated on, both breasts having been removed in nine. Only one died. In thirteen of the nineteen cases both breasts were affected. The table shows that the disease usually begins about the time of puberty, the enlargement of the breast going on very rapidly for two or three months, and increasing during the first pregnancy, after that generally remaining unchanged.

OBSTETRICS.

THE PARTURIENT WOMAN'S BED AS USUALLY PREPARED.

Much has been said and written in the last few years regarding the question of antisepsis in midwifery practice, and yet, how little attention has been given to the proper arrangements of the parturient woman's bed, and to the dressing to be applied to the vulva after delivery.

The bed is ordinarily prepared by spreading a rubber or oil-cloth over the mattress, to prevent it from being soiled, while upon it is placed an old ragged quilt, which has seen so many years of service in various capacities as to be of no further use in the household, and, consequently, of so little value that it can be readily parted with and thrown away. Over the quilt may be placed several layers of old cloths which have been accumulating in a drawer upstairs for just such an occasion as this, and, musty and unaired, are seized upon by the nurse, or the kindly assisting neighbor, to make a nice warm bed for the prospective mother. Finally, a sheet is spread over all, and the bed is ready for antiseptic midwifery. Worse than this is the feather bed, of so common use in the country. Now, feathers cost money, and the average feather bed is handed down from mother to daughter, and from daughter to grand-daughter, and the feather renovator is an unknown quantity there. Grandmother was probably delivered of ten or twelve children on that bed; mother, of as many more; all of the children had scarlet fever, the measles and mumps on grand-

ma's feather bed; brother John, who had typhoid fever, and the husband, who just recovered from erysipelas, both used the good old feather bed, and it would be cruel to put the good wife, when she is to be sick so long, on anything but the soft feathers. A bundle of cloths from the drawer upstairs is placed upon a chair, within convenient reach, the patient is put to bed, with perhaps a sheet pinned around the waist, her long night-gown drawn up from her hips, and is in readiness for the delivery of another daughter to inherit that feather bed.

During the pains of labor the patient rolls and tosses, her night gown works down under the hips, the sheet around the waist slips up under her shoulders. She is delivered with a gush of water and blood; her night gown is soaked and she is wet to the shoulders. Thus wet and cold she lies for half an hour or more, when the old quilt and rags are drawn away, some more rags from the pile on the chair are tucked under her, the wet night-dress is, after much trouble, removed and a roll of the same old cloths is placed against the gaping vulva, the swoolen labiæ and the torn perineum.—*Amer. Gyn. Journal.*

RUPTURE OF UTERUS EARLY IN LABOR.

Chercha (*Przeglad Lekarski*, No. 42, 1891) writes on the case of a 4-para, who was suddenly seized with a violent pain in the hypogastrium, to the right, when pregnant at term. The pain passed away, the os was but little dilated, the head was movable aud above the brim, the membrane unruptured. There were no labor pains; on the fourth day rigors set in, with fever, tympanites, restlessness and collapse. Hydrocephalus, probable rupture of the uterus, and septicæmia were diagnosed. Chercha tried to perform perforation without anæsthetics, but the mother's abdomen was so distended that the fœtal head could not be fixed He then tried version, after dilating the os with bags; but as he then reached the fœtal head he perforated and nearly a pint of water escaped. Yet neither the cranioclast nor the crochet would hold securely, so Chercha seized the leg and turned, so delivering a mascerated child. After its birth an abundant brownish fœtid fluid escaped. In removing the placenta he found that it lay partly in the abdominal cavity, there being a rupture in the uterine wall to the right. Much hæmorrhage followed. No injections were administered. The intestines, which had prolapsed into the uterine cavity were replaced and the uterine wound was plugged with iodoform gauze (30 per cent.). Parametritis followed, and high temperature continued for six weeks. A small vesico-vaginal fistula remained after the patient had, in other respects, recovered her health. Chercha notes that Hoffman and Simpson have observed rupture of the uterus early in labor not preceded by severe labor pains.—*Brit. Med. Mag.*

TWIN PREGNANCY WITH PECULIAR DISPOSITION OF THE OVA.

Borde (*Gazetta degli Ospitali*, p 133) has reported a case in which the two placentas lay side by side on the lateral and anterior walls of the uterus, and the ova was so related that one capped the other, laterally, like a night-cap. He believes that the two ova entered the womb at the same time, and became attached to the uterus, side by side. In a little while the quantity of liquor amnii was larger in one than in the other. The former, therefore, compressed the latter against the side of the uterus, giving it the peculiar shape just described.—*Univ. Med. Mag.*

GYNECOLOGY.

THE EFFECTS OF OLD PELVIC INFLAMMATION ON PREGNANCY AND CHILDBED.

Blanc (*Arch. de Tocol. et de Gynèc.*, January, 1892) opened a discussion on this subject at a meeting of the Paris Obstetrical and Gynæcological Society. On the basis of clinical facts, he maintained that perimetritic and parametritic inflammations were much aggravated by pregnancy. During gestation, a great afflux of blood in the direction of the pelvis occurred. This circumstance acted prejudicially on inflammatory foci. Abortion often occurred. The dangers were yet greater after delivery. Blanc related cases where general infection, starting from old inflammatory deposits, occurred during the sixth or seventh day of childbed. Whether this represented auto-or hetero-infection was doubtful. Professor Budin agreed as to

the dangers of old inflammatory deposits after delivery, but observed that infection occurs earlier than the sixth day; very fatal effects are sometimes seen on the second or third. M. Gueniot believed in latent microbism. It was mainly, in his opinion, the debility caused by delivery that allowed of general infection. M Lucas-Champion-niere admitted that the prognosis was certainly grave, and that in most of such cases that recovered from childbed the old inflammatory troubles were worse than before. Professor Pajot, gave it as his opinion that a woman suffering from distinct abdominal lesions of any kind ought to be cautioned against allowing herself to become pregnant.—*Brit. Med. Jour.*

UTERINE CANCER: CAUSE OF RECURRENCE AFTER OPERATION.

Winter (*Centralbl. f. Gynäk.*, No. 11, 1892) gives statistics throwing light on this subject. In no case did he observe recurrence in the pelvic glands; it is known that in cases not submitted to operation infection of the glands does not occur till late. Recurrence in viscera is very rare after operation (7 cases in 123). Local recurrence is the rule; 116 patients out of 230 who had undergone total extirpation suffered from recurrence. In some of these cases recurrence took place in small pieces of cancerous tissue which were not removed at the operation. Frequently after the removal of cancer of the cervix, universal cancerous infiltration of the parametrium occurred. Winter attributes this to infection through transplantation of cancerous elements during the operation, since when no operation is performed, cancer of the cervix, as a rule, only infects the posterior part of the parametrium. Recurrence in a cancerous fragment not removed, begins in the operation scar, and grows outwards into the parametrium; whilst the universal malignant disease of the parametrium is often quite independent of the scar. This malignant infiltration often grows very quickly and uniformly over the entire parametrium, which is not in favour of its origin in a solitary cancerous fragment in the scar. This infiltration is hardly ever seen after cancer of the body of the uterus or of the canal of the cervix; it is very frequent after cancer of the surface of the cervix, where the instruments used in the course of the operation come in contact with the cancerous tissue. Hence Winter holds that cancerous infection in the course of operation is a danger not to be overlooked; in many cases it is the sole cause of recurrence, and, when pieces of cancerous tissue are left behind, it aids to make the disease recur in a worse form. Hence, in operating, great care must be taken to guard against the danger of infection. In cancer of the cervical canal and uterine body the cavity should be disinfected and the os closed by suture. In cancer of the surface of the cervix the disease should be scraped away with the sharp spoon, and the surface cauterised before the uterus is removed.—*Brit. Med. Jour.*

THE ANATOMY AND PHYSIOLOGY OF THE FALLOPIAN TUBE.

Milroy (*Glasgow Med. Journal*, 1891, No. 6) has made investigations, the results of which are somewhat at variance with the prevailing views. He describes glands in the mucous membrane lining the fimbriæ, which secrete a viscid fluid when the latter grasp the ovary, the function of which is to cause more intimate union between them, and thus prevent the ovum from escaping into the peritoneal cavity. On account of the number of folds in the mucosa, it seems hardly credible, he thinks, that the ovum is drawn into the ampulla by capillary attraction, assisted by the motion of the ciliæ. The inner end of the ampulla, where the folds are scanty, seems to be the most favorable locality in which impregnation could occur. When impregnated, the writer suggests that the ovum is impelled by a "nervous force" (*vis nervosa*) through the isthmus into the uterine cavity.—*Amer. Jour. Med. Sci.*

PEDIATRICS.

NOCTURNAL ENURESIS CURED BY EXCISION OF LUSCHKA'S TONSIL.

Kœrner (*Centralblatt f. klin. Med.*, 1891, No. 23, p. 417) reports the cure of nocturnal enuresis in two girls, one nineteen years old, the other three years, following the extirpation of Luschka's tonsil, which in each case was considerably hypertrophied. This cure was immediate and complete. These cases, therefore, illustrate the important part that nasal obstruction may play in the pathogeny of noctur-

nal enuresis. The coexistence of hypertrophy of Luschka's tonsil and the nocturnal incontinence of urine of childhood (already remarked by Major, Ziem, Bloch, and Schmalz) is, however, so unusual that it is necessary to consider that without the existence of same predisposing weakness of the sphincter vesicæ, adenoid vegetations of the pharynx could not alone excite incontinence.—*Amer. Jour. Med. Sci.*

SUBCUTANEOUS INJECTION OF SALINE WATER IN THE GASTRO-ENTERITIS OF YOUNG CHILDREN.

Demiéville (*Revue Mèdicale de la Suisse romande*, Nov. 1, 1891) reports a case of severe diarrhœa, with vomiting, in a child, aged four and a half months, and of the successful result which followed the subcutaneous injection of a solution of chloride of sodium. Diarrhœa commenced on October 26th, and continued with but little abatement until the 31st, when the child fell into a state of extreme collapse—pulseless, cold, dusky in hue, and unable to utter a cry. On the next morning an injection was given under the skin of the thighs of a 6 per cent. solution of chloride of sodium. Immediately afterwards massage of the thighs was practiced, to facilitate the absorption of the liquid. Improvement rapidly followed, and the child recovered completely without any recurrence of the diarrhœa or vomiting. The first effect of the injection appeared to be upon the circulation; the pulse improved, and the face became quite red. Whether this was due to the mechanical pressure of the injected fluid upon the walls of the blood vessels, the tension of which had been reduced to the lowest point, or to its direct action as a stimulant upon the cardiac nerves, the author does not enter into any discussion. This improvement in the circulation must rouse to action the central nervous system, depressed from want of nourishment, or possibly by some auto-infection, and thus lead to a restoration of the functions of the various organs of secretion and excretion.

Careful directions are given as to asepsis in this operation, which the author urges is so simple as to present no difficulties either in the method of its application or in the instruments required.

In conclusion, Dr. Demièville makes a suggestion which appears worthy of careful consideration. In cases of diphtheria in which septicæmia has occurred, when swallowing is impossible, and nutrient enemata are rejected, when the circulation is almost at a standstill, and death imminent, he believes that subcutaneous injection of saline fluid might prove of the greatest value. It is in this condition that elimination by the kidney is often entirely suppressed, and on this account there is all the more reason to expect from such an injection a salutary effect upon the system.

NURSING BOTTLE.

Budin (*Journ. de Méd. de Paris*, 1891, iii, 483.) gives the following description of a new nursing bottle:

In a rubber cork, which may be used with any bottle, two tubes are placed, bound together; the larger allows the passage of the milk, the other, very small, permits the entrance of air; a nipple of rubber and a flat washer of bone complete the instrument. The tube intended for the passage of air must be very small, in order that the milk may not escape by it when the bottle is reversed, and also that the milk shall not flow too rapidly through the larger tube.

ACTION OF ICE AND ICE-WATER IN DIPHTHERIA

The treatment of diphtheria as employed by Dr. Bleyne consists in the application of ice upon the neck, and the internal use of ice. If ice is not obtainable, water as cold as possible may be used instead. The author claims that cold destroys the bacillus of diphtheria.—*Buffalo Med. Journal.*

HYGIENE.

THE BACILLUS OF MEASLES.

The *Berliner klinische Wochenschrift* of April 18th, contains a paper by Drs. P. Canon and W. Pielicke, Assistant Physicians to the Moabit Hospital, Berlin in which they give the results of researches on the bacteriology of measles recently made by them at the suggestion of the director, Dr. P. Guttmann. They point out that cocci have been found by various investigators in the lungs of persons who had died of pneumonia complicating mea-

sles; and that Babes found micro-organisms not only in the lungs, but the lymphatic glands, the mucus of the nasal fossæ, the conjuntival secretion, and in the exanthematous patches themselves; he also found cocci in the blood obtained from the papules, and in one also very short bacilli. In cultures he obtained streptococci which bore a resemblance to the S. pyogenes. Canon and Pielicke made stained preparations of the blood of fourteen patients suffering from measles, and in all cases they find "one and the same" bacillus. The preparations were made in the same way as in Canon's researches on influenza, and were stained with an eosin-methylene blue solution. They now generally employ a solution composed as follows: Concentrated watery solution of methylene blue, 40.0; ¼ per cent. eosin solution (in 70 per cent. alcohol), 20.0; distilled water, 40.0. The preparations were placed from 5 to 10 minutes in absolute alcohol, and then from 6 to 20 hours in an incubator at a temperature of 37° C. The following solution was also used with advantage: Concentrated watery solution of methylene blue, 80.0; ¼ per cent. eosin solution (in 70 per cent. alcohol), 20.0. From two to three hours in an incubator suffice for staining. In the preparations the bacilli were found stained blue, sometimes uniformly, but frequently much more deeply at the ends than in the middle; sometimes only the edges of the middle portions were stained. The size of the bacilli is very variable; sometimes they are as long as half the diameter of a red blood corpuscle, sometimes they are quite small, and have the appearance of dipococci; between these two extremes they show several gradations in size. Occasionally they are of extraordinary length, almost equal to the diameter of a red corpuscle; in that case they do not stain uniformly, but present three or four colorless spots alternating with the stained portions. As a rule, this form of organism does not stain deeply, the ends in particular often showing a very slight tinge of blue. These bacilli were frequently slightly bent, and were found only in preparations made towards the end of the disease (sixth day.) The author believes the bacilli found by them in the living blood in these fourteen cases of measles to be a specific kind, and to be the true exciters of the disease. They are found in very variable numbers, the first two or three preparations of one specimen of blood sometimes showing only a few bacilli, while on the other hand the field was sometimes packed close with them at the very first examination. They frequently occur singly, but in the majority of cases (12 out of 14) they were arranged in larger or smaller clusters. Their arrangement in the clusters presented nothing characteristic except that they often showed a tendency to lie parallel to each other; in other cases they lay close behind each other, and formed obtuse angles. The bacilli were found during the whole course of the disease, and in one case even three days after defervescence; in this case they had been present in unusually large numbers at the period of crisis. As a rule, the bacilli were found most abundantly at the time of defervescence. In addition to the fourteen cases referred to, the author examined the blood of seven children who had had the measles just before, and in some of whom the rash had not entirely faded away. The results of the examination were negative. They also examined, about ten hours after death, the blood of a child who had died of measles without any lung complication, but the presence of the bacilli could not be determined with certainty; in this case the blood had not been examined during life.

Some of the preparations were stained by Gram's method; the bacilli remained unstained, but were as distinct as the red blood corpuscles. Bacilli of the same shape as those found in the blood were seen in the expectoration, and in the nasal and conjunctival mucus of patients suffering from measles. In all cases, before the preparations were made, blood of patients with measles, obtained by pricking the finger, was inoculated in glycerine agar, blood serum, or milk (woman's), but they did not succeed in cultivating the bacilli on these nutrient media. More recently they used chiefly bouillon, inoculating each test tube with from one to three drops of blood; generally from six to ten tubes were used for each experiment. In three cases they found in the inoculated bouillon bacilli which agreed in all points with those found in the blood, but could not be further cultivated on glycerine ager, blood serum, or bouillon. The bouillon remained clear for a time, there being a sediment at the bottom of the tube which was partly deposited from the inoculated

blood; after some days a slight opacity became visible, and small flakes formed which rose on shaking the tube. In these bouillon cultures the bacilli were found in different forms, sometimes uniformly stained, sometimes resembling diplococci, sometimes more like diplobacilli. Some of them exceeded in length the longest seen in the preparations of blood. The bacilli in these bouillon cultures do not stain by Gram's method, and they display only slight power of independent movement. In one of the three cases referred to, these bacilli were found in large numbers in all the tubes of bouillon (four in number) which had been inoculated with blood; inoculations made at the same time on glycerine agar and blood serum remained sterile. The inoculation was in these cases made towards the end of the fever at the commencement of the crisis; in the blood preparations made at the same time the bacilli were found in considerable numbers. This was the case in which the bacilli were found in the blood three days after defervescence. From the same child blood has been drawn into sterilized tubes, and, after having been kept two days in the incubator, inoculated in bouillon and agar. In one of the tubes containing bouillon bacilli were also found, while glycerine agar inoculated with the same tube remained sterile; here also all attempts at further cultivation failed.

By this method Bruschettini (*Riforma Medica*, January 29th, 1892,) cultivated influenza bacilli obtained from living blood; it was several times employed by Canon and Pielicke in the course of the present investigation, but, except in the case mentioned above, without result. In the two other cases in which bacilli obtained from the blood was cultivated in bouillon, the inoculations were made during the course of the fever, yet bacilli obtained from the blood was cultivated in bouillon, the inoculations were made during the course of the fever, yet bacilli were found in only one or two of the tubes, all the others remaining sterile. The result was also negative in a series of inoculations made from one to two days after the subsidence of the fever. Sometimes, indeed, a few bacilli (two to five) were found in a preparation obtained from blood-inoculated bouillon, after sufficient shaking of the tube and very careful search, but it seems to the authors, doubtful whether this can be taken as a proof of multiplication of the bacilli. In one case, in which death was due directly to measles, numerous inoculations of the blood were made on different nutrient media, including bouillon, about ten hours after death; all these remained sterile.

Finally, an attempt was made to cultivate these bacilli on blood serum glycerine agar by the method employed by Wertheim for the cultivation of gonococci (*Deutche med. Wochenschr.*, 1891, No 50), but without result. The blood serum came from a person who was said to have passed through a severe attack of measles seven years previously, and the authors argue that there are special advantages in obtaining this nutrient medium from the blood of persons who have never had an attack of measles, and have, therefore, not acquired more or less immunity against that disease.

Canon and Pielicke concluded by stating than the bacilli found by them in the blood of patients suffering from measles are essentially different from the micro-organism hitherto described in connection with that disease, They admit however, that Babes's "bacilles très courts," which he does not further describe, may be indentical with theirs, but he only mentions having found them once, and seems to have attached no importance to the matter.—*Brit. Med. Jour.*

MEDICAL CHEMISTRY.

A DELICATE TEST FOR ALBUMIN IN THE URINE.

Spiegler suggests the following formula for the discovery of albumin in the urine as being the most delicate test we possess:

℞

Hydrarg. chlor. corrosiv.....	8	parts.
Acid. tartar.....	4	"
Aq. dest	200	"
Sacch. alb.....	20	" M.

The test-tube is filled one-third with the reagent. The urine is filtered and made strongely acid with acetic acid. It is then allowed to flow down the side of the tube, drop by drop, until it lies in a layer over the reagent. If albumin is present, a sharp white ring is seen laying between the two layers of fluid. If it is necessary to test heavy diabetic urine, more sugar may be added to the reagent, in order to raise its specific gravity. It is necessary to decompose any carbonate that may be

present, in order that it may not form a precipitate with the sublimate. But the precipitate may be recognized by the fact that when shaking the liquid the apparently caseous precipitate will disappear and the fluid become clear.—*Boston Med. Surg. Jour.*

DETERMINATION OF MERCURIAL CONTENT OF MERCURIAL OINTMENT.

Thein in the *Bulletin* of the Société Pharamaceutique de Bruxelles, gives the following: Fill a large test tube to within 2 cm. of its top with an aqueous solution of nitrate of sodium (2:5), or of magnesium sulphate (1:2). Add a determined quantity, say 4 gm., of the mercurial ointment to be tested, and place the tube in a warm-bath. On account of the specific gravity of the liquid the ointment at first floats on the surface, but little by little, as the ointment base melts, the mercury collects at the bottom of the tube, until finally each particle separates. Carry a little staff with a button on the end, down through the melted fat, and after cooling withdraw it bringing the fat away, and then collect, dry and weigh the mercury.

PURE BORON

M. Henri Moissan submitted to the Academy of Sciences last week an important essay on the preparation of pure boron. Magnesia mixed with an excess of boric acid and heated gives a mixture of boron, borate of magnesium, and boride of magnesium. By sucessive washing in acids the borate and the greater part of the boride are eliminated. By the fusion of the remaining boric acid the residue of the boride is oxidized, and, after washing, pure boron is produced. In another paper M. Moisson showed that when boric acid is treated with sodium or potassium great heat is given off, and owing to this heightening of temperature, the greater part of the boron unites with the excess of alkaline metal. When the compound is subsequently treated with water and hydrochloric acid, a mixture is obtained (after desiccation) composed of boron, boride of sodium, boride of iron, hydride of boron, and hydrated boric acid. This mixture, M. Moissan pointed out, had hitherto been regarded as amorphous boron.—*Paris Corresp. of Chem. and Drugg.*

NEWS AND MISCELLANY.

NEW YORK PASTEUR INSTITUTE.

During the second year of its existence (February 18, 1891, to February 18, 1892) 574 persons who were bitten by dogs, cats and other animals applied for treatment. These patients may be divided into two categories:

1st. In the case of 461 of these persons it was demonstrated that the animals attacking them were not mad. Consequently the patients were sent back after having had their wounds attended to during the proper length of time.

2d. In 113 cases the anti-hydrophobic treatment was applied, hydrophobia of the animals inflicting bites having been evidenced clinically or by inoculation at the laboratory, and in many cases by the death of some other persons or animals bitten by the same dogs.

Indigents have been treated free of charge.

The persons treated were: 36 from New Jersey, 22 from New York, 12 from Massachusetts, 8 from Connecticut, 6 from South Carolina, 5 from Texas, 4 from Maryland, 3 from North Carolina, 2 from Missouri, 2 from Ohio, 2 from Pennsylvania, 2 from Arkansas, 1 from Alabama, 1 from Georgia, 1 from Iowa, 1 from Louisiana, 1 from Michigan, 1 from Rhode Island, 1 from Virginia, 1 from Mexico, and 1 from West Indies (Curaçoa).

By the examination of the results, one will see that those obtained at the New York Pasteur Institute are about the same as those reported by the kindred institutions. It is unnecessary to comment upon them, as they will be well appreciated by any unprejudiced mind.

Let us remember that last year 42 deaths caused by hydrophobia have been formally reported of persons bitten by rabid animals, and who were not submitted to the inoculations. This makes about 80 deaths for the period included in our statistics, during which three persons died despite of the treatment. And without taking exception for the patient (Earl) who came only four days after his terrible fight with the dog, if we consider, as they do abroad, that this treatment has produced its full effects only fifteen days after it has been completed, we see that the percentage of those who died after the fif-

teen days following the inoculation has been only 2 out of 298, or 0.66 per cent.

Among the 298 persons treated, 177 have been attacked by animals undoubtedly rabid. If we consider again that statistics indicate 25 per cent. as a low per centage of deaths after bites inflicted by hydrophobic dogs; and then counting only 177 instead of 298 persons bitten, we ought to have had not two or three cases of death, but at least 44. Moreover, 123 persons among the 177 bitten by hydrophobic animals had their wounds inflicted on the face, the head, or the hands. We know that bites of this nature are followed by hydrophobia in a much larger proportion, say at least 40 per cent. The number of deaths ought to be, then, no less than *seventy* among the persons so bitten, who came from the different parts of the country to submit themselves to the Pasteur treatment.

LEPROSY IN JAPAN.

Another missionary who devoted himself to the succor of lepers has just completed his sacrifice by giving his life in their service. Father Testevuide, who may be called the Damien of Japan, established the first leper house in that country in 1886. At that time no provision whatever was made either by the Government or the public for the care of lepers, and it was only by the most persevering efforts that the energetie priest was able to collect sufficient funds to build a leper house on Mount Fusi. This institution he personally managed till his death. His example has been fruitful, and now there are three asylums for the victims of leprosy in Japan, all apparently owing their existence to private charity.—*British Medical Journal.*

PHYSICIANS DO NOT WRITE.

This is the general cry of those who desire to see them come to the front. As the California *Medical Journal* very justly observes, there seems to be a misconception, on the part of the profession in general, on the subject of writing for medical journals. The average practitioner seems to think that none but the editors of the journals or one who is a teacher in some medical college could or should write an article for the perusal and criticism of the general profession; nor lay down theories and laws to govern others. Poor indeed is the physican who dare not get out of the beaten paths, and may be ruts, of his predecessors, be they his teachers in the college he has attended, or the authors of his text books. Can he blindly follow any of these and be successful? No! Then, if he dare differ with them in his theories and practice why not go on record as differing with his own confreres? This would be a slow world if we all believed and did the same. How did our teachers gain their present status of knowledge and success? Was it not by observance and experience of others? Can't you do likewise? You have not only your teacher's knowledge to build upon, but also that of their predecessors; hence your advantages are greater than those of many professors in our colleges, and you could teach them many wholesome lessons, that you have never been taught, but learned by experience, in general practice. Hence you do yourselves and the progress of medical science an injustice in not contributing to the literature of the profession.—*Med. Review.*

ARISTOL Antiseptic: Cicatrisant.

EUROPHEN Iodoform Substitute: Antisyphilitic.

SULFONAL-BAYER Hypnotic: Sedative.

PHENACETINE-BAYER Antipyretic: Analgesic.

PHENACETINE-BAYER is a true and distinct organic derivative. It is indicated in influenza (*la grippe*); in all fevers, with or without pain; in rheumatism and neuralgia; and in phthisis and pertussis. It acts promptly and is both safe and effective. Supplied in ounces, tablets and pills.

EUROPHEN, as a substitute for iodoform, is winning an enviable place in therapeutics. It has a special value in specific lesions, while as a surgical dressing in ulcerations, open wounds, and septic conditions of the cavities, it has given excellent results. Supplied in ounces.

SULFONAL-BAYER is indicated in all the insomnias and in the cerebral disturbances of insanity. It is a pure hypnotic, a safe and effective remedy, and it does not give rise to a drug habit. For the correct method of administration *see pamphlet*. Supplied in ounces, tablets and pills.

ARISTOL is widely esteemed by physicians for the excellent results it has given in the treatment of all external traumatisms; in cavital lesions, and in many of the dermatoses. As a surgical application, it is safe, inodorous and non-toxic. Supplied in ounces.

EUROPHEN-ARISTOL, a preparation consisting of equal parts of each medicament, is also supplied in ounces.

DESCRIPTIVE PAMPHLETS FORWARDED ON APPLICATION.

W. H. Schieffelin & Co., New York.

BAKER'S EMULSION

WITH HYPOPHOSPHITES OF LIME AND SODA.

Among many points in which this preparation excels are:

1st—In quality of the Pure Oil used in its composition, being the finest Norwegian, of a special manufacture, receiving the highest prizes at late European Expositions.

2d—In the Proportion of Oil it contains.

3d—In mode of manipulation and thorough incorporation, rendering it Permanent and Palatable, and of proper consistence, about that of Rich Cream.

4th—In Size of Bottles, containing 16 ounces.

Confidence in the merit of our preparation leads us to respectfully ask a specification of our Brand when prescribing.

ESTABLISHED 1850

TRAUMATIC EPILEPSY; THIERSCH'S METHOD OF SKIN GRAFTING; LIGATURE OF THE FEMORAL ARTERY FOR POPLITEAL ANEURISM; ABSCESS OF KIDNEY; CARCINOMA OF THE BREAST

By CHARLES McBURNEY, M. D.
DELIVERED AT THE ROOSEVELT HOSPITAL, NEW YORK.

TRAUMATIC EPILEPSY.

Gentlemen:—This is the patient who was operated upon last Saturday for an injury received on the head a number of years ago, and which was followed by epileptic attacks, occuring at irregular intervals, but increasing in severity, and without a previous history of epilepsy. I found a positive surgical indication in the condition of the surface of the skull, as there was a marked depression which I thought might involve the internal table. The operation consisted in exposing the affected area, and making two large openings in the skull, and connecting them by a rangeur. On enlarging this opening upwards subsequently, I found that the inner table was not affected, although the outer one showed very marked elevations and depressions, and considerable change in the structure of the bone. The bone was very firmly adherent to the dura mater, and was separated with considerable difficulty. The dura mater was then opened, and some adhesions found between the dura mater and the arachnoid. At the anterior part of the operating field, there was also a very distinct thickening and whitening of the arachnoid membrane between two convolutions, covering an area about half an inch in diameter, and beneath this, there seemed to be an accumulation of fluid situated beneath a very thin layer of cortical substance. On cutting away this thickened arachnoid, however, and passing an instrument through the cortex a short distance, no fluid was found. The posterior part of the brain was perfectly normal in color, consistency, and pulsation, but the anterior part was flat and soft, and without pulsation. It was evident, therefore, that changes had taken place in the cortical tissue, probably due to small hæmorrhages on the surface of the brain at the time of the original injury, and that these had subsequently undergone softening. A small portion of the organ was removed from this situation, and subjected to microscopical examination; and in doing so, I had no hesitancy, for this part of the brain is practically unimportant, and I knew that I would not injure any motor function. The dura mater was then brought together, a small rubber drain inserted, and the skin flaps united by sutures. The patient has had a perfect week of convalescence, and the wound, as you see, is in excellent condition. So far, there have been no convulsions of any kind since the operation, and whereas, he had before the operation a dull expression, he now has a much brighter look, which has been noticed by others as well as by myself. This man has had before this intervals of many days in which he has been free from convulsive attacks of any kind, and hence, we cannot say yet how much good the operation has done him, but we must not forget that a sufficient lesion was found to account for his convulsions, and its removal would naturally lead us to expect a good result.

THIERSCH'S METHOD OF SKIN GRAFTING.

The next patient is the man upon whom I operated at the last clinic, and removed what I took to be a sarcomatous tumor

originating in a distinct traumatism. The injury was followed by a hæmatoma, and I believed that this underwent changes which converted it into a sarcoma. The operation which I performed, consisted in the complete removal of the sarcoma, which was fairly deeply situated, and closely attached to the deep fascia, and the wound was closed by grafts of skin applied according to Thiersch's method, the edges of the wound being stitched to the deep fascia to prevent undue motion of the parts. The wet dressings have been changed every forty-eight hours, as is my custom in these cases, and although there has been a little slipping of one of these grafts, the others have done extremely well. The wound has filled up level with the surrounding surface, and there is not the usual excavation we find in these cases of grafting. Had this one graft not slipped, the result would have been almost perfect. The change of dressing every forty-eight hours I have found sufficiently frequent, although Thiersch makes wet applications every four hours, night and day. The less frequent change of dressings I find yields just as good results, and is, of course, much less laborious. After about two weeks, we shall substitute a dry dressing, and perhaps then, some of the granulations will require to be stimulated with the actual cautery. This is the best application, nitrate of silver and similar caustics not seeming to act well upon the granulations. This method of skin grafting certainly has much to commend it when compared with the ordinary plastic operations. A few weeks ago, I operated upon a case where it was necessary to fill in a gap under the lower eyelid, measuring two inches laterally, by one inch in the vertical direction. If covering it by a plastic operation, it would have required a large flap from the cheek, or a drawing together of the sutures to such an extent as to cause eversion of the lid; but by this method of grafting, I was able to apply dry dressings in ten days.

EPITHELIOMA.

The third case is that of the old man with epithelioma involving about two-thirds of the lower lip, and associated with enlargement of the lymphatics under the jaw. He was operated upon, you will remember, one week ago, but he has not done so well as the others. On the second day after the operation, he developed a high temperature with signs of pneumonia, and although he appears to be convalescent now, I did not consider it advisable to bring him up to the operating theatre to-day. A portion of the tissue has sloughed, probably as a result of the continued high fever, and it is likely that a secondary operation will be required.

LIGATION OF THE FEMORAL ARTERY.

Our first patient to-day, is a man, twenty-seven years of age, with a tumor in the left popliteal region of comparatively short duration, and of comparatively large size. He was not aware of its existence until six weeks ago, but it is probable that it has been there for a longer time. He says that he has had pain in this leg for a number of years, but I cannot say whether or not this has any connection with the present tumor. At present, there is a pulsating tumor occupying the whole of the popliteal space, having thin walls, and pulsating both laterally and vertically. This pulsation is entirely stopped by pressure on the femoral artery. A loud aneurismal bruit is heard over the whole of this tumor. The tumor shows a decided tendency to increase, and has already caused considerable pressure on the popliteal vein, as shown by the enlarged veins of the leg, and by its pressure on the nerves, it is causing considerable pain in the limb below the knee. This case, therefore, seems to be one demanding surgical interference. He gives no history of traumatism, or syphilis, although it is possible that there has been syphilitic degeneration of the arterial walls.

In reference to the treatment of this case, I have decided to ligate the artery above the aneurism, and at the site of election in the lower part of Scarpa's triangle. I have for the most part discarded the method of treating aneurisms by digital, or other method of compression, although my experience formerly with this method was quite satisfactory, five or six cases which I treated in this way, having all recovered. But, this was before we had so much confidence in antiseptic treatment of wounds, and I think that the attention of the profession was directed to digital compression chiefly from a desire to avoid a cutting operation. Digital compression

is a terribly laborious process, and one who has not attempted it can have but little idea of the hard work it entails. The best assistants cannot keep up the compression longer than about ten minutes at a time, and hence there must be a very frequent change of assistants both night and day. I have decided in this case, therefore, to adopt the method by ligation. My own experience with this method has been very satisfactory, as I have never had any accident or bad result, such as gangrene, follow the application of the ligature. I look upon this case, however, as one where there is reason to be a little anxious as to the final outcome, for the patient is very anæmic, and the interference with the venous return is considerable, so that it is possible that the shutting off of the vascular supply may lead to disagreeable consequences. Notwithstanding this risk, his condition is such that the operation seems to be eminently proper. There is a very slight pulsation in both the anterior and posterior tibial arteries, and you will see by the purplish discoloration of the feet, the amount of interference with the venous return.

The limb has been thoroughly cleansed first with soap and water, and then with turpentine, alcohol, and ether, so we are ready for the operation. I begin by making an incision which will freely expose the lower part of Scarpa's space. I wish to apply two ligatures here, for I desire to divide the vessels between them, so as to remove the tension. Having applied these ligatures, I now pass a director under the vessel, preparatory to dividing the artery. Upon dividing it, there is an immediate separation of one-quarter of an inch, and I find that pulsation in the vessel has entirely ceased. The wound is now closed with deep and superficial catgut sutures, and the usual antiseptic dressing applied, and the limb well wrapped up in cotton, and bandaged from the toes to the groin. The limb is next fastened to a long posterior splint with a foot-piece, the limb being slightly flexed, and the foot raised on a pillow, for I desire in every way possible to favor the circulation in the limb.

ABSCESS OF THE KIDNEY.

In this next case, I incline to the diagnosis of a tubercular suppurating kidney, but I must admit that there is hardly sufficient grounds for a positive diagnosis. The patient is a delicate tubercular looking girl, twenty-three years of age, who says that some five years ago, she began to suffer from irritability of the bladder with frequent micturition and scanty urine, but that with this exception, she was in good health until about three months ago, when her general health began to fail rapidly, and she noticed at about the same time, a painful and tender point in the region of the right kidney, and this increased until the whole lumbar region became quite tender. She has had repeated chills, and considerable fever and night sweats. Four weeks after this tenderness was first noticed, she says there was a discharge of pus from the vagina, but we can obtain no history of bladder irritation at this time, and hence, I cannot say where the discharge came from; it may not have been pus. It occured to me that this might have been a discharge of pus from a distended kidney, and that she thought it came from the vagina, when in reality, it came from the bladder. There was only very temporary relief following this discharge.

At present, she is feeble and anæmic, and has a large mass in the right loin, occupying the region of the kidney, which anteriorly and laterally feels quite firm, but posteriorly, over the region of the kidney, presents an area of fluctuation which probably indicates a considerable collection of pus. Judging from the history, it is difficult to state when this formation of pus began. The examination of the urine gives us no clue to her condition. It is found to be of a yellow color, and to contain only a few leucocytes and epithelial cells and granular matter, but it has a low specific gravity—1004. It contains no albumen, and is practically a normal urine. I am, therefore, in considerable doubt whether we have to deal with a long continued obstruction of the ureter due to a calculus or some other cause, thus causing obstruction of the pelvis of the kidney, or whether there is tubercular disease of the kidney which has finally broken down and produced this abscess. These are the two most important conditions, but I cannot exclude entirely from the history a sarcoma of the kidney, associated with a purulent collection. I hope that incision and drainage may restore the patient to a fair condition of health, for I think she

would hardly survive an operation as severe as extirpation of the kidney.

The first step in the operation is to ascertain with an exploring syringe whether or not there is pus present, for if this be a suppurating kidney or a perinephritic abscess, I should feel that a nephrotomy would be all that I ought to do for this patient, and if subsequently extirpation were called for, it could be done much more safely than now, and if malignant disease were present, I should still feel that the main point would be to employ measures directed towards stopping her chills and fevers, and sweating. This can be accomplished by draining any collection of pus which may be present. You see that the aspirating needle withdraws pus, and this seems to be so superficial that if it originated in the kidney, it must have long since escaped from the kidney tissue.

The patient being placed in the prone position, an incision was made in the loin, and immediately a thick stream of pus gushed out. My finger now passes into a large cavity measuring six or seven inches vertically. It extends up to the spine, and its anterior wall is composed of the mass already referred to. The portion of the tumor occupying the anterior part of the loin feels quite firm, but I should expect to find pus there also. The aspirating syringe, as you see, again withdraws pus, but it is in a small cavity, and a large part of this tumor is evidently quite solid. My finger now passes into a large abscess cavity in the upper part of the kidney itself. After thoroughly sponging out the wound, a number of punctures were made, but no pus found, and hence, it is most likely that the disease is chiefly confined to this upper part of the kidney. Looking upon the case as probably a tubercular one, one would expect several suppurating foci, but as such are not found, it seems better to content ourselves with draining those which have been found, rather than incising the surface of the kidney without a more positive indication for such interference. The cavity is now thoroughly irrigated with Thiersch's solution, and the inside of the cavity mopped out with a sponge well sprinkled with powdered iodoform. A packing of iodoform gauze, and a compress of the same material, with a broad bandage, completes the dressing. My object is to treat this case as though there were only one abscess present, and if other foci develop later on, they will be treated in a similar manner.

CARCINOMA OF BREAST.

Our third patient is fifty years old, and she presents herself with a large tumor of the left breast, dating back for about two years, although the larger part of the growth has been noted only during the past four months. It involves more than one-third of the circumference of the breast; it has drawn the nipple slightly inward, and the skin is quite firmly attached to it over a considerable area, but is not attached to any extent to the deep fascia. There is one small spot of ulceration, and the mass has the true feel of a carcinoma. There is also enlargement of the axillary glands. The question arises, can this region be entirely covered by the skin of the neighboring parts, or must we resort to grafting? Although the skin is quite redundant here, and notwithstanding that a free incision will be required, it is quite probable that we may be able to close the wound by a flap of skin from the adjacent parts. The breast is included in a very long elliptical incision extending up into the axilla, and my assistants secure the vessels with clamps as the dissection proceeds. Having removed the breast, and cut open the tumor, you see that it is a typical carcinoma which has broken down in one or two places. We see now that this tumor was not attached to the underlying fascia. I find the glandular enlargement in the axilla so considerable that nothing but a complete removal of the contents of this region will prove satisfactory. As I remove these glands, and cut them open, you notice they present well marked evidence of being involved in the disease. I have cut with entire indifference as to whether I could cover the wound with flaps or not, as it is of the first importance to cut well beyond the diseased area, and it is a secondary consideration whether or not it will be necessary to resort to a plastic operation or to skin grafting. I find that there is still enough skin left to bring the flaps together so as to cover the greater part of the wound, but there is a small area which cannot be so covered without making undue traction upon the flaps, and therefore I shall close in this portion by Thiersch's method of

grafting. Before grafting, I shall introduce a number of interrupted sutures around the edge of the area to be grafted, and this step I consider quite important, as it not only diminishes slightly the size of the wound, but it fixes the edges. A portion of the patient's thigh having been thoroughly cleansed, an assistant makes the skin tense, while with a sharp razor, a long, thin, and broad strip of the skin is removed and transferred to the surface to be grafted. By the use of two broad instruments armed with teeth, the skin of the thigh is held tense, and at the same time *flat*, so that a long graft of nearly equal thickness throughout can be removed. If great attention be not paid both to the manner of holding these instruments, and to the position of the limb while cutting the graft, the surface of the thigh cannot be made flat, and consequently it will be impossible to remove even grafts of any considerable size. The grafts, as well as the surface from which they are removed, are kept wet with salt solution (6 per cent.) during the whole process of grafting, and the surface from which they are taken is dressed with rubber tissue and compresses wet with the same solution, and covered with cotton secured by a bandage. This dressing will not be removed for eight or nine days, and at the end of this time, the surface will be found entirely healed. When this dressing is used, the patient suffers no pain in the part from which the grafts were taken. The grafted portion of the wound is also covered with rubber tissue and compresses wet in the salt solution. The remaining portion of the wound has already been closed by interrupted catgut sutures. I have inserted a piece of rubber tissue through an opening in the axilla to facilitate drainage, as I find this answer in these cases fully as well as rubber tube. The operation is completed by applying the usual firm dressing of bichloride compresses and cotton. The dressings over the grafted portion will be changed every forty-eight hours, but the bichloride dressing will not be disturbed for a number of days.

I do not consider the prognosis in this case good, for the previous history, together with the amount of disease found at the operation, would lead us to expect a recurrence of the disease, but I hope that this may be postponed for eighteen months or two years.

ON THE ÆTIOLOGY OF IRITIS.

By PROFESSOR DE LAPERSONNE,
LILLE, FRANCE.

Gentlemen: Iritis has always been divided, from an ætiological point of view, into traumatic, syphilitic, rheumatic and other kinds. Putting aside the traumatic form which may be easily ascribed to an infectious external cause, I will speak to you about the ætiology of the so-called spontaneous, medical iritis, due to internal causes. Until recently, such have been termed dyscrasic iritis. The actual tendency, and of which I entirely approve, is to always consider the cause of iritis as an infectious one, and thus it may be said that iritis is the result of an infectious state. Though this proposition is easily demonstrable by a certain number of cases, it is far from being admitted by authors. If we adopt, from the start, the prevailing ideas about infection, it is seen that the field is admirably prepared for what is termed secondary infections. The iris, like all the uveal tract, is composed of an extremely rich vascular tissue, erectile, comparable to that of the lungs; the liver and the kidneys, and where diapedesis takes place readily; this diapedesis being probably one of the means of defence of the organism during the period of phagocytosis. A histological examination will reveal to us the existence of this diapedetic process at the beginning of an iritis. Again, it is well known that one of the means by which the organism rids itself of toxic substances is elimination carried on by the glands. You are familiar with the part played by the kidneys in this respect. Now, the uveal tract is a gland, a gland of the aqueous and vitreous humors, studied recently by Bouchard and especially by Nicati. Such is the field; let us examine the seed.

Clinical observation has for a long time permitted us to recognize the frequency of iritis in the infectious malady *par excellence*: syphilis. In this instance it is not necessary that the microbe be discovered. The proportion of these cases, although variable according to syphilographers and ophthalmologists, is quite considerable. On the other hand, the period for the appearance, and the gravity of the disease, depend on the degree of virulence. In malignant syphilis, the affection coincides

with the appearance of the roseola. You know how syphilis affects old individuals, and, in this respect, I will cite the case of an unfortunate countryman who came to our clinic, suffering from an intense gummous iritis. He still had upon the chin two chancres produced by the razor of a clumsy and careless barber; the body of the patient was covered with a confluent papulo-squamous eruption and numerous mucous patches. This man exhibited at the same time the primary, secondary and tertiary symptoms of syphilis, if we look upon the gummous affection of the iris as a tertiary manifestation of the constitutional disorder.

Iritis is of frequent occurrence in states manifestly infectious, such as tuberculosis and leprosy. Blenorrhagic iritis has been described, and there is no doubt, at present, that blenorrhagia is due to a general systematic infection. Still further: the frequent occurrence of iritis during the existence of intestinal disorders, has been attributed to a reflex infection. This subject is treated by Cohn in a recent work on the *Uterus und Auge.* A few months ago, in the *Semaine Medicale*, Wecker described metritic iritis as originating from a focus of infection in the female genital organs. Grandclement (*Soc. d' Opth.*, 1891) has referred to a special inflammation, an iritic uveitis, which the author attributes to a special microbe, and due to a poor elimination of organic waste by an insufficient renal action.

All these cases are rare, and constitute a small proportion among those producing iritis. After syphilis, the most frequent cause of iritis is rheumatism. Is rheumatism an infectious disorder? You know that this question is to-day discussed by authors and that some of these answer in the affirmative. Other writers (and they constitute the large majority), however, maintain that it remains to be established, especially in regard to acute rheumatism. Nevertheless, for one of the varieties of this affection, the answer is not doubtful. Such is the infectious pseudo-rheumatism of Bouchard, studied by Bourcy in his thesis, and of which I, myself, have reported examples in one of my papers. This rheumatism may give rise to very intense iritic and iridocyclitic manifestations. I remember the wife of one of my colleagues, who, during convalescence from a serious attack of infectious rheumatism, became afflicted with what may rightly be called lymphangitis of the eye-ball.

The objection that may be made is, that iritis is only produced during the articular attacks. On questioning patients, we may only find the signs of an arthritic temperament: a hereditary rheumatic or gouty history. Two years ago Hutchinson revived this question in the *Royal Society of London.* In his opinion, arthritic iritis is produced under the influence of two factors: the first, a hereditary one which in a special manner modifies the tissues; the second, a personal one—a climateric influence for the rheumatic form on the one hand, and on the other, errors of diet increasing the quantity of urates in the blood and tissues, for the gouty form.

In my opinion, there is another way of understanding the processes which are engaged in the production of iritis. I have frequently observed the co-existence of digestive troubles and the affection under consideration. Patients are often dyspeptic, and frequently suffer from dilatation of the stomach. One of the most interesting cases which I have seen is that of a woman who, for several months, was a victim of successive attacks of iridicyclitis. She was thin, exhibited a cachectic aspect, had bad teeth, and suffered from fetor of the breath. She had alternate attacks of constipation and diarrhœa, and was afflicted with a marked dilatation of the stomach, but there was no sign of neoplasm.

I made a careful, systematic study of this case, and I was delighted to observe an amelioration produced in the condition of the eyes by an appropriate treatment directed to the alimentary tract.

You have seen an interesting example at my clinic, in a patient suffering from repeated attacks of episcleritis with anterior irido-choroiditis. It is particularly upon these insidious relapsing forms of the disease that the influence of digestive troubles is most markedly observed. On questioning patients you will find a history of alternate periods of diarrhœa and ocular disorders, a condition which they will explain in their own manner.

You are familiar in a general way with the frequency of digestive troubles occurring in rheumatic, gouty and arthritic patients, even without the errors of diet insisted on by Hutchinson. If it is difficult to prove that the infectious agent is of a microbian origin, cannot it be admitted

that, under the influence of these alterations of the digestive tube, the septic products (ptomaines or toxalbumins) are reabsorbed and go to produce the special irritation which causes iritis? This is the hypothesis advanced regarding the production of certain inflammations of the skin, such as eczema or acne. It appears to me rational to admit that the same hypothesis may be resorted to when called upon to explain the production of iritis. Thus we may account for the periodical attacks, for the frequent relapses. It also explains the good effects obtained from intestinal revulsion, particularly after the use of calomel as advocated by English practitioners. Do not certain medicaments, like salicylate of sodium for instance, exercise an antiseptic action on the intestine?

The practical inference drawn from these facts is, that eliminating syphilis and the various infectious causes which have been enumerated, it is well to examine carefully the digestive tract, especially in cases of iritis with a tendency to relapses.

To the ordinary local treatment may be associated a well regulated diet, according to the precise indication advocated by Bouchard, and the employment of antiseptics such as salol, naphthol, iodoform and others.—Translated from *Le Bulletin Médical*, February 21, 1892.

CEREBRAL DISTURBANCES FOLLOWING INFLUENZA.

Mueller (*Berlin. Klin. Wochensch.*, No. 37, 1890) reports the case of a man aged fifty, who after an attack of influenza presented a condition of great physical exhaustion. In a few weeks his mind seemed affected and he became somnolent, so much so, that he could be roused only with the greatest difficulty and then he would almost immediately fall asleep again. There was pain upon pressure over the vertebræ, the neck was rigid, the pulse was small and irregular, the skin reflexes were diminished and the tendon reflexes were absent. This condition lasted for about two weeks when he began to improve. He slept less and his mind became clear, but he had no recollection of what had occured during the course of the disease. The reflexes returned to normal. The author thinks there was a cerebro-spinal meningitis similar to that seen after other infectious diseases.

Communications.

THE BLENDED TOCCI BROTHERS, OF LOCANA, ITALY.*

By ROBERT P. HARRIS, M. D.
PHILADELPHIA.

We have here a nude representation of what we must regard as the most remarkable duplex monstrosity that the world has seen since the death, three hundred years ago, of their Scotch analogue who had reached the age of twenty-eight years. This peculiar type of twins appears, on an average, twice in a century, as there have been about a dozen in the last six hundred years, and but two in the current century. The most remarkable feature about the Locana twins is that they are living and in good health at the age of fourteen and a half years, and bid fair to reach mature age, because of the perfection and independence of their thoracic and abdominal viscera. In the last six hundred years but two monstrosities of the same type have lived out their first year; and this early mortality we must attribute to a want of internal anatomical symmetry, and particularly to an abnormal construction of the heart and distribution of the blood-vessels in one twin. It is doubtful if unite twins are ever equals in mental and physical vigor, and the Tocci Brothers are as nearly alike in health and strength as has been the case in the subjects that have lived the longest.

The photograph before us represents the boys in a standing position, but it will be seen at once that they are mainly sustained in it by the use of their arms, and that this is more markedly the case with the left twin, whose shoulder is forced upward, because of the weak support given by his club-foot and imperfectly developed leg.

These twins were born in Piedmontese, Italy, on October 4, 1877, after a labor of eight hours, under a midwife, the head of the right boy, Giovanni, coming first; and he appears to have held that relative position, in a mental sense, ever since. Giacomo's head soon followed, and then came

*Dr. Harris brought to the notice of the College of Physicians an enlarged photograph of this remarkable monstrosity, which had been prepared for the Mütter Museum at the desire of its curator, and made the following remarks:

the double thorax, a single abdomen, one pair of legs, and a single placenta. Nothing was said about the cord, except that there was but one; but it was no doubt composed of six vessels—four arteries and two veins. The twins weighed 8¾ pounds when a month old, and probably a pound less at birth. When three years old, as shown by a photograph, they had shoulders, a corpulent abdomen, and, for their age, large testicles. Giovanni had a long face and a girl-like appearance, but his head-circumference has always been a little the larger of the two.

These xiphodidymi belong to the class that is distinguished by having two heads, four arms, and only two legs. In general outline they resemble, when their legs are together, a letter Y—the heads, shoulders, and chests down to the sixth ribs making the V, and the abdomen and legs the I, or stem. Their present weight is 95 pounds a healthy, robust boy of their age. Their arms, having much more exercise than their legs, are larger, in proportion to their age, than the latter; and the glutei muscles of Giacomo are badly developed, because of his talipes equino-varus, and consequent inability to develop them by exercise. Single boys of fourteen, as a rule, have much better developed legs than arms, which led to the expression in war times: "Better fitted for running away than handling a musket." But the Tocci boys are the reverse of this in strength.

If we had a back view of the monstrosity, it would show their two inner arms crossing each other over to their outer shoulders, in the position in which they usually hold them; two converging spinal sulci extending down to two sacra; two outer nates, as in a single subject; and two little rudimentary nates with a cleft between them, located over the intra sacral symphysis. They have no rudimentary nodule to represent an attempt at the formation of a third leg, as has been found in some analogues.

As they look at you, the two boys are quite different in facial contour, and Giovanni is generally credited with having the better mind; but their faces in profile bear a closer resemblance. They have fair skin, and at times a rosy color, and thick brown hair. Their bodies are short, and they are below the medium height, for their years. Their facial expression is not a happy one, when in repose, and reminded me of what I have noticed in boys having deformed feet—a shame-faced look.

In measure of health the twins compare well with normal children of their own sex, having had but little sickness since birth, and not having lost a day therefrom since they commenced to exhibit themselves in the United States, six months ago.

Giovanni is the stronger and more erect of the two, has the better ear for music, learns a foreign language the more readily, and is generally the more intelligent of the two. He has a natural talent for drawing, and is devoted to making pictures of our domestic animals, such as the horse, cow, etc., and of some of the savage quadrupeds, as of the lion and tiger. Giacomo is the critic in art, although drawing but little, and his taste is for caricatures. The brothers converse a great deal together. They are both right-handed, although one might have supposed that Giacomo would have naturally preferred his free arm, the left.

The boys have each two lungs, the outer being the larger, and are forced to breathe largely by their diaphragms. They have separate and distinct hearts, located in the left chest-cavity respectively, and these hearts are believed to be normal in structure. Giovanni feels his heart beating on the left side—and if either boy has an abnormal cardiac structure, he should be the one—yet his color and health, indicate the contrary. The cardiac beats are not synchronous, aud one heart generally pulsates a little quicker than the other

They have two stomachs, and that of Giovanni is said to be reversed, the greater curvature being to the right, as was the case in Rita, of the Sassari girls of 1829. I was not permitted to verify this, because of the opposition of the father. These two stomachs are as independent functionally as if they occupied two different abdomens. Recently, when traveling by railroad, one of the boys became very pale, and directly vomited the contents of his stomach,* while the other was so entirely free from nausea that he laughed at his brother for his mishap. One brother may wake up hungry, drink a cup of coffee, and eat something while the other remains asleep. The two stomachs do not appear to be influenced in the least by being in

*This was repeated by Giacomo in public on April 23, 1892, at the Dime Museum, Philadelphia.

contact, but only by their respective pneumogastric nerves.

There are evidently two sets of intestines—large and small. One boy can have a desire to defecate when the other has not; and this is particularly the case when one has a diarrhœa, in which event he only has a discharge, while the other is passive. There must, therefore, be two colons, as were found on autopsy in the Padua boys of 1691. They have probably a common rectum, as had also the Padua analogue; but it is possible that this part of the bowel may be bifid, which would be an interesting feature to determine by touch or speculum. The twins, from habit and convenience, defecate almost always at the same time.

They have two bladders and one urethra, as had also the Padua boys, although they usually urinate together. As their tastes for food and desire for drink are not the same, one boy may be awakened from his sleep in the morning by a distended bladder and empty it without waking up the other, in whom the kidneys have been less active.

My catechetical examinations made last month confirm the opinions respecting the anatomy of the twins that were formed after auscultation, percussion, and a knowledge of their habits, by Drs. Fubini and Mosso, of Turin, in their second month, and by Drs. Colrat and Rebatel, of Lyons, in their thirteenth. The conjectural belief that they might have two colons has been changed into one of knowledge, as shown by their independence in defecation. In the event of an autopsy, these colons will no doubt be found of small calibre, and quite abnormal as to length and direction. We are warranted in this belief by discoveries that have already been made in the examination of dead analogues. Even the single colon of a double monster is quite abnormal.

The boys are quite differently affected by changes of temperature. Giovanni requires less underwear than his brother, and will perspire freely on a hot day, while Giacoma has a dry skin. Either brother may be seized with an attack of coryza, as the effect of a direct wind-draught, when the other entirely escapes. They sleep upon the back—or, more correctly, each is in a dorso-lateral position, and places the side or back of his head upon the pillow. They usually sleep eight or nine hours continuously. For a change of position they sometimes turn over upon their abdomen for a short time, but never sleep in this form of decubitus.

A prick with a pin in the median line of union is felt by both brothers, but the sensation is lost to one twin in passing to either side. The penis is said to have a sensation common to each, and the scrotum has a partial one beyond the median line. It is claimed that one twin feels a little when his brother's testicle is touched, which I believe to be an error, the sense being in the skin only, as the testicles are supplied with nerves through the inguinal canal. The penis and testicles are in an undeveloped state, being small for their age. The penis becomes erect, but the boys have no knowledge of its sexual function.

The two legs are entirely independent, and each belongs to, and is controlled by, the boy whose head is on the same side. One boy does not feel a touch upon the other boy's leg, and has no power, by his will, to give it the least motion. It is possible that the twins might balance themselves so as to stand, as their Scotch analogue is said to have done, if the leg and foot of Giacoma were as well formed as those of Giovanni, and had the same degree of strength that the latter appears to have.

Whether the boys have two separate livers, or a double one with two gall-bladders, has not yet been ascertained, for want of permission to make the required examination. Having two bladders, they may have two pairs of vesiculæ seminales, but are more likely to have one to each bladder, with one vas deferens and one ejaculatory duct, as this would be in correspondence with the existence of one testicle to the owner of each bladder, and one urethra for the exit of the ducts. I find no reference to the seminal vesicles in any reports of autopsies made in male analogues.

With regard to other viscera, we can only form an inferential opinion, as follows: The spleens are small, and located right and left to correspond with the positions of the stomachs. The pancreases have their heads facing each other, to correspond with the curve of each duodenum. The kidneys are in two pairs, the outer being large and the inner being small, or, perhaps, rudimentary. It is rare to find

no trace of the two inner kidneys where the spinal columns are well separated so as to give space for them.

I see no reason why these Tocci boys may not live a number of years yet. Giovanni is the stronger, mentally and physically, but the difference is not much marked, and no special element of weakness likely to shorten life appears to have been discovered in Giocomo. They have both learned a certain measure of French and German, and can both sing, Giovanni having the higher-pitched voice. One of the Scotch twins, already mentioned as having reached the age of twenty-eight, is recorded as having been quite stupid when compared to his brother. We have no such difference to record here.

NERVE STRETCHING IN THE TREATMENT OF PERFORATING ULCER.

Dr. McLeod in the last number of the *Indian Medical Gazette* records the notes of an interesting case of nerve stretching for anæsthesia and perforating ulcer in which considerable benefit had resulted. The patient was a Brahmin, aged about 40, who on admission into hospital stated that about a year ago he suddenly lost sensation in the toes of the left foot. Two months subsequently to this he sustained a wound of the sole of the same foot, opposite the first and second toes, which became sloughy and refused to heal. On admission a deep sloughing sore on the ball of the foot about the size of a rupee was present. The three inner toes were dusky and swollen, and a small unhealthy looking ulcer existed on the inner side of the second toe. The whole of the dorsum of the foot was completely anæsthetic and the anterior third of the sole. The anæsthetic area extended from the anterior aspect of the leg as far as its middle-third. The external popliteal and musculo-cutaneous nerves were found to be thickened. After giving a fair trial to art and antiseptic dressing without effect, these nerves were cut down upon and stretched. The wounds healed by first intention, and the following results have been obtained:—1st. Recovery of sensation over the anæsthetic area—the feeling is somewhat duller than normal, but there has been an undoubted restoration. 2d. Rapid cicatrisation of the ulcers. 3d. Subsidence of the swelling and restoration of the skin to its normal appearance and texture.—*Med. Press*

WATER AS A THERAPEUTIC AGENT AND ITS VALUE AS AN ELIMINANT.*

By C. M. FITCH, M. D.,
CHICAGO.

In presenting this brief paper to the Pathological Society, I wish to remark in advance that I have made no attempt to say anything new; I only seek to invite from members criticism and suggestion in regard to the employment of a therapeutic agent with which you are all familiar, yet the value of which I believe that few, if any, of us fully appreciate.

For the most part nature does her work in a very simple fashion. All general laws are simple laws, and the general law of medicine is *regular nutrition.* Perfect health is perfect nutrition, but nutrition cannot be perfect unless there is complete elimination, a thorough carrying off of all products of tissue change. This is one of its essential conditions. But if *health* is perfect nutrition, then disease, general or local, must be impaired or perverted nutrition. And I believe that in a vast majority of cases it will be found, that the first stage of impairment of nutrition is faulty elimination. Dead material must be removed from tissue to make place for the living. It is not enough that we introduce nutritive elements into the blood, the tissues must also be in condition to appropriate the nutritive material offered them. It is a law of physics that two bodies cannot occupy the same space at the same time. The tissues cannot receive a due supply of nutritive matter until waste matter has been duly washed out of them. Tissue filth must make place for tissue food. The more thoroughly this is done the more actively can repair go forward. Water is the agent by which this important work is accomplished. It is the universal solvent, and to do its work thoroughly the solvent must be in *amount sufficient* to dissolve the material presented to it for solution. So far as the intent of this paper is concerned we may of course regard an emulsion as a solution.

Now the more rapidly combustion goes forward, the more rapidly must its products accumulate in the system, the greater will be the amount of water re-

*Read before the Chicago Pathological Society.

quired to dissolve and carry them off, and the more important it will be that an extra amount of water should be introduced into the circulation. If the oxidized products of the high temperature in typhoid or scarlatina could be carried off as rapidly as formed, the gravity of these diseases would be greatly lessened.

Although this paper professes to deal only with water as an eliminant, it may not be altogether out of place to refer to the methods by which the amount of water required may be lessened, that is, to those methods by which temperature may be kept down, combustion rendered less active, and its products less in amount. Here we have the application of cold, the use of modern antipyretic medicines, calomel, and that most powerful antipyretic of all, blood letting, which Dr. Gross mourns as a lost art. I am old fashioned to believe that this is the only rational treatment for pneumonia, and I do not believe the time far distant when this will again be the standard treatment in the first stage of this grave disease.

But use what methods we may to control temperature, there must in all inflammatory diseases be an abnormal amount of tissue change, and as a consequence an increased amount of water will be required to carry off the products of such change. In the olden time, when water was forbidden in fevers, the then high mortality from fevers would have been higher still but for the amount of water given with the medicines and as medicine. The doctors were really doing a right thing, but in a very disagreeable way, and without knowing what the right thing was that they were doing. Now we recognize the fact that in many cases the real medicine, the actual therapeutic agent, was the water, and we do not think it necessary at this time to give water in some repulsive decoction.

When I first entered upon the practice of medicine, hydropathy was at its flood tide of popularity, and I could not but know of some good work done by it. Wood, in his practice of medicine, refers to the success of the measures of hydropathists in chronic rheumatism, but these measures were often carried to excess, and it was so obviously unreasonable to employ one therapeutic agent to the exclusion of all others, that hydropathy pure and simple, gradually lost ground. But long before the time of Presnitz, indeed from the very infancy of medicine, the therapeutic value of water had been distinctly recognized by some of the closest observers, though probably none of the old observers knew how it did its work. The good effects of the various medicinal springs, shown so unmistakably in very many cases, come not alone from the rest and change enjoyed by the visitors at such places, still less from the salts which these waters contain, but from the very large quantity of the water drunk, supplying in sufficient amount the solvent necessary to take up and carry off from the system the accumulated products of oxidation. The salts may do, and often doubtless really do some good, but the chief benefit, I believe, is always due to the pure prot-oxide of hydrogen itself. Even in anæmia, where ferruginous waters are employed, the benefit gained is not due to the *iron* alone, but also to the elimination of the oxidized or *partially* oxidized products that have accumulated in the system.

And here we come upon another physiological fact connected with elimination, that should never for a moment be lost sight of. Products completely oxidized are much more soluble than the products of partial oxidation, urea much more soluble than uric acid and its salts, consequently while a moderate amount of water may suffice to remove perfectly oxidized waste, a very much larger quantity will be needed to dissolve and carry off the products of partial oxidation. Here we must employ forced elimination if we would do good work. Wherever oxidation is perfect we have water eliminated by the lungs and urea by the kidneys, but if the combustion has been imperfect, we shall have the uric acid salts present, and wherever this is the case our line of work will be pretty clearly marked out for us. For this reason in all inflammatory conditions the character of the urine should be carefully noted. It will not be out of place to say here, that I have for years been more and more strongly impressed with the fact that much of the sickness among young children is due to an insufficient supply of water. Few mothers ever think of giving a feverish fretful babe a little water, but put it to the breast instead.

In the case of "bottle babies" the thing is as bad or worse. I have more than once been surprised at the improvement that I have seen take place in ailing babies sim-

ply by giving them their food at regular intervals, and giving them a little water between times. As a rule the child's digestion will improve at once, and this improvement will be due not alone to the fact that the child is getting less food, and getting it at regular intervals, but also to the fact that more perfect elimination has been established. The water also quiets and satisfies the child, and makes regular feeding possible.

But the more especial purpose of this paper is to suggest the help we may have from water in the treatment of acute rheumatism, and of the more virulent poisons of scarlatina and diphtheria. For the first twenty or twenty-five years of my practice my experience with rheumatism was unsatisfactory enough. Sometimes patients would get along as well as I could wish, but I had the discomfort all the while of feeling that I did not know whether it was my treatment that was benefitting them, or whether they might not have got along just as well without me. Then I felt that I could never even guess at the length of time a rheumatic attack was likely to continue, and was haunted by the fear of valvular heart lesion as a possible result. I think I was reasonably well posted in the literature of rheumatism, and tried, and tried faithfully the then most approved methods of treatment.

It was not, however, until after I had learned the importance of thorough elimination and especially the value, of water as an eliminant, that I began to be at all satisfied with my results. I learned the value of blue mass and of podophyllin, as I had gained from these, results more prompt and decided than I had secured in any other way, but I soon learned too that something more than these was needed to maintain for a sufficient length of time the elimination necessary. I was disgusted with trying to neutralize the poison, whatever it might be, and was convinced that it must be washed out of the system. This was about the way I felt when salicylic acid was proposed as a remedy, and I tested it from the first, but almost from the first used it in connection with large draughts of water. I feel now as if we had finally developed a rational and effective treatment for rheumatism—a treatment upon which we can rely almost as confidently as we can upon sulphur to cure the itch. Indeed, I am compelled to confess, that in the treatment of rheumatism I have become almost a simple routinist. In every case, or nearly every case, my first step is to secure free catharsis, giving almost invariably some mercurial purgative, blue mass with podophyllin, or if much fever is present, calomel with soda and rhubarb. This is to be taken at bed time, and in the morning after the purgative has acted, I begin the use of salicylate of soda, with copious draughts of hot water. I give a 10 or 12 grain dose of the salicylate, with a large draught of hot water, every half hour till 6 or 8 doses have been taken, or until the stomach refuses more water. The patient should, of course, be in bed warmly covered. In a very short time, almost invariably within an hour, the patient will be in most profuse perspiration, drenched in his own sweat, as if he had been dipped into a bath tub, and this sweating will usually continue two, three or four hours after the last dose of the salicylate has been given. But a noteworthy fact in this connection is, that the patient is rarely exhausted by this profuse and continued perspiration. The sense of relief is usually so marked that the patient will not only feel no exhaustion, but will not unfrequently say, that he feels actually stronger. This, however, is not always the case, though I do not remember ever to have met with a case of extreme exhaustion.

This sweating process is usually to be repeated on the second and third day, though it will, as a rule, be sufficient to give the salicylate and hot water every hour for three or four hours, instead of every half hour as on the first day. I might add, that it is often well to put a little lemon juice into the water, or to give it as a cup of tea, if the patient rebels against plain water. This treatment will, in a very large majority of cases of acute rheumatism, be found entirely successful, though the course may sometimes need to be repeated.

In inflammatory attacks occuring with patients of special rheumatic diathesis, or suffering from chronic rheumatism, this treatment is, as might be expected, less successful, but even in these cases it often gives a very marked relief. In these cases, however, we must never forget to give the liver due attention. Where it becomes necessary to make use of iodide of potassium this remedy also should be given with

abundant draughts of water, though it may be impracticable to keep the patient in bed or to use water freely enough to cause perspiration. The water however promotes the action of the iodide upon the kidneys and thereby effectively aids elimination. It may be well to add here that for the last two or three years I have adopted a similar treatment in quinsy. The idea, I believe, originated with Dr. Knox, who suggested the use of salicylate of soda. I have no means of knowing how far the salicylate of soda, or how far the water may have to do with my results. I only know that this treatment has been far more satisfactory than the treatment I had heretofore followed, and that since adopting it I do not remember to have had a single case of tonsilitis resulting in abscess, and the attack is usually promptly aborted. But although water, as I have suggested, is one of our most effective remedies in rheumatism, its use is by no means limited to this harmful affection.

In diphtheria and scarlet fever it is one of the most valuable if not *the* most valuable of all therapeutic agents. Perhaps the same is true in all self-limited fevers due to a specific poison. When, if ever, antidotes shall be discovered capable of neutralizing these poisons water may cease to have less relative importance in their treatment, but so long as we have to get rid of these poisons by elimination, water must continue to hold its place as a remedy of the first rank. It is in diphtheria that I have made the most thorough test of the therapeutic value of water. In treating this disease I keep two special objects constantly in mind. *Local disinfection* and *general elimination.* I seek from the first to prevent by any means in my power, any increased accumulations of the poison in the patient's system. I give calomel at the outset, stop all food, especially all *nitrogenized* food as I do not wish to add to the already overwhelming amount of work awaiting the kidneys, and from the first dose of the mercurial begin the free use of water. After the calomel has acted, I frequently begin the use of salicylate of soda, but all the while with the free, *very free* use of water. If from the severity of the throat lesion, the child has difficulty in swallowing or refuses to take water, then I give enema of warm water every hour at the least, giving all that I think the child can possibly retain, and directing the nurse after each enema to maintain pressure upon the anus to secure retention of the water.

At the same time that I am doing this, I try to effect local disinfection by the free use of peroxide of hydrogen. This agent while a powerful oxidizer, a most efficient disinfector, has the great advantage of not being poisonous or not acting but in a very slight degree upon living tissues. For this reason its employment may be almost continuous, by frequent gargling where the patient will use a gargle or with the atomizer when the child is too young or too perverse to gargle. It should be used at the least as often as once an hour, not only to the throat but in the nares also if necessary. It is hardly necessary to suggest that in consequence of the oxidizing properties of the peroxide, atomizers with metal tubes should not be used.

If the membrane be very dense and fails to separate under the action of the peroxide, other means for its removal may be employed to the end that the disinfecting action of the peroxide may be more effective. Exception may possibly be taken to what I have said in the matter of withholding food in the early treatment of diphtheria. It may be said that the patient must have food to keep up his strength, but it is to be borne in mind that the debility in early diphtheria is not the debility of exhaustion, but the debility resulting from the action of a depressing poison, and we do not relieve the debility by increasing the quantity of waste products in the system, the volume of the depressing poison. No, our work from the first must be elimination—elimination the more thorough the better, and after we are satisfied that we have the disease so far under control that the poison is not only not gaining on us, but that we are removing it faster than it is forming, then we can consider the question of food. If the child desires food, he can have it in moderation, or later on if there is a danger of true exhaustion, food and stimulants can be pressed.

I have no wish to weary this Society with the clinical history of individual cases, but I would like to refer to three cases in one family which came under my care last week. All were severe, and one of them at least seemed malignant in type —high fever, dullness, great depression and apparent invasion of the nares by the

diphtheritic inflammation. In this case—A boy nine years old, I gave three powders with a grain of calomel and two of soda in each powder, giving one powder every two hours, with all the warm water the child could be made to drink. Fortunately he could be made to drink freely. He was in a free perspiration before the calomel acted and after catharsis had taken place he appeared decidedly better. The following morning—5-grain doses of salicylate of soda every hour, still with hot water, till he was again sweating freely, all this while also using the peroxide freely in throat and nares. The other two cases were treated similarly, but less heroically, and all are now doing well, appearing, in fact, like cases of a mild type. I should add here, that a day or two after this paper was read, one of these little patients, the one whose case at the outset seemed most promising, died very suddenly from strangulation, apparently from closure of the larynx by a flap of dense partially detached membrane. I have little doubt that if any one had been at hand to render prompt aid, this result might have been averted.

Since adopting this general plan of treatment, a little over three years ago, though I have not till lately been using salicylate of soda, I have treated between 40 and 50 cases of true diphtheria, and have lost three cases. In one of these cases, a child, four years old, was recovering from whooping cough. The lungs were still very weak and a diphtheritic bronchitis developed, extending through both lungs. In the second case it was impossible to secure anything like faithful and intelligent co-operation on the part of the parents, and in the third case, that of a boy six or seven years old, who had never been taught to mind, and who from the first would permit nothing to be done for him without a fight, continued till he was exhausted. When finally the disease seemed broken, when the membrane had wholly disappeared from the throat, when to all appearance an ordinary child would have been out of danger, this youngster from sheer ugliness, or a perverse unwillingness to do anything that he thought he was wanted to do, refused food, stimulants and even water, fighting for all he was worth when any attempt was made to force anything on him, till he ultimately succumbed to heart failure, the result of sheer exhaustion. I have no doubt that a little brandy and water willingly taken would have saved him. This is certainly a better record than I could have shown in the earlier years of my practice, when I crowded food, used iron, chlorate of potash, quinine, etc., etc. I did this for thirty-five years, not because I was entirely satisfied with the treatment—for I could not be—but because it was the usual treatment and I could think of nothing better.

I wish here to say that I am not prepared specially, to advocate the use of salicylate of soda, as I do not know how far the good results in cases where I have used it, were due to this salt, and how far to the water simply. This much however I do know, there is no other remedy under heaven that I would use to the exclusion of the *free* use of water.

I wish here again to emphasize what I have already said in regard to food, especially nitrogenized food in the early stage of diphtheria. It seems to me self-evident that the introduction of food into the stomach must have one of two injurious results—either it remains in the stomach undigested, or if taken into the circulation, must add its oxidation to the volume of waste matter to be discharged by the already overworked kidneys and so add greatly to the danger of the disease. Of course in the more advanced stage of diphtheria or in any protracted fever we must give food, but not in the early stage or while a high temperature is present.

Before leaving the subject of water in diphtheria, I wish to refer to one case where I feel confident that the use of water by the bowel saved the patient's life. It was a case that was under the care of my son and myself in the early part of the present summer, where intubation had been performed by Dr. Waltham when it was evident that without it the patient, a child between two and three years of age, could have lived, but a few hours. The operation, most skillfully performed, gave immediate and great relief so far as the breathing was concerned, but still the child grew worse. The child could of course take a limited amount of water by the mouth, the urine became more and more albuminous, and finally the kidneys ceased acting altogether, and for thirty-six hours no urine was discharged. But all this time we persevered in the use of water by the bowel, until finally the kid-

neys resumed their work, copious diuresis ensued, and the child continued to gain steadily and quite rapidly in most respects, although we had a diphtheritic paralysis of the lower limbs that lasted six or eight weeks. I had never before witnessed recovery in so severe a case.

In scarlatina we may have a pathological condition closely analogous to that here described in diphtheria, a condition where free elimination alone can save the patient's life. Here our remedy is water, water by the mouth or water by the bowel, as the case may be, but water all the time. I have had it objected to this treatment that it is dangerous thus to crowd the kidneys, that they will be exhausted and cease to act, but the congestion of the kidneys in these cases is not due to the amount, but to the kind of work they have to do; it is due to the excessive amount of poisonous material passing through them, and the more concentrated this poison, the more irritating will its action upon the kidneys be. Our safety, then, is in diluting it. It is a good deal easier to pass a quart of molasses and a gallon of water mixed through filter paper than to pass the molasses alone, and the urine in this case is not only dense, but acrid and poisonous. So I say again, our safety is in diluting it. I believe that many lives have been and are being lost from an inadequate appreciation of this fact. I certainly can recall more than one case in my own practice where I believe that I might have saved a patient's life had I understood the action of water then as well as I think I understand it now.

I have already, in the early part of this paper, alluded to methods of controlling temperature so that we may control also the volume of the oxidized waste that must be carried off. Obviously elimination cannot be crowded beyond a certain limit, and the saving of the patient's life may depend upon our so far controlling temperature, controlling oxidation, as to keep the volume of resulting waste within this limit. This is a matter of which we should never for a moment lose sight.

It would be interesting to study the action of water as an eliminant in some diseases other than those I have thus far named, but this paper is already longer than I had intended, and I will no longer trespass upon the patience of the Society.

A CASE OF SURGERY OF THE LIVER.*

DUDLEY TAIT, B. S., M. D.

VISITING SURGEON TO THE FRENCH HOSPITAL, SAN FRANCISCO.

The comparative rarity or perhaps the want of recognition of hydatid cysts of the convex surface of the liver, and the additional fact that only very incomplete descriptions of them are to be found in the many valuable works on surgery published in this country, have prompted me in presenting a few clinical notes on the subject.

The following case is of interest to the physician as well as to the surgeon, not only on account of its diagnostic features, but as illustrating the value of the radical treatment advocated of late by the surgeons of Australia and France:

The notes of the case are as follows:

M. B., aged 29, native of France, a sheepherder for the past four years. No hereditary or personal antecedents of importance. No history of impaludism, dysentery or syphilis.

During the summer of 1888, he began to complain of very severe pain in the region of the liver and in the right shoulder, greatly intensified when reposing on the corresponding side. Occasional attacks of coughing and dyspnœa were also referred to. Large and repeated blisters were prescribed by the physician who examined him at that period. The preceding symptoms increased gradually in intensity, incapacitating him for any constant or hard labor.

November 16, 1890, he entered my ward in the French Hospital, complaining of dyspnœa, a sense of tension in the right side and a severe dry cough.

Examination.—On inspection, considerable distension was noticed in the right costo-diaphragmatic region, with diminished motion during respiration. Careful mensuration showed a difference of three inches in favor of the right side.

Palpation and percussion demonstrated the absence of vocal fremitus and the presence of great tension and well defined dullness in an area extending posteriorly as high as the sixth rib, laterally to the level

* Read before the State Medical Society of California.

of the fourth rib and anteriorly obliquely downwards to the lower third of the sternum, the upper limit of dullness being represented by a convex line. The anterior border of the liver appeared regular, occupying a line parallel to and one and a half inches below the tenth rib.

Auscultation showed suppression of respiratory murmur in an area corresponding very much to the one just described. Above this area the respiration was weak as compared with the murmur on the opposite side. Slight friction sounds were detected in a space corresponding to the right costo-diaphragmatic pleural cul-de-sac.

The results furnished by percussion and auscultation did not vary with the numerous different positions given the patient during the examination and very little if at all through respiration. Heart normal, slightly deviated to the right. Examination of urine negative. Temperature normal, pulse 84, respiration 26. Patient weighed 140 lbs., having lost 15 lbs. during the previous six months. General condition poor.

A diagnosis of hydatid cyst of the convex surface of the liver was made and aspiration advised.

December 24th, after having thoroughly cleansed and disinfected the skin I aspirated with a Dieulafoy needle (No. 2) choosing the sixth intercostal space, in the anterior axilliary line. About five litres of a clear, transparent, non-albuminous liquid were evacuated. It contained traces of sugar and had a specific gravity of 1010. (The first few microscopical specimens showed no traces of either scolices or hooklets, but some of the latter were finally found after allowing the liquid to deposit for several hours.) The patient's condition was immediately rendered much more comfortable, but improvement was of very short duration; on the sixth day the patient had a well pronounced rigor followed by hyperthermia. Percussion gave evidence of re-accumulation of liquid and the noctural temperature showed an exacerbation of 3°, pulse 116, respiration 28. Complete anorexia.

Radical interference was clearly indicated. Preference was given the pleura-diaphragmatic route rather than the peritoneal route, (1) in order to explore the pleural cavity and ascertain if it had been infected by the suppurating cyst; (2) to obtain the maxium space possible in view of a radical operation.

Operation: January 1st, 1891.—Assisted by my excellent interne, Dr. Borde, I incised the sixth intercostal space, five inches in length, slightly in front of the axillary line. After resecting, by the subperiosteal method, two inches of the sixth and seventh ribs, the pleural cavity was opened and found to contain about two ounces of a serous liquid in which ulterior microscopical examination showed numerous leucocytes. The lung was apparently collapsed and retracted against the vertebral column. After shutting off the pleural cavity as well as possible by means of a large sponge, the diaphragm and the subjacent cyst were incised and three litres of pus evacuted together with remnants of numerous daughter cysts. The cavity was then irrigated with a 1/3000 solution of bichloride of mercury. Gradual traction enabled me to remove the cyst *en masse* without causing any hæmorrhage. The remaining cavity was then explored by the introduction of the entire hand. At a point two inches to the right of the xiphoid appendix, I noticed something doubtful, perhaps a second cyst, about the size of a goose egg, surrounded by apparently normal hepatic tissue. Owing to its great depth and doubtful nature I decided to let it alone, a grave mistake as the evolution of the case clearly demonstrated afterwards. The cavity was finally washed out and two large drainage tubes inserted. I succeeded in partially excluding the pleural cavity by approximating and suturing the costal and diaphragmatic pleural surfaces above the incision intersecting the diaphragm and introducing a small drainage tube as a precaution.

Two-thirds of the external wounds were closed by silk sutures and a dry sublimate dressing applied.

Duration of operation, one hour and twenty minutes. The immediate results of the operation were very favorable with the exception of a temperature of 104° during the first night. On the following morning the temperature was normal and remained under 100° during the first week. Antiseptic irrigation was resorted to daily, washing out a small quantity of pus from the hydatid and pleural cavities, the capacity of the former measuring 100 grams on the 8th day. The second week was

marked by abundant suppuration and hyperæmia. At the termination of of the fourth week, the patient had a severe chill followed by a sudden rise of temperature (104°), depression and anorexia.

Symptoms of septicæmia developed during 14 days, being followed by an abundant discharge of pus from the deepest portion of the hydatid cavity. The same clinical tableau recurred shortly afterwards and covered a period of three weeks. Patient had lost 52 lbs. From the end of the second month convalescence was uninterrupted. The patient rapidly regained his normal weight and could have been discharged cured but for a fistulous tract 5 inches in depth, and one-eighth of an inch in diameter.

At various and repeated intervals I endeavored to close this fistulous tract but it proved rebellious to all methods of treatment. Curetting, scarification, cauterization by means of the Paquelin or acids; antiseptic, stimulating and histogenetic substances were successively resorted to with very limited benefit.

Discouraged with these poor results, I again chloroformed the patient and, with the curette, tripled the diameter of the entire fistulous tract. At the same time, by resecting a half inch from the free extremities of the 6th and 7th ribs and removing the surrounding cicatricial tissue, an attempt was made to have the skin collapse under pressure and exclude the external half of the tract. This expedient proved beneficial but the deep portion of the tract progressed very slowly. A small incandescent lamp enabled me to examine the parts thoroughly but revealed nothing of importance.

At the present time the fistulous tract, although considerably diminished in size, has not entirely healed; it measures one and one quarter inch in depth. The patient's present weight is 155 pounds, his general condition remains excellent.

The time allotted me is too limited to analyze and determine the relative value of the diverse symptoms of hydatid cysts involving the convex surface of the liver, but I wish to call attention to a few diagnostic signs given prominence in recent publications.

In cases where the results of percussion and auscultation simulate those of a small pleuritic effusion, (600 grams for example), Dieulafoy very judiciously states that were the liquid of pleural origin, no deformation, tension or sense of restriction in the costo-diaphragmatic region would be noticed. Whereas in the case of hydatids, the deformation would equal that produced by a very large pleuritic effusion (3,000 or 4,000 grms.) In such cases the importance of careful inspection can not be over estimated. Another diagnostic sign of considerable value is the co-existence of extensive thoracic dullness and friction sounds in the right inferior pleural cul de sac.

Pain in the right shoulder is mentioned in numerous observations. The so-called pathognomonic "hydatid fremitus" or "thrill" (Frerichs) is exceedingly rare; some eminent physicians even deny its existence. The patient's occupation may constitute a strong presumption, as in the present case. Urticaria is referred to by French authors as a frequent sign of hydatids.

More often observed in abdominal cases, it is sometimes met with in cases affecting the convex surface of the liver. Debove's recent experiments relative to the pathogeny of urticaria demonstrated that it is the result of an auto-intoxication caused by the absorption of the hydatid fluid.

In my opinion the exploring needle should be used only as a last resort in the diagnosis of hydatid cysts. The dangers resulting from its use are decidedly more numerous and more serious than in pleural affections and the hooklets can not always be found in the liquid withdrawn.

Authors disagree regarding the treatment of hydatid cysts of the liver. Some incline toward methods which might be called medical (simple aspiration or associated with injection, electrolysis, etc) while others resort to surgical interference.

Tapping, although a very simple manœuvre, is not devoid of danger; the physician should remember the possibility of suppuration of the cyst from external or internal infection, the possibility of sowing scolices broadcast over the surface of the peritoneum or pleura, or inducing sudden collapse or suffocating the patient by rupturing a tight cyst into a bronchus. Antiseptic injections constitute a decided advance in the treatment of these cysts, but I am positively in favor of surgical measures in large cysts, especially in those of the convex surface of the liver.

Recamier's method, *id est*, the prelimi-

nary use of caustics, is of interest from a historical point of view only, its results having proved disastrous.

Bégin's or Volkman's method of operating in two stages, although rather successful in the hands of several German surgeons, has succumbed to the fate of gastrostomy in two stages, being now considered superfluous. It is moreover difficult to understand the rationale of this operation, for nothing can be gained by its adoption in cases uncomplicated by pus, whereas the presence of pus constitutes an indication for immediate and expeditious interference.

The radical operations may be summed up in two classes: 1st. Incision and evacuation with or without drainage. 2nd. Extirpation.

The numerous statistics due to Australian surgeons prove conclusively the superiority of total extirpation over all other methods, especially in the group of cases under discussion. Total extirpation comprises the removal of all daughter cysts and mother cyst at the time of the incision.

This procedure is comparatively simple: after withdrawing the liquid, the elastic lining shrinks and can be extracted by means of gentle traction with forceps.

One great advantage of this method is that "when collapse of the walls of the hydatid cavity is possible so as to allow apposition, the surfaces will directly unite by a process analogous to the primary union of wounds." (Verco).

Another argument in favor of total extirpation is the facility thus derived to explore for deep cysts, which as Terrier has demonstrated co-exist frequently with the superficial variety.

It was at one time argued that total extirpation was liable to induce hæmorrhage. That this statement is erroneous is amply proved by the absence of organic connections between the hydatid membranes and the adventitious capsule that surrounds them.

REPORT OF A CASE OF TRAUMATIC TETANUS TREATED WITH LARGE DOSES OF CHLORAL.

By J. B. THOMPSON, M. D.,
ATLANTIC CITY, N. J.

Fredrick Falter, robust German, aged 23, on Tuesday Oct. 27, stepped upon a nail which penetrated the ball of right foot. A simple domestic dressing was applied and the wound healed in about a week. Ten days after injury he noticed stiffening of jaws. Growing worse, I was called two days later, when undoubted symptoms of tetanus were present. The jaws were quite rigid, allowing about an eighth of an inch motion, which no reasonable amount of force could overcome. He complained of soreness of back and neck, which muscles were somewhat contracted and stiffened.

I gave him Potass. Bromide, 15 grains every 3 hours without benefit. The following day Dr. Krammerer saw the case in consultation, when chloral 15 grains every 2 hours was decided upon. At this time, the fourth day of the disease, the abdominal muscles also were in a state of tetanic contraction, altogether setting the trunk of the patient as if in a cask.

The fifth day he was given 20 grains of chloral every two hours, omitted occasionally when asleep. The patient sucked the medicine and nourishment through a rubber tube with a wooden mouth piece. Enema given, which caused the bowels to move naturally.

On the sixth day of the disease, sulphate of physostigmine was given alternately with chloral omitting a dose of chloral, commencing with $\frac{1}{30}$ increasing $\frac{1}{33}$, $\frac{1}{25}$, $\frac{1}{20}$ to $\frac{1}{12}$ grain doses; seemingly fast losing its power was discontinued in two days. On the sixth day the chloral causing so much pharyngeal irritation it was given by enema in a cup of warm milk or beef tea and egg, 50 grains at a dose, repeating only when symptoms demanded, usually in five to seven hours, the signal being more severe and frequent attacks of general spasm, becoming almost constant and which if not controlled promptly would cause the patient to become frantic with pain and dyspnœa. The chloral by enema would control these usually in fifteen or twenty minutes. On the sixth to eighth day,

morph. sulph. in ½ grain doses was given alternately with the chloral, four doses of each sufficing for twenty-four hours. Nov. 19, the ninth day of the disease, undoubted evidences of cerebral congestion supervening, physostigmine was again tried with morph. sulph. and potass. bromide, as follows: At 11.30, 40 grains chloral were given; at 5. 15 p. m., ½ gr. morph. sulph. hypodermically and 30 grs. potass. br. by enema; at 8.30, 30 grs. potass. br. which was rejected. Being more restless ½ gr. physostigmine was given without benefit; at 9.15, ½ grain morph. sulph., which gave partial relief; at 11.30, just twelve hours after last dose of chloral, being satisfied that without physostigmine or morphia it would control the spasm, 40 grs. chloral was given, but patient had become so frantic that it did not give complete relief and morphia was given in one hour and chloral again in five hours, (4.45 a. m.), which did not have to be repeated till 11 o'clock that day. The treatment thereafter was morphia and chloral alternately, the chloral lasting twice as long as the morphia. It never became necessary to increase the dose above 40 grs. and never oftener than once in 6 or 7 hours if alternated with morphia. On the 12th day the dose was reduced to 30 grains which was not satisfactory, and the 40 gr. dose was returned to.

Up to the eleventh day the temperature had not risen above 99.5°, and as the masseter and abdominal muscles were relaxing, the back also becoming less rigid, hopes of recovery were entertained. This day, however, the temperature reached 101° and caused some anxiety, pulse hard and full 112 to 120; twelfth day some delirium, temperature 103° morning 102½° evening; thirteenth day temperature 103° and he was assuming the typhoid condition and was given 15 grs. antipyrine, which reduced it in four hours 1⅘ degrees. Pulse now 112 asleep; 126 awake. This day the diaphragm which had been doing all the work of respiration showed evidences of weakening while the auxiliary chest muscles had returned to partial use and were assisting largely. Now during an attack of general spasm, respiration would be entirely cut off, and was assisted artificially. This condition continued, becoming more typhoid until the close of the 15th day he succumbed. He took some days as much as 2 quarts of milk, besides other nourishment. The chloral was always retained if given by enema in milk, but not so surely if given in water or beef tea, and was always satisfactory in its action. The final known complication was the rise of temperature and dependent adynamia, induced probably by demoralization of the heat centre by the tetanic poison.

APPLICATION FOR RHEUMATISM.

Hebbing is said to employ the following solution locally in the treatment of rheumatism:

℞ Salol,
Sulphuric ether..... āā ʒ i.
Collodion ..... ʒ i.

To be applied around the joints which are affected by acute rheumatism.

—*L'Union Médicale.*

OINTMENT FOR HÆMORRHOIDS.

℞ Antipyrin.
Salol..... āā 2 grammes.
Extr. belladonna.....0.10 "
Vaselin..... 15
Ceræ..... q. s.

M. Sig.: A piece, the size of a nut, to be introduced within the anus thrice daily.

A SALVE TO QUIET THE ITCHING OF MEASLES, SCARLATINA, AND CHICKEN POX.

Dr. Klein (*La Semaine médicale*, No. 4, 1892), speaks highly of the following:

℞ Pure anhydrous lanoline.....50 grammes.
Vaseline.....20 "
Distilled water..... .....25 "

Rub into the skin every three hours.

The evaporation of the water of this salve cools the capillary hyperæmia and quiets the itching.

TONIC IN MALARIAL CACHEXIA.

℞ Liq. sodii arseniatis.....ʒ j.
Ext. eucalypti fl.....ʒ iij.
Tr. cinchonæ comp.....ʒ jss.
Aqua cinnamomi, q. s.....ʒ iij.

M. Sig.—ʒ ij ter in die, in water, after meals.

STYRONE AS A DEODORANT IN ULCERATED CANCER.

℞ Styrone..... 4.00 grammes.
Glycerin.....30.00 "
Distilled water.....30.00 "

Sig.:—Externally.

—*Nouveaux Remèdes*; *Ibid.*

DIARRHŒA MIXTURE.

℞ Tinct. opii.
Tinct. capsici.
Spir. camphoræ.....āā fl ʒ ij.
Chloroformi purificati.....M xiv.
Alcohol, q. s.....ad fl ʒ x.

Mix. Dose.—20 to 40 minims

—*Squibb.*

ANODYNE LINIMENT.

℞ Olei origani.
Tinct. opii.
Spts. ammoniæ.
Olei olivæ.....aa oz j.

M. Sig.—Shake well before using. Apply with gentle friction.

A MILD ALTERATIVE TREATMENT.

℞ Potas. iodid..... .....ʒ iss.
Tr. gentian. comp.
Aquæ. dest.....āā ʒ ii.

M. Sig.—Teaspoonful in water after meals.

FORMULA FOR WINE OF COCA.

℞ Coca-leaves ..... 3 ounces.
Cognac.....1½ "
Sherry wine.....1½ pints.
Hungarian wine .....6 ounces.

Macerate for several days and add 7 grains of citric acid. Allow this mixture to stand for several days and then filter.

—*Pharmaceutische Post*, No. 27, 1891.

HOW TO ADMINISTER THE CHLORHYDRATE OF AMMONIA IN THE GRIPPE.

Dr. Marotte (*Le Bulletin médical*, No. 6, 1892) has found many persons to have difficulty in taking this salt in powder form, as it sometimes causes disagreeable burning in the stomach. In order to avoid this he administers it in a potion as follows:

℞ Muriate of ammonia..... 3 grammes.
Syrup of orange peel ..... 40 "
Rum ..... 15 "
Infusion of sage, ad .....250 "

A soup-spoonful every two or three hours. Increase the dose according to the severity of the disease.

FOR HÆMORRHOIDS.

℞ Atropinæ sulphat.....gr. iv.
Acid. tannic ... .gr. vj.
Morphinæ sulphat.....gr. vj.
Cocainæ hydrochlorat.....ʒss.
Vaselin.....ʒj.

M. et ft. ung.

S.—Apply a small quantity to the hæmorrhoid after each stool.

—*Rev. de Thér. Gén.*, No. 7, 1892.

CHRONIC DIARRHŒA IN CHILDREN.

Dr. F. Combemale (*La Semaine médicale*, No. 14, 1892) recommends the following:

℞ Extr. kola nut.....gm. 1 (grs. xv).
Syrup of quinces.....gms. 60 (fl. ʒij).

To be taken by the teaspoonful within twenty-four hours.

FREY'S EMULSION OF IODOFORM

℞ Iodoform..... P. 50 grammes.
Glycerine ..... " 40 "
Tragacanth..... " 25 "
Water ..... " 10 "

A teaspoonful of this is added to a pint of water to be used as an injection in cystitis. Prof. Billroth terms a 10 per cent. mixture of iodoform and glycerin an "emulsion of iodoform." The iodoform should first be triturated with a little of a mixture of equal parts of glycerin and water.

THE USE OF HYPNOTICS AMONG THE INSANE, WITH A REVIEW OF THOSE CHIEFLY EMPLOYED IN AMERICAN HOSPITALS FOR THE INSANE.

Although this subject is of special interest to those having practical relations with the insane, it will also perhaps be of interest to the general practitioner, because to him at times comes the responsibility and care of these unfortunate cases. Moreover, it is of the utmost importance that the insomnia of nervousness, incipient insanity or the first stages of decided mania or melancholia should be controlled by the best means which experience has pointed out.

In our opinion drugs are far more frequently resorted to for the purpose of inducing sleep than they should be, and not infrequently do they do positive harm in the treatment of insomnia. Many milder measures should first be tried whenever possible. Some of these are hot douches or baths followed by brisk rubbing with coarse towels, hot nutritious drinks at bedtime, care of the diet with proper stimulation in asthenic cases of mental disease, hot applications of the spine followed by galvanism of the spine, and many others of similar nature. At present, however, we have in mind cases in which these means have failed and in which drugs must be tried.

Although so much valuable work has recently been performed both in the discovery and clinical application of new hypnotic substances, the evil of the day seems to be that they are used without proper regard to their specific actions. This error is a most natural one in the case of all new medicaments. Naturally, one wishes to experiment with them with

the hope that at last the *ideal* hypnotic has been evolved from the crucible or still; yet after all we know that as far as the insomnia of mental disease is concerned we possess no one drug that is applicable to all cases, but that several drugs do exist which when properly used with due regard to their actions go very far towards affording us a specific. With the advent of each new hypnotic a vast wave of experimentation has swept over this country, and it is only when they have passed and broken that we are beginning to appreciate the proper places of these substances in their class. The enthusiasm with which such hypnotics as paraldehyde, sulphonal, chloralamide, etc., were received showed itself in the many papers that were published in our medical periodicals, full of unstinted praise to the favorite of the hour; but now the wise hand of Time has kindly modified many of these first impressions, and shown us both the virtues and faults of these various agents. This, however, is but partially true, for the greatest difference of opinion exists regarding some of them, and, if we are to place confidence in the published results, the greatest variance exists in their clinical effects when employed by different men. This being the case let us briefly review some of these drugs as intelligently as the diverse opinions will admit.

Before considering separately the most commonly used hypnotics it may be well to briefly refer to the indications for their employment in cases of insanity. These indications may be roughly grouped and summarized as follows:

I. In acute mania, acute delirious mania, acute epileptic mania before or after fits, and in the acute maniacal stages of general paresis or chronic mania. In these cases they are indicated to lessen motor and cerebral activity, to prevent exhaustion, to conserve the strength and to promote recovery when possible. It is in these states that hypnotics are urgently demanded, and are of the highest importance if sleep can be induced.

II. In the noisy states of chronic mania, late stages of general paresis and in the restlessness often attending convalescence from acute psychoses.

III. In the insomnia of acute and chronic melancholia for the purpose of aiding by rest the recuperative powers of the system. Here is it most important that the hypnotics employed leave a minimum of depressing after-effects, and also that they do not disorder digestion; otherwise they are better omitted from the treatment.

IV. In alcoholic insanity, periodic and circular insanity, and in primary or terminal dementia. The beneficial actions in these conditions being to quiet motor excitement and control the patient, as well as to obtain sleep with its good effects.

These are the chief indications which present themselves among the communities in American hospitals for the insane; for which every known remedy has been from time to time employed. It would be useless and beyond the scope of this mere sketch of an important subject to quote extensively from the voluminous literature respecting the several drugs to be alluded to, so that we only endeavor to offer certain facts which are of attested value:

I. *Sulphonal.*—This drug has been extensively tried since its discovery by Kast. It has been used in the insane by Cramer, who had "positive success" in 92 cases, with no instance of any unpleasant after-effects; by Schwalbe, who reports success in 66 per cent. of his cases; by Rabbas, who used it over 200 times with "good effect." Papers have been written in praise of it by such authorities as Ziemssen, Kast, Engelman, Oestreicher, Schotte, Schmey, Frankel, Mathes, Salgo, Rosenbach, Rosin, and others abroad, while in this country we have the contributions of

Flint, Wetherill, Sachs, Wilson and Hutchison, Griffith, C. M. Hay, J. G. Kiernan and many others.

Much difference of opinion exists at present concerning the value of this drug. There can, however, be little doubt of its efficacy in cases of insanity, although its slowness of action is a disadvantage to its use in acute cases. It is chiefly beneficial in cases of simple mania, mild restlessness, excessive "nervousness," and in all cases in which simple insomnia is to be overcome. It is practically useless in cases wakeful from pain, fever, cough, etc. In certain forms of light melancholia, and in the excessive nervous insomnia of alcoholism it is one of the best remedies, when it is well borne by the stomach. No better way has been found to give sulphonal than that suggested by Kast—in a half cupful of tea or light broth two or three hours before its effects are desired.

Jastrowitz, in a paper read before the Berlin Medical Society, places sulphonal second in the point of safety in therapeutic doses, chloral being in his opinion entitled to first place in this respect. He also thinks it the least efficient of all hypnotics, and liable to cumulative action. The experience in this country is against the conclusions of Jastrowitz, and the drug is being extensively used in cases of insomnia which do not demand a stronger remedy. It has been found repeatedly to produce sleep when other hypnotics have failed, but on the other hand in the experience of nearly everyone it is often uncertain in its action. There can be no doubt of its occasional toxic effects, which may be due to the slowness of its excretion, as well as to individual idiosyncrasy. The chief symptoms of poisoning are: mental torpidity, muscular weakness, giddiness, feeling of oppression in the head, cardiac weakness. These symptoms should always be a warning to stop the drug, since they may readily deepen into dangerous and fatal effects. Sulphonal acts best when given in a single large dose, which, at the beginning, should not exceed fifteen grains, and where it is to be employed continuously it is wise to allow frequent brief intermissions so that a possible accumulative action is avoided.

II. *Paraldehyde.*—This drug is exceedingly valuable in the insomnia of mental diseases, because besides its hypnotic action it is a circulatory stimulant and can freely be given in cases of cardiac weakness. Its disagreeable taste, the odor it leaves upon the breath for 10 to 18 hours after its administration, and its tendency to disorder digestion are its chief disadvantages. It is nevertheless, in our opinion, one of the most serviceable of all the hypnotics used in Insane Hospitals. It can be employed continuously for a long time without serious effects, although some rare cases of paraldehyde habit have occurred. Out of the many hundreds of cases in which we have seen this drug employed, only one case of paraldehyde habit has occurred, and that was due to an improper use of the remedy before the patient came under observation. It is more widely applicable to the insomnia of insanity than almost any other drug, and may safely be given in doses of 2 fluid drachms, and even as high as a half an ounce in severe cases of sthenic mania. It is, however, chiefly of service in the milder forms of mania, and in melancholic states, except when employed in conjunction with remedies to control higher degrees of motor excitability. Owing to its excessive pungency it should be given well diluted, so that the stomach may be as little irritated as possible. In epileptic mania it has been found very valuable, and has even been employed as a remedy for epilepsy and the status epilepticus by H. B. Williams, assistant physician of the Arkansas Insane Hospital.

III. *Amyl Hydrate.*—This substance has been extensively used in the same kinds of cases in which paraldehyde is of

service, but speaking generally it is inferior to it in its results.

IV. *Hyoscin.*—This is one of the most valuable drugs when it can be had pure. It is speedily useful in mild cases of insomnia, mania with insomnia, and great restlessness, and may be given in small doses continuously in certain forms of cerebral excitement, such as frequently occurs in the initial stages of general paralysis of the insane. In the wild frenzy of acute mania, it is also of great service in quieting motor activity and thus conserving the vital forces of the patient. Its disadvantage is its action upon glandular activity by which it injuriously affects nutrition.

V. *Hyoscyamine.*—The literature on this drug shows that it is extremely valuable in controlling motor excitement, but of less value as a hypnotic. The amorphous alkaloid is the more frequently employed, and has been given with benefit to acute maniacs in the stage of wild, uncontrollable excitement in doses of one-fifth of a grain hypodermatically. Reports from various asylums confirm this practise, and it would appear that such doses are exceedingly well-borne in the condition above named. Owing to the marked gastro-enteric disorder occasioned by the remedy it cannot be given continuously in chronic cases, and its chief value is to tide over the height of an attack of acute maniacal excitement, in whatever mental disease this condition may occur. Some writers have cautioned against its use in patients with feeble hearts, while others do not intimate trouble in this direction. Our experience in its employment in cases of mania has been that it acts promptly and satisfactorily when given to allay motor excitement with delirious mental exaltation.

VI.—*Morphine.*—The use of morphine in mental disease seems to be, judging from the available evidence, chiefly of value in melancholic states and as a soporific. Where there is a physical cause such as pain, cough, dyspnœa, etc., for insomnia aside from melancholia in any case, it is perhaps our best remedy, provided it is administered without the knowledge of the patient that he is taking it. The danger of establishing the morphine habit in these cases must be sedulously guarded against. Morphine is of comparatively little use as a hypnotic, except in combination with other drugs, such as chloral or the bromides. When given in asylum practise it is usually administered hypodermatically.

VII. *Chloral.*—Probably no drug is more extensively used as a hypnotic, antispasmodic and depressant than this. Among the insane it is commonly employed, often in combination with the bromides, to produce sleep in all cases where no contra-indication to its use exists. In the status epilepticus it has been found the best single remedy, and in such cases is usually administered by the rectum. From what is known of its physiological action upon the cortical cells of the brain it is probable that the sleep produced by chloral is nearer natural sleep than that induced by any other hypnotic. Its disadvantages are its depressant effects on the circulation, the necesary increase of the dose to maintain good effects, and the danger of the chloral habit.

VIII. *Chloralamide.*—This substance, which is intended to replace chloral, has been the subject of extended editorial notice in the issue of the REPORTER of March 5th, to which the reader is referred.

STATISTICS OF THE PASTEUR INSTITUTE.

At the general meeting of the Paris Pasteur Institute, which was held recently, a report was presented which showed that since the establishment of the Institute there has been a steady diminution in the death-rate of the cases treated. Thus in 1886 the precentages of deaths was 0.94; in 1887, 0.73; in 1888, 0.55; in 1889, 0.38; in 1890, 0.32; and in 1891, 0.19.

Book Reviews.

THE POCKET PHARMACY, With a Therapeutic Index. A Résumé of the Clinical Applications of Remedies Adapted to the Pocket Case, for the Treatment of Emergencies and Acute Diseases. By John Aulde, M. D., Member of the American Medical Association, etc., etc. New York: D. Appleton & Co., 1892. Price $2.00

This brochure has been written expressly to advocate the use of the pocket case containing twenty-four vials of tablets. The advantages claimed by the author for this addition to the small literature of the day, are; first, that it is a desirable mode of dealing with emergency cases; second, that the volume will prove of special aid to the young physician who he thinks is likely to become "rattled" when he attempts to write a complicated prescription at the bedside; and, finally, that the older physician will find it useful in the saving of the time required in sending the prescription to the drug store. The book is also stated to be a plea for smaller doses than those usually employed.

The contents consist of articles on the remedies selected by the author and comprised in the pocket case. These are arranged in alphabetical order; under each drug is a list of the diseases in which the remedy may be used, also arrranged alphabetically. Nothing is said of the physiological actions of the drugs, and scarcely any references are given throughout the work. It is simply a compilation of the chief indications for the drugs found in the pocket case.

As an emergency case the selection lacks many requisites and from a general point of utility is far from being what the average practitioner would likely adopt.

Both the conception and pretenses of the book will not, we think, meet with general approval, and while the author states that the case was made for the book the impression grows on one that the latter is more or less in the nature of an advertisement for a prominent pharmaceutical firm. It is unfortunate that the author did not render such an inference impossible.

HOSPITALS AND ASYLUMS OF THE WORLD. *Their Origin, History, Construction, Administration, Management and Legislation; with plans, etc., etc.,* By Henry C. Burdett. Four volumes. Vols. I and II. London: J. and A. Churchill, 1891.

The first two volumes of this extraordinary undertaking are devoted to asylums and asylum construction. The author, who has been for twenty-five years connected with asylum management as an official or as a director has collected a vast amount of material. Statistics of the capacity, methods, equipment aud construction of asylums in every part of the world are included. Discussions of the best plans for buildings, of the best disposition of patients for treatment. of training and training schools for attendants are all to be found here at appalling though infinitely useful length. Many ground plans are given in the volume on construction of the different types of buildings in use, and these are taken from many different countries. A thorough, reasonable and convincing argument is made for the "block system" of building or some modification of it.

A few headings of chapters will give a good idea of the extent of ground covered and of the minuteness with which the subject is treated: In the second volume among other matters there are considered at length— sites, construction, buildings, model plans, warming, ventilation, lighting, drainage, detached hospitals, farms, gas works, furniture and decoration and sewage irrigation of farms.

Our own country makes a poor showing. Most of our asylums have been built by architects with little knowledge of what the rest of the world had done in this direction, and their types are rather those of the hospital than of the asylum. In management, with two or three shining exceptions, we are scarcely less behind the times, and worst of all, because most easily corrected, there is scarcely an insane asylum in the United States which is not shown by its own reports to be dangerously and unwholesomely overcrowded.

STATE MEDICAL SOCIETY OF NEW JERSEY.

The one hundred and seventy-sixth Annual Meeting of the Medical Society of New Jersey, will be held at Atlantic City, on the fourth Tuesday in June, 1892, and will continue in session the following day. A special train will leave Camden on Tuesday at 12.15 p. m., for the accommodation of those who wish to attend the meeting.

THERAPEUTICS.

CHAULMOOGRA OIL IN THE TREATMENT OF LEPROSY.

Berge (*New Orleans Medical and Surgical Journal*, 1891) extols this remedy, and gives the notes of three cases in which it was employed with great benefit. The results seem remarkable. The dosage was ten drops of oil in a spoonful of water three times daily, gradually increased until forty-five drops three times daily were taken without disturbance of the alimentary canal, except in large doses, when the bowels were liable to be acted upon too violently. The author thinks the oil should be regarded as a specific. Its absorptive properties were manifested in a striking degree upon the tubercular infiltrations; it afforded relief to the nervous phenomena, relieved the anæsthesia, and restored health to the body and mind. Reliance seems to have been placed upon its internal administration, for it is stated that "the remedial properties of the oil externally have not been fully tested," and the author refrains from speaking about this question.

THE TREATMENT OF THE STATUS EPILEPTICUS

The *St. Petersburger Med. Wochenschrift* publishes an account of a method of treating the so-called "status epilepticus," which has been successfully adopted by Dr. Kerning. He gives the following particulars of a case treated by this method. A girl in the Obuchoff Hospital in St. Petersburg, after suffering a whole night from almost continuous epileptic convulsions, next morning was unconscious, but without any œdema of the lungs, and with a fairly good pulse. On the convulsions being renewed a hypodermic injection of 0.02 gramme of hydrochlorate of pilocarpine was given, and 1.5 grammes of camphor in an emulsion. Profuse perspiration followed, and the convulsions immediately ceased, but for an hour pulmonary œdema and collapse seemed imminent. These symptoms, however, passed off, and were followed by sound sleep and a good pulse. The patient was made to lie on her side to prevent annoyance from the excessive secretion of saliva.—*Lancet.*

THE TREATMENT OF INFLUENZA.

In a lecture on influenza, Baccelli stated that in cases marked by bronchial distress, concurrently with a feeble heart, camphor is decidedly useful in the first stage. Four grains of camphor in fifteen minims of olive oil may be injected beneath the skin every three or four hours. If camphor fail, injections of ether often succeed admirably. In other cases injections of strychnine, in doses ascending from a thirtieth of a grain every twelve hours, will often tide over a crisis. To sustain the vital powers hot wine may be given in small quantities at short intervals. In the gastro-enteric variety of influenza in the young and strong, ipecacuanha may be employed to induce emesis. When the respiration is embarrassed striking benefit is often derived from inhalations of oxygen.—*Lancet*, No. 3569, p. 220.

TREATMENT OF FISTULA BY HYDROGEN PEROXIDE.

Dr. H. Graff, a military surgeon of Christiania, publishes in the *Norsk Magazine* the result of his experience of peroxide of hydrogen in the treatment of abscesses which do not admit of being laid completely open so as to subject them to antiseptic treatment, and of fistulous sinuses offering the same difficulty. The author recommends, in preference to all other antiseptic fluids, irrigation with a fifteen-volume solution of peroxide of hydrogen, which he employed with the greatest success at the Royal Hospital of Christiania. The great development of gas which takes place in consequence of the decomposition of the peroxide when coming in contact with blood or pus removes the pus very effectually. The irrigation, followed by proper antiseptic dressing, causes a considerable decrease of the discharge, and healing takes place in a remarkably short time. In the case of cachetic patients, when granulation is slow, Dr. Graff recommends that the irrigation should be occasionally changed for injections of equal parts of balsam of Peru and ether. The treatment is especially valuable in cases of indurated wounds with puriform cavities. It is, of course, necessary to make due provision for rapid and free drainage, as the development of much gas may otherwise produce serious pressure.

NEW OBSERVATIONS CONCERNING THE THERAPEUTIC ACTION OF ICHTHYOL.

Stacquart (*Journal d' Accouchements*, January, 1892.) found that ichthyol proved very valuable in erysipelas; in a case of generalized pruritus, a 10 per cent. ointment and baths with ichthyol soap cured the affection in a few days. The same result was obtained in a case of pruritus scroti, and also in one of dermatitis accompanied with suppuration. Lichen urticans and also pruritus vulvæ, due to a severe leucorrhœa, yielded to the use of ichthyol soap.

THE ACTION OF CACTUS GRANDIFLORA.

A recent physiological and therapeutic study of this new medicament has been published by Edouard Boinet and Jules Boy-teissier (*Bulletin General de Therapeutique*, Oct., 1891.) They find that *cactina*, the alkaloid of the plant, is but little poisonous. It increases the energy of the cardiac systole, exhibiting all the characters of a heart tonic. In doses of two milligrammes, the drug did not diminish the number of cardiac beats in the case of the frog, nor did it produce any alterations in the movements or the sensibility of the batrachian. For therapeutic purposes the authors employed extracts and tinctures of the plant, especially Adrian's tincture, and the results obtained, in the treatment of cardiac disease, have been more or less satisfactory. In summing up their conclusions, Boinet and Boy-teissier found: (1) that ten minutes after the first injection, in the case of the frog, the cardiac energy was increased; (2) that this effect was transitory; (3) that it was only maintained under the influence of new doses; (4) that in large amounts the remedy diminished the cardiac pulsations, this being accompanied, at a later period, by irregular contractions of the heart; (5) that cactina increased markedly the force of the heart without producing, as does the extract, a diminution of the pulse-rate; (6) that the tincture, in doses of forty drops, has no therapeutic effect; (7) that in asystolic cardiac affections the tincture, in the same quantities, was similarly without any appreciable effect; (8) that in true cardiac disease, in which there was a latent want of proper compensation, daily doses of eighty to one hundred drops raised the energy of a failing heart; (9) that in secondary cardiac symptoms, in arhythmic conditions of nervous origin, daily doses of eighty, one hundred, and one hundred and twenty drops were well borne, and generally produced a regularity of the pulse; (10) that even with these large amounts, used for a considerable length of time, no untoward after-effects were observed in patients, or any evidence of a cumulative action.—*Univ. Med. Mag.*

THE TREATMENT OF URÆMIC COMA AND CONVULSIONS.

Dr. John Ferguson sums up a paper upon this subject in the *Therapeutic Gazette*, 1891, No. 9, p. 583, as follows:

In cases of albuminuria of moderate severity, give the saturated solution of magnesium sulphate; if more acute and urgent put the patient in bed, with the head elevated. If there be severe headache, any muscular twitchings, or tendency to coma, give calomel, croton oil, and nitrate of potassium, and maintain the action of the bowels by salts. Induce free perspiration by warm packs, hot drinks, and the salicylates. Allow no animal food but milk, and give liquids very freely. If convulsions, a hypodermatic injection of morphine, followed by pilocarpine. In pregnancy, push this treatment vigorously, thus making interference unnecessary. To secure full action of the skin, the use of salicylate of sodium or potassium is strongly advised.

CATRAMINE, A NEW TEREBINTHINATE.

Vincenzo Gauthier (*Gazz. degli Ospitali*, February 4th, 1892) gives the following information, derived from a laborious series of experiments, with regard to catramine. Chemically, it is an essential oil, which resinifies very easily, and resembles very closely the turpentines derived directly from the coniferæ. Physiologically its action in animals closely resembles that of oil of turpentine. It contains more resin than turpentine, and appears to be better borne. It is absorbed well either by the stomach or when given as vapor by the lungs; it is eliminated with the urine in the form of resin. From this fact it should be useful in diseases of the genito-urinary system. From a number of clinical trials the author considers that catramine is indicated (1) in chronic respiratory troubles, with abundant secretion; in the subacute stages it may be use-

fully combined with a narcotic; it diminishes the secretions, which under its use regain a healthy character. (2) In genito-urinary troubles where it may very advantageously replace essence of turpentine. —*Brit. Med Jour.*

MEDICINE.

A REMARKABLE CASE OF FEBRILE CHLOROSIS.

The following interesting case is reported by J. de Dios Peinado (*Gaceta Médica Catalana*, January 15, 1892.): A woman, 32 years of age, multipara, menstruated 40 days after her third confinement; from this moment the patient became pale, coughed somewhat and had evening fever, intermittent at first, remittent afterwards, and continued, finally reaching a height of 40.5°. C. A thorough examination of all the internal organs gave negative results; the patient, however, had a gastro-intestinal catarrh accompanied with anorexia, dyspepsia, nausea and vomiting, diarrhœa and pains; symptoms all were attributed to a tubercular infection. She was placed under an anti-tubercular treatment, but without any good results. The same symptoms continued, with, soon afterwards, some harshness of the respiration. The persistence of the condition and the absence of all physical signs in the lungs, led the author to diagnose the case as one of febrile chlorosis. The administration of the iron preparations being contra-indicated owing to the catarrhal state of the digestive tract, the patient was ordered to take 1 centigramme of calomel every 6 hours, a medication that, in many cases of acute anæmia (in which the parasitic nature of the disease is probable) may be considered as heroic. Two days after the beginning of this treatment the vomiting and the diarrhœa ceased, and in 5 days more the fever disappeared and did not return. The clinical history of this interesting case shows: 1. How easy it is to confound certain acute anæmias, of infectious or of nervous origin, and which disturb the hæmatopoietic processes, with pulmonary or general tuberculosis; 2. The great error of those who consider mercurials anæmia producing agents, and who, therefore, abstain from employing them even in syphilitic cases, on the supposition that such remedies are followed by great destruction of the corpuscular elements of the blood. Clinical and experimental evidence demonstrate the fact that mercurials, given with precaution, are powerful reconstituent remedies in a great number of anæmias, and even in those conditions of impoverished blood from organic causes, such as are found in tuberculosis and scrofula. This opinion has for a long time been entertained by Huffeland and sustained in our days by the observations of Hayem and Dochmann.

ACUTE MEDIASTINITIS.

M. Santa Maria y Bustamante (*Boletin de Medicina Naval*, January 15, 1892.) publishes the following case: A man, 37 years of age, had, 2 years previous to his present ailment, a pneumonia of the base of the right lung, from which he recovered completely, no trace being left behind. Recently he felt a sharp pain over the sternal region, corresponding to the 4th. costal cartilage of both sides. This painful sensation came on spontaneously, but could be provoked by a slight pressure; he suffered at the same time from oppression, accompanied with great distress; the respiration was accelerated, superficial and interrupted; he had a dry cough, and the action of the heart was tumultuous. Fever did not rise above 39°. C. From the negative results obtained after a thorough examination by auscultation and percussion over the heart and lungs, and the absence of swelling of the jugulars and the paradoxal pulse, the author, by exclusion, diagnosed an acute mediastinitis. Under a large blister placed over the anterior part of the chest, and a few injections of the hydrochlorate of morphine, the symptoms disappeared. The writer, then, details the possible terminations of acute mediastinitis, and especially the formation of mediastinal abscesses which, in their passage, may go through most of the organs within the thoracic cavity and even perforate the large blood-vessels. The diagnosis of this affection is often quite difficult, and then can only be established by exclusion; it has no especial symptomatology, and may frequently be mistaken for a dry pleurisy, so much the more so, when the condition may, itself, be a symptom of pleurisy.

INTERMITTENT CLAUDICATION AS A DIAGNOSTIC SIGN IN DOUBTFUL CASES OF DIABETES.

R. Viziolli (*Annali di Nevrologia*, f. 2, 81, 1891) believes that in diabetes, intermittent claudication is always a sign of the existence of a hyperplasic endoarteritis; that it precedes gangrene and, consequently, it is a sign of great prognostic value. In one case referred to by the author, the disease was accompanied by a fatal attack of angina pectoris, proving that the coronary arteries had taken a part in the endoarteritis. The sign under consideration will, therefore, prove of great diagnostic value in doubtful or ill-defined cases of diabetes.

HYDATID CYSTS OF THE LUNGS.

The following observation is published by A. Laveran (*La Medecine Moderne*, February 4, 1892): A young man, 26 years of age, military inclined, entered the hospital on the 7th. of January, 1892. The history of the case only revealed the fact that the patient had suffered from measles at the age of 3 years. During the latter part of the month of October, 1890, he felt, while fencing, a sharp pain in the chest, followed by abundant hæmoptysis. This was repeated; the patient had sometimes purulent expectoration, and continued to have symptoms of pain over the region of the chest, dyspnœa, cough and apyrexia. By December, 1891, the expectoration consisted of pus mixed with blood and whitish membranes, which, under the microscope revealed a hydatid nature. The disease comprised, in the course of development, three periods: a latent period; a second period characterized by hæmoptysis, dullness on percussion, an obscure respiratory murmur, together with other symptoms peculiar to tuberculosis. During the third period, the cyst either opened into the bronchial tubes, or either, after suppuration had taken place, the matters found their way into the pleura. This latter event would have produced the most serious symptoms, and perhaps rapid fatal results. The presence of the membranes spoken of, in the sputa, cleared the diagnosis. The pathogenesis of the echinococci is to-day well understood. The germs are produced by the ova of the tænia ecchinococcus of the dog. Thus is explained the frequency of this disorder in Iceland, where dogs are numerous and live promiscuously with the inhabitants. Hydatid cysts are likewise of frequent occurrence in Australia.

CLINICAL AND EXPERIMENTAL RESEARCHES ABOUT TETANUS OF GASTRIC ORIGIN.

L. Bouveret and E. Devic (*Revue Mèdicale*, January 10 and February 10, 1892.) have made an interesting study of the above subject. The tetanus which sometimes occurs in patients suffering from dilatation of the stomach, is a complication proper of gastric ectasis, this being accompanied by a permanent hypersecretion. This tetanus results from an intoxication of a gastric origin; but such intoxication ought not to be attributed to a pathogenic microbe which vegetates in the stomach. It results from stomachic chemical changes, changes which characterize the constant hypersecretion. The peptotoxine of Brieger does not exist wholly as a normal product of the peptonization of the albuminoids. It may arise in the course of *extracting* operations. Hydrochloric acid in the free state and alcohol, in the presence of peptone, are the two factors in the formation of peptotoxine. The *rôle* of the alcohol in these cases is not only that of a dissolvent; it is a true reagent, and takes a part in the formation of the toxic substance. When introduced intravenously, a solution of an alcoholic extract of the liquids of digestion, natural or artificial, produces violent tetanic convulsions; subcutaneously, however, it only causes paralytic phenomena. The symptoms produced by experimental poisoning, when the dose is small and the injection made slowly, bear great analogy to those of tetanus observed in man. In one instance, the convulsive symptoms appeared after the ingestion of a large dose of alcohol. It may, therefore, be asked whether the convulsant substance contained in the alcoholic extract may not arise or be produced in the abnormal conditions of digestion in a dilated and hypersecreting stomach. This hypothesis is confirmed by the results of the experiments of the authors. A highly convulsive alcoholic extract may be prepared by evaporating the liquids of digestion and the alcoholic solutions over a stove at a temperature of 39.°C., that is, at the temperature of the stomach. The authors have produced convulsive movements by intravenous injections of artifi-

cial digestions to which alcohol had been added, and in which the hydrochloric acid remained always in a free state. The age, so to speak, of the artificial digestions increases the convulsive power of these. A digestion one month old may produce true tetanic convulsions. The nature of this convulsant substance, the highly probable cause of this gastric tetanus, remains to be determined. The experiments of Bouveret and Devic prove that such a substance is not a chlorhydrate of ethylamine or of ethylene-diamine. It is probably the result of a syntonine to which alcohol gives properties: a poisonous odor, a toxicity and a convulsant power. It is important, therefore, to suspend completely the use of alcohol in all cases of constant hypersecretion, and especially in those complicated with gastric retention. When tetanus appears, the best treatment consists in evacuating and washing out the stomach by means of a sound.

CEREBRAL LOCALIZATIONS.

A. Brunati (*Archivio Italiano* XXVII, fasc. 3 and 4, 1891) reports a case which is of interest in a certain point of view. The subject was a young man twenty-one years of age, who had had, when three or four years old, a fall, injuring the parietal region of the left side, and for five years he had been considered insane though previously he had been of weak mind and neurotic disposition. He was of small size and unsymmetrical and deformed in the lower limbs. There was no paralysis nor sensory disturbance and there had been no convulsions. The patient died of ileo-typhus and the section showed adhesions of the scalp to the skull at the point of injury, also of the dura to the calvarium and to the cortex below, and an old lesion involving the two ascending convolutions of the left side with extensive destruction of the gray matter of the cortex, also involving the frontal and parietal convolutions. Another case is reported in the same number of the *Archivio Italiano* by Dr. G. Antonini which has a similar interest in some respects. The patient had suffered with convulsive attacks which had left him with paralysis of the right arm and facial and lingual hemiparesis of the right side with amnesic aphasia. The autopsy revealed diffuse general endo-arteritis obliterans, atrophy of the convolutions of the insula with softening of the same, which also involved the first and second temporal convolution and extended inward deeply in the centrum ovale to the lenticular nucleus and the external capsule. Posteriorly it reached the external occipital convolution. On the external surface of the brain the softening was apparent at the foot of the third frontal, the two ascending and the posterior portion of the inferior parietal convolutions. The membranes were adherent in various portions of the cortex. The most interest here attaches, it seems to us, to the absence of sensory aphasia depending on the lesions of the temporal convolutions, which absence is not to be explained by any exceptional functioning of the corresponding parts of the intact right hemisphere as the patient was not left-handed. There was apparently no evidence of verbal deafness.

FACIAL PARALYSIS.

Dr. Lusanna (*Rivista Veneta* for October, 1890), makes quite an extended study of the course and disease of the seventh pair of cranial nerves. He divides it anatomically into five portions:

1. Cerebral.
2. Bulbar.
3. Intracranial; the trunk of the nerve from its root to its entrance into the internal auditory meatus.
4. Inter-cranial; its traverse through the cranium.
5. Extra-cranial, from the stylo-mastoid foramen to its different terminal filaments.

These divisions are of much importance, not only from a dignostic point of view, but also in rendering a prognosis. Lesions occuring in the second portion are often fatal; those in the first, second and fourth are serious, while those in the fifth are light.

The differential symptoms indicating the seat of the disease in its course, are:

1st Portion.—Cerebral, conservation of reflex phenomena.

2d Portion.—Bulbar, paralysis of the extremities.

3d Portion.—Intra-cranial, injury to the neighboring nerves.

4th Portion.— Inter-cranial, gustation of the anterior part of the tongue abolished. Hyperæsthesia of audition.

5th Portion.— Extra-cranial, paralysis of the facial muscles not of the palate.

SURGERY.

NERVE GRAFTING.

Mr. Damer Harrisson, after recalling to the Clinical Society of London the excellent results that followed close apposition of the ends of divided nerves, observed that the only satisfactory method of dealing with nerves, the ends of which were too far apart to admit of their being sutured, was by nerve grafting. He referred in detail to the history of eight cases in which this operation had been performed at home and abroad, and then narrated a case under his own observation. A lad, aged 13, was admitted into the Liverpool Northern Hospital eleven weeks after a cut of the front of the right wrist had divided the median nerve and all the flexor tendons except the flexor carpi ulnaris. On admission the fingers were immovably fixed in the flexed position, paralysis of both motion and sensation being complete in the region supplied by the median nerve. Trophic changes were also present, the hand being blue and cold, the skin glossy, and the short muscles of the thumb much atrophied. The flexor tendons were found to be matted together; nearly 2 inches of the median nerve had been destroyed, leaving a gap between the ends. After dealing with the tendons, the nerve ends were freshened, thus increasing the separation to 2 inches, and a graft 2½ inches in length, taken from the sciatic nerve of a recently killed kitten, was fixed in position by one fine catgut suture at each end passing through the substance of the nerve. The limb was then put in a splint, with the hand flexed and the fingers straight. The wound healed by first intention. Sensibility began to return in the palm at the end of forty-eight hours, and eventually extended to the fingers and the thumb, except to the tips of the fingers. There was also transference of sensation impressions, those from the index finger being referred to the middle finger. At the end of three months the nutrition of the hand showed great improvement. Motion did not return until the end of five months, and appeared first in the short muscles of the thumb. Now the patient could oppose the thumb to the index finger. Another operation of the same kind had still more recently been performed by Mr. Mitchell Banks, of Liverpool, upon the ulnar nerve at the elbow after excision of a neuromatous tumor, 4 inches being grafted from the sciatic nerve of a dog. Sensation returned within thirty-six hours. Of the ten cases quoted by Mr. Harrisson, three were perfectly successful, six partially successful, and one failed. He attributed the difference in the success attending primary and secondary grafting to the trophic disturbances present when grafting was resorted to as a secondary operation. Restoration of function took place readily enough after long periods of time in respect of sensory nerves, but the degeneration which took place forthwith in the distal portion of motor nerves rendered repair slow and the return of function very gradual.

A NEW SUTURE.

Dr. Alexander Fulton, in *Medical News*, January 23, 1892 describes a new suture. Round pieces of amber, about one-sixth of an inch in diameter, of various lengths, are used, perforated as required. Lead, glass, or any material that can be kept thoroughly aseptic may be used. Fine wire (silver preferred,) after immersion in carbolized water, is run through the lip of the wound about half an inch from the edge when deep suture is desired, and one-third of an inch when more superficial suture is wanted. It is then put through the bar and clamped with a perforated shot. The lips of the wound are thus by traction brought in perfect apposition.—*Med. Age*, Feb. 10, 1892.

TREATMENT OF RETRO-PHARYNGEAL ABSCESS IN INFANTS.

Bilton Pollard writes in the *Lancet*, February, 1892: Retro-pharyngeal abscess is not always dependent on spinal disease. In the latter the abscess occurs under the muscular structures in close contact with the vertebræ, in the former pus is found in the cellular tissue between the pharynx and the prevertebral muscles.

The disease is not common, but merits attention from its possibly serious termination if not discovered. Evacuation of the abscess through the mouth has not proved satisfactory, on account of the difficulty of maintaining drainage.

The method recommended is to make an external incision along the posterior

border of the sterno-cleido-mastoid muscle near its superior attachment, and carried through the superficial structures until the floor of the posterior triangle is reached; the great vessels and nerves are then separated by blunt instruments and a finger is introduced into opening so deeply that it can be felt by a finger in the mouth of the patient, to be against the pharyngeal abscess.

A director is then thrust into the abscess through external opening and a drainage-tube is inserted. The result is almost immediate and is permanent. As the abscess cavity heals, a smaller and shorter tube may replace the one first introduced.

This is the operation advised by Prof. Chiéne, who claims more perfect antisepsis for it than is possible in oral incision.

TREATMENT OF COMPRESSED FRACTURE OF THE SKULL.

Dr. Brice Clarke gives details of two cases of compound fracture of the skull, in which the fragments were carefully replaced in situ and became firmly reunited. One of the patients was a plate-layer, who had an extensive fracture of the frontal bone caused by the buffer of an engine. The other was a girl whose parietal bone was fractured by a flower-pot falling from a considerable height upon her skull. In both cases the wounds and the bone fragments were carefully cleansed, and the fragments firmly wedged back into place. In both, union was absolutely firm six months later and remained so up to the present time, more than a year after the accident, nor was it now possible to detect any signs of fracture in either case. Great stress was laid upon the necessity of wedging the bones firmly back in their exact relative positions so as to insure accurate apposition of the fragments. Mr. A. Lane said that after trephining, if the bone were replaced it would unite. W. H. Bennet mentioned a case in which he had replaced a two inch trephine circle of bone with perfect success, and this instance was by no means unique. Dr. Clark in reply said, that, so far as he had been enabled to ascertain, it was not unusual for replaced circles of trephined bone to unite. He said it did not seem to be generally known that if pieces of bone were all put back in their proper places they were very likely to unite.—*The Lancet*, Oct. 17, 1891.

ANTISEPTIC SYMPHEOTOMY.

Spinelli (*Ann. de Gynéc. et d'Obstét.*) maintains the results of Sigault's operation, performed with antiseptic precautions, have been constantly favorable for the mothers, and that the children run no risk through the essential features of the procedure itself, the dangers which they incur being solely due to the manœuvres needed for extraction. He describes 24 cases where the symphysis pubis was divided during labor: 12 were performed in the clinical department of the Hospital for Incurables, and 7 in private. All pelvic measurements are given. All the 24 mothers and 23 of the children were saved. The 1 child which was lost was delivered by turning, and was born aspyhxiated. It was revived, but died in twelve hours. He concludes that a well-developed fœtus, at term can, after division of the symphysis, be delivered through a contracted pelvis of which the true conjugate is but two and one-half inches, a measurement for which, at present, embryotomy or Cæsarian section is almost universally practiced. Provided that strict antisepsis is enforced, the mother suffers no permanent damage. The divided ossa pubis unite by first intention.—*The British Medical Journal*, February 13, 1892, suppl., p. 27.

OBSTETRICS.

DECIDUO-SARCOMA OF PLACENTA.

E. Blanc (*Bull. et Mèd. de la Soc. Obstèt. et Gynèc. de Paris*, December, 1891) reports a case in which a woman aborted at the fifth month. The placenta did not follow the ovum, and the midwife tore off the cord in attempting its extraction. A physician was called in, and he found the cervix closed. Alarming symptoms set in, and on the third day after abortion the patient was sent into a lying-in hospital at Lyons. Rigors had occurred, and the temperature rose to over 102°. There was no flooding, and the patient's general condition was good. The fundus rose to about three fingers' breadth above the pubes. The cervix was long, rather soft, and hardly permeable to the finger. The vagina was carefully disinfected, the patient placed under chloroform, and the uterine cavity explored. The placenta was very adherent, it lay in the right half of the uterus, and was only ex-

tracted in part. No hæmorrhage followed, and the uterus was washed out with an antiseptic. On the next day the temperature remained high. With great difficulty the rest of the placenta was removed. The surface of the uterine walls to which it was attached felt rough and dense, as though aponeurotic. The patient rapidly recovered. On careful examination the placenta was found to be subject to deciduo-sarcoma, as described by Chiari and Sänger. This diagnosis greatly modified the prognosis of the case, which did well after the entire removal of the membranes; in several other instances a trace of tissue left behind has formed a tumor. The patient, who had once been delivered normally, had not suffered from any affection which might explain the morbid condition of the placenta.—*Brit. Med. Jour.*

THE RESULTS OF TWO HUNDRED LABORS WITHOUT INTERNAL DISINFECTION.

Mermann has continued in the clinic at Mannheim his usage in conducting labors without internal disinfection, and records in the *Centralblatt für Gynäkologie*, 1892, No. 11, the results of 200 recent cases. He had but one death, and that from rupture of the uterus complicated by placenta prævia and a large amount of amniotic liquid. In the two hundred cases there were 36 which presented complications of greater or less gravity. These cases complete a series of 700, presenting no death from septic infection. The morbidity rate was 6 per cent. In the last 200 cases there occurred but 2 cases of mild ophthalmia, and in all less than 10 cases of conjunctivitis were observed among infants. Mermann's practice is to omit injections, and, whenever possible, to also omit internal examinations, relying upon palpation and auscultation and a close observation of the case.—*Amer. Jour. Med. Sc.*

RAPID INDUCTION OF ABORTION BY THE CURETTE.

Doléris (*Annales de Gynèc.*, March, 1892) read a paper on this proceeding at a recent meeting of the Obstetrical Society of Paris. A young married woman, subject to advanced aortic disease from childhood, became pregnant, and as was expected, the gravest symptoms developed from the first: dyspnœa, rapid hypertrophy and displacement of the heart, insomnia, and alarming syncope during vomiting. At the end of two months the patient was very cachectic. Immediate induction of labor seemed necessary as there was, over and above the symptoms just noted, great anæmia. The os was dilated with laminaria tents, and the gravid uterus scraped with the curette. In less than thirty-six hours abortion occured, and the patient recovered and did well. In the discussion on Doléris's case, it was observed that statistics proved how severe heart disease did not necessarily affect the prognosis of pregnancy so very gravely. M. Guéniot mentioned three cases in which women with organic disease of the heart bore their children to term in repeated pregnancies without any marked aggravation of the cardiac affection. Dr. Porak believed that the great point of importance in these cases was the state of the endocardium.—*Brit. Med. Jour.*

RUPTURE OF THE UTERUS.

Dr. Schultz, of Budapest, presents (*Orvosi Hetilap*) the following statistical information: (1) Complete ruptures without treatment, 60 cases giving 20.2 per cent. recoveries; (2) complete ruptures treated with drainage or tampons, 70 cases with 36 per cent. of recoveries; (3) complete ruptures treated by laparotomy, 193 cases with 44.7 per cent. of recoveries.

After enumerating the advantages of laparotomy in this class of cases, Schultz recommends that in every case where it is possible to make a positive diagnosis of complete rupture of the uterus the abdomen should be opened. If the tear is much contused and not suitable for suture, or if myomata are present, or the endometrium is already infected, hysterectomy is to be performed; otherwise, the abdominal cavity is to be emptied and the tear sewed up. Subperitoneal pockets remaining in the parametrium or vaginal vault should be drained.

Incomplete ruptures should be tamponed with iodoform gauze or wicking, or drained by means of a glass tube. A flannel bandage is firmly applied to the abdomen; the treatment is in other respects like that after a laparotomy. If the conditions for laparotomy are unfavorable in cases of complete tear, the child should be extracted *per*

vaginam and a tampon inserted.—*Internationale Klinische Rundschau*, January 10, 1892.

RETROFLEXION AND RETROVERSION IN PREGNANCY.

Chrobak (*Centralbl. f. Gynäk.*, No. 7, 1892) maintains that these conditions, so far from being unusually associated and therefore amenable to the same treatment, are clinically and pathologically distinct. He endeavors to show that the relations of the uterus, and the mechanism of its muscular apparatus and ligaments, favor spontaneous reduction of a retroflexion in pregnancy. He even believes that he has never known a case of uncomplicated retroflexion where manual reduction was absolutely needed. He has reduced a great many retroflexed gravid uteri, either to relieve pain or difficulty in defæcation or simply because a displacement being discovered he naturally rectified it. Far more frequently he has done nothing, and spontaneous reduction has followed. The case of retroversion is quite otherwise. If a retroversion be not replaced by the hand, abortion, under very unfavorable circumstances, or incarceration, will inevitably ensue. The fundus grows larger and the cervix becomes more and more elevated, and recedes from the symphysis as the pregnancy advances. Spontaneous reduction is an impossibility under the circumstances, and it is the duty of the obstetrician to interfere.—*Brit. Med. Jour.*

HYMEN OBSTRUCTING LABOR.

I recently attended Mrs. F., a healthy primipara, aged about 22. The head was distending the perineum, but on examination I found I could not, as usual, sweep the examining finger around the head, and there was evidently something obstructing it. Puzzled to know the meaning of this I exposed the patient, and found the hymen tightly stretched over the head, like the skin of a drum. I at once proceeded to divide it, but while I was doing so the child was shot suddenly into the world, unfortunately rupturing the perineum. Playfair states that such cases are rare. For this reason, and to warn others against the accident which befell me, the case seems worth recording.—J. Cuthbertson Walker, in *Brit. Med. Jour.*

GYNECOLOGY.

A MODIFIED HYSTERORRAPHY.

In a review of Vaton's work, "*Etude comparative des differents traitements du prolapsus uteri*" by Luke, of Königsberg, the following description of the former's modification of Caneva's method of fixing the displaced uterus to the anterior abdominal wall is given: The abdominal wall is incised in the median line until the peritoneum is reached. The latter is now loosened from the posterior wall of the previously distended bladder with the right index finger, the left hand keeping back the coils of intestine. According to Vaton, whose trials of the method were made upon the cadaver, this can be accomplished without difficulty. The peritoneum is now easily loosened from the anterior surface of the uterus; the bladder is now emptied. The uterus is now fixed either by sutures or Muzuex's forceps, drawn toward the abdominal wall, and both sides of its anterior wall are secured, as a preliminary step, to the anterior surface of the peritoneum. A thread is then led through the abdominal muscles of the left side, which grasping the anterior surface of the uterus, passes out through the right side of the abdominal wall. A similar fixation suture is established about 1 cm. below the first. The sutures are now firmly tied and the abdominal wound closed.—*Centralbl. f. Chirg.*, 1890, No. 42.

PUERPERAL HÆMATOMA UNDER DOUGLAS'S POUCH.

Ter-Grigoriantz (*Centralblatt f. Gynäk.*, September 12th, 1891) records a case in which a woman, aged 24, who married at the age of 18, had two normal pregnancies, and had been delivered at term a third time. She was four days in labor, and the child, very bulky, died at birth. After delivery the patient remained unconscious for three days, and then suffered for a week from diarrhœa. Two months later a bloody discharge of a faint odor came away from the vagina. The tip of the forefinger could be passed into a round sharp-bordered opening in the upper part of the vagina. To the left of the aperture and at the same level was a normal cervix; the uterus, not enlarged, was anteverted, and the fundus was directed towards the

horizontal ramus of the left pubes. A firm mass filled the right side of the pelvic cavity; it extended downwards, but hardly passed to the left of the middle line at any point. The surface of the mass was smooth and felt as though continuous with the pelvic walls. Ter-Grigoriantz washed out the opening in the vagina with a 4 per cent. solution of carbolic acid. Quantities of very fœtid broken-down clot came away. After daily syringing for six days hardly any more clot escaped, but stinking pus was discharged. At the end of a fortnight the injected carbolic solution came away almost clear and quite odorless. The mass, during this treatment, gradually disappeared. Douglas's fold sank low in the pelvis, the uterus assumed its normal position, and the opening lay in the posterior vaginal wall immediately below the cervix. Hæmorrhage had clearly occurred under Douglas's pouch after labor, and the pressure of the clot had caused the vagina to slough.—*Brit. Med. Jour.*

HYSTERECTOMY FOR CARCINOMA OF THE UTERUS.

Braithwaite (*British Medical Journal*, No. 1624, p. 329) reports the results in twelve cases of carcinoma of the uterus treated by complete vaginal hysterectomy and in four treated by supra-vaginal hysterectomy. Of the first group, three were living and free from recurrence of the disease at the time of report, four years, eighteen months, and ten months, respectively, after operation; one was living, free from disease, four and a half years after operation, but had been lost to observation for a year and a half; one died two years after operation, without recurrence of the disease; in two cases the uterus was profoundly involved, and death followed the operation in six months and a few months, respectively; in four cases there was fatal recurrence; four months, three months, ten weeks, and soon, respectively, after operation; one case died from acute suppurative peritonitis following the operation. Of the four cases in which supra-vaginal hysterectomy was performed, one was free from recurrence nearly five years after the operation; in two the disease recurring in seven months and two months respectively; one case died twelve hours after the operation from shock and hæmorrhage.—*News.*

A COLOSSAL FIBRO-CYSTOMA OF THE OVARY.

Dr. Peters makes the following record: The patient, a woman æt. 40, whose last delivery was 20 year before, and who in the course of 5 years had aborted twice, noticed for 13 years a slow increase in the circumference of her abdomen. Disturbances of defecation and urination had appeared 2 years since. The patient's appetite was variable, she having at times morbid cravings.

During the last year she suffered from pains in the back, swelling of the legs, sleeplessness and loss of appetite: The greatest circumference of her belly, somewhat below the navel, was 145.5 cm.; between the xiphoid cartilage and the pubes the distance was 81 cm. The operation necessitated an incision 60 cm. long. The removed tumor consisted of the left ovary. It was a fibro-cystoma, 38-50 cm. in diameter (in different places) and weighed 37 kilogrammes (about 81 pounds.) Recovery took place without any disturbance. The patient is obliged to support the superfluous abdominal skin by a binder.—*Oeekb. van het Node. Tsjdsch. voor Geneesk.* 1890, I No. 2.

SUPERNUMERARY OVARY AND TUBE.

E. Falck(*Centralbl. f. Gynäk.*, No. 44, 1891) publishes a case of very unusual anomaly. A multipara, aged 37, suffered for about ten weeks from pains in the sacral region, right side, and right leg. The period came on fourteen days before it was due, and lasted rather longer than usual. Behind the uterus a freely movable tumor, about the size of an apple, was found. Abdominal section was performed; the tumor was easily removed. On its upper aspect lay a long cord-like structure, half the thickness of a man's finger. The tumor had no connection with the genitals, but was attached to the omentum, from which it was separated. Both ovaries—still small but subject to cystic degeneration—were removed. Falck declares that the right and left appendages were then seen to be normal in every other respect. The tumor, which was filled with a substance like soft pitch, was found to consist of the middle of a dilated tube. A piece of distinct tissue flattened on its surface proved to be the remains of an ovary and tube near corresponding appendages

normally attached to the uterus. Falck gives a short account of cases of supernumerary Fallopian tubes, already published, and of accessory ovaries. The last-named anomaly is of a different character from that under consideration, which implies some disturbance in development at a very early stage of embryonic life.—*Brit. Med. Jour.*

PEDIATRICS.

AN INTERESTING CASE OF TOO EARLY DEVELOPMENT OF THE SEXUAL ORGANS IN A CHILD.

At a late meeting of the Paris Academy of Medicine, M. Crivelli (*Wiener Klin. Wochenschrift*, July 24, 1890,) showed the photograph of an eighteen-months'-old girl whose genital organs presented a degree of development such as is usually found at the age of eighteen. The mammæ and the nipples were also well developed; the mons veneris covered with lanugo, the clitoris being also very large. By investigation, Crivelli found out that the child was addicted to masturbation. The menses had appeared regularly since three months, and lasted from three to four days. Before the appearance of the menses the child feels sick for about twenty-four hours.

CONGENITAL RICKETS.

Mr. Gilbert Barling, surgeon to the General Hospital, Birmingham, records a case illustrating true rickets arising in the fœtus without the association of the cretinoid condition. The patient, aged six months, was the second child of a young healthy mother, who had influenza during the second month of her pregnancy. Directly after birth, and ever since, the child had been subject to profound sweating, especially during sleep, as also to bronchial and intestinal catarrh. The hair is dark and abundant, the anterior fontanelle is very large, and the frontal eminences are very marked; otherwise the head is well shaped. A week after birth the right humerus broke spontaneously; three weeks later the left leg bones also broke; and a fortnight later the left humerus; but all these bones have united again. Ever since birth the thigh and big bones of both extremities have been noticed to be unusually curved forwards and outwards, and there is shortening of the left femur, with thickening at the upper part, which indicates that it has been fractured; probably this happened before birth. There is no nodulation at the junction of the ribs with their cartilages, nor is there enlargement of the epiphyses. There is no mental dullness, such as cretins show; on the contrary, the child is unusually bright and intelligent, laughing and noticing objects around it. There were no signs of the cretinoid state.—*The Birmingham Med. Review*, p. 107, February, 1892.

ON RELAPSE, OR RECRUDESCENCE IN SCARLET FEVER; TWO CASES, WITH A NOTE ON THE LITERATURE OF THE SUBJECT.

Boddie (*Edinburgh Medical Journal*, October, 1891) says: A true relapse in scarlet fever as opposed to recurrence is comparatively rare. The two cases reported are unquestionably examples of relapse. The first patient was a boy of fourteen years. He passed through an ordinary attack of scarlet fever, followed by desquamation and albuminuria, and had apparently recovered when on the thirty-seventh day, after exposure to cold and wet, his temperature rose and he developed all the symptoms of scarlet fever. The illness continued six days and was followed by more marked desquamation than after the first attack.

The second patient was a boy of nine years, who passed through a typical attack of scarlet fever, followed by desquamation and albuminuria. On the twenty-seventh day the symptoms suddenly returned and continued five days and were followed by partial desquamation.

The review upon the literature of the subject is quite complete.

IODOFORM AS A PROPHYLACTIC OF OPHTHALMIA NEONATORUM.

Dr. Valude (*Annales d'Oculistique—Merck's Bulletin*, December, 1891.) has published the results he obtained in the clinics of Dr. Bar and Professor Tarnier, in Paris, from the systematic employment of finely powdered iodoform as an application to the eyes of newborn babes. These results compare favorably with those obtained under similar conditions in the same wards by Dr. Crédé from silver nitrate.

The author recommends the eyelids to be carefully cleansed, and powdered iodoform dusted into the conjunctival sac as soon as the child is born—before the cord has been severed. As an advantage of this treatment it is claimed that the powder, or some of it, at least, *remains* in the folds of the conjunctiva *for a considerable time* after the application; whereas solutions of any kind immediately drain away.

Dr. Valude believes that iodoform will prove more useful than silver nitrate in the hands of *midwives*, because it can be more easily applied, and does not decompose—as the solutions of the silver-salt do, even when such precautions as preserving in dark bottles, etc., are taken.

CRANIOTOMY IN MICROCEPHALI AND IN UNDEVELOPED CHILDREN.

Lannelongue (*Gaz. des Hôpitaux*, 1891, No. 39), has performed craniotomy twenty-five times in microcephalic individuals and the imperfectly developed. He found in microcephalic skulls evidences of premature ossification of the sutures and diminished area of the fontanelles. Other observers have mentioned, as other operable causes of idiocy, injuries occurring during birth, notably compression of the skull, meningeal hæmorrhage of the convexity, leading to hæmatoma, circumscribed pachymeningitis and formation of cysts; and finally hyperostoses of syphilitic origin and general thickening of the bony vault of the skull. In the operation he has employed two different methods, the one consisting of linear and the other of flat incision. He now prefers the latter. Large portions of bone, either the shape of a V, of a rectangle, or of a T, are removed, the periosteum and skin flaps being then re-united, the area of bone measuring from eight to twelve millimetres. The operation lasted from forty to forty-five minutes. He does not think it necessary to remove the periosteum, basing this upon an observation of two children operated upon who died two months afterwards of croup. In these cases not a trace of bony regeneration was found. The ages of the children operated upon varied from eight months to twelve years. The operation was successful in twenty-four out of twenty-five cases; one ended fatally from sepsis. In three other cases slight suppuration occurred. In the majority of cases both intelligence and gait were improved.

HYGIENE.

"ELIMINATION OF MICRO-ORGANISMS BY THE SWEAT."

Under the above title a short paper appears in *L'Union Médicale* for March 3rd of this year. It commences by stating that it is still an unsettled question as to whether micro-organisms are able to pass through certain vessels and organs, and then be eliminated by means of the kidneys or intestinal canal, when these organs are in themselves perfectly unaffected and in a healthy condition. According to some authorities, among whom is Wyssokowitch, such an event can only occur when there is a sanguineous exudation, or the tissues of the kidneys or intestine are diseased. Some observers, on the other hand, deny that such conditions are necessary. Thus Trambusti and Maffucci maintain that they have found anthrax bacilli in the urine and bile when no disease whatever could be found in the kidneys and liver. Baumgarten, again, states that he has seen tubercle bacilli pass from the blood into the tissues when the walls of the vessels were quite healthy. From other authorities we learn, on well-established evidence. that pathogenic micro-organisms can pass into the milk when the mammary glands are unaffected. Brunner* investigated this matter from another side, and demonstrated the fact that pathogenic microbes could be eliminated by means of the sweat. This investigation was met with a great difficulty from the outset—namely, that it is not easy to sterilize the skin so as to be sure that the micro-organisms which were found in the secretion, and cultivated in artificial media, were derived from the tissues and fluids of the body; and not from its cutaneous surface. This difficulty was overcome by using animals for experiments which had been inoculated with disease, the pathogenic organism of which could not accidentally have found its way on to the skin. The animal was then made to perspire profusely by artificial means, pilocarpine being usually employed for this purpose, and then further inoculation and

*Berlin. Klin. Wochenschrift, May 25th, 1891.

cultivation experiments were made with the sweat. Proceeding in this way, Brunner injected a culture of staphyloccus aureus into a hog, one of anthrax into a cat, and one of micrococcus prodigiosus into a sucking-pig. In all three cases the microbes injected were found in the sweat, and also in the saliva. This is an important discovery, from both practical and theoretical points of view. It gives to crises, accompanied by profuse perspirations, which may be produced artifically or occur naturally, a still more important place than they formerly held. It also demonstrates that there may be great danger in allowing a patient who has been sweating profusely to possibly reabsorb the secretion, and that therefore it is a good plan to employ moderate friction with dry cloths when such a crisis occurs, and to subject all linen and clothing capable of absorbing the sweat to immediate disinfection. Another precaution which the investigation indicates is that when an abscess is discharging externally, or when a patient is suffering from erysipelas or other infectious cutaneous affection, there is great danger to the patient himself if the linen etc. are not changed after profuse sweats, as the micro-organisms may possibly be absorbed by the skin. It is singular, however, that several observers (including Mattei, Surmont, and Lile) have failed, after numerous attempts, to find tubercle bacilli in the sweat of phthisical patients; so numerous have such trials been that we may almost consider it as absolutely proved that such migration of the bacilli does not occur.—*Lancet.*

ALCOHOLISM AND TUBERCULOSIS.

Dr. Hector W. G. Mackenzie, assistant physician to the Brompton Hospital for Consumptives, is of opinion that tuberculosis is much more common among those addicted to alcohol than is generally believed. He says that his experience among the out-patients at the Brompton Hospital is that a considerable portion of the phthisical—especially of the men—have been alchoholic, and that a history of alcoholism is a very common antecedent in those cases where there is no inherited susceptibility to tubercle. As regards women, it is impossible to say to what extent alcohol is responsible for the disease, it being very uncommon for a woman to own to alcoholic habits. He finds that in alcoholic cases the condition of the patient is generally worse than would be expected from the amount of disease revealed by physical examination. It is therefore specially important in such cases, when there are any chest symptoms, to examine the sputum for bacilli. By this means he has been able to make an early diagnosis of phthisis when the examination of the chest was negative. In alcoholic cases the progress of the disease, as a rule, is rapid, and the prognosis particularly unfavorable. Dr. Mackenzie does not offer an explanation why many drunkards develop phthisis. Our observation leads us to the conclusion that in the majority of cases of phthisis in inebriates the patients have endeavored to live on alcoholics in lieu of food. Everyone admits the importance of malnutrition as a factor in the causation of tuberculosis, and it is not a matter for surprise that drunkards who habitually neglect their food frequently die of phthisis. —*Hospital Gazette.*

FISH DIET AND LEPROSY.

Dr. August Crane, lately Government Physician in Hawaii, writes as follows to a contemporary on the subject of fish diet and leprosy:—"From time immemorial the staple food of the native Hawaiians had been fish, and principally raw fish. Until about 1860, there is no history nor tradition of the existence of leprosy among them. At about this date it appeared, and at the time of its appearance, white people had been among them for forty years, and their food and methods of living had greatly changed. Canned foods, fresh meat, and vegetables had been so widely introduced that the use of fish, and especially raw fish, had enormously decreased, and could not be considered as a prominent feature of their diet. At the present day, while consuming no remarkable amount of sea food, one Kanaka out of thirty is a leper. All fish, no leprosy; little fish, much leprosy. This has been the history in Hawaii." These statements above expressed appear to be a formidable indictment against the theory that fish diet and leprosy stand in the relation of cause and effect. But the advocates in favor of the theory are now few and far between, despite the powerful authority of Mr. Jonathan Hutchinson.—*Med. Press.*

OBESITY.

A French journal recommends a mode of dieting for curing obesity, which is attributed to an army doctor. A colonel, who was threatened to be retired from the army, as he was so heavy that it required two men to lift him into the saddle, became thin in a few weeks, and to such extent that he had to take means to recover what he had lost. The means consisted simply in not eating more than *one* dish at any meal. It is said by doing this the stomach never takes too much. Nevertheless nothing but the one dish should be taken; no condiments or soups or supplementary dessert should be allowed.

MEDICAL CHEMISTRY.

THE REACTION OF URINE WITH ETHER.

Dr. Andrew H. Smith, writes in the *Lancet:* If a specimen of urine, taken promiscuously, be thoroughly agitated in a test-tube with half its bulk of pure sulphuric ether, there will result in most instances an abundant white foam. If now the tube be corked and set aside, this foam rises to the surface and gradually condenses into a greyish gelatinous plug, so firm, it may be, that the tube can be turned upside down without disturbing its contents. In another smaller proportion of cases no foam will result from the agitation, and the ether will immediately separate from the urine and form a clear layer above it. In some instances a second prolonged agitation after the lapse of a few moments will produce the reaction described. In other cases it may be obtained by adding a few drops of acetic acid and shaking the tube again very thoroughly. It will always be noticed that when the reaction occurs the fluid begins to clear first at the bottom, and the clearing progresses upward. When the reaction does not take place the order is reversed, a clear layer of ether appearing first at the top. Pending a thorough chemical investigation as to the nature of the substance thus separated from the urine, I find that the reaction occurs in urine which does not respond to any of the tests for albumen or for peptones. It occurs also in urine from which the phosphates have been removed, and it cannot be obtained with simple solutions of urea or of the urates. It is most abundant in the urine of those who have a good appetite and good digestion, and is usually absent after long fasting, or when the diet is greatly restricted. From these facts it seems probable that it represents an excess of nutritive material taken into the blood and thrown off by the kidneys, and not a product of disassimilation. Albuminous urine responds to the test in the same way and under the same conditions as normal urine, but if the patient is on restricted diet and the urine does not react to the test, it can be made to do so by adding nitric acid and filtering out the resulting precipitate. A portion of the albumen is redissolved by the acid, and at the time so modified that it is acted upon by the ether. This is shown by the fact that if the albumen be removed by heat and filtration before the acid is added, the reaction cannot be produced; but if a drop or two of acid be placed upon the filter, the filtrate immediately responds to the test. The same effect may be produced by acid spontaneously generated in the urine, so that a specimen of albuminous urine which will not show the reaction while fresh may do so after the acid fermentation has progressed for twenty-four or forty-eight hours.

It is possible that the presence of this material in the urine, and its peculiar reaction with ether, may explain some cases of anuria after prolonged etherization. The ether being eliminated by the kidneys and mixing intimately with the urine in the tubules, affords all the necessary conditions for plugging the latter with gelatinous material, too firm to be displaced, suspension of function necessarily following. Until we know more of the possible reactions of this substance, it will be well to receive with caution the results of some of the more "delicate" tests supposed to detect the presence of minute proportions of albumen.

SYNTHETIC TARTARIC ACID.

M. Genoresse has discovered a simple way of preparing tartaric acid synthetically. He starts with glyoxalic acid (CHO. CO_2H),(the acid peculiar to gooseberries, grapes, and similar fruits, and acting upon it with nascent hydrogen liberated by the action of acetic acid upon

zinc dust in contact with glyoxalic acid, the result is that 2 molecules of the latter acid are joined together by 2 hydrogen atoms, and that union gives tartaric acid, or rather the optically inactive form of it known as racemic acid, there being apparently equal molecules of the dextro and lævo varieties produced. The product was separated and examined. This new synthesis of tartaric acid would appear to throw some light upon the natural formation of tartaric acid; for, remembering the close relationship between glyoxalic and oxalic acids, which latter is one of the most readily formed in vegetable tissues, and the reducing agencies which appear to be connected with chlorophyll, we have all the means at hand to account for the natural synthesis of tartaric acid.—*Paris Correspondent of Chem. and Drugg.*

NEWS AND MISCELLANY.

VACCINATION IN AUSTRIA.

The Superior Sanitary Council of Austria has under consideration the details of a new vaccination law. This measure not only provides that every child shall be vaccinated in the first year of life, but that re-vaccination shall be compulsory before the school age is reached. Only animal lymph which has been prepared in institutions under State control is to be used. —*Brit. Med. Jour.*

A NEW CHAIR OF ORTHOPEDICS AT THE PHILADELPHIA POLYCLINIC.

At the last meeting of the Board of Trustees of the Philadelphia Polyclinic and College for Graduates in Medicine, an additional Chair of Orthopedics was created, and Dr. Benjamin Lee was elected Professor of Orthopedics. Dr. Lee is President of the American Orthopedic Association, Secretary of the State Board of Health of Pennsylvania, and has been a voluminous contributor to the Medical Journals, upon orthopedic subjects. Among the many subjects he has enriched by his labors, are the use of "Suspension in Pott's Disease" and the "Gymnastic Treatment of Deformities." The addition of Dr. Lee will greatly increase the facilities, at the Polyclinic Hospital, for the modern and scientific treatment of deformities for which it has already acquired a distinct reputation, and which the Trustees now desire to increase by the addition of this new member of the Faculty.

DAMAGES FOR LOST GRAFTS.

A novel action for damages is reported to be pending somewhere in the German Empire under some what curious circumstances. A nurse allowed skin grafts to be snipped from her lily white arm in deference to the wishes of the patient and the request of the surgeon. Unfortunately, the wound did not heal, as might have been anticipated, but proved the starting point of a cellulitus, causing great suffering, permanent disfigurement, and some loss of function. The nurse consequently feels aggrieved, and claims damages from the surgeon.—*Medical Press.*

MANAGEMENT OF HOSPITALS AT NORTH BROTHER ISLAND.

At the meeting of the Board of Health held April 12th, the following resolution was adopted: "*Resolved*—That upon due consideration of the testimony taken at an investigation in respect to the management of Dr. F. R. Percival, of the Riverside Hospital, at North Brother Island, in connection with typhus fever cases, this Board concludes that the persons sick with typhus fever have been properly treated and cared for, and that no further action is necessary in the premises at present." Soon after the investigation referred to was commenced, Dr. Percival was removed from the charge of the typhus fever cases and transferred to the charge of patients ill with other contagious diseases at North Brother Island, and he is still on duty in the latter position.

WM. R. WARNER & CO.

SEDATIVE. ANODYNE.

EFFERVESCENT
BROMO
(WARNER & CO.)
SODA.

Caffein 1 Grain, Bromide Soda 30 Grains in each heaping teaspoonful.

USEFUL IN

Nervous Headache, Sleeplessness, Excessive Study, Migraine, Nervous Debility, Mania, as a Remedy in Sea-sickness, and Epilepsy.

Dose and Composition.—A heaping teaspoonful, containing Bromide Soda 30 grains, and Caffein 1 grain, in half a glass of water, to be repeated once after an interval of 30 minutes, if necessary.

ANTI-RHEUMATIC. SEDATIVE.

EFFERVESCENT.
BROMO
(WARNER & CO.)
LITHIA.

EACH DESSERTSPOONFUL CONTAINS:
℞ Salicylate Lith a 10 grains, and Bromide Soda 10 grains.

A REMEDY IN THE TREATMENT OF
RHEUMATISM, GOUTY DIATHESIS, ETC.

Dr. A. Garrod, the well-known English authority on Gout, who was the first physician to introduce the Lithia Salts in the treatment of Gouty Diathesis, states that their action is materially increased by being administered in a *freely diluted form.*

This effervescing salt of Lithia furnishes an easy and elegant way of applying Dr. Garrod's methods.

INGLUVIN

A SPECIFIC FOR VOMITING IN PREGNANCY.
A POWDER:—PRESCRIBED IN THE SAME MANNER, DOSES & COMBINATION AS PEPSIN
In Doses of from 10 to 20 Grains,
AND A POTENT AND RELIABLE REMEDY FOR THE CURE OF
Marasmus, Cholera Infantum, Indigestion, Dyspepsia and Sick Stomach,
caused from debility of that organ. It is superior to the Pepsin preparations, since it acts with more certainty, and effects cures where they fail.

BAKER'S EMULSION

WITH HYPOPHOSPHITES OF LIME AND SODA.

Among many points in which this preparation excels are:

1st—In quality of the Pure Oil used in its composition, being the finest Norwegian, of a special manufacture, receiving the highest prizes at late European Expositions.

2d—In the Proportion of Oil it contains.

3d—In mode of manipulation and thorough incorporation, rendering it Permanent and Palatable, and of proper consistence, about that of Rich Cream.

4th—In Size of Bottles, containing 16 ounces.

Confidence in the merit of our preparation leads us to respectfully ask a specification of our Brand when prescribing.

ESTABLISHED 1830.

JOHN C. BAKER & CO., Philadelphia.

Most Powerful Purgative Water Known:

1/4 THE QUANTITY REQUIRED BY OTHERS

ABSOLUTELY HARMLESS AS IT CONTAINS ALMOST EXCLUSIVELY SULPHATE OF SODA.

NO REPULSIVE SMELL NOR BITTER TASTE

NO GRIPES

FRACTURE OF THE SKULL; MOTOR LESIONS—CELLULITIS—STRICTURE OF THE RECTUM; COLOTOMY—FRACTURE OF THE GREAT AND SECOND TOES—HÆMORRHOIDS—MALIGNANT TUMOR OF THE LIVER.

By JOHN B. HAMILTON, M.D., LL.D.,

PROFESSOR OF THE PRINCIPLES OF SURGERY AND CLINICAL SURGERY, RUSH MEDICAL COLLEGE, CHICAGO, ILL.

FRACTURE OF THE SKULL; MOTOR LESIONS.

Gentlemen:—We have here one of the most interesting cases that could be brought before a class. This little fellow, 3 years old, about 18 months ago sustained a fracture of the skull. As I press my finger over the elevated portion of the parietal eminence near the suture on the left side, I can find still a place where the bone failed to unite after the injury. The patient is so frightened at this time that his gait cannot well be seen by walking, but there is a distinct unsteadiness in his gait, showing the weakness of the muscles of the upper portion of the right thigh, and on account of deficient innervation the extensor muscles of the fingers of the right hand fail to act. So then we have a distinct lesion of the motor area on the left side of the brain. My impression is from previous examination of the child when less frightened than at present, that there is an incurvation or projection of the edge of the fractured bone which produces this difficulty. The child is able measurably to contract the finger, but cannot extend it, and the defect in gait is due to irritation of the motor area of the left side of the cerebral hemisphere. The parent of the child states that for a considerable time after the fracture was received he was unable to walk and that his gait has become more steady as time has progressed. The paralysis of the arm was complete in the beginning; it is now, as you see, steadily improving. The question is, has that improvement reached its limit? We shall keep the child under observation for a period long enough to ascertain whether or not, there is a probability that the extensors will resume their function. If we find under continued observation that the condition is stationary, then operative measures will be instituted. The operation would consist in cutting down over the portion of the bone which was fractured. Examination of the wound and the edges of the bone, as near as I can ascertain, shows that the bones have never completely united after the fracture. There is still a fissure two inches long which has the effect in this case of an extra fontanelle.

In the treatment of this case antiseptic methods are only to be considered. In operations on the dura mater and on the brain itself the main thing to be considered is thorough antisepsis and we may be reasonably sure that improvement, without danger, will follow.

CELLULITIS.

We have here a case of cellulitis of the platysma myoid muscle and its sheath, also of the sterno-cleido-mastoid muscle of the left side. The causes are such as produce inflammation of the intermuscular substance elsewhere, usually referred by the patient to the sudden onset of cold. As we know now it is undoubtedly of infective origin. The boy says he is just recovering from an attack of typhoid fever. Of course, you understand that the typhoid bacillus could in no wise cause this particular inflammation, so it must have been

doubtless some specific pyogenic coccus gaining entrance through the blood-vessels. It is proper to say in this case that the treatment will consist in the application of hot fomentations, which will perhaps disperse the inflammation without operation. The position of the head, held in the position which you see, is simply due to the voluntary contraction of the muscle. The patient places the head in a position which is most easy for him, and consequently the muscles involved are relaxed when placed in that position. If permanently retained contracture results, constituting torticollis.

STRICTURE OF THE RECTUM; COLOTOMY.

We have here a case of a young man, about 35 years of age, who has a very serious affection, it being no less than a stricture of the upper portion of the rectum at about the sigmoid flexure. On attempting to pass a bougie through this stricture it was found very firm and unyielding and high up. It could not be reached with the finger. For some months he has been passing blood at intervals. He has been unable to have a movement from his bowels without a great deal of pain, and usually not without the introduction of the finger and irritation of the mucous lining of the bowel. His condition has become such that he desires some radical relief. We have then to do with a case of obstruction of the bowel due to a stricture—to a new growth probably malignant. It is quite certain that there is no history of syphilis in this case, usually considered in these growths as the most common cause, and the only thing left to consider is the question of carcinomatous stricture. The lumen of the stricture has steadily diminished, and the difficulty of passing fæces has increased from the beginning. The amount of blood which has been thrown out either with the passages or violent tenesmus which takes place has also increased. So that when you consider the rapidity of the swelling and the fact that rapid general emaciation has gone on, we may conclude without much doubt that we have to deal with a malignant stricture. Of course, in such a condition a palliative operation is absolutely necessary if we propose to prolong the patient's life. That operation consists in making an artificial anus by an opening in the colon, and in case the stricture should not be malignant we would by the resting of the stricture have a better chance for examination and perhaps its cure. We will recommend him to have this operation performed in any event. The operation consists in the usual one performed by Madyl, which is making an incision through the abdominal parietes, pushing aside the omentum, reaching the colon, pulling it through the wound, putting a glass rod under the colon, through the mesentery, either stitching the bowel to the opening or leaving it alone according to the length of the incision that has been made. If, for instance, the incision is a small one (and the smaller the better), it is not necessary to stitch the bowel into the wound for the reason that its agglutination will speedily take place; it is not likely to collapse because the glass rod will be left in position for two or three days. From the third to the fifth day the bowel, which has been raised over the glass rod, may then be incised either by scissors or by the Paquelin cautery, and the opening is stitched to the wound, if required, after which time we may proceed further and remove the stricture by incision of the coccyx, removing it through the pelvis, or the question may arise whether, if it is found to be malignant and constantly growing, we shall allow the artificial anus to remain during the rest of the patient's life. There is no question about the relief afforded by the operation when successfully performed, and under ordinary precautions there is little risk of adding to the patient's danger.

The line of the incision is easily found by drawing an imaginary line from the anterior superior spine of the ilium to the umbilicus. We bisect that by a line drawn at right angles with this line, having it partly about and below the imaginary line, so that by making an opening in that situation we shall come directly upon the colon.

We have now arrived at the peritoneum, which I will incise. I now pass my finger into the rent that has been made in the peritoneum and search for the colon. Usually where there is very much obstruction the colon can easily be felt, and the hard lumps of fæcal matter resting within it. Sometimes, however, it is a matter of more difficulty, requiring lengthening of the incision. That I do not wish to do if I can prevent it. I am now passing in re-

view through the incision certain portions of the intestine as I find parts of the gut entirely empty, indicating that there has probably been a volvulus in addition to the stricture which is present in the sigmoid. I am trying to withdraw the colon as much as possible from below so as to bring it near the sigmoid flexure. The question now to determine is whether the wound is securely closed around the intestine. If not, it is necessary to stitch it; if it is perfectly closed the stitches will be unnecessary. In order to relieve the pressure from being directly over the center we surround it with a gauze compress on the side. If the patient does well, about Wednesday I shall open this with scissors and remove the glass rod. By that time the posterior portion of the intestine will have become securely fastened into the wound.

FRACTURE OF THE GREAT AND SECOND TOES.

This patient yesterday caught his foot in an elevator shaft and sustained a fracture of the great and second toes. We will irrigate the parts, clean off the clotted blood, and examine it. On examination of the great toe I notice that the nail is loose, it simply hangs by the skin. Its removal will enable me to examine the bone a little more carefully. The end of the toe seems to be a mass of pulpified tissue, but I believe it will unite if thoroughly cleaned and treated antiseptically. I shall now after sublimate irrigation suture the anterior flap directly down to the wound, with the expectation that it will unite by primary union.

HÆMORRHOIDS.

This man, complaining of hæmorrhoids, has an external hæmorrhoid and also some condylomata about the anus. We will turn out the inside of the rectum just above the external sphincter with a view to inspecting the membrane. The external pile is sufficiently obvious. I introduce the speculum in the manner which you observe, using my finger as a guide. There seems to be no disease in the interior of the bowel. The external pile is produced usually by direct extravasation of blood. If you adopt the nomenclature of the Royal College of Physicians it comes under the class of extravasation tumors. From a pathological stand-point a tumor is a new growth, but under the present nomenclature we would call this an extravasation tumor. I simply pass a grooved bistoury through the pile and turn out the clot by direct pressure. I think it would be well while the patient is on the table to remove these condylomata with the scissors. We now pack the verge with a bit of iodoform gauze, and it will give him no further trouble.

MALIGNANT TUMOR OF THE LIVER.

This patient has been sick five months, and comes here for the purpose of diagnosis. We find an enormous swelling in the abdomen. Let us hear the percussion note whether it is tympanitic or whether it is fluid. It is a solid swelling. If you notice, the sound is flat in this situation on the left side; it is resonant where the air or gas is in the intestine. The tumor is movable from side to side. The patient is jaundiced. The color of the fæces is variable, alternately white and lead colored, consequently we must look to the liver as the organ probably deranged by the presence of this tumor. Its situation is directly over the liver and would seem to indicate that we have to deal with a malignant tumor of that organ. We might have a hydatid swelling, for hydatids are very common in the liver, but we would not have density of structure. As I pass my fingers down on to the tumor I find it perfectly hard and firm. If you notice, on turning the patient on the side the tumor subsides toward the portion of the body most dependent; it is therefore partly movable under the abdominal parieties. As I grasp the parieties in my fingers and then pass the end of the fingers over the contents of the abdomen I am able to map out, as it were, with my fingers' ends, the exact location of the tumor. It is attached to the liver and overlies the stomach. I conclude then that we have to deal with a malignant tumor, because of the rapidity of its growth, its situation, and in fact that it is solid and not fluid. An exploratory laparotomy would undoubtedly do the man no particular harm and would clear up the diagnosis in this case; but I question the propriety of advising the operation as I think it would only result in exposure of a sarcoma which could not be removed. However, I would be willing to make an exploratory laparotomy at any time he so wills it.

There is one word as to the diagnosis in these cases as between general ascites and these abdominal swellings. If we have a dropsy of sufficient extent to make this extension of the abdomen we would also have a pitting of the feet and legs on pressure. Moreover we would not have abdominal resonance. For instance, at this point (illustrating) we have it soft and resonant. The resonance simply indicates where the gas is present in the intestine, and its absence indicates where the tumor is solid. An exploratory puncture would, of course, determine the contents of the tumor whether it be solid or fluid. Further than that, an examination of the fluid might be made. Under the circumstances I would advise this patient to have an exploratory laparotomy performed. He seems to be in good health, not yet cachectic, and can stand the operation without difficulty.

ATTENUATION OF THE TUBERCLE BACILLUS.

Gramatschikoff (*Centralbl. f.. allgem. Patholgie*, Band ii, No 25) describes a new method by which the tubercle bacillus may be attenuated. Having inoculated 33 fowls with human tubercle bacilli without any positive results, clinical or pathological—at the most only local tuberculosis occurred—he next sought to ascertain what alterations these bacilli undergo and how long their virulence is retained in the organism of the fowl. With this object pure cultivations, enclosed in parchment, animal membranes, and glass tubes closed by permeable membranes were introduced into the peritoneal cavities of fowls. After periods varying in duration, the inoculated material was withdrawn, sown upon glycerine agar, and also placed within the eyes of rabbits. In this way bacilli of diminished virulence were obtained, the degree of diminution being dependent upon the length of stay in the fowl's body. Some were still capable of producing general tuberculosis; the course of the disease, however, was slow in comparison with that observed in control animals, in which tuberculosis had resulted from inoculation with bacilli of the same generation as those attenuated in virulence. These latter, in other instances, produced only local disease, which healed of itself.—*Brit. Med. Jour.*

THE ANTIPHLOGISTIC METHOD AND THE TREATMENT OF ACUTE PLEURISY

By PROFESSOR PETER,
PARIS, FRANCE.

A CLINICAL LECTURE DELIVERED AT THE HÔPITAL DE NECKER.

Gentlemen:—I do not come to combat thoracentesis. It was under Trousseau that I made my first puncture of the thorax, and I am too well acquainted with the beneficial results obtained from such operation to speak ill of it.

What I propose to say about acute pleurisy is, that the disease remains the same, but that it is the treatment of it which has suffered modifications. To show this I will call your attention to the medication of the past and that of the present.

In regard to the first, I will refer to books very little read nowadays, that is, to the treatise on auscultation of Laennec, 1819, the Clinical Medicine of Andral, 1822, and that of Bouillaud, 1837.

For the present I will only call attention to the following points. Laennec says: "In acute pleurisy, when the subject is vigorous and plethoric, the best practitioners of all times and of all countries, have recommended bleeding from the arm, unless the individual be a woman in whom the menstrual period is about to occur. In this instance, bleeding from the feet is preferred. But if the pain and the fever do not subside after one of these bleedings, it will be best in pleurisy, as in all inflammations of the serous membranes, to resort to blood-letting, and, generally, this local bleeding must be repeated until the pain and the fever cease, and also if these symptoms should return. In my opinion, wet-cupping is preferable to bleeding by leeches."

Here you must allow me a slight digression that I may try to make you understand my opinion about the matter, and the absolute usefulness of an energetic interference so timely in the first stages of an acute pleurisy.

By acute pleurisy I understand that phenomenon which occurs in an adult, robust and healthy individual, through the accidental cooling off of a surface temperature which has been produced by a prolonged and active muscular exercise. In

such an acute pleurisy three stages are observed: a hyperæmic stage, a purely congestive one, and as a consequence of this, an affection of the intercostal, and sometimes of the phrenic nerves, constituting, when intense, what is commonly termed a "stitching" pain in the side. Again, and preceding this pain, there are fever characterized by chills, and a condition of general malaise. After a few hours the period of exudation appears, soon followed by the formation upon the pleura of a fibrinous exudate. Then shortly afterwards, there comes on, with a greater or lesser rapidity, the secretory period, with the production of a serous effusion. In the meantime the original pain subsides gradually until it finally ceases, as if the liquid effusion, out of regard, as it were, for the inflamed pleura and the affected nerves, acted as a calming agent. The same results are observed through watering of the eyes in cases of acute ophthalmia.

I shall not dwell long upon the phenomenon of the pain in the side; suffice it for us to know that it is the clamor, the cry of an irritated nerve, situated in the neighborhood of an inflamed pleura; that it is the denouncing manifestation which, after the few hours of a pre-existing fever, comes to point out to us the localization of the malady, and to put us on our guard.

Before the appearance of the fibrinous exudation and, *a fortiori*, that of the serous effusion, the physician has sufficient time to interfere in the production of these two phenomena, and this interference must be proportionate to the intensity of the fever and the acuteness of the thoracic pain.

These are, therefore, the two chief indications: To combat the fever and to prevent the fluxion. This is what was admirably understood by our forefathers when they practised a general blood-letting to combat the pleuritic fever, and when, on the other hand, they applied wet-cupping and leeches, and, one or two days later, a large blister to act against the local inflammation.

Under analogous conditions, if this treatment is put into practice at the beginning of the pleurisy, we obtain a double result: 1. There will be no serous effusion, or at least a very small amount. 2. The duration of the disease is notably shortened. In this manner the general disorder has been averted and the local trouble stayed. Such has been noticed in the first thirteen clinical observations of Andral. This author cites ten cases of acute pleurisy that terminated in recovery; three got well without effusion, and in seven the effusion was slight, but totally disappeared under the antiphlogistic treatment. These ten cases were observed in the period of ten months.

Bouillaud has reported twenty-one observations of acute pleurisy, of which only the first case terminated in death. The antiphlogistic treatment consisted in repeated bleeding, wet-cupping and the application of large blisters. I believe that this treatment is too energetic, and that it may be employed in a more moderate manner, with the same amount of success. I believe, on the other hand, that it was the excess of such measures that, in the hands of Bouillaud, produced a reaction in an opposite direction, and that a treatment which is both rational and efficacious was thus abandoned. But certainly worthy of notice, especially in the observations of Bouillaud, is the tolerance of the system towards these large blood-lettings; the rapidity with which the pain ceased, followed by the abatement of the local trouble; the re-absorption of the effusion and the recovery of the patient. In fact it is remarkable that in thirty-one cases of both Andral and Bouillaud, there was only one death, and this in the case of an individual whose system had been previously run down.

You will not forget the fact that only 1 death occurred in 32 cases of acute pleurisy observed in the course of a year, more or less. I will return to this a little later.

Let us now see what the modern treatment of acute pleurisy is: The fever, which is the first manifestation of the disease, is combated from the start by sulphate of quinine and antipyrine; for treating the pain, the physician of to-day exhibits sometimes a certain amount of thereapeutic audacity, for if the suffering is too intense he resorts to the hypodermatic injections of morphine. By this he hopes to strangle, as it were, the advanced sentinel which is denouncing the localization of the disease; while the effusion is slowly but surely taking place within the cavity of the pleura, simply because nothing is done against the local hyperæmia which is to give origin to the

fibrinous exudation and the serous secretion. There are other practitioners who do still less; who observe the doctrine of the absolute expectant treatment, practitioners whom I call volunteers of the doctrine of contemplation, and who allow the sero-fibrinous secretion to take its course, maintaining that acute pleurisy is a cyclical disease which must terminate spontaneously in 2 or 3 weeks.

I consider it my duty to oppose such a doctrine; in the first place, because you cannot remain indifferent, even if the disease is not shortened by it, towards a means by which you can diminish the pain and thereby the suffering of the patient; secondly, because, in my opinion, the disorder may be shortened; and finally because the inflammatory disease can be rendered less serious by the antiphlogistic treatment.

My learned friend, Sée, calls attention to the fact, in support of his doctrine, that 60 out of 100 cases of acute pleurisy are either tubercular or pretubercular. I confess that this argument is somewhat contrary to the views already expressed; but I still believe that, even in such cases, an active interference is necessary. I will also say that hæmatosis being lessened by the pulmonary tuberculization, it becomes urgent to endeavor to prevent a new diminution of this blood-making process, which necessarily results from the occurrence of the pleural effusion.

It is precisely the non-application of the antiphlogistic treatment, gentlemen, at the beginning of an acute pleurisy, which permits the formation of these large serous collections, and for which we are obliged afterwards to practise thoracentesis---an occurrence which I deplore, and by which a medical is changed into a surgical disease.

What I have endeavored to show is: (1) that the serous effusion may be stayed; (2) that it may be entirely prevented; (3) that a moderate effusion (say from 500 to 1000 grammes, for example) is still a condition for the justifiable application of revulsion, and that thus piercing the chest may be avoided, especially if the disease has not reached its 24th day; (4) that, finally, if the effusion is considerably large (that is, from 1,800 to 2,000 grammes) thoracentesis must be resorted to, even before the 24th day, and preferably by the aspiratory method. In this I am in accord, in all points, with my friend Dieulafoy.

I have before remarked that during the first half of this century, in 32 cases of acute pleurisy only 1 death occurred, and that the absorption of the effusion was rapid. Now, let us see what the facts are in our days:

The serous effusions are not only more and more abundant, but the abundant effusions are more and more frequent also, and these are not only more serious but quite purulent in a large number of cases; so that the operation for empyema has become more and more frequent. Two distinguished surgeons, Gosslein and Richet, have assured me that their surgical life, regarding pleurisy, could be divided into two distinct periods; in the first one, embracing a lapse of from 20 to 30 years, they never had occasion to practice operations for empyema; while during the second one, which corresponds to the present epoch, they have practiced such operation twice or thrice a year. Nélaton, according to Dolbeau, practiced, at an advanced period of his life, the operation for empyema.

Now, there is at least a singular coincidence between this aggravation of pleurisy, the necessity of our having often to perform thoracentesis or an operation for empyema, and the treatment of modern times. I do not hesitate to say that such is not a coincidence but a correlation.

Louis has asserted that nobody ever died from acute pleurisy; but this proposition is too absolute. Laennec affirmed that death was rare, but he does not mention a single case of sudden termination as a consequence of this disease. We have already seen that only 1 death was recorded in the 32 cases of Andral and Bouillaud, giving a mortality of only 3 per cent. I have studied the proportionate mortality from pleurisy, at the Hôpital Necker, during the years 1889, 1890 and 1891, and I find the following statistics: In 1889, 4 deaths in 60 cases; in 1890, 2 deaths in 44 cases; in 1891, 7 deaths in 70 cases; all of which give an average mortality of 7 per cent. during these 3 years, the double of that presented by Andral and Bouillaud.

Let us now consider the question of sudden death. This has been attributed, and not without reason, to the abundance of the effusion, that is, to the generalization of the disease over the pleura. In an interesting work, one of our distin-

guished hospital physicians, Talamon, has reported cases of sudden death by syncope, not only in patients in whom the effusion was of a minor importance, but also in two cases that had generalized fibrinous adhesions. Talamon has investigated the cause of death in such instances. He ascribes it particularly to the rapid formation of a thrombus of the artery or of the pulmonary infundibulum, since the post-mortem of such cases did not offer a satisfactory explanation of the mortal syncope. I believe, myself, that in those cases, in which the disease is so generalized, the inflammatory process has gone so far as to produce diffused adhesions, adhesions which affect the posterior pulmonary plexus, and thus cause, by a reflex mechanism, an inhibition of the cardiac plexus.

I will not say much regarding the part which the nerves play in acute pleurisy. In the first period of the malady the intercostal or the phrenic nerves are deeply affected, and at an advanced stage a functional trouble comes on, followed soon after by inhibition of the nervous mechanism of the heart and consequent death.

There is, therefore, danger in permitting the generalization of the pleuritic affection, because it may result in the production of serous effusions and adhesions, and, in both cases, in an interference with the function of the pulmonary plexus. It becomes, then, necessary to avoid the development and the generalization of the pleuritic inflammation.

To resume: in a frank, acute pleurisy, due to cold, and occurring in a robust and otherwise healthy adult, the effusion may, during the initial stage, be stayed or avoided. Later, when the period of effusion has been established, during the first two weeks, if the effusion is considerable, a cure can be obtained through the application of wet-cupping, followed by one or two blisters. It is understood, of course, by a rational necessity, that the patient may be subjected to diet.

I have said that the serous effusion may be prevented at the beginning of the disease. I can cite cases of this kind to prove my assertion. For instance, to a young lady I advised sulphur baths for rheumatismal pains from which she was suffering, but forgot to state to her that the water should be warm. She took a cold bath. In about ten minutes she began to experience intense chilly sensations which obliged her to get out of the tub. Soon afterwards she was taken with severe chills, a general malaise and a pain in the side. She then sent for me. I arrived about five or six hours after the bath had been taken, and found the patient suffering from fever, an intense pain in the side, and great dyspnœa. On examination I detected a slight friction sound due to a fibrinous exudation, but there was no effusion. I immediately applied wet-cupping, which was followed by a rapid diminution of the pain and of the dyspnœa. I saw the patient in the evening; on the following morning she had no effusion, but I could still notice the pleuritic friction sound. I then applied a blister 10 by 8 centimeters in size, and six days afterwards, the patient had completely recovered, without any effusion having taken place.

I have previously said that when the effusion is about 500 to 1,000 grammes, revulsion will be sufficient to effect a cure. I agree with Dieulafoy in that when the effusion goes in amount above the figure just mentioned, that is, 2,000 grammes or more, so that displacement of the viscera is apt to occur, puncture of the chest becomes necessary. In these cases I have seen (and others have observed analogous results) re-absorption to take place, followed by a cure, through the successive applications of blisters before the third week of the disease had passed, and while fever is still present. In this respect I am in absolute accord with Hardy and Constantin Paul. I could cite a large number of cases of this nature, but I will only relate the following one:—

A very distinguished Paris physician, 50 years of age, suffered an attack of acute pleurisy on the 25th of June, 1881. On the 18th he was asked by some of our learned colleagues to have the chest punctured, calculating that there was two litres of serous effusion already collected. The sick physician stoutly refused, and, on the 19th Professor Hardy was called in consultation, and he (Hardy) advised the application of a large blister. A few days later, having returned from a professional visit which had prevented me from seeing this patient at the beginning of the disease, I told him that in the presence of the abundant exudation, and owing to the persistence of the fever, thoracentesis was urgently

called for. He refused again, and requested me to apply blisters. He had, in all, eight blisters, and "thanks to these derivatives," he wrote to me sometime afterwards, "he had, by the 30th of July, completely recovered." The disease lasted forty-five days, after which our patient entered again into the enjoyment of good health, and was once more able to attend to his own patients.

Now, gentleman, I have cited this case not expecting you to act similarly in a parallel instance, but to show you that when thoracentesis appears to be most urgently needed, it can be avoided if the disease has not gone beyond the twentieth day.

You see then, gentlemen, that, agreeing with my learned friend, Hardy, I must protest, with proofs to support us, against the abandonment of the antiphlogistic treatment, especially *at the onset of acute pleurisy.*

With Constantin Paul, I wait, to practise thoracentesis, until the fever has subsided, and for the disease to have gone beyond the 20th day, because before or at this period re-absorption is possible. Like Proust, and following the example of Trousseau, I am in the habit of evacuating the liquid at once and in a slow manner. Finally, like Dieulafoy, I practise the operation, even if fever is present, when the effusion is so abundant as to cause displacement of the viscera. I will insist upon the danger arising in the generalization of the pleuritic inflammation, which may be the cause of sudden death, and also upon the urgency of practising thoracentesis in such cases.

In conclusion, I will say that to-day, generally, the study of the pathogenic *cause* makes us forget that of the morbid *action.* Particularly in acute pleurisy, we have not evidently ascertained the nature of the morbific action, that is, whether this is due to cold or to infectious microbes. We are only familiar with the processes that occur, that is, with the stage of hyperæmia, the stage of exudation, and the secretory stage. Now, during the presecretory period, which may last from 12 to 24 hours, we have, if called in time, sufficient opportunities to act in order to prevent or stop the occurrence of the effusion. This is what I have tried to demonstrate to you.—*Translated from Le Bulletin Médical, April 27, 1892.*

METHODS OF MODERN DERMATOLOGY.*

By LOUIS F. FRANK, M. D.,
MILWAUKEE, WIS.

The history of dermatology is as ancient as the history of medicine in general, but it is impossible to make a correct account of the literature of cutaneous medicine, owing to the confusion which has existed in the nomenclature of this branch from the very oldest times to the present. Hippocrates can be considered as the founder of Grecian dermatology, other investigators after his time are Cornelius Celsus, Pliny, Galen, Lorry Plenck and Willar of the last century, and an array of prominent writers of this century. It was reserved for the genius of Hebra, to examine critically the enormous material of dermatology, to discard useless material, strengthen and uphold true principles, to properly and scientifically classify dermatological diseases and their forms. We must admire the simplified nomenclature and clear logic of Hebra, his gift of observation and his precise indications for the employment of appropriate remedies, which were in part already in use and in part were first introduced by himself. Assisted by the fertile minds of a Rakitausky, and Ikoda, who built up a new school of pathological anatomy, Ferdinand Hebra became the founder of modern dermatology. Since that period most noteworthy changes have taken place in its therapeutics; the principles first proclaimed by the Vienna school under the general leadership of Hebra, were remodeled with every influential discovery made in the last 20 years, and every new discovered fact and the list of remedies enlarged. And this progress is due to two factors: 1. The better knowledge of the causes of skin diseases, in no small degree due to the perfection of the microscope. 2. The discoveries of new remedies and methods in dermatology. Of these I wish to speak.

Among the most important and efficient enrichments in modern dermato-therapeutics are the salve- and plaster-mulls of Unna. The principles which led to this important progress were those of modern antisepsis,

*Read before Milwaukee Medical Society, April 26, 1892.

aiming at the complete rest of the skin, prevention of friction from clothing, complete exclusion of outer air and its detrimental action on the skin. The basis of this dressing primarily consisted of undressed cotton of various lengths and thickness, which were drawn through an ointment constituted of mutton tallow. In this manner Hebra's and Wilson's ointments were first made. These mulls were covered on both sides with the medicated ointment, and only since of late but on one side. The dressing was adapted and held in place by cotton or mull bandages. It is evident that a dressing of this kind facilitates the treatment of ambulatory patients, even if the skin lesion should be a very extensive one. Especially eczemas in the region of the anus, scrotum and axilla and lower extremities can be treated with pronounced success. I regard this treatment of eczema of the nostrils and ears (external auditory canal) as the very best and efficient. In 1882, a most decided progress in the plaster-mulls was made by Unna, when he introduced the so-called gutta-percha plaster-mulls, which meet any demand of a continual and impermeable dressing. It has the great advantage of not irritating the skin and being very adherent. In many persons of irritable skin you will have found that the application of an ordinary adhesive plaster will cause dermatitis and eczema of the affected and adjacent parts. An important factor likewise is the macerating action of the gutta-percha and similar material. Already Hebra used rubber gloves, stockings, caps, and other articles of clothing in the treatment of chronic eczemas, on account of the macerating effect produced by the same. They are likewise of great value in all conditions of hyperplasia of the epidermis and keratoses, due to a variety of causes, also in certain forms of psoriasis and the obstinate papular syphilides as they occur in the palm of the hand and soles of the feet. A vast number of medicinal remedies are combined with the salve-mull and gutta-percha plaster-mull, the firm of P. Beiersdorf & Co., Altona, Germany, manufacturing twenty-seven of the former and 131 of the latter.

Some years ago Prof. Pick, of Prague, suggested the use of gelatine as a vehicle for various medicaments in dermatological practice. He employed a mixture of gelatine and water over which, after its application to the skin, was smeared a thin layer of glycerine. Unna and Beiersdorf combined the gelatine and glycerine directly and they found that a definite relation must exist between the amounts of glycerine, gelatine and water taken and the percentage of drug employed. The formula is as follows:

℞ Zinci oxydi.....30,0.
Gelatinæ albæ.....40,0.
Glycerinæ.....50,0.
Aquæ.....90,0.
M.

The gelatine preparation is prepared for use by being melted, the tin containing it being placed in a vessel of boiling water—and painted on the parts with a stiff brush. The jelly is then covered with tissue paper or dried with cotton-batting which forms a thin coating. As much water is added as is necessary to form the proper consistency. It is a very valuable preparation where a complete protection from external influences is demanded as we find it in many forms of eczema, particularly the squamous variety. The action of the gelatine can of course be but a very superficial one as its constituents do not penetrate the epithelial layer and resorption is impossible. However, as a protective dressing its value cannot be over estimated. Any medicinal remedy can be combined with it, particularly ichthyol, sulphur, sublimate, acetate of lead, chrysarobin, pyrogallol, etc.

For the treatment of isolated lesions of the skin the treatment by salve-sticks and paste-sticks has been advocated by Unna and Brook. The paste-sticks are soluble, the salve-sticks insoluble. The basis of paste-stick is starch, sugar and mucilage of tragacanth; the basis of the salve-sticks consists of

℞ 35 pts of wax
55 " " olive oil
10 " " oil soap free of water.

They are useful in localized eczema, mycoses, lupus, syphilides, parakeratoses and hyperkeratoses, anomalies of pigmentation, ulcers, etc.

Medicated soaps so far as they have been found up to date in market are articles of but slight value, and to Unna again belongs the credit of having obtained preparations which fulfill the just demands of dermatologists. The basis for the medicinal agents consists of soap containing a surplus of fat. It is prepared out of beef tallow and a mixture of two parts of soda-lie and one part of potash-lie; to the mass

is added a sufficient quantity of olive oil that about 4 per cent. remains unsaponified, which is the surplus fat.

Although the scientific treatment of skin diseases by soaps has been up to date but little in use compared with the treatment by salves, plasters, and pastes the advantage of their application is self-evident. This method is not only justified but absolutely indicated in all those cases where the diseased skin is rich in fat due to an increased secretion from the sebaceous glands and sweat ducts. In all these cases it would be imprudent to add more fat in form of an ointment to an already fatty skin, but to use a soap which will form an emulsion with the superfluous fat of the skin. By removing this fat which is on the surface and also that which fills up the orifices of the glandular ducts the medicinal remedy incorporated in the soap is allowed to penetrate and act on the inner walls of the sebaceous and sudoriferous ducts. This is of prime importance as we know that especially in parasitic diseases the source of the affection is often deeply buried in the glandular organs of the skin, where it can develop anew, extend to the surface and cause a so-called relapse, which really means that the germ of the disease has not been completely eradicated. The treatment by soaps is thus far particularly indicated in diseases of a parasitic nature, in tinea, sycosis, acne, psoriasis, etc. With regard to their chemical properties soaps are divided into

Alkaline soaps (with a surplus of free alkali.)

Neutral soap (in which all alkali is combined with the particular fat acid.)

Acid soaps (with a surplus of free weak acid.)

As far as my experience goes in the treatment of skin diseases by medicated soaps the results have not been as satisfactory as proclaimed, however, I use them very frequently regarding them as a most valuable expedient in the treatment of many skin lesions.

The action of drugs applied to the skin in the form of spray is a very energetic and applicable one. The practical facts harmonize with the physiological fact that the power of resorption of volatile substances by the skin is a great one, which is especially true when the skin is denuded of its epidermis. This method is especially indicated where the skin or mucous membrane is free of access, as the external auditory channel to the tympanum, the nose and pharynx, the urethral and anal mucous membranes; likewise fissures as caused by eczema, psoriasis, syphilides or the natural folds behind the ear, the nipple, the fingers and toes. Certain forms of mycoses as pityriasis vesiculæ and tinea tonsurans are readily cured by a spray of a 10 per cent. chrysorubin solution.

An important part of recent therapeutics of the skin is played by mechanical treatment by means of Valkmann's spoon, the sharp and pyramidal prong fastened to the spoon, as modified by Auspitz, and the flat, double-cutting lancet-needle for cutting out vessels in the skin; the various apparatus for the same purpose, finally the electrical needles and combination of needles for the destruction of the hair-follicles, the latter being especially recommended in America in recent times. In many skin diseases, especially nævi, pointed condylomata, warts, and superficial epitheliomata, pustula, acne and sycosis, lupus, tuberculosis and erythematosis, mechanical treatment either alone or combined with other medicinal agents constitutes a very useful, occasionally the sole therapeutic method, attended with good results.

It may be of interest here to allude to an apparatus of late devised for producing local anæsthesia. I first saw it used in the clinics of Prof. Besnier; it consists of a cylinder containing chloride of methylene gas under high pressure, which escaping rapidly liquefies, causing local anæsthesia. It is without doubt a great progress in local anæsthesia, particularly as injections of cocaine are liable to cause alarming symptoms at times, and the use of the ether spray combined with the actual cautery is liable to cause explosion. The local action of chloride of methylene is similar to that of ether, but more rapid and intense. It first causes a local irritation, then after a few seconds a diminution of sensibility, the skin turning white and anæmic and covered with frost, which then is the proper time to operate. If the anæsthesia is carried too far there is great danger of causing deep-seated gangrene.

The opening of abscesses, felons, excision of chancroids, the operation for phimosis, opening of pustules, extirpation of atheromatas—in fact all superficial minor operations form the indications for its use. In dermatology it is applied principally

for scarifications, scraping with the sharp spoon in case of lupus and similar minor operations. In conclusion I will draw your attention to the Micro cauter, a modification of the Paquelin cauter, proposed by Dr. Unna. It consists of the ordinary cautery point to which a copper wire is affixed which enables the heat to be conducted to a very small point. I employ it principally in nævi and in dilated vessels as we find them in venous lesions, especially acne, rosacea, telangiectases, lupus, etc.

After the conclusion of Dr. Frank's paper, the following discussion occured:—

Dr. H. H. Sercombe: How much of the surface is anæsthetized by the apparatus you have shown us?

Dr. Frank: A spot about as large as a dollar.

Dr. S. W. French: Have you used collodion on the skin?

Dr. Frank: I have never used it in place of the gelatine, but I think the latter preferable.

Dr. J. A. Bach: I should like to ask, in cases of eczema of the internal auditory canal, whether the doctor uses plasters or ointments.

Dr. Frank: I employ salve-mulls, especially the double sided ones, cut out about the length of the canal, rolled up, put in and pressed around on all sides, especially through the nostrils.

Dr. D. J. Hays: In regard to the gelatine treatment the doctor spoke of, I have used that during the past three years with remarkable success in some cases of squamous eczema. Cases that have resisted treatment for years rapidly improve under this method. The gelatine is simply painted on the part affected, the application being allowed to remain for three or four days or a week. The plasters cannot be applied in all places, but where they can be I have met with remarkable success.

I regard the ointments generally that are put up in our apothecary shops as doing more harm than good. That, at least, has been my experience with them. They are rough and irritating to the skin, and nine times out of ten are without good effect, but treatment with these plasters, and especially with gelatine, applying the latter with a brush, will cure cases that have resisted all other kinds of treatment for years.

Dr. French: Do you confine yourself to the remedies you have mentioned or do you use lotions also?

Dr. Frank: Of course I use lotions and other remedies. I do not limit myself to the remedies I have spoken of, but my subject is Modern Methods of Dermatology, and these methods have all been adopted within the past few years.

THE USE OF HOMATROPINE DISCS IN REFRACTION.

ARTHUR D. MANSFIELD, M. D.

ASSISTANT SURGEON AT THE PRESBYTERIAN EYE, EAR AND THROAT CHARITY HOSPITAL, BALTIMORE, MD.

It often becomes necessary in testing the refraction of an eye to temporarily completely paralyze the accommodation, thus rendering the eye incapable of exerting any voluntary effort toward reading or near work of any kind being accomplished. When an eye is in a condition to only appreciate distant objects then we can find the defects much more readily than when the accommodation is allowed full play and scope.

In the majority of eyes demanding aid in visual defects we can dispense with the use of a mydriatic and can find out the defect of such an eye unaided, but in some cases, the number varying, a mydriatic is demanded and the indications for it absolutely positive. Now comes the important question, what mydriatic shall we use? The great objection to mydriatics is that the mydriasis lasts too long, entails too much discomfort upon the patient, renders an important organ useless; and in those who depend upon their vision for their livelihood the question is a serious one. The demand on the part of the eye for aid in the shape of properly adjusted lenses is necessary, and to accomplish this the paralysis of the spasm of the accommodation is also necessary. Then what shall we do? We want a mydriatic that will paralyze completely the muscular ability of the eye, yet at the same time allow the eye to recover quickly from the influence of such an action. Before a mydriatic of such a character was discovered, their use for refraction was a serious matter to the patient, but in homa-

tropine, we find a mydriatic causing but little discomfort. Homatropine has been used in many forms—the aqueous solution, the oily solution, and the discs of homatropine hydrobromate combined with the hydrochlorate of cocaine.

My intention is to draw particular attention to the use of the discs of homatropine and cocaine, yet I cannot refrain from mentioning the other forms in which we use this mydriatic. From the aqueous solution we get excellent results if we will only wait long enough and instill the drops with sufficient frequency. With the instillation of a solution of homatropine mydriasis and complete paralysis of the accommodation do not follow until 30 to 45 minutes have elapsed, which is rather longer than the pressure of hospital work will allow; what we need is something that works more rapidly. Such a substance was thought to be found in the oily solution of homatropine but my experience has been very limited and what I have had has been rather unfavorable on account of its setting up considerable inflammation in the conjunctivæ and producing such lachrymation and photophobia as to render its use absolutely painful. My experiences may not accord with that of some others. Nevertheless I have abandoned the oil for another form from which I have had most pleasant and brilliant results.

We all are aware that with the least spasm of the accommodation where astigmatism occurs that it is almost useless to attempt to properly adjust glasses to correct the faulty meridian, as the faulty meridian will migrate in as many different angles as are shown on the astigmatic chart. To bring out the only faulty meridian (or meridians) it is necessary to use the mydriatic, and, as I have already endeavored to point out, homatropine is the substance best adapted to do this, and the form in which it is most efficaceous is in discs as prepared by Jno. Wyeth & Bro. of Philadelphia. These ophthalmic discs are very small, only about one-eighth inch in diameter and as thin as a piece of writing paper, made of the purest gelatin, devoid of all irritating substances, and each contains hydrobromate of homatropine gr. $\frac{1}{30}$, and hydrochlorate of cocaine, gr. $\frac{1}{30}$. The presence of the cocaine is to facilitate the absorption of the homatropine by the cornea, the reason being that cocaine exerts a peculiar disintegrating effect upon the epithelium of the corneal substance, thus allowing the homatropine to come in closer contact with the nerve fibres of the cornea which ramify in all directions.

The discs when placed upon the everted conjunctiva of the lower lid, and the lid with the disc allowed to return to its proper position. At once there is a feeling of discomfort, due of course, to the presence of the foreign body, which discomfort lasts but a short while, for as soon as the disc dissolves the uneasiness disappears. The dilatation begins almost immediately and in from 7 to 10 minutes the mydriasis is complete. It is not in all cases that homatropine will give us complete paralysis of the accommodation, there are some cases, as we all know, who have much refraction to work, that require the continued use of atropine itself. But aside from such cases the use of the homatropine will give excellent results, and I particularly recommend to the attention of my readers so disposed to follow my advice to give the gelatine ophthalmic discs a trial.

My reasons for preferring the discs to either the aqueous or oily solutions of homatropine are as follows: In the first place we have a definite quantity instilled into the eye and hence we obtain a definite result if the discs contain the definite amount, and we have every reason to believe that they do.

Secondly, the discs being dry are not subject to the same fungoid growths and changes in composition to which the aqueous solution is subjected. Consequently the discs can be kept for any length of time, while age impairs the efficiency of the aqueous solution.

Thirdly, the action of the discs is more rapid by half, in some cases by two thirds, than the solution of the drug.

Fourthly, in using the solution there is always more waste than in the form under consideration, which is quite a consideration in the use of such a drug as homatropine. The drug is a useful one no matter in which form we use it, and cannot well be dispensed with in our present work, but the desires of the age are always for the better, no matter how small the difference may be, especially when the difference is a question of time combined with efficiency.

129 So. Broadway, Baltimore Md.

A CASE OF CRUSHED KIDNEY CAUSED BY A RAILWAY ACCIDENT.

By HERMAN MYNTER, M. D.,
BUFFALO, N. Y.

The following case is of peculiar interest, as the injury is one very frequently produced by railroads and very fatal in its consequences.

On Jan. 27, 1891, I was called to Oil City, Pa., by a dispatch, stating that a man had been severely injured by a railroad accident, and that probably a laparotomy would have to be performed. On arriving, late in the evening, I saw the patient, Mr. A. Wood, aged twenty-two, and learned from his attending surgeons the following history:

Late in the evening on Jan. 23, four days previously, he was caught obliquely between the bumpers while coupling cars. He stated then that he was not seriously hurt and could continue work as brakeman on a freight train. He actually did ride thirty miles on the train, and then had to give up on account of faintness, pain and vomiting, and was brought back to Oil City, where Dr. Coulter was called to see him on Jan 24, at 3.30 a. m. He found no visible injury, no fracture of pelvic bones, no particular tenderness in abdomen, except in right iliac region, where he had considerable pain by pressure. No ecchymoses were present anywhere. At this time he was considered seriously hurt. During the day (Jan. 24) the patient could not urinate and was in great distress on that account. He managed at last to empty his bladder and the water contained a great amount of blood. After that his bladder was emptied with a catheter three or four times a day and the urine continued to contain more or less blood.

On January 26, the temperature began to rise, being 102.5° but afterward gradually receded to 100.5°. The pulse ranged from 100 to 108. On the same day tympanitis commenced, although not excessive. Some flatus were passed on January 29. No hiccough. On examination the patient was seen to be a strong, healthy young man. Temperature, 102°; pulse, 108, full and regular.

Considerable meteorismus was present, with tenderness in right iliac region. No particular tenderness in left side of the abdomen. The meteorismus prevented a careful examination of the abdomen. Over the right lumbar region a diffuse ecchymosis and some fullness and muscular rigidity were seen, and he was very tender upon deep pressure here. There were slight ecchymosis around anus and perineum.

The urine was normal in quantity, but intimately mixed with blood, and of a dark, dirty color. It contained no coagula of blood. His bowels had not moved, he having been kept under the influence of opium since the injury.

The question of diagnosis was not discussed. It was evident that the man was seriously hurt, but I thought we could exclude any injury to organs in the abdominal cavity. A crush or rupture of the bowels would probably have terminated fatally before the time by diffuse peritonitis, of which there were no signs. True enough, he had considerable meteorismus, but not more than could be accounted for by a slight traumatic peritonitis and the continued opium treatment. The normal quantity of urine, of course, excluded rupture of the bladder, not to mention the absence of diffuse peritonitis. A rupture of spleen or liver would probably have terminated fatally by internal hæmorrhage in a short time.

The ecchymosis over the right lumbar region, on the other hand, the deep-seated pain and swelling here, the muscular rigidity, the intimate mixture of urine with blood, the fact that he vomited immediately after the accident, but otherwise was able to travel thirty miles and then first became faint and had to give up work, and lastly the tenesmus of the bladder pointed directly to the right kidney as the seat of lesion, and I thought I was justified in diagnosing a rupture of this organ.

The next question, whether he could be removed to Buffalo, as his family insisted upon, was settled with the diagnosis, and Dr. Coulter and I left that same night with the patient on a special train, and arrived at Buffalo at 6 o'clock on the morning of January 28, the patient having stood the journey well. I had him transferred to the Emergency Hospital, and gave orders to have him take ℥i of epsom salt immediately, and ℥ss every hour afterward till copious evacuations occurred, and to have him transferred to the Sisters' Hospital

for operation at 11 o'clock. On his arrival there he had several copious evacuations, with the result that the meteorismus had disappeared. An indistinct deep swelling, with intense tenderness by pressure, could now be felt in the right iliac region. Under ether narcosis, exploratory incision of the right kidney was made in the usual way by an incision four inches long and two and one-half inches from the spine, extending from twelth rib downward toward posterior superior crest of the ilium. Having reached the lumbar fascia, the usual yellowish-white color was seen changed to an intense dark color from infiltration of blood. On passing through this fascia a large cavity was opened, containing about a pint of dark bloody fluid and coagula. The lower half of the kidney was found crushed to a pulp, and felt very much like an epithelioma of the uterus in the process of disintegration.

The question of nephrectomy was now in order, but bleeding from the crushed kidney was so copious by the slightest touch or manipulation, that all I could do was quickly to remove the blood coagula, disinfect the cavity with corrosive sublimate and then pack it firmly with iodoform gauze, over which an antiseptic dressing was applied. One or two results were possible. Either the crushed parts might become eliminated by and by, and under favorable circumstances recovery might take place, or else, the bleeding having stopped and inflammatory thickening and adhesion having occurred, a nephrectomy might, later, be performed.

On Feb. 3, urine was noticed to pass through the wound. The dressing was changed without bleeding, and a new one applied. On the same day the water commenced to clear up, although still containing considerable pus. He gradually improved, the large cavity contracted more and more, the urine became more and more normal, the crushed parts of the kidney came away by irrigation, and on March 16 he left the hospital with the wound healed, with the exception of a small fistula, through which scarcely anything was discharged. The fistula has since healed completely, and the patient is in excellent health.

General Remarks.—I desire to add a few remarks on the subject of crushed kidneys. In regard to the ætiology of ruptured and crushed kidneys, blows, falls and crushes are mentioned as the most frequent causes, not considering the cases which are produced by gun-shot wounds, etc. A quite frequent cause, probably the most frequent, are crushes between the bumpers of railroad cars. In "International Encyclopædia of Surgery" two cases are mentioned. One was that of a man aged twenty-one, who was struck by the bumper of an engine. He vomited and complained of great pain beneath the ribs. Next day bloody urine was noted, which gradually increased, so that great tenesmus of the bladder occurred from coagula in the bladder. A dull swelling formed in the left side of the abdomen, tympanitis and delirium supervened and death occurred on the twenty-sixth day. The left kidney was found ruptured across the middle and the lower segment crossed transversely by numerous fissures. A large cavity was found surrounding the broken kidney, filled with grumous, offensive blood, clots and urine. In the peritoneum, forming the anterior wall of this cavity, there was a ragged rent in a thin slough, through which offensive serum was found to exude into the peritoneal sac.

The other case died on the eleventh day, a tumor having been observed on the left side, with similar symptoms as in the previous case. The left kidney was found completely divided through the pelvis, and the two halves widely separated by blood and urine, which reached behind the peritoneum as high up as the diaphragm and as low down as the insertion of the psoas muscle on the femur. A kidney may become completely torn through, either transversely or longitudinally, there may be several small surface tears, or it may be pulpified, as in my case.

The first and principal danger is the bleeding, which gradually may reach such proportions that strangling of the peritoneum from pressure occurs. If a large branch of renal artery is torn death may occur quickly. If the patient survives this danger he stands an excellent chance of succumbing to a perinephritic abscess. Can you imagine a better chance for the development of a genuine abscess than a crushed kidney with a collection of blood and urine in the loose, fatty and easily destroyed tissue in the retroperitoneal space?

It is true that there are a number of recoveries from ruptured kidneys on record,

the principal symptoms of which were hæmaturia, but, to say the least, it is questionable whether they were cases of ruptured kidney! Hæmaturia is not necessarily a symptom of ruptured kidney, occurring, as it does, from contusions, renal calculus, acute nephritis, etc.

On the other hand, a ruptured kidney may exist without hæmaturia if the ureter becomes plugged by a clot or completely torn across, so that neither blood nor urine can reach the bladder. In regard to the symptoms I can give no better description than that of Henry Morris, surgeon to the Middlesex Hospital in London:

"If after the abdomen has been run over or the person has fallen or been struck on the abdomen or loin, faintness, coldness, vomiting and abdominal pains follow; if on the day of, or the day after, the accident, and whether the catheter be required or not, the urine is found to contain a quantity of blood and blood clot, and if after several days blood clots continue to pass, or pus as well as blood is voided in the urine; if, moreover, there is pain along the course of the ureter, with retraction of the testis, or a rigid and prominent state of the muscles on one side of the abdomen, with frequent desire to micturate; or finally, if a tumor, dull on percussion, forms in the loin, or lumbar or hypochondriac regions of the abdomen, accompanied or not with signs of local peritonitis—there are safe grounds for believing that either the kidney or its pelvis has been ruptured."

The prognosis, at best, is doubtful, and the mortality great. Dr. Otis gives statistics of 27 cases, of which 16 died; a mortality of 59 per cent. Maas gives another table of 71 cases, of which 34 died; a mortality of 48 per cent. Both added together give 98 cases with 50 deaths; a mortality of 51 per cent., all for subparietal injuries.

In compound injuries, by gun-shot wounds or penetrating instruments, the mortality is still greater. In the "Medical and Surgical History of the War" 78 such cases are mentioned, 52 of which died; a mortality of 67 per cent. In none of these were operations performed.

When we, lastly, consider the treatment, then I believe that very little reliance can be placed in the usual administration of opium, ergot, astringents and cold applications, except in the lightest cases, which would probably recover without treatment. Considering that an exploratory incision of the kidney region under antiseptic precautions is an operation absolutely devoid of danger, and that by no other means are we able to satisfy ourselves of the amount of injury done or prevent dangerous and fatal complications from occurring, I am strongly in favor, with Simon, of employing this measure as a preliminary step in all cases where there are symptoms of ruptured kidney. If we should find the diagnosis wrong or the injury less than we suspected, no harm will have been done. If right, we are in a position to judge about the severity of the lesion, and the means to be used in order to meet the dangers, be this ligation of ruptured arteries,—nephrectomy, if possible, in completely crushed organs, or simply, as in my case, removal of clots of blood, disinfecting of the cavity, and packing with iodoform gauze, leaving the wound open for drainage, and referring the question of nephrectomy to a future time.

That even in such a case nature can accomplish wonders, and that nephrectomy may be superfluous, is well shown in this case.

THE VISUAL FIELD IN EPILEPTICS AND MENTALLY DEFICIENT PATIENTS.

Lombroso (*Rec. d'ophthal.*, August, 1891) draws the following conclusions from his observations: 1. The visual field is remarkably limited in epileptics and idiots. 2. There is a constant irregularity at the periphery of the field, and the line of demarkation appears irregular and sinuous, sometimes forming actual peripheral scotomata of very inconstant relation. 3. The field is more limited on the right side in the lower hemisphere, and on the left side in the upper hemisphere, thus forming a partial hemianopsis to the right below and to the left above. This he calls a partial heteronymous vertical hemianopsia. 4. In some cases there was an extreme limitation of the field due to neuroretinitis. 5. In all, the field for color was limited, its form following constantly that for white, but more or less regularly. 6. The field for blue and that for red cross at different peripherical points. 7. In almost all cases the ophthalmoscopic examination was negative. 8. The visual acuity was entirely independent of peripheral vision.

CASE OF PERITYPHLITIS.

By J. P. TUCKER, M. D.,
OVERTON, TEXAS.

I was called April 17th, 1891, to see Mr. D. J's little son, aged fourteen years. I examined the patient and found considerable tenderness in the right iliac fossa; patient complained of an excruciating pain all the time; temperature 102°, pulse 130, respiration 38. I gave 5 grains of calomel and ½ grain of pulv. opium, 5 grains of antifebrin to reduce temperature, then 3 grains of sulphate of quinine, every four hours, ⅛ gr. sulphate of morphine as required to relieve pain, turpentine stupes over bowels, but my little patient continued to suffer pain. On the morning of April 26, I discovered an abscess about two inches below and 1½ inches to the right of the umbilicus. I explored the abscess and found pus deep-seated. I made a free incision through the abdominal wall into the sac; at the time I operated I think it discharged 20 ounces of thin milky-looking pus, the odor of fæcal matter. The father of the little patient says he is satisfied it discharged a gallon of pus in all it discharged in four weeks. I put in a drainage tube after operation; the treatment was iron, quinine and good rich food in the form of fluids, with morphine as required to relieve pain; bowels kept in soluble condition. The little patient says about three weeks before the abscess developed, that he jumped off a stump and the end of a hoe handle struck him in the side where the abscess formed; about four weeks after it ceased to discharge, the little unfortunate patient went out horseback riding with his brother and they ran a horse race, the horse stopped suddenly and and threw him on the horn of the saddle and another abscess developed in the same place, and it opened spontaneously. This time it discharged two weeks.

Ætiology.—Perityphlitis is usually the result of extension of inflammation from the vermiform appendix or its rupture from ulceration. It may be due to the extension of tubercular, typhoid, or dysenteric ulcers in the cæcum and to the lodgment of foreign bodies in the vermiform appendix. Caries of the spine or of the pelvis have induced it. Traumatism is an occasional cause: it is rarely of spontaneous origin. Of the symptoms in a few instances of perityphlitis, especially those supervening on typhlitis, there will be a history of colliсky pains which radiate outward from the cæcal region with more or less irregularity in the action of the bowels. There is pain in the thigh accompanied by numbness and a sense of formication in the right lower extremity, due to pressure of the tumor upon the nerves. This pain is deep-seated and much increased by flexing the thigh upon the abdomen. Rigors and febrile movements are usually slight. In extensive perityphlitis, the patient cannot raise the right thigh, either on account of the pain or from interference with function of the nerves from the pressure. When the abscess is of large size there may be œdema of the limb, the parts in the vicinity of the cæcum are very tender to pressure, and the patient usually lies on the right side with his thigh semi-flexed so as to relax the psoas and iliac muscles. As the abscess increases in size there is in adults constipation and a tendency to vomit; in children the bowels are commonly loose and pain in the stomach will have been an early and prominent symptom. When a perityphlitis arises as a typhlitis is disappearing, a painful tumor more deeply seated than in typhlitis will make its appearance. The little patient referred to finally made a good recovery.

HYDROGEN PEROXIDE AS A DISINFECTANT OF WATER.

Dr. Altehoefer, after giving references to the literature of the subject, gives his researches on the disinfectant power of H_2O_2 dissolved in water. He finds that the addition of 1 per 1,000 to ordinary drinking water, to drinking water containing sewage, or to water containing typhoid bacillus or cholera bacillus is quite sufficient to destroy the various saprophytic and pathogenic organisms contained under these conditions, if it is obtained perfectly fresh and kept in good condition, and if it is allowed to act for a period of twenty-four hours. It is specially valuable for the disinfection of drinking water because it does not affect the taste, does not alter the color, and in the proportion mentioned is perfectly innocuous. As regards cost, he calculates that sufficient drinking water—say 10 litres—for a family may be sterilised by means of H_2O_2 at a cost of about 5 cents per diem.

Selected Formulæ.

ECZEMA.

Dr. Hardy considers internal treatment of the greatest importance in eczema after the acute stage is passed, and arsenic as the most important remedy. He gives the arseniate of soda in one-tenth of a grain dose, once daily. Dr. Brocq thinks internal treatment of importance in eczema, and prescribes in strumous cases cod-liver oil or a syrup containing iodine; in rheumatics, alkaline waters; in gouty subjects, colchicum, digitalis, etc. For eczema capitis the following local application is advised:

℞ Napthol.
Camphor.
Resorcin.....āā gr. x.
Sulphur.....ʒ j.
Vaseline.....ʒ j.

DIARRHŒA MIXTURE.

℞ Tinct. opii.
Tinct. catechu comp.
Spir. camphoræ.....āā part. aqu.
Mix. Dose.—30 drops in water after each evacuation. If diarrhœa persists or increases, double the dose.

—*Velpeau.*

PILLS FOR DYSMENORRHŒA.

The following (*La Cronaca Medica*, September, 1891,) is recommended:

℞ Camphor, in pulvere.....cgrams. 5.
Pulv. Doveri.....gram. 1.
Extr. hyoscyam.....cgrams. 5.
Sufficient for ten pills. One pill every hour until the pains disappear.

INUNCTIONS OF IODOFORM IN PULMONARY TUBERCULOSIS.

The following are two forms in which Flick employs iodoform by inunction in the treatment of pulmonary tuberculosis:

℞ Iodoform.....ʒ j.
Ol. rosæ.....gt. j.
Ol. anisæ.....f ʒ j.
Ol. murrhuæ.....f ʒ ij.—M.

℞ Iodoform.....ʒ j.
Ol. rosæ.....gt. j.
Ol. anisæ.....f ʒ j.
Ol. olivæ.....f ʒ iij.—M.

—*News.*

A SALVE FOR THE TREATMENT OF EXFOLIATIVE MARGINATE GLOSSITIS.

Dr. Besnier (*Le Bulletin Médical*, No. 9, 1892) recommends the following salve:

℞ Hydrochlorate of cocaine.....cgrams. 5.
Balsam of Peru.....āā gram. 1.
Boric acid.
Vaseline.....grams. 30.
Apply locally twice a day.

INHALATIONS OF THE ESSENCE OF TURPENTINE IN FIBRINOUS PNEUMONIA.

Dr. G. Slepianin (*La Semaine Médicale*, No. 56, 1891) has found inhalations of turpentine of great service in fibrinous pneumonia. He uses the following mixture:

℞ Esseent. terebinthin, Glycerin pure..āā 30 grams.
Aq. destillat.....180 grams.
Sufficient for five or six inhalations.

This may be inhaled five or six times a day by means of a spray. Each inhalation should last five or six minutes, the patient lying quietly upon his side and breathing tranquilly: now and then let him take five or six long breaths. The writer found that the cases treated by this method ran a very mild course, while the patients were in a state of comparative ease.

DIARRHŒA MIXTURE.

℞ Tinct. opii.
Tinc. rhei.....āā fl ʒ ss.
Tinct. catechu co.....fl ʒ j.
Ol. sassafras.....*m* xx.
Tinct. lavand. co.....q. s. ad. fl ʒiv.
Mix. Dose.—A fluidrachm after each movement.

—*Loomis.*

FOTHERGILL'S TONIC (CHARITY HOSPITAL.)

℞ Sulph. quinine.....16 grains.
Sulph. strychnine.....½ grain.
Citrate potass.....30 grains.
Tinct. chlor. iron.....300 minims.
Syrup.....1 fluid ounce.
Water to make.....āā 4 fluid ounces.—M.
Dose, a teaspoonful.

LINIMENT FOR NEURALGIA.

Some eighteen years ago Mr. Thomas Edison, the wizard of Menlo Park, suffered terribly from neuralgia, and applied to his face, externally, the following neuralgia lotion. I made it for him several times, and, although I have not seen it used since.

℞ Chloroform.....2 fluid ouoces.
Sulphuric ether.....1 fluid ounce.
Alcohol.....1½ fluid ounces.
Chloral hydrate.....2 ounces.
Camphor.....1 ounce.
Morphine sulph.....6 grams.
Oil peppermint.....1 fluid dram.

This, however, we do not think the druggist would be justified in supplying on a written request from a person unknown to him and without knowledge as to the method of use intended by the party sending the order.

—*Editor Pharmaceutical Record.*

THE PYLORIC PAIN OF DYSPEPTICS.

Dr. Coutaret (*La Semaine Médicale*, No. 8, 1892) recommends the following mixture as efficacious:—

℞ Saturated chloroform water.....gms. 300.
Syrup of columbo.....gms. 100.
Extract of cannabis indica.....cgms. 10.
A teaspoonful every half hour until the pain ceases.

CYSTITIS.

Dr. A. W. Marsh (*Therap. Gazette*) recommends oxalic acid. His formula is as follows:

℞ Acid. Oxal.....gr. xvj.
Syr. arrant. cort.....ʒ i.
Aq.....q. s. ad. ʒ iv.
M. Teaspoonful every four hours.

BALDNESS.

℞ Tinct. jaborandi.....ʒ iv.
Glycerin.....ʒ ij.
Lanolin.....ʒ iij.
Sig.: Rub a little into the scalp every evening.

—*Pharm. Era.*

TREATMENT OF PSORIASIS OF THE HEAD.

The following treatment is applicable only in cases of limited psoriasis and in the absence of all irritation of the scalp. It is recommended by Besnier and is as follows:—

1. The following ointment should be applied daily to the affected part:

℞ Sapo. viridis.
Vaselini.....āā 100 parts.
Ichthyol..... 10 parts.
Acid. salicylic.
Acid. pyrogallic.....āā 5 parts.
M.

This should only be applied to small lesions on account of the high proportion of active ingredients.

2. Cease making applications as soon as any signs of irritation put in an appearance.

FORMULA FOR THE WINE OF COCA.

The following is recommended (*Pharmaceutische Post*, No. 27, 1891) as an excellent formula for the preparation of the wine of coca:

℞ Coca leaves.....ʒ iij.
Cognac.....ʒ jss.
Sherry wine.....Ojss.
Hungarian wine.....ʒ vj.

Macerate for several days and add seven grains of citric acid. Allow this mixture to stand for several days and then filter.

SYSTEMIC INFECTION FROM GONORRHŒA.

At the late meeting of the Southern Surgical and Gynæcological Association, Dr. Bedford Brown, of Alexandria, Va., read a paper on this subject. He cited five interesting cases of systemic infection from gonorrhœa. He believes that there are two channels for the absorption and transmission of the gonorrhœal microbe into the general system. One is by continuity of surface over the mucous membrane of the genito urinary tract from the urethra to the kidneys. The other channel is through the medium of the great lymphatic system, from the lymphatics of the urethra to the inguinal glands, thence through the lymphatics of the system into the general circulation. He believes also that this microbe, so transmitted, is lodged at different points in the organism. The gonorrhœal microbe transmitted by continuity of surface over the genito-urinary tract, invariably induces specific suppurative inflammation. On the contrary, when transmitted through the lymphatics, the inflammation is not of a suppurative character, but assumes peculiar types; then the contact of the infectious microbe with the mucous surfaces produces suppurative prostatitis, cystitis, ureteritis, pyelitis, aud then pyonephrosis. The absorption of the same through the lymphatic channels first sets up lymphangitis of the lymphatics of the urethra, then lymphadenitis of Cowper's glands, then of the inguinal glands, and inflammation of the connecting lymphatics. By further absorption it may induce septic phlebitis on the thigh, and finally synovitis, endocarditis, and internal destructive ophthalmitis. He also believes that, in certain cases, genuine septicæmia may be developed in the course of these complications. He thinks there is marked relative difference in the susceptibility of different constitutions to the systemic poisoning of gonorrhœal infection, as in other diseases. That the absorption and infection of the system from this cause is only in exceptional cases. The writer lays stress on gonorrhœal ureteritis following cystitis, as a part of the action of the gonorrhœal infection in its travels over the mucous surface of the genito-urinary organs towards its fatal destination in this direction, the kidneys. This complication is accompanied with pain, at times sharp and paroxysmal, usually dull and aching in character. These sharp paroxysms of pain extend upward to the kidney, and not downward toward the bladder, as in nephritic colic. Then again, there is soreness in the entire line of the ureter, increased on pressure, so that the course of the canal may be marked out clearly. Ureteritis is always established before nephritis begins in gonorrhœal infection.

The cases cited by Dr. Brown indicate that a state of pyemia or septicæmia may be developed by systemic infection from gonorrhœa in certain cases.

THE

MEDICAL and SURGICAL REPORTER.

ISSUED EVERY SATURDAY.

DIRECT COMMUNICATIONS TO
P. O. Box 843, Philadelphia, Pa.

EDWARD T. REICHERT, M. D., Editor.
(Professor of Physiology, University of Penna.)

BUSINESS OFFICES:
29 to 35 North Tenth Street, Cor. Filbert.

EDITORIAL OFFICE:
Southeast Cor. 36th and Woodland Ave.

TERMS: Five dollars a year, strictly in advance, unless otherwise specifically agreed upon. Sent three months on trial for $1.00

REMITTANCES should be made payable to THE MEDICAL AND SURGICAL REPORTER, and when in sums of five dollars or less should be made by Postal Note, Money Order or Registered Letter.

—o—

Pocket Record and Visiting List.

Two sizes. Prices to Subscribers of THE REPORTER.
For 30 patients a week (with or without dates)....$1.00
For 60 patients a week (without dates)..... 1.25
Prices to non-subscribers, $1.25 and $1.50 respectively.

The Model Ledger.

Physicians who keep their own books will find this of great value. It enables the Physician to make out his bills with great ease and gives at a glance the amount earned, received and due in any quarter. Sample pages sent on application. Price, $5.00.

Binders.

Patent binders for the Reporter, each lettered on the back in gilt **"The Medical and Surgical Reporter"** and made to hold the issues of six months. Price, 50 cents.

Vaccine Matter.

Bovine Crusts.....$1.50 each.
Bovine Points or Quills..... 1.00 a doz.
Humanized Crusts..... 1.00 small.
Humanized Crusts..... 2.00 large.
Guaranteed in every respect.

Books.

Books will be supplied to our subscribers, transportation prepaid, at the regular prices.

Leading Articles.

PENTAL AS AN ANÆSTHETIC IN SURGERY.

At the last meeting of the Society of German Naturalists and Scientists, held at Halle, Dr. Holländer demonstrated the value of pental as a dental anæsthetic. It was suggested that these short periods of anæsthesia might also be made use of in surgical procedures which occupy but a few moments.

The paper of Holländer stimulated Dr. V. von Rogner to test in the Royal Hospital of Wieden, in Vienna, the merits of pental in surgical practice. He used it principally in the public ambulance service, or in other words, in emergency cases, and his article has been ably discussed in the *Medicinische Neuigkeiten.* Before giving the results and comments on Rogner's work, a few words relative to the substance itself will be apropos.

It was in 1887 that von Mering resurrected the anæsthetic amylen. This substance, on account of its quintuple contents of carbon in its molecule, has been renamed Pental (C_5 H_{10}). Pental is an extremely volatile fluid, having an odor somewhat similar to that of benzine. It is perfectly clear, limpid, of a cool, sweetish but ultimately of an astringent taste. Locally applied it is an irritant. It is inflammable, and burns with a yellow and very sooty flame. It is insoluble in water, but easily miscible with chloroform, ether and alcohol. It does not undergo any change if exposed to the light. Its specific gravity varies between 0.6788 and 0.6383 at a temperature of 36.8° C., and its boiling point varies between 35° and 38° C.

The preparation of the patient for pental anæsthesis is the same as for chloroform. For the administration of the anæsthetic, Rogner uses an Esmarch's mask, the inner side of which is additionally furnished with a layer of cotton about the thickness of the finger. For each admin-

istration of the drug fresh cotton should be used in the mask. Pental, at present, can only be purchased in bottles containing 15 grammes, which constitute a single dose. The bottle should not be opened before immediate use and then the entire contents should be poured upon the mask. After the mask has been put over the patient's nose and mouth, the anæsthetizer's hand holding the mask, the mask and face of the patient should be covered with a compress to hinder the too rapid evaporation of the pental. The degree of anæsthesia can be determined as in the case of chloroform. The operation can be begun within 60 or 70 seconds after the application of the drug. Certain points regarding the successful administration of pental require some experience and dexterity to be obtained. In all cases, it is stated, anæsthesia supervened without any period of excitement whatever. In a majority of cases the conjunctival reflex is retained, but its presence, we are told, need not indicate that there is not sufficient anæsthesia. All unpleasant symptoms are absent and the anæsthesia occurs gradually and quietly. The pulse is apt to be rapid at first, but becomes regular and slow during the anæsthesia. There are, it is stated, no deleterious effects on the heart or respiration, nor were vomiting, headache or other untoward effects noticed. The return of consciousness usually begins in about four minutes, and then is rapid, although quiet. Even at this stage there is a considerable lack of sensibility, which will be found valuable during the application of dressings, bandages, etc. In all cases in seven minutes after the application of the mask the return to complete consciousness and well-being was complete.

Pental anæsthesia, while accompanied by a loss of sensibility to pain, is not always attended by entire absence of consciousness, especially in the first stages, although all will-power is entirely gone. It is to be regretted that we have no data from the physiological laboratory to show just how this new substance acts upon the organism, and it is to be hoped that such will be obtained before much more of this injudicious experimentation on the human subject is pursued. The composition of pental is not such as would lead us to believe that it is one of the eminently dangerous anæsthetics, but these substances as a class demand the most thorough study of their physiological actions and the most solicitous care in their administration. One death has already been reported from its use.

ORAL DEFÆCATION.

Under the heading of "Collectanea Medica" our esteemed German contemporary, the *Deutsche Medizinal Zeitung*, occasionally interests its readers with a number of medical oddities, which frequently are of extraordinary interest. The issue before us tells us of a defæcation by the mouth, which was recently reported to the Paris Hospital Medical Society by D. Desnos.

The patient was an epileptic, who shortly after his admission to one of the Paris hospitals had an epileptic convulsion during which it was noticed that the bed linen was soiled by an ill-smelling fluid which in odor and color was like fæces. Upon being questioned the patient acknowledged that for the past two years he had been defæcating per os. He was watched and about six o'clock the same evening, an hour after his supper, the patient was seen to evacuate fæcal masses through the mouth. In time it was noticed that this was his regular habit.

The abnormal mode of defæcation was accomplished in two different ways. At times the patient when feeling need would ask for a vessel, at once quietly and with only a slight vomiting effort evacuate the fæcal masses. At other times the evacuations would be accompanied by a slight convulsion, during which the patient

would press his hand to his back in the region of the œsophagus, stating that he experienced a severe pain at this point.

The fæcal masses evacuated would completely fill a spit-cup. They were formed, varying slightly in consistence on different days, and to all appearances had come from the large intestine after having undergone the digestive process of the small intestines. The odor was that of normal fæces, and not the fearful fetor of fæcal vomiting occuring in cases of strangulation of the bowel. Upon examination they were found not to contain a vestige of nourishment, although evacuated one hour after the patient's meal time.

A few hours after defæcation the patient's abdomen would become tense, hard and somewhat enlarged, and he would point out a region of dullness in the lower portion of the abdomen which disappeared after the oral defæcation. The patient dates the cause of these extraordinary evacuations two years back, at which time he fell from a wall, striking upon a twig, which inflicted a perforated wound at the upper and inner part of the right iliac fossa. For a long time afterwards he experienced severe pain at this point. The only feasible explanation for the phenomenon seems to be that this wound established a communication between the large intestine and the upper portion of the small intestine.

Instances of oral defæcation have occasionally been reported as occurring in hysterical cases, but these may be explained by a spasmodic contraction of the large intestine, and only occurs occasionally and not habitually as in the case reported. It is doubtful if there is another case like this in medical literature.

A CORRECTION.

The Communication on Cephalhæmatoma With Report of Case in the issue of May 7th is by Dr. O. D. Walker, not by O. W. Wilson. The error occurred in making the type-written copy of the paper.

Book Reviews.

SURGICAL DISEASES OF THE OVARIES AND FALLOPIAN TUBES, INCLUDING TUBAL PREGNANCY. By J. Bland Sutton, F. R C. S.. Assist. Surgeon to the Middlesex Hospital, etc. 8vo., pp. 500, with 119 engravings and 5 colored plates. Philadelphia: Lea Bros. & Co , 1892.

This monograph will prove a welcome addition to the literature of diseases of women. The author's extensive studies of specimens of diseased ovaries and Fallopian tubes, together with his investigations in comparative anatomy and pathology make him specially well qualified to write a work of this kind. The present volume considers symptomatology and treatment as well as the pathology, but without doubt it will be prized chiefly as a contribution to pathology.

Part I. comprises 222 pages, and treats of diseases of the ovaries. Very little that is new is presented. The author elaborates a new theory concerning what have been called tubo-ovarian cysts. He differentiates a class which he styles ovarian hydrocele. The claim is made that it is only ovarian hydroceles which intermit, that is, which discharge at times their contents in the uterus—the *hydrops tubæ profluens* of the older authors. This theory being novel will require careful investigation.

Part II. containes 84 pages devoted to diseases of the Fallopian tubes. The author gives a most excellent exposition of the subject. It will be a pleasure to workers in this field to find the pathological facts involved presented to the profession in so temperate and convincing a manner. Gynæcologists have had hard work to convince the profession of the facts concerning diseases of the tubes, but when pathologists are convinced, as in the case of the author, the fruition of their labors is at hand.

Part III treats of tubal pregnancy, and embraces 121 pages. The author is in close agreement with Tait, both in pathology and treatment. Hæmatocele is considered as being due to ruptured ectopic gestation almost without exception. The treatment advised is abdominal section.

Part IV treats of the methods of performing operations for ovarian and tubal diseases. This section could have been omitted with advantage, as it is too con-

cise to be of special value, and adds nothing to the book.

The illustrations are unusually good, many of them being new, and the letter-press is that characteristic of the Leas.

We can recommend this book to every one interested in the pathology of the diseases of women, and believe that it really fills a "long felt want."

TRANSACTIONS OF THE AMERICAN ORTHOPEDIC ASSOCIATION. Fifth session, held at Washington, D. .C. Sept. 22, 23, 24, and 25, 1891. Volume IV. Philadelphia: Published by the Association.

This volume is made up of over 400 pages, embodying lists of the officers, presidents; members, and corresponding and honorary members; minutes of the Third Annual Meeting; the Constitution and By-Laws; and 54 papers on various topics in this specialty. There are also many illustrations and discussions.

The work is highly creditable to the Association, and we regret that want of space renders it impossible to review the many valuable contributions which it contains,

---

TRANSACTIONS OF THE NEW YORK STATE MEDICAL ASSOCIATION FOR THE YEAR 1891. Volume VIII. Edited for the Association by E. D. Ferguson, M. D. New York City: Published by the Association, 64 Madison Avenue.

The Association is to be congratulated upon the amount and character of the work contained in the nearly 700 pages which constitute this last volume of their Transactions.

WARNER'S THERAPEUTIC REFERENCE BOOK. Philadelphia: William R. Warner & Co. 1892.

This little book, which has reached its fourth year of publication, is of a convenient pocket size and contains much matter of value to the practising physician. We find articles such as, aid in memorizing doses, treatment of asphyxia, time of incubation of eruptive fevers, digestibility of foods, pharmaceutical formulæ, medical formulary, periods of gestation, hypodermic medication, incompatibles, parvules, pills, poisons and antidotes, posogoloical table, prescription writing, and weights and measures.

Periscope.

THERAPEUTICS.

THE TREATMENT OF SYPHILITIC SUBJECTS WHO ARE PREDISPOSED TO DISEASES OF THE NERVOUS SYSTEM.

In the *Gazette hebdomadaire de Médecine et Chirurgie*, 1891, No. 51, p. 606, appear the essential facts of a paper by Dr. Alfred Fournier, which was presented before the French Society of Dermatology and Syphilography. Taking up the question of the possibility of mercury being the cause of tabes in syphilitics, he disposes of this question by citing indisputable facts which show the impossibility that this can be the case, believing that those are predisposed to syphilis of the nervous system who suffer from nervous exhaustion (intellectual, moral or physical), and who are of a nervous heredity. He suggests the bromides to subdue nervous excitability, and hydro-therapy as a preventive. In the actual treatment by mercury and the iodides, in cerebral syphilis, some brilliant results; in medullary syphilis, failures in greater number than successes; in tabes, in early stage, complete cure—later, eventual possibility of cure or holding the disease in check; if ataxia is confirmed, absolute powerlessness; finally, in general paralysis, in his experience, failure. He believes that greater success will be obtained in the prevention than in the cure of nervous diseases of syphilitic origin.

SULPHATE OF CINCHONIDINE IN THE TREATMENT OF VARIOUS TYPES OF MALARIAL POISONING.

In the *Bulletin Général de Thérapeutique* for December 30, 1981, there appears a paper on the above subject, the author being Gemayel.

After detailing a number of cases in which he employed this alkaloid of cinchona in preference to quinine, he reaches the conclusion that cinchonidine is equal in rapidity of action and efficiency to quinine, if not superior to it, producing in all the cases to which he has given it brilliant results. He has found it particularly useful and advantageous in those fevers which have resisted quinine. Neither does he believe it to have the contra-

indications which often exist against the use of the older alkaloids. He orders one and a half drachms of sulphate of cinchonidine, divided into four powders, and that one of these shall be taken the first, second, fourth, and the sixth day. On the third and fifth day the treatment is suspended. In the course of the following week the same treatment is repeated. By this means he endeavors to prevent a return of the disease, which, of course, is very important. The time which is best for the administration of the drug is just before going to bed. In this way the inconvenience of buzzing in the ears or other disagreeable symptoms, such as nausea, are escaped. However, if the attacks are severe, it is well to give the cinchonidine at other times. It is hardly necessary to add that arsenic, iron and hydrotherapy are useful adjuncts to cinchonidine in the treatment of chronic malaria.

THIOL IN SKIN DISEASES

Buzzi's (*Charité Annalen*, 1891, Band xv.) experiments in Professor Schweninger's clinic in Berlin lead him to regard thiol as superior to ichthyol. It is valuable in many diseases of the skin, and possesses the following advantages over ichthyol: it is clean and never irritates, whereas ichthyol is impure and often irritates; ichthyol smells disagreeably, thiol does not; ichthyol spots the linen, thiol does not. It moreover has the advantage of costing only one-half as much as ichthyol.

INJECTIONS OF INFUSION OF NERVOUS TISSUE IN NEURASTHENIA.

Const. Paul (*Bull. de l' Acad. de Mèd.*, No. 7, February 16th, 1892) describes the effects of injections of a glycerine extract of the grey matter of sheep's brain. His experiments were continued for more than a year. The material employed was made by macerating the grey matter of sheep's brain for twenty-four hours in five times its weight of glycerine, afterwards diluting with an equal quantity of water and filtering through porcelain under great pressure. With this material, injections (from 2 to 5 c. c.) are made into the loose cellular tissue of the dorso-lumbar region. They were perfectly well borne, and gave rise to practically no inconvenience. Detailed reports of eleven cases are given. They may be classified as follows: 3 of chloro-anæmia with neurasthenia, 3 of simple neurasthenia, 1 of abnormally slow pulse, 4 of ataxy or tabes. M. Paul's conclusions are as follows: The patients feel first increased strength and improved spirits; the amyosthenia and muscular impotence diminish rapidly, exercise being taken without fatigue; pains in the back and spinal hyperæsthesia disappear after a few injections; even in ataxy the "lightning pains" cease; neurasthenic headache and insomnia also vanish, and there is increased cerebral activity. The patients feel their appetite improved, gain in weight, and lose any symptoms of dyspepsia which may have been present. In the case of chlorosis the use of iron was with advantage combined with the injections. The author thinks that in the new treatment we have a true "neurosthenic" tonic—to borrow an expression of Trousseau. In neurasthenia, although the patient may eat well, he is incapable of converting his food into force which can be employed as desired. The injection of nervous tissue allows of this utilization of food and of its being stored up in the form of potential force. In the cases quoted nervous force is developed first, allowing greater mental activity. Increase in weight and enrichment of the blood follow later but none the less surely. The author has recently commenced observations on a saline extract of grey matter in place of the glycerine extract above mentioned, but the results are not ripe for publication.—*Brit. Med. Jour.*

TRIONAL AND TERTONAL IN MENTAL DISEASES.

Kast and Baumann, in their work upon the relationship between the chemical constitution and physiological action of certain sulphones, concluded that the hypnotic energy of these bodies would be increased in proportion to the number of contained ethyl groups; thus trional (diethylsulphonmethylethylmethane) would be more active than sulphonal (diethylsulphondimethylmethane), and tetronal would be more powerful than either of the preceding. Barth and Rumpel tested the point, and failed to discover that the new compounds were superior to sulphonal. Schultze (*Therap. Monats.*, October, 1891)

has investigated the action of the former bodies in various forms of insanity. In maniacal conditions tetronal was always less efficient than trional, and the latter failed to cause sleep in many cases, even when the dose amounted 3 or 4 g. Restlessness was diminished by this dose. Better results were obtained by administering 2 g. night and morning. Excitement and destructive propensities were much lessened by this method; 1 g. of trional each morning was found to act well in subduing the excitement of very demented or imbecile patients. In several paranoiacs who were tortured throughout the night by their hullucinations, 1 to 3 g. of trional proved an efficient soporific. The hallucinations of one of these patients were aggravated by 2 g. of tetronal; emesis, cephalagia, and loss of appetite were also induced. In all these cases tetronal was inferior to trional. Schultze concludes that trional is a more reliable sleep producer than sulphonal or tetronal, and very rarely gives rise to unpleasant after-effects. He estimates that in uncomplicated insomnia trional will succeed in 75 per cent. of cases and tetronal in 60 per cent.—*Brit. Med. Jour.*

EXTRACT OF MALE FERN.

The physiological properties of the ethereal extract of male fern have recently been investigated by MM. Prevost and Binet, of the University of Geneva, who find that grave results seldom follow even large doses introduced into the stomach of man and warm-blooded animals, in consequence of the slowness with which the drug is absorbed, but that hypodermic, and, still more, intra-peritoneal injections, kill animals by paralyzing the heart and respiration. The most prominent symptoms are paralysis and early rigidity of the voluntary and involuntary muscles, preceded by vomiting, dyspnœa, shivering, and cold. The chief cause of death is paralysis of the heart, which is found immediately afterwards firmly contracted in systole, and incapable of responding to stimuli. The vagus does not lose its inhibitory power until just before death. A great loss of vermiform movements is observed in the intestine in the case of the rabbit, the rat, the guinea-pig, and the pigeon. When the drug is applied to the conjunctiva the sensibility of the cornea is diminished, and subsequently arrested without auy change being observed in the pupil. In cold-blooded animals the central nervous system is quickly paralyzed. There would seem to be a special action on the protoplasm which causes the muscular and other changes observed.

THE TREATMENT OF ACUTE CROUPOUS PNEUMONIA.

Dr. Marcel Boudouin, under the direction of *La Semaine Médicale*, has ascertained the various methods of treatment of this disease which are in common use in the hospitals of Paris (*Ibid.*, pp. 222, 223). M. Cornil, seeming to regret that venesection is obsolete, at the outset directs wet cupping, blistering, alcoholic stimulation, and Dover's powder to favor perspiration. M. Dujardin-Beaumetz uses caffeine in preference to alcohol, recommending also kola; for nervous manifestations, chloral, or, in alcoholic subjects, paraldehyde, blistering only when the signs are persistent. M. Peters treats his pneumonias according to their condition: wet cups in early cases, tartrate of ammonium frequently, but according as they are robust, debilitated (with alcohol), or bilious. M. Bucquoy believes in bleeding and tartar emetic, sulphate of quinine, and blisters. M. Rigal has practised intra-pulmonary injections of antiseptic substances (sublimate, etc.), also administers sulphate of quinine and uses cold baths. M. Moizard, in adynamic forms, injects ether or caffeine, and even sparteine. M. Oulmont uses these remedies with small doses of digitalis. M. Huchard uses ether, camphor, or digitalis, and avoids all depressing remedies, as antimony.

THE SULPHATE OF DUBOISIA IN MENTAL DISEASES.

Preiniger has used the sulphate of duboisia as a culmative and hypnotic in mental affections with good results. The action of this agent much resembles that of hyoscine, while its inconveniences, when given in too strong a dose are the same. When administered to an insane patient, sleep sets in, in from ten to twenty minutes, and lasts from one to eight hours. Sometimes the sleep is of short duration, yet, on awakening there persists a somnolent condition and prostration which more or

less takes its place. If the dose be larger than two and a half to three mgrms., the patients become agitated, the extremities jerk, the pulse becomes accelerated, the respiration increases in frequency, and the temperature rises — even hallucinations may set in. The peculiar idiosyncrasies of patients with regard to occustecination and its intensity of action should be borne in mind. The maximum dose for subcutaneous use, and which should not be increased, is two mgrms.—Administered by the mouth it sometimes does not act.—*Le Bulletin Médical,* No. 88, 1891.

THE TREATMENT OF CYSTITIS.

In an article upon cystitis in the *Atlanta Med. and Sur. Jour.*, March, 1892, Dr. Murphey, of Atlanta, writes:—In the treatment of cystitis, the measure of the first and greatest importance is absolute rest. The rest should be in bed, with hips slightly raised, in order that pressure may be taken off the neck of the bladder. Constitutional treatment consists in regulating the character of the urine, so that it shall be unirritating to the diseased bladder.

To render the urine less irritating give alkaline diuretics, demulcent drinks, etc. Citrate of potash is one of the most valuable alkaline diuretics and is often advantageously combined with buchu, uva ursi, triticum repens.

Opium should be used to allay pain, lessen excitability and relieve spasmodic action. I usually prefer suppositories of opium and belladonna, but if the spasm alone is causing the pain belladonna alone will relieve it, which is preferable. Poultices over the hypogastrium and perineum or hip-baths are useful. The bowels should be kept regular and free in order to secure free action of the portal circulation and prevent straining at stool. Free action of the skin and bowels relieves the taxed kidneys and bladder, giving them less to do. Saline purgatives are better suited for this purpose. Sulphate of magnesia or a glass of a laxative mineral water before breakfast usually acts nicely. Digestion should be watched with care; in fact, I have found cases that could not be relieved until the state of the digestion was improved.

The diet is an important factor that should not be overlooked; irritating articles of food should not be allowed, spirits, alcohol in all forms must not be allowed; coffee and tea should not be allowed. Nothing should be taken that disagrees in the least with digestion.

In a mild case of cystitis, I do not adhere strictly to all of the rules laid down here, but let the patient continue at business if desired, and by proper care and treatment he may be relieved in a short time. For example, the urine is too acid or too alkaline; acts sometimes like a foreign body; it irritates, and the bladder will make efforts to expel it. Deposits of any urinary solids in the viscus are likely to produce an irritable condition. Such cases being of a mild form can readily be relieved if not allowed to stand too long.

In advanced stages of cystitis local treatment can be employed advantageously, by washing out the bladder carefully with medicated injections.

MEDICINE.

ATAXIC PARAMYOTONIA.

Gowers (*Centralbl. f. Nervenheilk. u. Psychiatrie*, February, 1892, p. 41) has reported the case of a man forty-one years old, with a history of syphilis of eleven years' standing, in whom for a year and a half an abnormal tonic condition of the muscles, first in the lower, then in the upper extremities, had existed. The patient was well nourished; the extremities were large and the muscles well developed and hard. This hardness was dependent upon tonic spasm that interfered with voluntary movement, rendering it slow and difficult. There was no special rigidity; extensors and flexors were apparently involved in like degree. The spasm was not diminished by repetition of movement, but was constant and opposed passive as well as active movement. There was at the same time some muscular weakness. In the upper extremities coördination was impaired. The muscle-sense was defective, especially as to posture, size and weight. The electric irritability of the muscles was preserved. It was not possible to elicit the knee-jerk or other evidence of myotatic irritability, although the failure may have been dependent upon spasm. Tactile sensibility was lost upon

the palms of the hands, diminished on the dorsal aspect of the terminal phalanges, and on the soles of the feet. There was often a sensation as of standing upon a circular base. The sense of pain was retarded upon the palms of the hands. The temperature-sense was almost normal. There was almost complete impotence. The action of the sphincters were preserved. There was an absence of pain and of cerebral derangement. Gowers considers the affection as analogous to Thomsen's disease and dependent upon functional derangement of the gray matter of the cord, as a result of which there is increased activity of the motor nerve-cells that control normal muscular tone.—*Amer. Jour. Med. Sci.*

THOMSEN'S DISEASE.

Dr. C. L. Dana showed at a recent meeting of the New York Neurological Society a man thirty-three years of age presenting the typical phenomena of this disease. The family and personal history of the patient were good. At the age of seventeen weakness of the muscles was first noticed, and three years later the patient found that after clenching the fists he was unable to open them. The affection had gradually become greater and more extensive, until the only muscles not involved were those of the thighs and upper arms. The myotonia was most marked in the forearm and leg muscles, the tendon reflexes were only obtained with difficulty, and there was no sensory disturbance. The reaction to galvanism was slightly increased, that to faradaism normal. Dr. Dana expressed the opinion that the phenomena were confined to the muscles, and that the disease was a purely muscular one.—*Lancet.*

HEREDITARY TREMOR.

Debove, *Gaz. des Hop.* 99. 1891. (Abstract by Möbius, in *Schmidt's Jahrb.*) Charcot has lately described a hereditary form of tremor which had been previously mentioned by Fernet. Debove reports the histories of two families thus affected, in one of which it had gone through five generations. His conclusions are as follows: There is a hereditary tremor which may be transmitted in either sex, beginning in childhood and increasing in advancing years. Its rhythm is about eight or nine to the second and it disappears when the muscles are completely at rest. The outstretched hand trembles, but voluntary movements do not increase it. It may involve the limbs, the eye-lids, the lips, or the tongue, but the hand is the most affected. The fingers do not have an independent tremor. The author adds that further observations may confirm or modify his views. Prof. Möbius calls attention, in his notice of Debove's article, to the fact, that in his "Diagnostik" he had described a tremor essentialis which agreed in its symptoms and in its hereditary character with the above, but with this difference, that in his cases the tremor first appeared in mature individuals, or in those of advanced age.

ÆTIOLOGY OF ITCHING.

According to Dr. E. B. Bronson (*Medical Record*, Oct. 24, 1891), the primary cause of itching pertains to hidden molecular or dynamic changes within the sensory nervous apparatus, changes whose immediate effect has been presumed to be of the nature of a dysæsthesia, and whose only ostensible sign is the perturbed sensation. The accessory pathological causes he tabulates as follows: Predisposing causes.—A: A state of cutaneous hyperæsthesia, or excessive irritability of the cutaneous nerves. It may occur, (a) as the local expression of a general neurotic condition, congenital or acquired, in which case the simplest excitants, as friction of clothing, may evoke the sensation; or, (b) it may be due to local changes in the skin, attended with prolonged irritation of the cutaneous sensory nerves. B: A state of hypopselaphesia, *i. e.*, a state of impaired conduction in the cutaneous nerves of tactile sense. Though usually occurring as a concomitant of hyperæsthesia of the skin, it is possible that it may exist independently of the latter, as in atrophic conditions (more particularly in pruritus senilis), when, like hyperæsthesia, it may become the predisposing cause of itching. Exciting causes.—A: Irritations conveyed to the skin from the interior of the body, either as (a) reflex irritations; or as (b) irritations transmitted from nervous centres. B: Direct or local irritation, (a) from extraneous sources, *i. e.*, from such

irritants as operate upon the surface of the skin; (b) from intra-cutaneous sources, comprising (1) lesions of trophic cutaneous diseases and their products; (2) toxic materials deposited from the blood; (3) effects of local nutritive disturbances, or deranged metabolism in the cutaneous sensory nerves; (4) spastic contraction of the arrectores pilorum muscles, which, though it may not of itself suffice to cause itching, is probably often associated with other causes as a contributory factor.

FIBRO-SARCOMATOSIS.

Dr. Langenbuch recently presented at the Freie Verein der Chir., in Berlin, a patient who had had several months before about eighty fibro-sarcomata scattered over the skin's surface. An energetic treatment with iodides and arsenic had already resulted in a decrease in the tumors, when an erysipelas suddenly developed and spread over the entire surface. The consequence of this was that, within the space of five days all the sarcomata had disappeared and the skin had become normal. After the space of a year a slight recurrence had taken place, and a tumor the size of a plum was to be seen in the region of the neck.

GENERAL ATHETOSIS.

Dr. Hugh Hagan reports a patient, aged four years, who was of normal birth and healthy extraction. Was healthy up to nine months of age. Taken ill on Friday and until the following week had continued convulsive attacks marked by high temperature. Fever lasted five weeks. During convalescence the mother noticed "the child moved constantly in all its joints." Author says the child was brought to him two years after first illness. Patient is in a state of constant motion. Movements are marked by that apparent volition and rhythm so different from the jerky, spasmodic character of the choreic. The eyes, though in a more or less constant state of movement, do not present the rapid vibratory character of a true nystagmus, but are more slowly and irregularly drawn up, down, in or out, as a result of the spasms of the internal ocular muscles. The masseters and temporals close the lower jaw so as to lacerate the tongue, which is alternately protuded and retracted. At times marked opisthotonos. Cannot sit or stand unassisted. Totally ataxic aphasic, but, so far as his education will permit, probably not amnesic. The athetoid movements cease entirely during sleep. When at rest the parts assume their normal physiological positions, no evidence of contracture or contraction being present. He thinks that the condition present is due either to a cerebral tumor, or to meningeal adhesions over the motor cortical region, and sees no reason why this condition could not produce the symptoms as well as those generally found.—*New York Med. Jour.*, Jan. 16, 1891.

HISTOLOGICAL ALTERATIONS OF THE NERVOUS CENTRES PRODUCED BY ELECTRICAL SHOCK.

Magini, of Rome, experimented upon dogs, cats, pigeons, white mice and rabbits, employing the potential electrical apparatus of Winsurth. After examining the brain cord and peripheral nerve carefully he arrived at the following conclusions:

1. That death by electrial shock, where there is no external or appreciable internal lesion, is produced by a profound alteration taking place in the ganglion cells of the cerebro-spinal system.

2. That such ganglion cells show great changes in size, being shrivelled and atrophied, deprived of nucleus and nucleolus, and accept an intense stain.

3. That the electrical shock, oft repeated, favors diapedesis.

"GONORRHŒAL CYSTITIS."

Du Mesnil (*Virchow's Archiv*, vol. cxxvi, 1891, Part III) denies that there is such a thing as specific gonorrhœal cystitis. When gonococci are found in the urine, they have, in all probability, entered with urethral pus, and are not new products developed from the true specific inflammation of the vesical mucous membrane itself. In women pus from the urethra or vagina might easily get into the bladder in this manner. Du Mesnil maintains, on the strength of fresh researches, that gonococci cannot alter the composition of the urine, and that cystitis with ammoniacal urine is not produced by these germs. Indeed, the urine renders the gonococci harmless or kills them entirely.—*Brit. Med. Jour.*

GLYCOSURIA AND LOCOMOTOR ATAXIA.

Guinon and Souques call attention to the fact (*Arch. de Neurologie*, Nov., 1891,) that tabes may have crises in which sugar is found in the urine, and that in the family of ataxics may be found glycosurics. DeWolf points out (*American Lancet*, Vol. VII.) that during the paretic apoplectiform attacks, and after locomotor ataxia gastric crises, glycosuria may occur. Kiernan states (*American Lancet*, March, 1884,) that glycosuria may be present in the urine of paretic dements after both epileptiform and apoplectiform attacks.

LEPROSY.

Looft (*Centralbl f. d. Med. Wiss.*, 1891, p. 764) has found bacilli in anæsthetic spots in four cases of pure anæsthetic leprosy, the cases representing four stages of the malady from two to seven years' duration. The portions of skin examined were excised from the periphery of the spots. In the sections from the old patches the bacilli were very few in number. In no case were bacilli found in the muscles in in which the fibrillæ had undergone fatty degeneration.—*British Med. Jour.*

SURGERY.

OUTSTANDING EARS.

Mr. William Thomas, of Birmingham, describes, in the *British Medical Journal* for October 17, 1891, the following operation by which he has succeeded in making flaring ears lie close to the head. The operation consists in the removal from the inner surface of the pinna of an elliptical piece of skin, dividing the cartilage of the pinna down the center of the exposed cartilaginous surface, and uniting the margins of skin by sutures. The widest part of the skin removed should be from one-half to three-quarters of an inch, but of course this depends on the degree of deformity. It is necessary to divide and turn back the cartilage, not only to remedy the deformity, but also to allow of easy approximation of the skin margins, and care must be taken to avoid division of the outer skin with the cartilage. The after treatment consists in the application of a small cotton-wool pad between the head and the pinna—the latter being fixed by a bandage until healing is complete. Immediate union takes place, and there is hardly any perceptible scar, the skin of the ear having great vitality. A simple method of keeping the outstanding ears back without operation is to fix them by a piece of lint soaked in collodion, and placed between the pinna and the head, the ears being bandaged close to the head until the collodion is firmly set. The adherent splint thus formed will hold the ear in position for two or three weeks, when it may be renewed. It is, however, only a temporary measure. The principles of the operation are applicable to various malformations of the pinna.—*St. Louis Med. and Surg. Journal*, January, 1892.

PENTAL IN SURGICAL PRACTICE.

V. v. Rogner (*Wiener med. Presse*, 1891, No. 51) used pental very successfully in cases where narcosis is required for a short time only. The same conditions for its use obtain as for anæsthesia from chloroform.

He used Esmarch's inhaler, covered on its inner side by a layer of wadding.

Narcosis in sixty or seventy seconds, in all cases, followed its administration, without any stage of excitement and without any injurious effect upon the heart or respiration.

At the expiration of three minutes the patient awakes quickly and quietly, but anæsthesia lasts for several minutes more.

INTRA-CRANIAL SURGERY IN ITALY.

It is cheering to witness the advance of surgery in Italy, which now bids fair to resuscitate the best traditions of Fallopio, Tagliacozzi, and Scarpa. Intra-thoracic and intra-abdominal surgery owe not a little to her recent operators, prominent among whom may be mentioned poor Count Loreta of Bologna, whose tragic end on July 23rd, 1889, as described in *The Lancet* of August 3rd following, is one of the saddest pages in the annals of the profession. His resection of the liver, and, still more, his digital divulsion of the œsophageal and pyloric orifices of the stomach, did not require the commemorative tablets in the Bologna Hospital and University to perpetuate their author's pre-eminence among his contemporaries.

His influence and teaching are still active for good in the direction which would have pleased him most—that of intracranial surgery. In Florence, the week ending March 12th has been signalised by a brilliantly successful operation in this department. Professor Baiardi, of the Spedale della Maternità there, had under his charge in the children's ward a little boy of four years and two months, suffering from "general cortical epilepsy," according to the official bulletin, "and idiocy." Having trepanned the cranium, Proffessor Bairdi (assisted by Drs. Mattucci and Giarré) removed two great tracts of bone in the parietal regions, "in correspondence with the *zona motrix* of the cerebellum." From the first day after the operation the little patient's eye, nearly always wandering, uncertain, and unconscious, "si mostrò sereno ed animato da un lampo di intelligenza" (showed itself serene and enlivened by a flash of intelligence,) the "habitual restlessness was replaced by calm," and "sleep came to restore the feeble limbs of the child, which, a prey to sickness at the threshold of life, had neither consciousness nor instinct, could neither speak, nor walk, nor indicate its bodily requirements in any way; did not even know how to masticate." The recovery, vigilantly watched and assisted, is already so far satisfactory as to warrent every confidence in the lasting success of Professor Baiardi's operation.—*Lancet.*

A NEW OPERATION FOR CONGENITAL PTOSIS.

Gillet de Grandmont (*Rec. d'opthal.*, April, 1891) describes his operation as follows: (1) After having seized the upper lid with a Snellen's forceps, the skin is cut through parallel to the free border of the lid, the incision being three or four millimetres from the border and about two centimetres and a half long. (2) Raise up the two cutaneous flaps and detach and excise the corresponding portion of the orbicular muscle, so as to expose the entire tarsus from the ciliary border to and including Sappey's orbito-palpebral muscle or tendon of the levator palpebræ. (3) Cut through the entire thickness of the tarsus, for an extent of two centimetres, parallel to the free border of the lid, and from two to four millimetres from it. (4) Describe a curvilinear incision, with cavity downward, extending from one end of the first incision of the tarsus to the other. This incision should extend through all the tissues of the lid, including the conjunctiva. (5) The upper or orbito-palpebral flap should then be stitched to the lower or tarsal flap by three sutures without touching the skin.

SURGICAL TREATMENT OF GRANULAR CONJUNCTIVITIS.

For those cases of granular lids which are not benefited by the ordinary antiseptic caustic treatment, the following method is recommended by Darien, (*Archives d'Ophthalmologie*,) and has been successfully carried out for more than a year.

All the cases, numbering 130, were much improved, and the great majority quite cured.

The patient being anæsthetised, the lids are thoroughly everted and the palpebral fissure split, if necessary. Every granulation is incised and then scraped out with a small sharp spoon. The lids are thoroughly scrubbed with a brush of short, hard bristles, and a 1:500 sublimate solution is well rubbed in with absorbent wool.

Iced compresses are applied for the first day. The lids must be everted, any adhesions separated, and the eyes bathed with a strong sublimate lotion every day. In about a fortnight the conjunctiva will be smooth and healed, but the patient must be kept under observation for a month longer to guard against a relapse.

SILKWORM-GUT IN SURGERY.

Bianchi (*Reforma med.*, 1891, May 1) says; Silkworm-gut, *crin de Florence* of the French, is not the bowel of the silkworm, but the worm's silk producing gland with its contents. To render the material aseptic, Bianchi places it in a 5-100 solution of carbolic acid, then boils it for one hour in a 3-100 solution of boric acid, and preserves it in a 1-1000 solution of sublimate. He has used the gut very extensively and claims it to be preferable to silk and catgut, as it does not absorb the secretions, and is suitable for plastic operations as well as for suturing of nerves and bones. A thread eighteen to twenty cms. long can sustain twenty to twenty-three kilograms. Bianchi used the silk-

worm-gut in the following operations among others: In two resections of the knee, two osteo-plastic operations by Pirogoff's method. One Ogston's astragalo-navicular resection, one fracture of the patella, per valgus, and in compound fracture of the bones of the forearm and the humerus, etc.

RADICAL TREATMENT OF NASAL POLYPI.

Casselberry (*N. Y. Med. Jour.*, Nov. 14th, 1891), in order to gain access to myxomatous polypi in the nose, recommends the reduction of hypertrophied turbinated structures by the electro-cautery; the removal of septal excrescencies by the saw, chisel, or drill; and the correction of septal deflections. For removal of polpi he recommends the snare, supplemented by occasional use of the forceps. After removal of the growths, the so-called roots are to be thoroughly cauterised by means of the galvanic cautery. A fine electrode, slightly curved, may be insinuated beneath the middle turbinated body to the region of the hiatus semilunaris, from the edges of which polypi are known to spring very frequently. By these means the majority of cases can be permanently cured. Nevertheless, there are certain cases which Casselberry maintains can only be cured by removal of the antero-inferior and of the middle turbinated body. These are the cases where, owing to narrowness of the superior nasal zone, or enlargement or malformation of the middle turbinated body, there is an impediment to proper access to the diseased parts, and the space is insufficient to insert an electrode to the region of the hiatus semilunaris. He considers properly constructed turbinated bone scissors the easiest and best means of removal in most cases. Where, however, there is not space on each side of the body to permit the passage of the blades sufficiently high up, he uses a wire snare *écraseur* for removal of the part.—*Brit. Med. Jour.*

FISSURA ANI.

In a paper which recently appeared in the *Southern Medical Record*, Dr. Willis F. Westmoreland, says: I wish to speak now with reference to operations for fissure in ano. A great many physicians recommended the use of speculums for stretching the muscle; while other operators advise you to take a knife and nick the muscle before you stretch it. In olden times surgeons introduced their hands into the rectum, closed their fist and then pulled it out, stretching the muscle in that way. In the use of these different methods you cannot tell how far you stretch the muscle. I have never seen patients lose control of the sphincter as a result of this operation where the fingers or thumb had been used as a method of operation. Incontinence of the fæces occurs in those cases where the muscle has been cut, stretched with speculum, or where some of the old methods have been used. My plan is to put the patient under the influence of an anæsthetic. I stretch the sphincter; I feel the contracted parts of it have given way while my patient is under the influence of an anæsthetic; take my finger out, and then if there is not any contraction of the muscle—none at all—I let it alone. If the spincter contracts, it shows that the contracted part is not thoroughly broken up, and I stretch it more while the patient is still under the influence of the anæsthetic.

A CASE OF DEPRESSED FRACTURE ON THE LEFT SIDE OF THE SKULL, WITH SYMPTOMS; TREPHINING; RECOVERY.

Cheyne, (*Lancet*, 1891, ii., 813.) gives the following history: F. V., a boy aged four years, was brought to the hospital on August 23, 1888. Three days previously he fell from a balcony fifteen feet high, on to a stone floor. When picked up he was unconscious and severely bruised about the left side of the head, and there was a lacerated wound above the left eyebrow. He regained consciousness in about seven minutes, complained of severe pain in the head and soon became very sick. The sickness and vomiting continued until the day before admission, and was accompanied by restlessness, fever and pain in the head. On the morning of admission he seemed duller, and there was twitching of the eyes and hands. The boy seemed dull and stupid. The right eye was widely open, and the left upper lid slightly drooping. The right pupil was dilated and reacted imperfectly to light; the left was normal in size and reaction. There were no signs of facial or other paralysis. While he was in the out-pa-

tient room distinct twitching came on in the left side of the body; the face, hand and arm being more affected than the leg. At intervals this spread to the right arm and leg. This condition continued until the operation (two-and-a-half hours later), the twitching at times being very severe, and during the whole of this time the boy was quite unconscious.

On examination there was found a depressed fracture of the frontal bone, just above the outer side of the left orbital process, from which a fissure ran vertically upwards for an inch and a half. Trephining was done and the depressed bone elevated or removed. After the operation the boy slept well and was quite conscious on awakening. There was no recurrence of the twitching, but the left arm and leg were paralyzed as regards motion. This paralysis passed off entirely in a few days, and the boy made a rapid recovery.

OBSTETRICS.

RUPTURE OF THE UTERUS AT THE BEGINNING OF LABOR.

Cercha (Przeglad Lekarski, abstract in *Repertoire Universel d'Obstetrique*, 1892) reports the following case: 4-para at term. Suddenly on March 1st, great pain on right side of abdomen, low down. The pain soon disappeared. On examination the cervical canal was slightly patulous; the head movable above the pelvic entrance, the membranes intact. For three days there was no more pain; on the fourth day, repeated chills, fever, meteorismus, restlessness, collapse. There was œdema of the vulva. The distention of the abdomen was so great that one could distinguish nothing in it. The fœtal heart sounds could not be heard. On internal examination hydrocephalus of the fœtus was discovered. At first an attempt was made to perforate the head, but on account of its free motion this could not be done. [Why not fix with vulsellum?] Podalic version was then tried, but did not succeed. Finally the os was dilated with hydrostatic pressure sufficient to allow full access to the head, when perforation was done, and a one-half litre of fluid ran out. It was impossible to extract without a cranioclast, for the cranial bones were disarticulated, so podalic version was done. In endeavoring to extract the placenta it was found in the abdominal cavity, having escaped through a rent in the right wall of the uterus; there was considerable hæmorrhage. No injection was given. The wound was tamponed with iodoform gauze, after replacing the prolapsed intestines. The woman recovered, but had fever for six weeks. There remained a small vesico-vaginal fistula. The author quotes the similar cases of Hoffman and Simson.—*Univ. Med. Mag.*

LARGE HÆMATOMA AFTER LABOR.

C. Braun (*Centralbl f. Gynäk*, No. 10, 1892) exhibited before the Vienna Obstetrical Society last February a case in which an enormous hæmatoma developed on the third day after labor. The patient was a 3-para, aged 26. She was admitted into hospital twenty-five hours after rupture of the membranes. Then decapitation was necessary, as the presentation was transverse and had been mismanaged. The head was delivered with forceps. The cervix and vagina were plugged on account of laceration of the cervix and vestibule, which could not be controlled by ligature. In three days the hæmatoma developed; it arose in the left broad ligament, and extended upwards nearly as far as the right hypochondrium. The temperature was then normal, the pulse rose to 130, and the respiration to 60. The patient was kept in bed and ice bags were applied to the abdomen. Sixteen days later the hæmatoma and general symptoms appeared unaltered. After that date recovery was rapid, and when the case was exhibited no trace of the disease remained save a small, irregular, resistant mass in the neighborhood of the iliac fossa, quite free from tenderness.—*Brit. Med. Jour.*

TUBAL ABORTION; INTRA-PERITONEAL BLEEDING; LAPAROTOMY; RECOVERY.

Jahreiss reports in the *Münchener medicinische Wochenschrift*, 1892, No. 9, the case of a woman who had borne two children, who complained of profuse irregular bleeding persisting for two months, and occurring about every two weeks. Pain was also present, the patient stating that menstruation had been profuse since the death of her last child, when a midwife

had delivered an inherent placenta. An examination revealed the uterus nearly normal; the right fallopian tube showed dilatation. The left tube was normal. The patient was put at rest, given fluid extract of hydrastis, and an ice-bag placed upon the abdomen. This treatment failed to relieve the pain or check the hæmorrhage, and finally, a slight elevation of temperature, with a rise of pulse to 120 was observed. The symptoms were those of rupture of a tubal sac, although collapse, subnormal temperature, and profound anæmia were absent. Upon opening the abdomen blood was found in the pelvis, and tubal abortion upon the right side was discovered. The patient recovered without complications. The right tube and ovary were removed, and the abdomen cleansed. On examining the tube clotted blood was found in it, but the ovum could not be distinguished. Rupture had occurred, although the orifice of the rupture was partly closed by the clot.—*Amer Jour. Med. Sci.*

HYDATIDIFORM-MOLE PREGNANCY.

Engel (*Centralbl. f. Gynäk.*, 1892, No. 1) has examined five cases of molar pregnancy which were observed in the course of 4,000 labor patients under his observation. These cases occured in a woman aged 22, a 2-para; a second, aged 26, a 3-para; a third, aged 28, a 4-para, a fourth, aged 32, a 9-para; and a fifth, aged 46, who was the mother of no fewer than twenty children. The fœtus could not be found in any of these cases. The most characteristic symptom was hæmorrhage, which began about the third month and lasted for weeks or even months, in the course of which period the uterus steadily increased in size. At first the blood was very serous and almost colorless. Later, old and recent clot came away. Another characteristic train of symptoms consisted in nausea, headaches, pallor, palpitations, and other phenomena, due to internal hæmorrhage. The uterine walls were always thin, the cervix participating in the morbid change. Hence, sharp instruments are out of the question. Ergot should be given, the vagina carefully plugged, and ultimately the cervix must be cautiously dilated with compressed sponges, the uterus being emptied by the hand.—*Brit. Med. Jour.*

FORCEPS AS AN AID TO VERSION.

Dr. W. Henry Harris, writes in the *Lancet*:—A case I was called to at a long distance, by two medical men in attendance, in Manitoba, may not be without interest. On arrival, I found the patient, aged twenty, in labor, then some twenty hours; primipara; seven months. On examination I found the right arm protuding (had been so some hours, the patient having been kept under chloroform,) the right shoulder firmly jammed, and constant powerful uterine contractions, so that the introduction of the hand for version seemed impossible. It occurred to me that if I could apply the forceps (Simpson's long) on the thorax at a point a little below its greatest diameter, gentle pressure would cause the blades to descend toward the pelvis, and so convert the presentation into an ordinary breech. The result was as I anticipated. In this case the fœtus had been dead some hours and the labor premature. My reason for publishing this case in *The Lancet* is that I do not see "forceps as a means of version" quoted in the text-books, as well as to suggest that similar means might be applicable in cases where such unfortunate presentation has occurred.

GYNECOLOGY.

ILEO-COLOSTOMY.

Gross, of Nancy (*Sem. Méd.*, February 13, 1892) discusses the indications for ileo-colostomy in cases of ulceration and tumor of the cæcum. Maisonneuve, it is stated, was the first surgeon to aim at intestinal anastomosis in a case of internal strangulation, in which he stitched the small intestine to the cæcum in order to avoid the necessity of forming an artificial anus. This operation, which was performed in 1854, was followed soon after by a second, in which an attempt was made to relieve the patient by an artificial anus. Both these cases terminated fatally, death having been due in one case to peritonitis, in the other to suppurative perityphlitis. Although ileo-colostomy has not been frequently performed, much attention has been given to this operation, especially by German surgeons, and its methods have been improved by Salzer and Hochenegg. In the procedure advocated and successfully practised by the latter

surgeon, the two ends of diseased portion of gut, which has been completely separated from the rest of the intestinal tract, are fixed to the edges of the external wound in order to permit the discharge of mucous and purulent secretion. Ileo-colostomy is held to be indicated under the following conditions: (1) In cases of tumor—particularly carcinoma—of the cæcum not amenable to direct operation. In cases in which the diseased portion of intestine is constricted, ileo-colostomy will relieve the patient of the symptoms of obstruction. If such symptoms have not yet been manifested, the operation will have a prophylactic effect. Moreover, by removing the irritation caused by frequent contact of fæcal matter the tumor will be less disturbed, the bad results of fæcal retention will be avoided, and secondary pericæcal inflammation will be diminished if not altogether abolished. (2) Chronic or relapsing inflammatory affections of the cæcum, with ulceration and consecutive constriction and adhesion to surrounding structures; ulceration of tuberculous or other organs with pericæcal suppuration and stercoral fistulæ. Free passage of fæces along the intestinal canal will necessarily result in suppression of the discharge of fæcal fluid by the fistulæ, and so render it possible for these to close and cicatrize. Moreover, as the seat of the disease is no longer infected by fæcal matter, the inflammatory phenomena ought to diminish in intensity, if they do not wholly disappear. Ileo-colostomy, however, as practised by Hochenegg, is a long, delicate and complicated operation, and it ought not, therefore, to be undertaken except under very favorable conditions, and when the general health of the patient is relatively satisfactory.—*Brit. Med. Jour.*

OVARIOTOMY IN A PATIENT IN HER EIGHTY-SECOND YEAR.

At a meeting of the British Gynæcological Society on March 24th, I recorded the particulars of an operation for ovarian tumor in a patient over 81 years of age, who recovered perfectly, of which some details may be interesting. The peritoneal cavity was filled with a clear yellowish-colored jelly-like fluid. The cyst, which was multilocular, extended up above the umbilicus. The main cyst contained thick colloid material, which had to be scooped out with the hand. The peritoneal cavity was irrigated with warm water, and a drainage tube inserted. Convalescence was somewhat tedious, but satisfactory. The patient is now (April) quite well, and able to walk round her garden, Dr. Joyce, of Cranbrook, informs me. In Mr. Bland Sutton's table of twenty-two cases of ovariotomy in patients over 70, the oldest was only 80. This case, therefore, is the oldest yet recorded.—Arthur W. Edis, M. D. in *Brit. Med. Jour.*

PYOKTANIN INJECTIONS IN CARCINOMA OF UTERUS.

Boldt (*Merck's Bulletin* for January, 1892) says: Pyoktanin possesses great germ-destroying power, and is devoid of injurious effects on the animal economy if used with proper precautions. He quotes a case, Backmaier (*Wiener med. Presse*, 1891), where there had been hæmorrhage from the vagina for more than three months, uterus immovable, with parametric-infiltration involving anterior vaginal wall.

The injection, one-and-a-half to three syringefuls of a one-to-one hundred solution in different portions of the growth every second day for four months, resulted in disappearance of the anæmia; the ulcerated surface was even and covered with healthy granulations; the discharge was scanty and not bloody or ichorous; the infiltration had diminished, and the ulcer on vaginal wall was partially healed.

Four months subsequent to this improvement was steadily progressive.

Boldt also gave reports of four cases of his own. The women were from forty-two to fifty-three years of age and all had been bleeding irregularly from two to three months. They were emaciated, having intense pelvic pain—the anterior vaginal walls were more or less infiltrated; the vaginal portion of the cervix of all was nearly destroyed, and other recognized diagnostic evidences of malignancy was present. The treatment was through curetting; followed by a tampon of dry iodoform gauze. In one case the Paquelin cautery was required to stay hæmorrhage. After forty-eight hours gauze was removed, patient placed in Sims' position, parts dried and injection again used, care being taken to reach the deeper structures, with effort to keep the parts as thoroughly clean as possible, this treatment, with some mod-

ifications, is continued. The injection usually causes pain for half an hour.

Confident views are expressed that proper treatment by this drug will prolong life and alleviate suffering, and in some cases, perhaps, complete a cure, when the disease does not admit of radical surgical treatment. The hypodermic use of pyoktanin should not exceed grs. iiss. Hoge, in *Virg. Med. Monthly*, October, 1880, reports a case of failure, but Boldt alleges the remedy was used insufficiently, or that the solution might have been unstable.

PEDIATRICS.

OVARIAN CYSTS IN INFANTS.

Kissel (*Nouv. Arch. d'Obstét. et de Gynèc.*, October, 1891. Supplement, p. 458) found 30 cystic ovaries in 428 bodies of female children (362 from birth to 1 year old, the remainder from 1 to 13 years old.) In only one case of cystic ovary was the subject over 1 year, and that case was 13 months old. The younger the infant the higher up lay the cystic ovaries, the older infants bearing the tumors in the pelvis. The cysts most usually occupied the outer aspect of the ovary. The cysts were tense, sometimes larger than the ovary, and often had septa. The ovarian parenchyma was partly destroyed by the pressure of the cyst; sometimes there were traces of parenchyma on each side of the cyst. Why these cysts were so common in infants and rare in children Kissel could not explain. He carefully searched with the microscope, but could not once find any trace of cyst or cicatrix representing the site of a cyst. These cysts, must, it would seem, undergo a retrograde change, and, thanks to the youth of the patient, the parenchyma is probably reproduced.

A TOY BALLOON IN THE TRACHEA; REMOVAL.

Dr. W. C. Glasgow (*N. Y. Med. Jour.*, 1891, liv., 460.) gives the following history: The patient, a colored child, eight years old, was seen for the first time, April 22, 1891. It was stated that two hours previous to this time the child had swallowed a toy balloon, that she had had severe choking spells, but that in the interval her breathing was normal. When brought to the clinic there seemed to be nothing the matter with her. Her breathing was perfectly quiet and normal; there was no cough; her voice was clear, and there seemed to be no interference with respiration. Suddenly, however, without any apparent cause, she began to struggle as if for air. She became quickly cyanotic, her cry was toneless, and there was frothing at the mouth. An examination of the chest showed a whistling râle over the left bronchus, with weakening of respiratory murmur. She was then chloroformed and a low tracheotomy done, but nothing could be detected even by the sound passed into the trachea. On the fifth day she had several coughing spells, with symptoms of strangulation, and during one of these attacks, a red substance was seen presenting at the tracheal wound. This was caught with a forceps, and although but gentle traction was used, the red rubber came away from its attachments, leaving the wooden tube in the trachea. This was forced upwards through the glottis and removed through the mouth. It was too large to pass through the tracheal opening. The next day surgical emphysema was seen over the whole anterior part of the chest. The left lung gave numerous mucous râles, with a distinct full respiratory murmur. The wooden part of the balloon measured an inch and three-sixteenths in length, and five-sixteenths of an inch in diameter.

THE TREATMENT OF SCARLATINA.

Since the publication of the treatment of the disease with chloral, by Dr. J. C. Wilson, in 1889, others have had some favorable experience with this drug. The theory of its action is a sedative to the nerve centres, and antiseptic to the blood and tissues with which it comes in contact in administration and elimination. It is given in doses just sufficient to keep the patient in a state of light somnolence. This will require about one-half to two grains for infants and children, and four to six grains for adults, repeated every three to four hours, according to effect. It is especially successful in preventing complications and sequelæ.

Curgenven presented before the Epidemiological Society of England his method of treatment. The remedy used is oil of eucalyptus. He gives it internally in frequent doses (two to four hours) of a few

drops in emulsion or shaken up in water. He saturates the clothing and all bedclothing, and sprinkles the floor, furniture and walls with it, until the entire air of the room is redolent with the odor. He sponges the body with it twice daily. It renders all other medication and disinfection, as well as isolation of the patient unnecessary.

His invariable results, after one year's experience, are the immediate arrest of the eruption, which does not extend further, the speedy relief of angina and subsidence of enlarged glands, the decline of temperature to nearly normal, and absence of albuminura, due to the elimination of the oil by the kidneys. Thus the activity of the poison is very effectively checked within a few hours.

But he further states that if administered before eruption and active symptoms have set in, it will abort the disease, and that it will act as a complete prophylactic to those exposed to it.

Salicylic acid is rapidly acquiring a reputation in treatment, as well as prophylaxis, of this disease. In from two to five grains daily it is said to be effective in protecting the system against an attack.

Dr. Illingworth, in the *Edinburgh Medical Journal*, relates his experience in this disease with the biniodide of mercury, on the principle that it acts as a germicide. The dose used (for a child 7 years of age) is one-sixteenth of a grain thrice daily, rubbed up with sugar. However, he prefers giving every three or four hours a half drachm of the bichloride of mercury solution (Brit. Pharm.), giving, also, one and one-half to two grain doses of iodide of potassium at the same intervals. He claims the usual benefits, that it "modifies the course of the fever, reduces the temperature, checks or altogether prevents the inflammation of the skin, and prevents the dreaded sequelæ."—*Med. World.*

POSTICUS PARALYSIS IN INFANTS.

Dr. Robertson (*Lancet*, 1891, ii., 936.) read before the Northumberland and Durham Medical Society, a paper on the condition of childhood which he thus named. The symptoms included prolonged and difficult inspiration, sometimes even cyanosis, with drawing in of ribs during inspiration. Marked pharyngitis was present. The symptoms were removed by repeated intubation and treatment of the pharyngeal affection. He regarded the symptoms as being due to bilateral impairment of the postici muscles.

HYGIENE.

EXAMINATIONS FOR ARSENIC IN THE LABORATORY OF THE HEALTH DEPARTMENT AT COPENHAGEN.

In a report on this subject, C. Gram states that in all 412 articles were subjected to a chemical analysis for arsenic. Of this number, 91, or 22 per cent., contained arsenic. Among 186 samples of wall-paper, 26 contained arsenic, 19, however, in minute quantity. Of 64 samples of wall-paper border, 30 contained arsenic, 14 only in traces. Among 78 samples of cloth and ribbon, 17 contained arsenic, all in considerable quantities. Of 17 samples of artificial flowers, 3 contained a very noticeable quantity. Of 50 kinds of candles examined, 15 contained arsenic in considerable quantity, all of which latter, however, came from the same manufactory.—*Tidsskrift f. Sandhetsplei*, vol. ii, No. 4.

TRAILING DRESSES.

It is difficult to detect anything beautiful or becoming in skirts of such length as to gather up the maximum amount of dirt when its possessor takes her walks abroad. At the same time, the news that the Supreme Sanitary Board of Hungary has opened a "regular campaign" against dress trains on the ground that, by sweeping up the dust, they contribute to the spread of "tuberculosis and typhus fever and other maladies," is calculated to raise a smile. On æsthetic grounds these trailing garments are to be deprecated, but the merest zephyr probably causes more commotion of the germ-laden dust than the passage of a princess. This is playing at sanitation, and when one reflects upon the multitude of hygienic reforms more or less urgently called for in Continental countries, sumptuary edicts of this description remind one forcibly of the "straining at the gnat." Moreover, history teaches us that the ladies are not to be coerced in the matter of dress. Coaxing will sometimes—though rarely—bring about a partial reform, drastic measures, never! It is not a mere selfish dis-

regard for the health of others that underlies this obstinacy, because the ladies show the same lofty indifference when their own health is in question. The fact is, they feel intuitively that dress is one of the most potent factors in evolution, in respect of sexual selection. It is idle to warn them that small waists are as abhorrent to nature as a vacuum; they know by experience and tradition that small waists are appreciated, and small waists they must therefore have *per fas et nefas.—Med. Press.*

PROPHYLACTIC TREATMENT OF HEREDITARY TUBERCULOSIS.

Solles (*Rev. Mens. des Mal. de l'Enf.*, September, 1891.) believed that hereditary tuberculosis existed in a sporular form, the tubercular sporule being the progenitor of tuberculosis in the majority of cases. The proof of the existence of the tubercular sporule is that upon a section of a miliary granulation no bacilli are found, but if a rabbit is inoculated with this granulation, the animal will die from phthisis, and numerous bacilli may be found in its body. In most of the scrofulous lesions, which are very suggestive of tuberculosis, no bacilli are found. These facts seem to demonstrate the existence of a hereditary tuberculosis, which is not bacillar, but sporular. Phthisical and scrofulous subjects eliminate specific spores by their excretory organs. The author has demonstrated this to his own satisfaction by inducing tuberculosis in guinea pigs, which he had inoculated with the fæces, urine and semen of tubercular and phthisical subjects. These experiments enable one to formulate principles for the prophylactic treatment of hereditary tuberculosis. It would consist in the expulsion of the spores by increasing the functional activity of the excretory organs, the skin, kidneys, and intestine, thus preventing the development of the disease. It would further consist in securing the resolution of the sporule accumulations by the use of the iodide of potash, salt-water baths, and revulsives.

QUININE AS A PROPHYLACTIC AGAINST INFLUENZA.

Graeser first recommended quinine as a prophylactic in influenza in *Berl. Klin. Wochenschr.*, in Dec. 1889. Following his recommendation, Fraujen used the drug with good success. Each soldier of a battalion of infantry (about 450 men) received a daily dose of eight grains of quinine in whiskey; in the course of three or four days the influenza had entirely disappeared from amongst the soldiers, while it continued to spread amongst the civilian population of the town.

Finkler has likewise made favorable reports concerning this remedy, also claiming for it a direct curative action after the disease is fully established, which according to his experience, is not shared by antipyrine and salicylic acid.

Schelter reports his experience with the same method in a cavalry regiment. For over a week quite a number of cases of influenza had occurred in every one of the five troops of the regiment. He then commenced the daily administration of eight grains of quinine in one-half oz. of whiskey to each of the ninety-one men comprising the second troop. Only seven of these were taken sick subsequently; that is three men on the 2d, two on the 3d, one on the 5th and one on the 6th day. From this time on, the troop enjoyed an entire immunity from the disease, while in the remaining four troops the number of cases developing after the experiment was begun is given as 21, 19, 42 and 31, respectively. If the three men who were taken sick on the day after the first dose of quinine was given are left out, its prophylactic effect it even more striking.

THE ÆTIOLOGY OF FIBROMYOMA.

Prochownick, (*Deutsche med. Wochenschrift*, No. 7, February, 1892) observed several cases in which the patients were syphilitic and in which the antisyphilitic treatment had no effect whatever upon the myoma. Myomata are found in cases where there is either some specific irritation of the walls of the vessels, or where there is a tendency to the formation of tumors which grow as a result of irritation. The syphilitic virus may perhaps be considered a specific irritation in this sense, but the tendency of syphilis is to cause a contraction of the tissues, and not a proliferation. Observations would tend to make us look upon the theory of the formation of these growths as the result of a variety of irritative causes, as the more tenable and more satisfactory explanation.

MEDICAL CHEMISTRY.

DETERMINATION OF THE SPECIFIC GRAVITY OF POWDERS.

The *Chemischè Zeitung* thus describes the method of Smeeth. Vaselin is placed in a watch glass and heated to expel all air-bubbles. It is allowed to cool to 60° F. and the whole is then weighed in water. The vaselin is again slightly heated to fluidity and a weighed quantity of the powder to be tested is sprinkled over the surface. After cooling as before the whole is weighed and the usual calculations give the specific gravity desired.

NOTE ON PAYEN'S PROCESS FOR THE DETECTION OF FREE MINERAL ACIDS IN VINEGAR.

According to Payen's processs, 100 cc. of the suspected sample are boiled for twenty or thirty minutes with 0.05 gm. of potato starch. If no mineral acids were present the starch will have been but little acted upon (dissolved), and will consequently show with the iodine test; but the presence of even 2 parts per thousand of sulphuric acid is said to be sufficient to convert all the starch into dextrin or glucose, and even then it will give no true coloration with iodine. This process is almost a standard one, and has scarcely ever been attacked; but F. Corril, a French analytical chemist, has stated recently that he cannot recommend it, as he still obtained the starch reaction with vinegar containing 5 parts of sulphuric acids or 5 parts of either hydrochloric or nitric acid per thousand. Hence vinegar dealers, unless their own experience agrees with Payen's for varying percentages of adulteration, should not rely too implicitly on this test.

NEWS AND MISCELLANY.

LEGAL RESTRICTIONS OF HYPNOTISM.

A bill to restrict the use of hypnotism has been introduced into the New York Legislature. It is entitled "An Act to Prohibit Public Exhibition of Hypnotic experiments, and to Prohibit Hypnotic Treatment by Anyone except duly Licensed Physicians." It contains the following clauses: (1) It shall be unlawful for any person except duly licensed physicians in the course of lectures to medical students, or before scientific bodies, to give exhibitions of or perform hypnotic demonstrations in public. (2) It shall be unlawful for any person not a duly licensed physician to hypnotize another. (3) Any person violating either of the foregoing provisions of this act shall be guilty of a misdemeanor. It is expected that the bill will have the support of the medical profession throughout the State of New York. The English of the bill might with advantage be submitted to some authority on Parliamentary style for revision, but its meaning and intention are admirable, and we hope it may speedily become law. With the examples of Belgium and the United States before it, perhaps our own Legislature may at last be roused to take similar action.

EPILEPTIC COLONIES.

In the current number of the *Journal of Mental Science* Dr. C. Theodore Ewart discusses in an interesting manner the ever-present problem, What is to be done with epileptics? The question is discussed principally with reference to the working of epileptic colonies, in the establishment of which this country has taken so far scarcely any practical steps, and Dr. Ewart's paper is an important contribution towards the solution of the problem. After describing the various efforts which have been made in other countries to grapple with this subject, he summarizes the main principles which he thinks should be observed in the organization of such a colony. The first essential is land, to consist of at least 500 acres of farm and woodland, well adapted to agricultural and horticultural purposes, within easy access of a large city, which would naturally supply a market for the produce. Then there must be small buildings, arranged in separate divisions for the male and female patients, each of the divisions to make provision in separate cottages for the demented, the convalescents, the school children, the workers, and the private patients of the higher classes. Medical care of each patient must be provided for, and there must be educational provision for epileptic children, and workshops, farm buildings, dairy, etc., for the adults, as well as a special laboratory for the study of epilepsy by a skilled pa-

thologist. The two arguments advanced against the establishment of two types of asylums are that there would be a sameness of occupation, a want of hope, and an absence of object, calculated to drive a sane man into insanity in a short time. To this argument Dr. Ewart replies that in such a colony as is proposed there would be neither lack of objects nor absence of hope. The second argument touches the financial question, for it might be said that the drafting off of chronic cases would necessitate the introduction of a larger number of sane workmen and workwomen. To this Dr. Ewart's reply is that the welfare of the patient must be the first duty of a committee, and he protests against the idea that the chronic cases are incurable. Even if they are that is no reason why they should not be made useful, as such a course would give them an interest in life which, to say the least, would tend to ameliorate their condition. Besides, by separating the acute from the chronic, each class is placed in better circumstances for rapid recovery; the time of lodgment would thus be shorter, and the expense correspondingly lessened. This great problem is one which must be faced; it is obtruding itself more and more every day, and if by the means proposed we can in any way lessen the misery and brighten the lives of many of our fellowmen and women, while we protect the helplessness of childhood, and develop it into something better and more useful than under present conditions it has the chance of attaining, it is our duty, and it ought to be our pleasure, to make the attempt, even if it may entail at the commencement some sacrifices. But even from the economic point of view such a course will in the end bring its own reward.—*Lancet.*

THE ÆTIOLOGY, DIAGNOSIS AND TREATMENT OF THE PREVALENT EPIDEMIC OF QUACKERY"

Dr. Geo. M. Gould, in a recent paper under the above title writes: "I have been surprised to see how a few minutes' talk with such people (believers in homœopathy) makes it plain to them what silly fools they have been, and how egregiously they have been duped. I have looked about for some scrap of literature I could hand to these folks, to show them what roaring nonsense they unwittingly gave their assent to. Oliver Wendell Holmes's little skit is almost the only such thing. Convinced, however, that people need and will profit by simple instruction honestly, plainly, justly, put before them, I wish to have a little pamphlet prepared that, historically and actually, will show up the ridiculous pretensions of modern homœopathic practice. I shall, therefore, postpone a bit of private pleasure I had planned, and offer a little prize of $100.00 for the best essay on the subject. The essay should not contain over 15,000 words, and in simplicity and directness should be adapted to the commonest lay understanding. Papers should be sent me on or before January 1, 1893, type-written, without the name of the author, but accompanied by a sealed letter, giving the author's name with motto or *nom-de-plume.* The essay will be given to a competent committee, and when their decision is reached the sealed letters of the authors will be opened, and the prize sent the winner. The essay will then be cheaply but well printed in large quantities, and supplied physicians at the cost of printing."

THE VIENNA MEDICAL SOCIETY.

At a recent meeting of the Imperial Royal Medical Society of Vienna, Professor Billroth announced that 9,000 florins had been subscribed for the erection of a building to be used as the permanent home of the organization. Of this amount the Emperor gave 5,000, and a lady who wished to remain anonymous gave 4,000. The individual members of the society then subscribed a sufficient amount to secure the erection of the building.

THE PHYSICIAN.

The following is a translation of an epigram written by Cordus in the sixteenth century:

The Physician like an angel seems
When he in the sick room brightly beams,
And like unto a god is he
When he's removed the malady.
But in a different light we view
The doctor when his bill is due;
Our alter'd eyes we at him level
As though he were the very devil.

CH. MARCHAND'S

PEROXIDE OF HYDROGEN.

(MEDICINAL) H_2O_2 (ABSOLUTELY HARMLESS.)

THE MOST POWERFUL BACTERICIDE AND PUS DESTROYER.
ENDORSED BY THE MEDICAL PROFESSION.
UNIFORM IN STRENGTH. PURITY, STABILITY.
RETAINS GERMICIDAL POWER FOR ANY LENGTH OF TIME.
TAKEN INTERNALLY OR APPLIED EXTERNALLY WITH PERFECT SAFETY.

Send for free book of 72 pages giving articles by the following contributors:

DR. PAUL GIBIER, Director of the New York Bacteriological and Pasteur Institute. "Peroxide of Hydrogen and Ozone—Their Antiseptic Properties." *Medical News* of Philadelphia, Pa.

DR. GEO. B. HOPE, Surgeon Metropolitan Throat Hospital of New York. "Some Clinical Features of Diphtheria, and the Treatment by Peroxide of Hydrogen." *New York Medical Record.*

NOTE.—Avoid substitutes—in shape of the commercial article bottled—unfit and unsafe to use as a medicine.

Ch. Marchand's Peroxide of Hydrogen (Medicinal) sold only in 4-oz., 8-oz. and 16-oz. bottles, bearing a blue label, white letters, red and gold border, with his signature. Never sold in bulk.

PHYSICIANS WILLING TO PAY EXPRESS CHARGES WILL RECEIVE FREE SAMPLE ON APPLICATION.

PREPARED ONLY BY

Charles Marchand

SOLD BY LEADING DRUGGISTS.

Laboratory, 28 Prince Street, New York.

BAKER'S EMULSION

WITH HYPOPHOSPHITES OF LIME AND SODA.

Among many points in which this preparation excels are:

1st—In quality of the Pure Oil used in its composition, being the finest Norwegian, of a special manufacture, receiving the highest prizes at late European Expositions.

2d—In the Proportion of Oil it contains.

3d—In mode of manipulation and thorough incorporation, rendering it Permanent and Palatable, and of proper consistence, about that of Rich Cream.

4th—In Size of Bottles, containing 16 ounces.

Confidence in the merit of our preparation leads us to respectfully ask a specification of our Brand when prescribing.

ESTABLISHED 1830.

JOHN C. BAKER & CO., Philadelphia.

BURN BRAE

A PRIVATE HOSPITAL

FOR MENTAL & NERVOUS DISEASES.

Founded by the late Robert A. Given, M. D., in 1859.

Extensive and beautiful grounds. Perfect privacy. A pleasant, safe and healthful home. Music, games, open-air amusements. The oldest institution of the kind in the United States. Both sexes received.

ARRANGEMENTS MADE FOR CHRONIC CASES.

Located a few miles west of Philadelphia, at Primos Station, on the P. W. & B. Railroad.

Clinical Lectures.

ALCOHOLIC PNEUMONIA.

By PROFESSOR ALFRED L. LOOMIS, M.D.

DELIVERED AT THE BELLEVUE HOSPITAL, NEW YORK.

Gentlemen:—This man says that six days ago, after a wetting, he was seized with pain in his back, and "all over," without any chill. There was some pain in the right side, which continued until the next day, when he began to have a cough with thick, whitish expectoration. When lying on the right side, both pain and cough were aggravated. His previous health had been very good; he has had no venereal disease, and he has been accustomed to drink whiskey several times every day. His history undoubtedly points to a pleurisy, but this may be associated with pneumonia or bronchitis. He may or may not have cirrhosis of the liver. Alcohol acts very differently on different individuals; on some persons, it seems to act as a poison, on others, it has no such action. The same may be said of tobacco, so that the amount of liquor taken is not always a guide to the effects. I remember a young man, eighteen years of age, coming to me at the college clinic, who began drinking when nine years old, and who had averaged about half a pint to a pint of whiskey daily for ten years. When I saw him, he had pneumonia which did not seem to trouble him very much; it ran a mild course, and was a typical pneumonia. I have seen him several times since, and he looks perfectly healthy, yet he continues to drink his usual quantity of whiskey. Of course, we do not ordinarily consider such a subject a good one for pneumonia. The alcohol did not seem to have produced any effect on his heart. The patient before us has more the appearance of one with pneumonia than with pleurisy. He was admitted to the hospital this morning, and his temperature at the time, was 100°. This would seem at first to be against pneumonia. It is said that the pulse of pneumonia is full and easily compressed, and that the pulse of pleurisy is hard and not easily compressed. This man's pulse is about 100 per minute, and is compressible, and there is slight blueness of the finger nails. His respirations are but slightly accelerated—34 per minute, yet there is certainly no notable dyspnœa. There is much more abdominal than thoracic breathing, but not much difference in the motion of the two sides of the chest. There is loss of resonance and a slight increase in the vocal fremitus on the right side anteriorly. In performing auscultation, you should endeavor to cultivate a habit of concentration of effort, so that you will hear only the lung, or only the heart as the case may be; it is a matter of the mind, not of the ear, and after long practice, you will be able to perform auscultation satisfactorily even when there is much noise in the room.

In the right lung, in front, we hear on ausculation some fine crepitation, and some coarse râles, and broncho-vesicular breathing; behind, on the right side, there is flatness on percussion at the apex, and the breathing in the lower portion of the right lung is vesicular, with a drum-like quality to it. There is bronchial breathing at the right apex posteriorly. In two-thirds of all cases of alcoholic pneumonia, the consolidation begins at the apex, and the fact that there is some consolidation at the apex in such a subject as this, would in itself lead you to suspect that there was a *recent* consolidation. In the majority of these cases, the pneumonia is lobar, and

not lobular. On the left side of the chest, there are the signs of bronchitis, so that it is quite impossible that this is a lobular consolidation, and this seems the more reasonable from its being confined only to the posterior portion, instead of involving the whole upper lobe.

This is a very interesting case, because the history in the first place points strongly to pleurisy—pain in the region of the nipple, with slight cough and expectoration—and his temperature at present would indicate either a lobar pneumonia in the stage of resolution, or else that he never had a lobar pneumonia. Then, the question arises, may he not have had some disease at the apex of that lung before this illness? There is no such history; he has apparently been in robust health. From the amount of bronchitis, and the fact that the pneumonia is confined to the posterior portion of the chest, I should be disposed to consider that he had bronchitis and pleurisy, and secondarily, a lobular consolidation without any previous tubercular disease. Another point would lead to this conclusion. Where you have a lobar pneumonia at the apex, there is generally more dyspnœa than in pneumonia of the base, and very frequently also, delirium, neither of which are present in this case. We have, then, bronchitis and pleurisy, and a lobular pneumonia at the apex of the right lung. We must wait for a time to determine whether any disease of the lung existed prior to this attack. We used to say that a man with a pneumonia at the apex was liable to develop phthisis, but this was before we recognized the tubercular character of all phthisis. Those cases of pneumonia which were followed by phthisis were undoubtedly tubercular at the time the pneumonia developed. I would impress upon you the fact, that in all alcoholic subjects, you should examine the *whole* chest, otherwise you may entirely overlook a pneumonia.

There is nothing to do in the way of treatment for this man, except to keep him quiet, and give him good food, and watch him. If you have such a case in private practice, of course you will be required in most instances to do something, but please remember, if you must do anything, do that which will bring no harm to your patient. Every case of this kind is a law unto itself, and you must treat the individual rather than the disease.

THE INDICATIONS FOR COLD BATHS IN THE TREATMENT OF BRONCHO-PNEUMONIAS.

By DR. HUTINEL,
PARIS, FRANCE.

A CLINICAL LECTURE DELIVERED AT THE HÔPITAL DES ENFANTS-MALADES.

Gentlemen: It would be difficult to find in France, within the last twenty-five years, a physician that would dare to prescribe a cold bath to a young or an old individual suffering from a serious attack of pneumonia. Cold being the principal cause of inflammation of the lungs, it would seem absurd to apply as a remedy that which is precisely the cause of the disease.

The method under consideration is not, nevertheless, a new one. Without going as far back as the time of Hippocrates, who recommended lukewarm baths, I will refer to Bartholin, who 200 years ago prescribed cold baths in pulmonary affections, and to other physicians who, during the same epoch, used for similar purposes, snow or ice. Towards the end of the sixteenth century, James Currie employed refrigeration in the treatment of febrile and inflammatory diseases. It was not, however, until forty years ago, that cold baths began to be scientifically applied in the treatment of pneumonias. The honor of the introduction of this therapeutic means is due to Vogel, of Berne (1850). Nissen, d'Altona, Weber, de Kiel, and others, followed his example. Jürgensen, who has made remarkable studies concerning pneumonias, Liebermeister and Lebert, of Breslau, have given to this method their support. Thomas (1878) has especially studied the treatment of broncho-pneumonias in children. He has preferred the use of lukewarm baths at a temperature of 30° C., with the view to prevent a too great shock to the system. Many other physicians have bathed their pneumonic patients; but in France practitioners have for a long time hesitated in accepting this mode of treatment.

Labadie-Lagrave, in his thesis of 1878 and Hanot in 1880 have reviewed the observations published before their time, but only admit, with reserve, the results al-

leged to have been obtained. However, it must be admitted that after the work of these latter authors, the use of cold baths had been quite generalized, and to-day many physicians are in the habit of prescribing them. The communications of Barth and Rendu to the *Societé Médicale des Hôpitaux*, have greatly contributed to the generalization of the method. The action of cold baths has been principally studied in the pneumonias of adults, but this action is no less remarkable in the bronchial pneumonias of children. Without referring to published statistics, it has seemed to us interesting to determine, based upon a large number of personal observations, what are the indications for the use of cold baths in the treatment of the disorder in question.

What is, I ask, a broncho-pneumonia? It is a more or less extensive inflammatory condition of the pulmonary lobules, secondary, in every case, to an infection of the tubes. This has, in general, its primary origin in simple catarrhs or in the specific catarrhs occuring in the course of measles, whooping-cough, the grippe, diphtheria, etc.; but it often begins in other parts of the system, away from the respiratory tracts, as, for instance, in the intestines. In either case, it is the large bronchi that become ordinarily affected at first, the disease extending itself afterwards to the smaller tubes.

There is no such a thing as *a* broncho-pneumonia; but there are several kinds of broncho-pneumonias. Clinical studies and pathological anatomy have shown this, which has afterwards been confirmed by microbiology. Yet, it must be said that it is quite difficult to establish the clinical, anatomical and microbiological differences, as there does not exist a marked limit between any of the different varieties of the disorder. It has been held that broncho-pneumonias of the pseudo-lobar variety, are due to infection by the pneumococci, and that the disseminated foci of lobular broncho-pneumonias are caused by the presence of streptococci. This theory can be accepted in a general way, but it is too schematic, and cannot be applied to every case. I will not insist upon this point. Bearing in mind that many micro-organisms may be found in the broncho-pneumnias, and that the microbes may belong to several varieties such as pneumococci, streptococci, staphylococci, coli-bacillus, and others, we must not forget that the infection is always primarily bronchial.

In every broncho-pneumonia two principal factors are always to be taken into consideration: 1. the local lesion, that is, the inflammation of the lung, due to irritation, and the reaction of the tissue invaded by the micro-organism; 2. the general infection, due to the rapid increase of the microbes, to the absorption and to the retention in the blood and the various humors, of the toxines produced or secreted by them.

We are familiar with the local lesion: It is an irritation whose point of departure is in the bronchioles, and is characterized by enlargement of the vessels, swelling and desquamation of the bronchial epithelium, diapedesis of the blood corpuscles, exudation of lymph and fibrin in the peribronchial alveoli, all of which phenomena produce a more or less complete obliteration of the bronchi and of the alveoli surrounding these. This inflammation which passes through the successive phases of splenization, hepatization, and often suppuration, results in an interference of the pulmonary function. In other words, we have: 1. A narrowing of the respiratory field; 2. An obstruction of the pulmonary circulation, giving rise to dilatation of the right side of the heart, and sometimes to the consequent cyanosis; 3. Finally, when the lung assumes a fixed condition, as it were, due to the coagulated exudate in the alveoli, there is produced an interference in the expansion of the thorax, and, through a mechanical obstruction, we have resulting emphysema and congestion.

We are also familiar with the general symptoms. In the first place, there is fever. We have no broncho-pneumonia without fever. Sometimes, hyperæmia is considerable as are also the dangers which accompany such condition. The pulse is accelerated, arterial pressure is lowered, while that of the veins is increased. The secretions, such as the urine, the sweat, the saliva, and others, are diminished, and finally, there is retention in the plasma and the various humors, of the toxines and products of tissue change.

Nervous phenomena become manifest. Sometimes there is depression, at others, on the contrary, excitement followed by convulsions, which in themselves constitute a danger.

Dyspnœa, cough, respiratory anxiety,

passive congestion come on *pari passu* with the local lesion and the general infection. I insist upon this point, that is, that the local lesion and the general phenomena do not *always* occur together. The pulmonary lesion and the toxæmia almost never exhibit similar character as regards severity; one or the other predominates. To be convinced of this, it will be sufficient to examine carefully the conditions of the organs at autopsies practised in children who have died from a broncho-pneumonia.

There are cases in which death is explained sufficiently by the pulmonary lesions, which are quite marked. These reveal that the patient has died from asphyxia.

There are other cases, on the contrary, in which post-mortem examination does not explain the phenomena observed during life, phenomena which have been neither worse nor less rapidly fatal. In such cases, the lung exhibits a condition of turgescence; it is œdematous, hyperæmic at the base, with, here and there, spots of ecchymoses; it is crepitant, and may be inflated almost completely; the large and small bronchi are inflamed and covered with a mucous in which the pathogenic micro-organisms are found. Death seems to have been caused by a toxæmia, the local lesion having been outstripped, as it were, of its importance, by the general infection.

Finally, there are still other cases, and these are the most numerous, in which the local lesion and the toxæmia march together, but they do not produce the same reactions. Moreover, there are found, alongside of the primary inflammatory lesions, those of a secondary nature, such as passive congestions, which vary according to the case, and against which we must wrestle if detected in time.

Now, what must we do in broncho-pneumonias? We cannot do much against the local lesion. I do not condemn revulsion; on the contrary, I consider such a measure useful, and I employ it; but I believe that it is not sufficient; often it acts slowly; and it does not appear wise, therefore, to depend on it entirely, especially in serious cases. I will not speak of innoculations with the serum of vaccinated animals; it does not seem to me that this method has given the results we were made to hope for by recent works upon the subject, particularly those of Mosny. It is especially against the different manifestations of the general infection that we must act; and it is precisely in those cases in which the general phenomena are quite marked, that cold baths are particularly useful. Let us examine how these baths modify these various symptoms.

A cold bath, in cases of hyperthermia, diminishes, undoubtedly, the heat of the body; but there are chemical antipyretics which act as quickly, and, in general, more powerfully—such as antipyrine, for example. If to lower the bodily heat were our only object, and the only effect produced by the cold bath, there would be no use of resorting to it in those cases that exhibited marked hyperthermia; but the cold bath not only diminishes the temperature of the body, it at the same time exercises other beneficial influences: it enhances the various secretions, increases the arterial pressure, and sustains the heart; while, on the other hand, most of the antithermic remedies produce, in similar conditions, untoward effects. Antipyrine, which I have cited as an example, depresses the patient, slows oxidation, and promotes in the economy the accumulation of toxic products. Quinine is preferable, but even in large doses this drug does not act with sufficient activity. This remedy is, nevertheless, an excellent adjuvant of the cold bath, and to which you must resort almost constantly.

The diminution of the temperature produced by the cold bath, varies, the thermometer descending one, two or three degrees; in some cases the fall is only several tenths of a degree. The more marked and persistent the diminution of the temperature, the more favorable the results. In fatal cases, the fall of the temperature is insignificant.

The cold bath acts energetically upon the nervous system It gives, as Professor Peter has remarked speaking of typhoid fever, a lashing to the economy. It diminished the depression so marked in certain cases of broncho-pneumonias, and especially suppresses all symptoms of excitement. It is indicated in the period of convulsions. After the bath, the child becomes calm and goes to sleep as soon as the temperature begins to rise again. Cold water acts upon the circulation in a most favorable manner. The first effect, easy to understand, is a constriction of the per-

ipheral blood-vessels, and a sudden increase of pressure in the left side of the heart. At such a time syncope is apt to occur, but this is not, nevertheless, so much to be feared in children as it is in case of adults, since in the former patients; the cardiac muscle is generally healthy.

We must, however, be on our guard in case this accident should occur. If the syncope comes on, the child must instantly be flagellated, and given a hypodermatic injection of ether. The constriction of the peripheral blood-vessels determines an increase of the arterial pressure, steadies and notably slows the pulse. Following the constriction, there is dilatation of the peripheral vessels; the skin becomes reddened, this being due to a secondary derivative effect, a revulsion analogous to that produced by a sinapism, but more extensive. The changes which we have been able to observe in the greater circulation are the same as those produced in the lesser one.

The congestive foci in the lung become diminished, a diminution which, according to Jürgensen, may be detected by auscultating the little patients after the bath. The cough and the dyspnœa also diminish, and sometimes to an astonishing degree. In my experience the cold bath has never produced evil effects upon the lung, and, like many others; I am convinced that the measure has been wrongly accused of being the cause of pulmonary complications.

Upon the secretions the cold bath exercises a most beneficial influence: it increases the amount of urine, and facilitates the elimination of soluble poisons. It does not cause albuminuria, as has been supposed, and we can easily understand how it diminishes, instead of increases, passive congestions. It similiarly promotes the salivary and the digestive secretions; under its influence, the tongue becomes moist, the children accept voluntarily articles of food. Patients who have been bathed return to life, to use the happy expression of Juhel-Rénoy.

You see, then, that cold bathing acts energetically upon the circulation, the secretions, the nervous symptoms, and upon the dyspnœa when this is out of proportion with the pulmonary lesions. Is the measure under consideration indicated in all cases? Certainly not. Its application in all cases of broncho-pneumonias would be a very bad practice, indeed. We must always proceed in such a way as not to sink into disrepute the best methods. The bath is useful in these cases in which the general symptoms are marked, and in which the local lesions are not very extensive. I will detail the following case, which occurred in a little daughter of one of our most distinguished colleagues:

B., a child, 5 years of age, enjoying the best of health, suffered an attack of influenza on the 26th of November, 1891. The disease did not exhibit any peculiarities until the 24th, when, together with a marked elevation of the temperature there came on symptoms of great excitement, followed by those of depression. Auscultation only revealed numerous disseminated râles in both lungs. The patient became worse on the following day and, in spite of her having been placed under hydrochlorate of quinine in doses of 0.40 grammes a day, with the frequent application of mustard plasters, there appeared on the 27th a marked rise of the temperature, 40° C.; there was also found over the angle of the right shoulder-blade, a zone of dullness in which sub-crepitant râles, without any blowing sound, were detected.

She became still worse on the following night; on 28th the temperature was 41° C.; auscultation and percussion both revealed a double broncho-pneumonia: that is, over the base of the left lung, and also a little above the angle of the right shoulder-blade. In two hours the temperature went up to 41.6° C., the condition of the little patient became very alarming; her face was reddened, swollen; when made to speak, the muscles of the face would exhibit convulsive movements, giving rise to a grinning expression and one of terrible anxiety; she complained, besides, of a violent pain over the left side, and her excitement became exceedingly marked, this being a true jactitation. The number of respirations was 56 per minute.

In the presence of such distressing symptoms, which appeared to augur an early fatal termination, I decided to plunge the moribund child in a bath at 30° C. The duration of this bath was 16 minutes.

When the little patient was taken out and placed in her bed, the scene had absolutely changed. The pain in the side, the excitement, the convulsive movements of the muscles of the face, all had disap-

peared, and there came on a condition of perfect calm. The little child slept profoundly for about a quarter of an hour; the respirations were reduced to 40, and the pulse from 142 came down to 120 per minute.

This amelioration did not last long; on the following morning, the 29th, the temperature rose to 41° C., that is, in the course of 11 hours; the excitement and the cough re-appeared. I gave her a second bath of 12 minutes duration. Improvement occurred, but very soon afterwards, the temperature went up again, and I then ordered a third bath at 25° C. also of 12 minutes duration.

The third bath was the signal of a definite defervescence, and the little child entered into a true convalescence, which became more and more marked every day, and *pari passu* with the favorable changes in the local lesions, there was a marked improvement of the general condition. The period of convalescence was, nevertheless, prolonged, but the child finally made a complete recovery.

Families will often oppose the application of a cold bath in these cases: under such circumstances we must employ a certain amount of artifice. Under the cover of revulsion you add to the water a little mustard, for, as a general rule, parents believe in the efficacy of this simple remedy, and it behooves us to wrestle, not so much against their reluctance, as against their over-zealousness.

In favorable cases the temperature is decidedly lowered after the bath, and often descends to the normal point; the pulse is slowed, and calm is insured. These happy results are only obtained in cases in which the fever is high and the excitement marked, and in which the local lesions are of little moment. Nothing similar is observed when the lung is in a condition of marked hepatization, without there existing any febrile re-action; in these cases the depression produced by the bath is a negative or only a moderate one, the relief obtained being slight. This measure here, then, is useless, and it may produce, on the other hand, untoward effects. The fever which in part only, it has caused to disappear, may serve to enchance phagocytosis; we, therefore, ought not to suppress it, lest we place a weakened system in a greater jeopardy.

When an extensive lesion of the lung is accompanied by serious general symptoms, the bath is often indicated, as it produces a quiet condition of the patient, lowers the fever, diminishes the cough, and makes us, on the other hand, gain a certain amount of time. In children, the bath sustains the strength and diminishes pulmonary hyperæmia; but often this amelioration is of short duration, and there comes a time when cold water produces no effect at all. In such cases, the prognosis is exceeding bad, and death may be expected at every moment.

I shall not burden you with statistics. At the Hospice des Enfants-Assistes, I have obtained most excellent results, but I have also observed many failures. Serious, complicated broncho-pneumonias occur in very young children who live amidst bad surroundings.

I have often seen patients, after a marked amelioration, succumb to a secondary infection such as choleriform diarrhœa, at a time when I thought that convalescence had already set in. In city practice, I have treated 12 children suffering from broncho-pneumonia, with cold baths. Five deaths occurred, and among the other seven cured, there were one 2 months, one 6 months, one 9 months, and two 1 year old each.

Can we, from the nature of the broncho-pneumonia, point out a sure indication? Not absolutely. It is especially in the broncho-pneumonias caused by pneumococci that we are more apt to succeed. The broncho-pneumonias caused by the streptococci, are generally of a protracted nature, and exhibit quite extensive lesions. In these cases the cold bath is useless.

It remains for us to find out whether a cold bath is useful in the broncho-pneumonias caused by the coli-bacillus; these inflammations are not yet thoroughly understood, and are besides quite rare. Moreover, it may be said that the nature of these broncho-pneumonias is less easy to establish. To do this it would be necessary to puncture the lung, in order to examine what kind of microbes had invaded this organ; but I do not believe that such a method should be resorted to.

To summarize then: It seems to us that cold baths are useful especially in those cases in which the general symptoms are marked, exceeding in importance and gravity the local phenomena; as, for example, in those cases characterized by a suffocating

catarrh, and in those broncho-pneumonias in which the nervous symptoms predominate. When the temperature marks 41° C. the cold bath is always indicated, because the hyperthermia constitutes by itself danger. The same indication holds good, when, with the existence of more or less extensive local lesions, the temperature and the re-actions are excessive.

When the local lesions are quite extensive, and the fever is intense, the cold bath may sustain the patient by producing a certain amount of defervescence, but it does not generally bring about a cure.

In the presence of serious local lesions, with little febrile reaction, the cold bath is contra-indicated. It is similarly contra-indicated when the action of the heart is disturbed, although this is exceptional in children; or when there is a condition of marked adynamia. Age does not constitute a contra-indication. In fact, cold bathing produces in young children marvellous results, because in such subjects the general symptoms predominate and do not always bear any relation to the local lesions.

The manner in which I generally give a cold bath, is as follows: For the first bath the water must be at 28° C, the duration being from five to ten minutes. The child must be taken out before it is chilled. For the other baths the temperature of the water may vary from 24° to 18° C; it is not necessary that it should be lower. The child is to be put into the bath entirely naked, and thus kept there, the temperature of the water being regulated gradually by adding more cold water, as required. The head of the child is then to be bathed by affusion. In about five, eight or ten minutes the little patient is taken out, wrapped in woolen sheets, and made to take some nourishment. An hour later the temperature of the body is taken, in order to see if it has diminished. Two hours after, that is three hours after the bath, the thermometer is again applied. If the temperature is still above 38° C. a new bath is given; if below, it is better to wait. The temperature, however, must be taken every two hours, and the child put back into the cold bath if the bodily heat is above 39° C, unless the excitement and the dyspnœac symptoms have disappeared.

The baths should be continued while the hyperthermia lasts, given as many as seven during the first day. In favorable cases the number should be diminished on the following days.

As an adjuvant I advise the administration of quinine, which, instead of depressing, sustains the heart, and also hyperdermatic injections of caffeine and ether if there be tendency to collapse or syncope. The child should be nourished with milk and water, broths, and made to drink as much as possible, in order to increase the urinary secretion, coffee, and especially grog and cognac. A child one year old can take from 15 to 30 grammes of alcohol a day; one three years of age as much as 60 grammes. Alcohol has the advantage of aiding the favorable reaction which is produced after the bath. When such a result is not observed, it is generally because the bath has been prolonged; it is, therefore, important to see that the duration of the following baths is diminished.

The cold baths are not only indicated in the catarrhal or grippal broncho-pneumonias; they are similarly of service in those occurring during an attack of measles or of whooping-cough. The prognosis in these latter cases is always exceedingly bad. It is almost fatal when the pulmonary inflammation is secondary to diphtheria.

I hope, gentlemen, that I have been able to impress you with the fact that cold baths constitute a useful means to employ in the treatment of broncho-pneumonias of children; they do not constitute, however, a sovereign remedy, nor is the treatment applicable to all cases.

Employed when especially indicated, cold baths produce excellent results; but applied indiscriminately they are often the source of disappointment. — Translated from *Le Bulletin Médical*, May 11, 1892.

VASCULAR TERRITORY OF THE HUMAN SKIN.

Spalteholz, of Leipzig (*La Semaine Médical*, 1891, No. 47), gives these results of his studies upon injected tissues: 1. The number of afferent branches and their diameter is variable; when pressure is brought to bear they are more numerous and larger. 2. Their length is greater where the skin is very mobile. 3. There exists multiple anastomoses, the arteries of the skin never ending as terminal arteries. 4. The size and the number of the anastomoses are always different, being largest and most numerous where there is increased pressure.

Communications.

THE PRESENT STATUS OF OBSTETRICS AND GYNÆCOLOGY.*

BY C. D. PALMER, M. D.,
CINCINNATI, OHIO.

In 1878 I delivered the annual address of the Alumnal Association of the Medical College of Ohio, on the subject of the "Present Status of Gynæcology, and its Relations to General Medicine." This was nearly 15 years since. It has occurred to me that there is no subject for me better adapted for a society of this kind, composed of gentlemen of almost all ages and specialties of medicine, of the great state of Ohio, than this very same one.

What is the present status of obstetrics and gynæcology to-day? No one will for a moment say that it is what it was 15 years since. What it will be 15 years from now, is only a matter of speculation.

To the thoughtful inquirer, it is plain that the relation of obstetrics and gynæcology to general medicine is a most intimate and inseparable one. The idea that a physician may practice gynæcology in its exclusive sense, without a knowledge of the diseases of the body at large, or with a disregard of the general bodily conditions, is one of the most absurd and dangerous doctrines. There is comparatively little gynæcology outside of the domain of general medicine; on the other hand, there is scarcely a disease of the general system in the female of any considerable importance or duration, which does not affect the circulation, the innervation, and the functions of the pelvic organs, We venture the assertion, and challenge the successful contradiction that no disease or class of diseases in the economy, set up more decided disturbances or complications at large than those of the female pelvic organs. Medicine although made up of parts is really one. The whole stands by a linking together of all its parts, a separation of any link implies a break in the whole chain. Gynæcology has suffered not a little by this exclusivism of our times. The extreme surgical tendency of some has brought us an unmerited disrepute. Pelvic diseases must be learned by studying medicine in its entirety. Few constitutional diseases, or even local affections of distant organs of the body exist that we do not see in women some peculiar expression of the same in the sexual system. The various states of a changed constitution of the blood, the so-called diatheses and cachexiæ, as anæmia, hydræmia, leucocythæmia, scrofula, phthisis, rheumatism, gout, syphilis scorbutus, eczema, chronic malaria, almost invariably, unfortunately too rapidly, first disorder menstruation, and finally produce organic changes in the uterus. A neurotic habit, evidenced by attacks of general neuralgia, is accompanied by a neuralgic dysmenorrhœa as is also such a constitution a very important factor in the causation of other pelvic affections.

Again, pregnancy, more particularly the lying-in state, tests the soundness of a woman's constitution. Any imperfection of her system, any blood taint, although hidden, is apt to manifest itself at this time. Pelvic cellulitis, we have noticed, has at times an ætiological constitutional factor, so have mammary inflammations. An enfeebled general health, a disease prior to marriage, present though latent, frequent child-bearing, prolonged and excessive lactation, and many other general causes make a women liable to, and perpetuate sub-involution, hyperæmia of the uterus, with displacements, diseases and complications from which she would otherwise be exempt. Many of the well-known exciting causes, utterly fail to bring about a local disease without some constitutional morbific force operative in the background. In this way, a discovery of one's actual constitutional standard of health is revealed.

Many of the chronic diseases of the uterus, are chronic only in virtue of a diathetic taint, a general imperfection or depreciation of the general health. Therefore, that local diseases of the female pelvic organs require only a local treatment, is a pernicious doctrine, wrong in theory, dangerous and criminal in practice. A gynæcologist cannot be a skilled physician without a knowledge of medicine in general. It is necessary that he diagnosticate, know the cause and proper management of diseases in general. Constantly arising in his special practice, they influence and complicate the acute and chronic conditions, for which his services are sought.

*Read before the Ohio State Medical Society, May 6, 1892.

In turn, while it is not to be expected of the general practitioner that he will differentiate uncommon and obscure pelvic affections, or perform special operations in this field of practice, it is expected that he will understand the importance and significance of symptoms here arising, and the general management of the diseases they express.

Volumes might be written on the influences of civilization and modern culture with its fashionable surroundings and entanglements, modifying the diseases of women. Unquestionably both sexes do not have a few of the physical ailments of a generation since, but it remains a seriously debatable question whether women nowadays do not have many of their diseases more frequently. I believe they do; and look upon it as a penalty of our modern methods of living.

Local medication of the uterus is certainly better understood now than it was fifteen years ago. There can be no question as to the propriety of local treatment, but an ailing woman, afflicted with a disease of her sex, must be at the mercy of the good judgment of an honest physician.

When to medicate, *when not* to medicate the uterus, *how often* and *with what*, are questions to be answered only by a studious, progressive practitioner.

Fluid applications to the uterus have now a diminished field of utility. Intra-uterine medication can be made less painful, less hazardous, and more efficient. Potential cauterization of the uterus is now much less frequently employed, and the use of the inevitable nitrate has almost become a relic of the past. Who can doubt that we better know how to treat endometrial affections than we did? That the endometrium is rather a glandular, than a mucuous tissue, is recognized.

Gonorrhœa, it matters not how contracted, as a causative factor in many female pelvic diseases, has a hitherto unrecognized significance. Massage as a therapeutic agent in gynæcology, is well appreciated, to say naught about the local massage after "Thure Brandt."

Electricity as a therapeutic agent never received such attention. Apostoli has been, and is, an enthusiastic, painstaking, progressive worker. His enunciations have been seconded by careful, observing men all over the world, and he is considered not altogether a misguiding leader. Competent judges in gynæcology say we must use discretion in the selection of cases, in kind and localization, if we do good with galvanism for fibroids of the uterus. There is really no contention between electricity and surgery in gynæcology. Each has its place and field of application, hence usefulness. Unmistakable benefits result from electrical treatment in certain chronic pelvic inflammatory exudations, uterine versions and flexions as well as from some of the uterine inflammations.

We know of little more concerning pelvic cellulitis and pelvic peritonitis than have been so clearly and reliably announced by Bentley and Goupil, in 1857. But our acquaintance with the diagnosis and operative cure of diseases of the Fallopian tubes is only of rather recent date.

The gynæcological world has had its craze for cervical splitting, its trachelorraphy craze, its pessary craze, and now it is having its tube craze. We need but a few years for the Fallopian craze to settle down on a more rational basis. A more clear and thorough elucidation of the diagnostic signs of pregnancy, intra- and extra-uterine, have occurred in recent years. A recognition of early pregnancy, depends usually, not on one symptom, or group of symptoms, but on a painstaking analysis of the sum total of evidence in a given case. The most conclusive evidence is found within the pelvis, in the size, the shape and the consistency of the uterus and surroundings; no sign, but the collective evidence of all signs being considered. Many mistakes in the diagnosis of pregnancy are avoidably and unavoidably made. It would be well to suspect the possible existence or co-existence of pregnancy in every female we are examining who is from 10 to 55 years of age.

One of the most important advances of medical and surgical gynæcology has been the recognition of bacteria in producing certain morbid processes. How many cases of endometritis and salpingitis we know are septic in their origin? Consider the diminished and diminishing mortality rates in modern obstetric practice. One death in 1,000 cases of parturition, in Paris, and none in as many cases in Preston Retreat, in Philadelphia, would have astounded our predecessors. So much for improved septic and antiseptic precautions. We have come to understand that sepsis, not traumatism, is the danger element in obstetrical and gynæcological practice. How many

intra-pelvic diseases of women may yet be stamped out by further bacteriological studies! We know now how to employ the uterine curette, a most valuable instrument, calculated to supersede much intra-uterine medication, so that its ills may be reduced to a minimum; another proof of modern antiseptic evolution. Pessaries we are not as yet ready to dispense with, although their use has been judiciously greatly abridged. Some hitherto-regarded incurable uterine displacements have been made amenable to medical and surgical treatment. Vesico- and recto-vaginal fistulæ, cervical lacerations, vaginal and perineal ruptures are now regarded as largely preventable, and their best treatments are prophylactic and immediate. Stitch-hole abscesses, abdominal herniæ and fæcal fistulæ can generally be avoided.

The greatest improvements in modern surgical gynæcology and obstetrics, we owe to Semmelweiss and Lister. A greater revolution at any time never occurred than these men have been the agents of originating. Recent years have brought their harvests of return to these benefactors. In no direction in recent years has gynæcology grown as in the surgical. Compare the most excellent work of Greig Smith of to-day with the gynæcological surgery of 1856. In 1855, Spencer Wells wrote a small book on the diagnosis and surgical treatment of abdominal tumors. Is ovariotomy justifiable? was the question then. Now, everyone advocates its performance, and that early, too. In recognition of the grand work which has been done for this otherwise incurable disease, witness the operations on the liver, the gall-bladder, the stomach, the spleen, the kidneys, the intestines and other abdominal structures. *Section*, *peritoneal irrigation* and *drainage* have revolutionized abdominal and pelvic surgery. It is impossible to practice gynæcology without a resort to surgical procedures. Such are the causation and nature of many of the gynæcological diseases that surgical operations are for them a *sine qua non*. Modern gynæcology has made its most wonderful advances by surgery. Extra-uterine gestation, uterine cancer, some kind of uterine displacements, and otherwise unrelieved uterine fibroids testify. Not only has vaginal hysterectomy had established for it a proper place, but supra-vaginal hysterectomy is destined to be the operation, if any, for certain, not all, uterine fibroids. No real contest can exist between high amputation of the cervix uteri and complete vaginal hysterectomy, for uterine cancer.

More than my allotted time has been consumed in praise of what gynæcology has done and will do. Many pages might be written concerning modern gynæcological abuses. Every department of medicine and surgery has been a subject to abuses. Intra-uterine medications, Emmett's operation of trachelorrhaphy, Sims' operation of cervical discission, Battey's operation of oöphorectomy, and not a few other operations by laparotomy and vaginal hysterectomy have each and all been abused. No intelligent rational physician will for a moment attempt to assert that these surgical procedures have no place in practice, and should be ignored. Well would it be if every medical man would carefully consider the supposed curative effects of operations *per se*. Medical records are full of them. The psychical influences at work are at times a most interesting study. The power of the body, especially the pelvic organs, upon the mind, is ever to be held in view. Always endeavor to avoid developing a neurosis, through introspection, especially in morbid patients.

The modern tendency of to-day is to make many of the female pelvic operations on a very small pretext, made unnecessarily, either for life, comfort or the preservation of health. Many of the well recognized failures of oöphorectomy and salpingo-oöphorectomy have followed operations done for hystero-neuroses, under a mistaken diagnosis. Doleres claims that four-fifths of the oöphorectomies done in Paris have been unnecessary. How many times unnecessarily in this country, no one can tell.

Notwithstanding all the drawbacks and abuses gynæcology has encountered, the young science and art applied have relieved many a suffering, helpless woman, prolonged many a helpful life, and saved from the grave many a worthy, noble companion for usefulness, otherwise unhelped.

TWO CASES OF FRACTURE OF THE PATELLA, (ONE A COMPOUND FRACTURE; THE OTHER A SIMPLE TRANSVERSE ONE) WITH OPERATION FOR MAINTENANCE OF FRAGMENTS.*

By G. M. STEELE, M. D.
OSHKOSH, WIS.

My only reason for reporting these cases is to add the widow's mite to the current history of these sometimes grave and interesting cases.

Case I. John D., aged 36 years, married, farmer, and healthy. On Oct. 2d, 1891, he was running a steam thresher when a cry of fire was heard. He jumped from the table beside the cylinder to investigate the matter, when he slipped, and in falling his right knee came into contact with the cylinder, running at usual velocity with power on. In extricating him the right foot also shared the same fate. Fortunately there were with him two or more friends who had some experience in the modern management of wounds, and though ten miles away, put clean cloths around his injuries and took him to my office for care. A casual examination revealed a compound comminuted fracture of the right patella, the loss of the large toe on same foot, and serious injury to the next adjoining one. He was placed under chloroform, the knee thoroughly cleansed, several small pieces of the patella removed, the joint irrigated with 1-5000 solution corrosive sublimate, a rubber drainage tube inserted, but not passed through a counter opening, the wound packed with sublimated gauze to control a moderately free hæmorrhage, dusted freely with aristol and then dressed with usual dressings, no iodoform. There was only a little displacement of fragments. After amputating and dressing the toe, a plaster dressing was placed upon the limb from ankle to body. Two days following the accident the patient was visited and the knee dressed. The pulse and temperature were only slightly above normal, from one to two degrees rise of temperature, and remained so for about a week when they were normal continuously. The dressings were considerably saturated with bloody serum, and synovial fluid, but the swelling was only moderate and pain not great. The gauze packing of wound was removed and the wound and surrounding parts were now, and upon all subsequent dressings, thoroughly irrigated with hot 1-5000 sublimate solution. I now used a bone drainage tube, hoping that my wound was aseptic and that an earlier closure of the joint might thus be secured. The next dressing was made two days hence, and thereafter at intervals of four, five, six, seven, eight, nine, eleven and sixteen days respectively at his home, and was examined and protective dressing applied two or three times at my office. The cause of the somewhat prolonged dressings was a little carious bone which was finally absorbed. No pus made its appearance. Slight passive motion was commenced after the fourth week, with a condition now which promises a very useful limb and considerable motion of joint. Now, 7 months after his injury, he is walking with a cane simply as a guard on uneven ground, but can walk as briskly as the ordinary walker and is able to attend to general business of farm, which does not require continuous walking. (I here presented a photograph showing front profile as well as side, demonstrating amount of flexion now secured.)

Case II. Thos. Mc A., age 32, married healthy. About 11 A. M. Oct. 30th-1891, jumped upon a moving train for a short ride. In alighting from the train he fell upon a street pavement, causing a simple transverse fracture of his right patella, with much separation of fragments. In an hour or so after the injury he was seen and a temporary dressing applied. Two years or so previously I saw Dr. T. M. Marloe do an operation upon a similar case in the New York Hospital, and his operation with his remarks upon the same occasioned a resolution on my part to do likewise, when a proper case came to me. It was advised in this case and performed some 16 hours after the injury was received. The operation performed was advised by Volkmann, modified by Kocher, and called "peri-patellar suture," except that here silk braid was used instead of silver wire. This method was suggested by a young surgeon, Dr. Clark of New York, and was performed several times in the New York aud Chambers St. Hospital by Drs. Marloe and L. A. Stimson. It con-

*Read before the Wisconsin State Medical Society, May 4th, 1892.

sists in carrying a long needle threaded with stout braided silk down transversely through the ligamentum patellæ, close to the latter, and from a perpendicular line down so as to just escape its outer or inner margin, to a point corresponding on the opposite side; from here the needle is returned to the opening from which it emerged and carried along the perpendicular line, subcutaneously, to a point corresponding to the upper border of the superior fragment, the suture is now drawn up, leaving a liberal loop at the point from which it last entered, then passed into the opening from which it just emerged, dipped down through the tendon of the quadriceps extensor, and liberated again at a corresponding point on the opposite side; it is now returned through last opening, passed subcutaneously, and emerges at point of first entrance, drawing the suture so as to bury it. An assistant now forces the upper patellar fragment down to the lower, and retains it there while the operator tightens firmly the suture over upper fragment with extremities of sutures on one side and loop left on the other: when firm the loop is drawn out and the suture tightly tried and buried subcutaneously. If done properly the patella is now firmly surrounded by the silk without entering the joint, and buried subcutaneously, and, barring accident, will long remain to retain the fragments. The knee was now carefully dressed, and the limb enveloped in plaster splint from foot to body. The foot was slightly elevated while in bed. The following day, November 1st, pulse 65, temperature 99°; November 2d, pulse 85, temperature 102°. He was now given magnes. sulph. sufficient to thoroughly evacuate the bowels. November 3d, pulse 105, temperature 103°. He was now given acetanilid grs. v. I may truthfully say that the surgeon was now in great need of some soothing cordial to soothe his disturbed mind, which did not reach him until the next morning, November 4th, when the potion came in the form of a pulse of 78 and temperature 99⅘°, with good countenance. November 5th, pulse 68, temperature 98⅗°, and from now on normal. The dressings were not disturbed until November 28th, when the condition was perfect. The swelling was very slight, and moderate motion produced no pain. December 6th, five weeks after operation, I found him walking about the house without cane or crutch. January 11th, ten weeks and two days after the operation, all support, except flannel bandage, was removed, and he walked wherever he desired without artificial aid. At the last examination there was one-eighth of an inch between the fragments and what I believe to be bony union. It is of the utmost importance to bear in mind that this, or any other operation for this injury, should never be undertaken without adhering scrupulously to the minutest details of aseptic surgery. I am fully aware that any operative treatment of simple fracture of the patella is fairly subject to question, in view of the practical results of non-operative management. Of the operative measures, however, this one seems to possess, to my mind, the merit of thoroughly securing the object of all treatment, in the simplest and most commendable manner. To offset its dangers, is the greater certainty and rapidity of repair and usefulness of limb, should no operative accident occur. In point of time this limb was liberated, and seemingly with safety, some months quicker than by ordinary methods of treatment and with rapid restoration of function. He now walks so perfectly, that, until wearied, his friends say that they could not tell by observing his movements that he had been injured. His knee is not yet strong enough to endure continued hard use, but he is ready for labor of a character consistent with limb. I have also a photograph showing similar views to the former.

CHLORINE IN TYPHOID FEVER.

Yeo (*Lancet*, Nos. 3528 and 3529, 1891) has recommended free chlorine as the best agent for the antiseptic treatment of typhoid fever. Forty minims of pure hydrochloric acid are added to thirty grains of potassium chlorate in a flask and chlorine permitted to generate. In two or three, water is gradually added, and the tightly closed flask is thoroughly shaken. Then sufficient water is added to make ten ounces. The result is an almost perfect solution of chlorine. To twelve ounces of this solution are added from twenty-four to thirty-six grains of quinine hydro-chlorate and an ounce of syrup of orange-peel. In accordance with the severity of the case, an ounce of the solution may be administered two, three, or four times a day.

OPIUM, BELLADONNA AND CHLORAL POISONING.

By P. J. FARNSWORTH, A.M., M.D.,
CLINTON, IOWA.

A hurried ring of the telephone: words come over the wire, "What shall I do for a woman who has taken an overdose of morphine?" The little girl who is studying primary physiology and the effects of alcoholic poison, answered promptly "give her an epidemic and some coffee."

She did not specify the epidemic 'grippe or scarlatina. An emetic and coffee is the stereotype recommendation for treatment in such cases, but if not applied at once is of little consequence. In most cases of poisoning the drug has been fully absorbed when we are called, and if morphine coma has set in an emetic would not act, or coffee be taken up, or even a stomach pump be of any service. This is true of the other alkaloids.

To begin with the case in hand. Opium is in most ways a complete physiological antidote of belladonna, atropine of morphine.

The text-books so classify them but direct its use in a cautious, hesitating manner as antidotes. We may better illustrate our meaning and use by this case: Mrs. L., aged 30, being seized with a paroxysmal pain in the stomach, received a hypodermic injection of ¼ gr. of morphine. The pain not being checked, on returning again, she took four or five of the hypodermic tablets from the vial that had been left, in all, one and a quarter grains. This was at 9 P. M. The pain and the patient became quiet. Sometime between three and four in the morning her friends were aroused by the strange breathing, and endeavored to wake her but without doing so. I was called and found the usual coma, contracted pupils, irregular and interrupted breathing, full pulse, skin pale and covered with cold perspiration. Every attempt to rouse her failed, such as dashing on water, slapping with a wet towel; and the galvanic current was ineffectual. These only started the respiration, which relieved for a minute or two the cyanosis, which was beginning to creep over the face.

A messenger was sent for tablets of atropine. While waiting for his return the respiration became more interrupted and reduced to five or six per minute, the pulse becoming slow and feeble. The rousing-up process was continued and artificial respiration was resorted to. Soon the atropine came, and one-fiftieth of a grain was injected into the arm, hot bottles were put to the feet and warm blankets over the body, artificial respiration kept up for fifteen minutes, when the dose was repeated in the other arm. In five minutes more the pupils began to open, and the breathing became a little more voluntary, warmth returned to the surface, and the pulse improved. In thirty minutes another injection of one-fiftieth of a grain was given. The pupils dilated very fully, respiration and pulse became regular and about normal, but the profound stupor remained; it was impossible to bring her to any consciousness. No other alarming symptoms being present this was deemed not to be dangerous, and no further attempt was made either to medicate or wake her up.

The sleep was a deep, quiet one; the patient was kept under observation and spoken to or the hand raised occasionally until about the next evening, she made some response. The urine was drawn off and she gradually came to consciousness. There was no ill feeling or nausea; in a little time the lassitude passed off and the patient was well.

In a case previous to this I was called in consultation where it was estimated the patient had taken four grains of morphine and a fifth of a grain of atropine. When called, the narcotics had been taken four or five hours.

The person was entirely unconscious and did not rouse in the least under any means used, the breathing and pulse a little accelerated, the temperature a little above normal, skin moist, pupils dilated. She appeared much like one profoundly under the influence of an anæsthetic. I advised letting her entirely alone waiting until the effects passed off. This was done and the stupor continued until the next day or as many as thirty hours. Consciousness then returned with no particular bad feeling following.

Another case in practice was from another source. At five o'clock in the afternoon I was called to see a lady of forty, rather of full habit, but of nervous temperament. Found her with flushed face and full pulse, in a half somnolent condi-

tion, moaning in an incoherant manner and occasionally screaming as if in intense pain, temperature normal. She had been in apparent health in the morning. It seemed to be a case of hysterics or violent neuralgia. I gave a hypodermic injection of ¼ gr. morphine. I subsequently learned she had taken a drachm of tr. opii a little while before.

The moaning ceased in a few minutes, a deep sleep followed, which soon passed into coma, from which it was impossible to rouse her. The respiration became peculiar (a shallow catch) which was reduced to six per minute, the skin was of natural color, the pulse full but weak, the temperature fell to 96°, anæthesia was complete.

On the floor beside the bed I discovered a bottle which had in it a few drops of a solution of chloral. The inference at once was that it was a case of over-dose of that drug though the symptoms were different from other cases I had seen.

Chloral acts promptly, in medicinal doses, as a hypnotic, where there is no pain. In severe pain it produces stupefaction but not sleep, even in large doses. The injection of morphine had quieted the pain and irritation and the large amount of chloral produced its anæsthetic effect. The shallow, catching, slow breathing, is not characteristic of chloral. I have seen it in one other case of chloral and morphine poisoning. Chloral alone gives a weak heart, but a soft shallow respiration and diminished temperature. Chloral and alcohol have other features, deep unconscious sleep, normal temperature, redness of the skin, temperature natural or above, pupils in either case slightly dilated, eyes watery. A large amount of chloral may not produce sleep; if pain is present, add to it a small dose of morphine and the sleep is precipitated and coma and anæsthesia.

At 6 P. M., my patient was in the condition described. I gave hypodermically $\frac{1}{60}$ grain of atropine. In about fifteen minutes this was repeated. The respiration soon became deeper and more frequent. I counted six, eight, ten per minute up to fourteen. I waited half an hour and gave another $\frac{1}{60}$ gr. Not long after this the respirations became nearly normal, the circulation steady, the pupils dilated, but the anæsthesia and sleep continued. A quantity of urine was drawn off, and she was allowed to rest, which continued until ten or eleven the next evening when she gradually woke up and came out of the stupor, not feeling very bad in any way. I then learned she had taken, from morning until the time I saw her, the vial three times full, each containing a solution of three drachms; and then a teaspoonful of tr. opii and my injection of ¼ grain morphine.

In another case four drachms of chloral were taken at once. The sleep was profound, the pulse slow and weak, the respirations regular but shallow, the temperature reduced. The person could not be roused and after four or five hours seemed sinking. A hypodermic injection of atropine was given (gr. $\frac{1}{60}$) this roused up the breathing and the heart, but the stupor continued twenty-four hours.

For the converse I have had few cases of atropine poisoning. A lady took three grain pills of extract of belladonna, by mistake for some cathartic pills. Dryness of the throat followed, giddiness and wild delirium, increased circulation, the scarlet rash, and severe pain in the stomach. Having some powders of morphine at hand she took four of them in three hours (over a grain). The pupils were widely dilated when I was called, the delirium was passing off, but the hallucination continued, especially if she opened her eyes. She was crouching in a dark closet with her best bonnet and cloak on, and for the rest her underclothes. She passed her urine freely. Half a grain of morphine was given and she fell into a quiet sleep, which continued until the next morning.

I was called about noon to see a little boy of four who had been suddenly attacked with some strange malady. He was hilarious then, covered with rash, his pupils widely dilated, he had some symptoms of spasms. The temperature was not high and the appearance of the eyes led me to suspect it was not scarlatina. I inquired what could the child have eaten. The mother recollected that a few days before some of the older ones had brought in from the alley two or three of the spring heads of "jimson weed" (*datura stramonium*). In the morning she had found the children playing with them and many seeds scattered on the floor. An emetic of ipecac was given, which brought up with the contents of the stomach numbers of the black seeds. The emetic was repeated and followed by a quarter grain of morphine, which produced quiet and a

long sleep out of which he awoke all right.

The elimination of these drugs is mainly by the kidneys, morphine slowly, atropine and chloral more readily. Their influence does not pass away until they have passed out. If the respiration and circulation become regular and sufficient the stupor may be disregarded; like an anæsthesia, it may continue with safety for an indefinite length of time. When the one drug is given to antidote the other the unconsciousness will be prolonged without danger. Sensation may be abolished but the functions of animal life continue unimpaired.

It may be difficult to determine the equivalent amount of either drug. If we put the ordinary dose of morphine at ⅛ grain we may give $\frac{1}{200}$ grain atropine. If four grains of morphine have been taken up we may give ½ grains of atropine; not all at once but up to that if necessary. Of atropine to chloral or that and morphine it could hardly be stated. When called to a case of poisoning with either of them the quantity injected is usually unknown. The judgment of the practitioner must determine the quantity required for the antidote. Begin with twice the medicinal dose and repeat at intervals, long enough for a proper effect to be observed. If it is for opium inject from $\frac{1}{100}$ to $\frac{1}{50}$ grain of atropine and repeat in fifteen or thirty minutes. The pupils will dilate and the respiration become regular, then let the case rest. If it is belladonna give morphine in ¼ gr. doses until the delirium is quieted and the symptoms improve. Give atropine in the same way for chloral. Atropine dilates and opium contracts pupil and dries up the perspiration; this serves as a guide in opium poisoning. Morphine will not contract the pupil dilated by atropine.

I have had no experience with many of the other alkaloidal poisons or with the phenol series. I feel very certain of success with the three mentioned; with the others I would experiment. Alcohol and chloral are the antidote for strychnia. Atropia might be tried with a probability of success in antipyrine or its kindred substances in the cyanosed state.

Since our toxicologies were written we have added a large series of soluble alkaloids and a new way of introducing them. We have only begun to understand the possibilities of hypodermic medication.

Not to forget the little girl's prescription of coffee. There seems to me not the remotest reason for giving coffee in opium poisoning except where an emetic has acted, it may be grateful to the stomach and stimulate the brain somewhat. Caffeine is a depressant to the heart and respiration, acting rather to increase than decrease the bad effect of the opium. It is said to produce death by depressing respiration. Coffee is a weaker sister of tobacco and produces the soothing, tranquilizing feeling in the same way that nicotine does. It is a diuretic and depressant.

TREATMENT OF DIPHTHERIA.

By C. C. MOORE, M. D.,
PHILADELPHIA.

In observing the death reports one cannot fail to notice the large number of deaths caused by this dreaded and alarming disease. This is proof positive that something is still wanting in the treatment; and any doctor that is apparently having success should report his plan of treatment.

I have either had a class of mild, favorable cases or my treatment is more successful than the majority of practitioners, if the Health Board statistics are worth their keeping. When I speak of diphtheria, I mean that contagious disease due to the specific poison: germ micrococcus diphthereticus and not any pseudo-membranous formation in the throat any place from tonsils to larynx, and due to some exposure or disregard of the laws of hygiene. Though follicular tonsillitis may resemble diphtheria in the beginning, it is never fatal and recovery begins in a few days. Some will object to the name follicular tonsillitis, but I think it names and describes this disease of the tonsils better than any other I have seen used. Membranous laryngitis or croup is very similar in appearance, but is due as I believe to an entirely different cause. The onset of diphtheria is sudden and alarming and the family or neighbors have it named before the doctor arrives, and great care will be required or a mistaken diagnosis will be made. We have no specific cure yet and diphtheria must be treated symptomatically. But we must throw away the old rule of treating symptoms as they arrive, and anticipate the symptoms, treating them before they arrive, or recognize them

and treat them before they rise very high, for right here will determine success or failure. The most pronounced and alarming symptom will be the inflamed and swollen tonsils, the inflammation soon extending to larynx and nares, interfering with respiration, preventing perfect oxidation of the blood and through this making a perfect field for the poison germs to multiply. Next to this is the fever which indicates the active chemical change caused by the amount of poison absorbed or the susceptibility of the patient to this particular kind of poison. The fever of itself is scarcely ever dangerous though I believe it proper to try to control it, and thus save the strength to tide over what would otherwise be a fatal case. It will also relieve a great deal of suffering.

After I decide it is true diphtheria I use the following:

℞ Tr. ferri chlor .....f℥iss.
Acidi. acetici dil. .....f℥iss.
Syr. limonis q. s. ad.....f℥ii.
M. Sig. f℥i. in aqua f℥i. Gargle; some may be swallowed and some spit out.

If the child is too young to gargle use a small brush and swab the throat thoroughly, then let the child have about two teaspoonfuls to swallow. The iron has an astringent effect on any inflammation of throat and mouth or mucous membrane; besides I believe it has some effect on the blood to modify the disease. The acetic acid has also a beneficial effect on the swollen mucous membrane of throat. The syrup of lemon is an excellent vehicle. You may use wine of cocoa, but it does not make as nice a mixture though the cocaine may exert some of its anæsthetic properties locally. The water you dilute with should be as hot as can be tolerated. A cathartic should be used to produce two or three stools daily; nothing serves this purpose so well as the following:

℞ Ext. cl. mit. [illegible].....grs. ii.
Sodii et pot. tart.....ʒi.
Sacch. alb.....ʒi.
M. ft. Chart. No. xii.
Sig. One every two to four hours as required.

This will prevent any of the membrane that has been swallowed from remaining in the alimentary canal.

If fever is sufficient to weaken and cause restlessness, then follow in the afternoon and night, to relieve and give quiet rest:

℞ Acetanalid .....grs. xii.
Morph. sulph.....gr. i.
Sacch. alb.....gr. i.
M. et ft. Chart No. xii.
Sig. One every three hours if needed. The dose to be varied to suit the age and strength of the patient.

The acetanalid is to reduce fever, the morph. sulph. to get rest, and I think it also helps to reduce temperature. If the nares become involved, the following for insufflation will be beneficial:

℞ Sulphur.....
Iodoform.....
Bismuth subnitratii.....
āā ʒi.
M. Sig. Use with powder-blower in mouth and throat.

I believe all of these powders have a germacidal effect and also will help to remove any accumulation in the nose and throat. If the secretion accumulates in nose use a flexible wire probe and cover the end with absorbing cotton and swab out the nostrils until clear of any membrane. If the nose and lips become excoriated from the discharge, use a few drops of fluid cosmoline in the nose. This two or three times daily gives great relief.

I have used these prescriptions in a number of cases and so much confidence have I in them that I almost consider them specific, along with careful attention to the condition of the room, which should be kept of an even temperature of 75° F. This is warmer than proper for most patients, but I believe that in inflammations of respiratory tract the patients should be in a warm room; also, if room can be moistened with steam it will be of great advantage, but at same time do not forget to secure perfect ventilation.

For food, the most nourishing will be required, usually it should be liquid; rich, pure, unskimmed milk is first on the list. Skimmed milk is useless for every purpose. Next is the beef tea which so many physicians condemn, but when milk is refused or does not agree the tea will do well. You may change this for soups and broths. Take at regular intervals and be careful to not over-feed. Well-baked bread or crackers may be used also. If the strength begins to fail use stimulants, either whisky or brandy, and quite freely, which will often tide over the crisis.

I have followed this course in a number of cases and thus far successful in all but one and that one did well until the kidneys became involved and he died from acute parenchymatous nephritis. I will speak of after-treatment, which should be care from exposure to changeable weather, and to over indulgence in food. Most cases will be benefited with tonics for a while and the iron salts will be preferable. The most common and troublesome se-

quelæ will be abscesses of the middle ear, and this should always receive prompt and careful attention. The attendant should be always cautioned to watch for symptoms of ear-ache. Too often the little one will cry for days and the nurse will chastise it for being cross and spoiled after its former sick-spell when the child will be relieved by a discharge from the ear. The family will think because they can not see the abscess it does not need attention. Some even claim it to be a sign of health. Paresis and albuminuria are the two next common results and when the child does not begin to gain flesh after this disease, local paralysis and nephritis should be examined for.

I will finish this paper with a report of two cases I saw the same day, one of which was the only fatal case from diphtheria I ever had, and this was due to the after-following nephritis:

12–14–'91, S. A., æt 5 years, white.—A very delicate looking child. The first visit found the child with all of the cerebro-spinal symptoms of La Grippe of '91 and '92. Temp. 101°, pulse 110. Some discharge from nose, pale, anæmia, no patches in throat though I looked carefully for diphtheria, as there were several cases reported in the neighborhood. The tonsillar arches and pharynx were swollen and red. The following:

℞ Hydrarg. chlor. mit.....gr. ii.
Sodii et pot. tart.....5i.
M. ft. Chart. No. xii. Sig.—One every hour until catharsis.

I used the sulphur locally in powder, because I felt suspicious of what followed and thought it would assist the calomel in its action, fluid cosmoline to be dropped in the nose with an eye dropper.

12–15–'91, It is a plain case of diphtheria with typical patches on tonsils developed since yesterday. (I must not forget to mention the child had just recovered from a severe attack of measles. The rash had left him about seven days.) Temperature 103°. pulse 120, respiration 30; very sick looking. He was isolated to an upper room and the following:

℞ Tr. ferri chlor.....f 5i.
Acidi acetici dil.....f 5i.
Vini cocæ.....q. s. ad. f 5 ii.
M. Sig.—f5i in aqua f5i. Swab the throat every four hours and give f5ii of the dilution to swallow.

℞ Spr. frumenti.....f5i.
Every two hours, using plenty of water with it.

The powders from previous day had acted kindly, and were continued.

12–16–'91. Abnormal conditions increased from yesterday, but nothing alarming. The anterior cervical glands were very much swollen and tender. To take the place of first powders the following was prescribed.

℞ Sulphur.....
Iodoform..... āā 5i.
Bismuth subnitratii.....
M. Sig.—To be used in powder blower, and nose and throat covered with it.

12–17, Glands on each side of neck more swollen; left side most. Temperature and pulse same; very restless.

12–18, Doing tolerably well. Took more nourishment.

12–19, Temperature 101°, pulse 130. Croupy cough indicating œdema of rima-glottidis; respirations 46. 10 A, M: thought this would be a fatal case and told the parents so. 12 M. ℞. H_2O_2 locally, full strength of Chas. Marchand's, cleared all false membrane and respirations improved. I stopped the former gargle and used H_2O_2 at 3 P. M. took some nourishment and slept, but breathing very hard. Muscles of chest working as in true croup. Child held his own for remainder of day by using H_2O_2 when any membrane loosened.

12–20. Weakening, and breathing extremely difficult. Medicine as day before.

12–21. Patient failing in every way.

At 8 A. M. respiration 44, pulse 130; at noon, respiration 48, pulse 136; at 3 P. M., respiration 56, pulse almost imperceptible. The case was getting desperate. I promptly went for one of S. S. White's oxygen apparatuses, 40-gallon capacity, and at 5.30 P. M. commenced to give him a constant stream of pure oxygen. He was very much cyanosed, respiration 56, and very difficult. The oxygen was half wasted, but patient too weak to resist and I passed the tube of inhaler well back in pharynx. The constant stream from cistern of oxygen soon supplied the deficiency and the blue color began to clear up and breathing was improved. For fifteen minutes this was continued, when respirations were 44 and the child was able to cough and raised a mouthful of muco purulent membrane, From that time on he improved and at 10 P. M. was resting; color better; respiration 36, easy, and quite natural; pulse 108, and perceptible at wrist. Had calomel to-day and bowels moved freely but very painful micturition; gave the oxygen for five minutes and he

took it kindly. This increased his strength and more phlegm was expectorated.

12–22. Doing well; took nourishment and was urinating better, but no albumen. From this on he made slow recovery.

12–27. Eating well and he got the following:

℞ Elixir phos. ferri. quin. et strych.
Sig. f3i. Four times daily.

In this case I had to deviate from my routine treatment, but this digression I described in full. He got water and whisky all of the time, some days a little beer was given. One favorable symptom throughout was the temperature, which never was above 103° and he got no antipyretic.

1–14'–92. Doing well in every way.

With my other patient I was not so successful, but will give the history, as so many report their successes but not their failures, and this is my only death directly or indirectly from diphtheria. I was called the same day as my first case called me, and the two were cared for at same time.

12–14–'91. C. C., æt 6, white. A pale strumous child of not very healthy parents. I saw the child four months previous. He then had hypertrophied tonsils and a chronic naso-pharyngitis, for which I treated him once and told the mother that diphtheria would almost certainly be fatal with him. She only brought the boy once as he did well and would not submit to having the tonsils removed as they should have been and as she was advised.

When I examined the child I found the temperature, 103°; pulse, 110, weak and compressible, and a very sick appearance from a well developed diphtheria. He had been seen the day before by a drug-store doctor, who pronounced it a sore throat and gave a fever mixture and some ointment for enlarged glands on both anterior cervical chains. I do not approve of any rubbing for these enlarged glands of diptheria, as I believe the poison is readily scattered throughout the system. No symptoms alarming, but the strumous constipation. He was ordered a hot bath and put to bed. Ordered fld. cosmoline for excoriated nostrils and

℞ Hydrarg chlor. mit.....gr. ii.
Sulphur .....3i.
M. et ft. Chart. No. xii. Sig.—One every three hours.

To be taken dry that it might lodge in throat, and also, after passing further, increase action of bowels, for this was necessary.

12–15–'92.—Medicine acted well; temperature, 101½°

12–16–'92.—Doing well; taking liquid nourishment. Temperature and pulse as usual.

℞ Tr. ferri chlor.....f 3 i.
Acidi acetici dit.....f 3 i.
Syr. limonis.....q. s. ad. f3ii.
M. Sig.—f3i in aqua f3i. Gargle.

This boy could gargle quite well.

12-17.—About as usual.

℞ Sulphur,
Iodoformi āā3i
M. Sig.—Use locally with powder-blower.

12-19.—Doing well apparently, R H_2O_2, locally removed all necrotic tissue.

12-20.—No bad symptoms, the diphtheretic patches had all disappeared and the tonsils were sloughing out, a process I thought rather favorable. He had a hoarse, croupy cough.

12-21.—Appetite failing, also strength. The tonsils were kept clear of pus and sloughs.

12-23.—No fever, pulse normal but very feeble.

12-24.—Bowels not acting.

℞ Magnesii citratis solution.....
Sig. f3i every hour.

I was suspicious of kidney trouble for quantity of urine was small and stomach was turned against food.

12-25.—Doing well; medicine from day before had acted well.

12-26. Throat very red again; slough removed from tonsils.

12-29.—Same for three days, urine examined and found half albumen as it settled after boiling. At this stage I thought a tonic was needed and ordered f3i of Syr. Hypophosphites comp., every four hours and all other medicines stopped. Tried to get him to take skim milk for a few days but the stomach refused it, my usual result from this exclusive diet. Was given a hot bath that brought out a very nice perspiration.

12-30.—About the same. The skin was moist.

12-31.—Face and feet œdematous for the first, and a fatal prognosis given the family.

1-1-'92.—Urine full of albumen, hot baths did well.

1-2-'92.—Taking food, better.

1-3-'92.—Same as last few days but refusing food.

1-4-'92.—Same but weakening.

1-5-'92.—Not so well, painful micturition and ammoniacal odor quite perceptible.

1-6-'92—Failing, odor increasing, urine boiled thick like white of egg.

1-7-'92.—Very weak at 10 A. M., stomach refusing food and medicine, and kidneys not acting at all. Ordered Bassham's mixture, which the stomach promptly ejected. He failed rapidly and died at 10 P. M. No autopsy allowed. I do not know if he had albumen in urine before diphtheria or not. The long continued sloughing of tonsils should have been prevented by having them removed long before taking sick. I might have tried pilocarpine when the kidneys began to fail, but do not think any good would have come from it. These are the only two cases where I deviated from my usual routine treatment and this was to try to avoid symptoms that arose.

PUERPERAL PERITONITIS TREATED BY HYSTERECTOMY.

The *Archives of Gynecology, Obstetrics and Pediatrics*, March, 1892, contains an abstract of a case reported by Dr. A Lapthorn Smith (*American Journal of Obstetrics*), in which a partially retained placenta gave rise to peritonitis, preceded by a chill and temperature of 104° on the third day. The symptoms were urgent, and palliative treatment gave only temporary relief. On the fifth day abdominal section was performed and the uterus removed, the stump being drawn into the lower angle of the abdominal wound and covered with boracic acid. No drainage was employed; the stump turned black on the twelfth day; the temperature fell from 105° before the operation to normal on the fourth day, and the convalescence was uneventful. The following conclusions are drawn:

In confinement cases the temperature should be taken daily, and if there be any fever, vaginal douches of permanganate solution should be given; if the temperature does not speedily fall after such measure, the douche should be made intrauterine.

If there is no improvement in a day, curette, irrigate and apply tincture of iodine to the cavity of uterus.

If these measures fail and peritonitis develops, perform an exploratory incision, and if there is no other evident source of infection, remove the uterus.—*Univ. Med. Mag.*

Society Reports.

THE CLINICAL SOCIETY, OF LOUISVILLE.

Stated meeting, May 24, 1892.

Dr. I. N. Bloom, Vice-President, in the Chair.

GUN-SHOT WOUND OF KIDNEY.

Dr. W. C. Dugan: I have a specimen of gun-shot wound of the kidney, that I would like to exhibit. The organ was removed fourteen hours before death. Last Saturday night I was called by telephone to the City Hospital to see a man that had been shot. I requested the House Surgeon to ascertain the condition of the patient, and he said the man was in fairly good condition, having walked up to the ward. I asked him to go back and ascertain, if possible, if he had been shot through into the cavity, and whether there was great loss of blood. He again telephoned in about twenty minutes, reporting that the patient was growing rapidly worse, pulse becoming rapid and feeble. I hastened to the hospital and made an examination; found the patient almost pulseless, complaining of thirst, and had every evidence of great loss of blood. On examination it was found that the ball had entered just between the eighth and ninth costal cartilages. Of course from the range of the ball, the liver could hardly have escaped. The abdomen was opened and a large amount of coagulated blood removed, and it was found that the patient was still bleeding. I then examined the liver and found that the ball entered its lower surface posterior to the transverse fissure, and, on further examination, it was found that the kidney was wounded. The location of wound of liver placed it beyond surgical procedure. The kidney was lifted up and was found to be bleeding freely, and I will state the ball passed through it near the pelvis necessarily wounding large vessels. We decided to do a nephrotomy, so ligated the vessels and removed the organ, all being done in a few minutes. The patient died of shock in fourteen hours. Post-mortem showed that there was no hæmorrhage after the operation. I deeply regret that we neglected to practice transfusion.

Dr. W. O. Roberts: I would like to ask Dr. Dugan how long after the man was shot before operation was performed, if there was any intestinal wound, and, whether or not there was any bloody urine.

Dr. W. C. Dugan: I saw the patient about two hours after he received the shot. There were no intestinal wounds. The nurse told me that there was blood in the urine the following morning.

Dr. W. O. Roberts: Dr. Dugan did, in my opinion, just exactly what ought to have been done, under the circumstances.

OPERATION FOR CONGENITAL PTOSIS.

Dr. T. Evans: I wish this evening to exhibit a case upon which I operated two years ago. This child was brought to my office in May 1890, the subject of congenital ptosis. There was entire absence of the levator palpebra muscle, with great flattening of the ossa nasi and well marked epicanthus. In order to look at objects even a little below the horizontal meridian, she had to throw the head backward, distort the face by tension of the orbiculars oris, zygomatici and other facial muscles in her efforts to widen the palpebral commissure; depressing the occipito-frontalis scarcely made an impression on the superior lid. The movements of the globe were normal, and the vision was apparently perfect. As the father was accordingly anxious to have something done, I decided to perform what is known as Pauvs' operation, which was done by making an incision from one canthus to the other, interrupted in its middle for about one-third of an inch; this incision followed the furrow of division between the tarsal cartilage and the orbital portion of the eyelid. A horizontal incision with a slight convexity upward and about three-quarters of an inch in length was then made, just over the orbital margin, passing down to the periosteum. Then, by two short vertical incisions through the integument, this incision was joined to the first incision at the border of the tarsus. Still another horizontal incision was made along the upper border of the eyebrow, deep enough to extend to the periosteum, and about an inch in length; then, the little peninsula of skin marked out by the middle, lower and vertical incisions was dissected from the tarsus down almost to its ciliary margin. Then the bridge between the two horizontal incisions was undermined and the peninsula of skin from the lid passed under the brow and securely stitched to the superior lip of the upper incision. I operated on one eye at a time, with interval of about one week between the operations. The wounds were dressed with collodion and iodoform without bandages. The object of the operation is to have the occipito-frontalis assume, as far as possible, the function of the missing levator palpebra muscle, without interfering with the closing of the lids. She has, as you see, pretty good control of the upper lid by the action of the occipito-frontalis, and no longer distorts the face in her efforts to depress the inferior lid.

She has been in school for the past year, and has no trouble in keeping up with her classes. The only disfigurement from the rather extensive operation is the small pit under the brow, where the slit of integument was passed through. A few hairs persistently grow from this opening. This is the only case in which I have attempted this operation, in fact, the only time I have ever seen it performed. While the result has not been perfect so far as correcting the deformity is concerned, the improvement has been so marked as to regard this as the most rational and the successful of the various operations that have been devised for the relief of this peculiar, and distressing deformity. If I have occasion to again perform this operation, I should modify it by making my superior or horizontal incision higher and nearer to the meidan line, and, also, make the dissection and insertion of the flap nearer the median line, thereby getting a closer connection between the superior lid and the more athletic portion of the occipito-frontalis muscle. I should also be more careful in removing the hair bulbs from the end of the flap before passing it under the brow. For the epicanthus I followed Arlt's method of excising a triangular piece of the fold on either side of the nose. The epicanthus and flattening of the nose generally disappear to some extent as the child develops. In this case there has been very considerable development of the parts since she has been under my observation.

I regret that I did not secure a photograph of the case before the operation, but the deformity was so great that the par-

ents very naturally objected to having it photographed.

Dr. J. W. Irwin: The case is a very interesting one, but Dr. Evans' prognosis as to the ultimate use of the eye, is not quite as favorable as a case I have in mind.

Two years ago, a patient of mine, a young man, fifteen years of age, had congenital ptosis of one eye. He could scarcely open the lids at all; could see the ground and nothing more.

He was operated upon by Dr. J. H. Ray two years ago. The operation he performed was cutting through the skin down to the tarsal cartilage, then transfixing the lower flap with a silk ligature, and carrying the ligature up subcutaneously, and bringing it out at the insertion of the tendon of the occipito-frontalis muscle, just above the eyebrow. The sutures were allowed to remain until they cut their way out, with the effect of producing a very marked immediate result. The line of the cicatrix seemed to be buried; that is, so the upper flap came down over the top of the lower one a little, the lower was very much shorter than the one made by Dr. Evans.

The union, in that case, to the occipito-frontalis seemed to be very perfect, and the immediate result everything that one would expect, but within the last two years, that result has improved. The patient can now see straight before him.

Dr. S. G. Dabney: I have never seen the operation referred to performed, and have had only one case where I advised such an operation, and, in that case, the family decided to postpone it until the child became older. The paper read by Dr. Evans is very interesting, and we can all see the benefits the child has received from the operation performed. I think there will be still further improvement as the child grows older.

Dr. T. C. Evans: I will say that the child has improved steadily since the operation. One reason for doing the operation early was that she was absolutely unable to go to school. I think by the time she is twelve or thirteen years old, the epicanthus will have almost entirely disappeared, and the development of the nasal and frontal bones, will still further lessen the deformity.

A CASE OF ABDOMINAL TUMOR.

Dr. W. R. Wathen: I will report a case upon which I operated recently:

Miss P., Ashland, Ky., aged twenty-six years; has been stout until six months ago; then had a feeling of weight and some pain on the left side of the abdomen, and detected a small enlargement. She thinks the enlargement began just below the short ribs, but her physician afterward examined her and thought it began lower down. It gradually increased and she began to lose flesh rapidly; but at no time had any fever, nor was there any disturbance of the function of the kidney or any abdominal viscera.

For three months the tumor could be traced from the short ribs to the pelvis, and the left buttock was enlarged to twice the size of the right. The uterus was retroverted and the tubes and ovaries were bound down by adhesions, but the tumor could be felt through the vagina. It was nearly immovable, and by palpation and percussion the outlines showed that it extended from under the ribs to the pelvis, and within one inch of the mesial line. It caused lateral bulging of the abdomen, was apparently cystic, but percussion in front of the anterior superior spinous process of the ilium did not exclude the possibility of an intervening bowel. A laparotomy was done at Ashland, May 8, 1892. As it was impossible to tell the nature and conditions of the tumor, and its relation to the bowels or other abdominal structures without an exploratory incision, the abdomen was opened in the mesial line; the adhesions of the tubes and ovaries were separated and the uterus lifted out of the sacral cavity. The tumor was extra-peritoneal and the wall protecting it from the peritoneal cavity was thick and extensively adherent to the omentum. It extended from a little below the peritoneal line in the pelvis to above the kidney, but that organ was not involved. Posteriorly it extended to the spinal column, and anteriorly to midway between the iliac bone and the mesial line. The abdominal wound was closed and a vertical incision two inches in length was made an inch in in front of the anterior superior iliac spinous process. A half gallon of inodorous, thin, milky-looking liquid was discharged, the nature of which it was not possible to tell without a microscopical examination, which could not conveniently be done. The cavity extended further than the finger could reach below and above. There were some connecting bands which were broken, but the general con-

ditions were not such as are usually found in a pus cavity. It was evidently some kind of extra-peritoneal cyst, the cause and nature of which I do not know. The cavity was thoroughly irrigated with a bi-chloride of mercury solution, and some matter the appearance of brain substance washed out. The gum drainage tubes were sutured in the angles of the wound, one dipping to the bottom of the sac and the other going up to the kidney. The cavity was irrigated twice daily with the mercury solution, but only a little drainage except the liquid injected was noticed, and there was no pus. After a few days there was no discharge, and the water injected came away clear. The cavity is contracting rapidly, and will probably soon be obliterated and the wound closed. The operation was followed by no untoward symptoms; her pulse and temperature remaining about normal. The bowels moved freely in forty-eight hours without medicine, and each day since. She ate heartily after this, and is gaining flesh and strength.

Dr. W. C. Dugan: There are two peculiar features in regard to Dr. Wathen's case: first, the inability to feel the tumor from the vagina; and second, the œdema on the left buttock. I recall a case very much like this, presented by Dr. Prudden to the Pathological Society of New York City about seven years ago. It was a post mortem tumor.

Dr. W. H. Wathen: I had never seen the case until about an hour before the operation; in interrogating the lady and her physician as to the history, I could find no evidence of any kidney complication, or disturbance of any organ of the body. In answer to the inquiry of Dr. Dugan as to the inability to feel the tumor through the vagina, would state that the tumor may have extended a little below the rim of the pelvis; she was a large woman, pelvis very deep; cannot state positively whether it did or did not, but the œdema on the left buttock was evidently the result of pressure of this accumulation interfering with the circulation. I did not see the patient after the operation, but left my nurse with her for a week, and she explained upon her return that within two or three days there was practically no œdema on the buttock, and she was positive these was nothing in the liquid discharged after I left the case that indicated pus, being at the second day almost clear, and after two or three days the dressings were hardly soiled, and when water was injected through the tube, it came away just as it went in. I know nothing about the pathology of this cystic accumulation, and had no way of saving any of it so as to have a miscroscopical and chemical examination made. Had the operation been done here, I should have saved some of the material and had a carful examination made. There was no odor whatever.

Dr. T. Satterwhite: I would like to ask Dr. Wathen how long the bi-chloride injection was used, and at what strength.

Dr. W H. Wathen: It was used several days, and at a strength of 1/5000.

FRACTURE OF ANTERIOR SUPERIOR PROCESS OF ILIUM.

Dr. W. O. Roberts: One week ago last Friday, I was called to see a patient about nineteen years of age, whom I found lying on the floor with his right leg extended and rigid, and seemed to be suffering a great deal of pain. The history of the case, as related by bystanders, was that this boy while running a foot race was suddenly caught with his leg backward, and could not move it. He called for assistance and was carried into a neighboring house where I saw him. He was put under the influence of chloroform so a thorough examination could be made, and I found a fracture of the anterior spinous process of the ilium. This is a very unusual case and I never heard of a fracture in this locality caused by muscular contraction, which must have been the case in this patient. The only two muscles going to the limb from this special point are the tensor vaginæ femoris, and the sartorius,

Dr. T. C. Evans: I would like to ask the size of the fractured piece that was pulled away.

Dr. W. O. Roberts: About the size of your thumb.

RECURRING APPENDICITIS.

Dr. W. C. Dugan: A gentleman about twenty seven years of age came to me from Indiana to-day, with a history of colicky pains for fourteen years. He is confined to his bed about once or twice a month for two or three days. He is in pretty fair condition, and able to work some of the time, but always complains of pain in his right iliac region. There is little, if any, en-

largement. I made diagnosis of appendicitis (recurring) and want to know if this is a case in which an operation is called for. I am inclined to think it is, and have advised the patient to have it done without delay. It is especially important that this be attended to for these cases all sooner or later terminate in perforation, and this man lives many miles from a surgeon. If he lived in a city it would be much less urgent, for, if perforation, should occur, he could summon his surgeon at once, but not so as he is located far in the country.

DR. J. G. CECIL: It seems to me that the case is old enough to demand an operation, and I think Dr. Dugan would be justified in making a thorough examination.

DR. L. MCMURTRY: From Dr. Dugan's brief account, the indications are that he has a case of recurring appendicitis, and I think the case is one that can only be cured by the radical operation. The history of these cases is that they eventually end in perforation. If let alone, no one can tell whether the next attack will be the perforative attack, and an operation is much safer now than it will be at any time in the future.

DR. W. O. ROBERTS: I think this is a case where an exploratory operation should be made; there would be comparatively little risk in this, and if appendicitis is found to be the trouble, of course, it will never get well until an operation is performed.

DR. W. H. WATHEN: An exploratory operation made in the median line would be attended with but little danger, and I think Dr. Dugan would be justified in making it, if he did nothing further than to detect disease of some internal organ, whether it be removed or not. Then, if the appendix is diseased, and is found to be bound down by adhesions, it could be taken care of. I should make an incision, not over the appendix, but midway between the umbilicus and the pubes.

DR. W. C. DUGAN: I do not agree with Dr. Wathen in regard to the location of the incision. I would prefer the right iliac region, as the trouble seems to be located in that locality. An incision could be made long enough to explore the right side of the cavity to ascertain whether the trouble was appendicitis or not, and if that should be found in a normal condition the entire cavity could be examined through the same incision.

Selected Formulæ.

ULCERATED CHILBLAINS.

Dr. Brogg recommends for ulcerated chilblains:

℞ Acid. carbol.....*m* xv.
Ung. plumbi.....3 v.
Lanolini.....3 v.
Ol. amyg. dulc.....3 ss.
Ol. lavand.....gtt. xx.
M. S.: Apply two or three times daily.

ECZEMA OF THE VULVA.

Dr. Lusch (*La Médecine Moderne*, 1891; *Le Progrès médicale*, January 2, 1892) speaks highly of the following lotion:

℞ Bicarbonate of soda.....gms. 8 (3ij).
Bicarbonate of potash.....gms. 4 (3j).
Neutral glycerine.....gms. 6 (3jss).
Tincture of opium.....gms. 8 (3ij).
Water.....gms. 250 (fl. 3viij).
Apply mornings and evenings.

After applying dust on:

℞ Powdered starch.....98 parts.
Powdered camphor..... 2 parts.

CARE OF THE TEETH IN DIABETES.

Dr. Dujardin-Beaumetz says diabetics should care for their teeth and gums with the utmost attention. The following formula for a dentifrice has given him the best results. It is to be diluted one-half at time of using, and should be used twice daily:

℞ Acid. boric.....25 grammes.
Acid. phenic..... 1 gramme.
Thymol. .. ..0.25 centigramme.
Aquæ..... 1 litre.

To this is to be added:

℞ Essence menth.....gtt. x.
Tinct. anisi.....10 grammes.
Cochineal.....q. s. to color.
Alcohol.....100 grammes.

HEADACHE.

In neuralgia cephalagia, and in the early stage of la grippe, when the patient complains of pains and aches from head to foot, the following has answered admirably. It also causes a reduction of temperature in la grippe:

℞ Quininæ sulph.....gr. ix.
Antipyrine.....gr. xviij.
Ext. hyoscyami..... gr. iij.
M. Ft. capsul. No. vj. Sig.—One capsule every two or three hours.

HEMICRANIA.

Dr. Schultins (*Centralblatt für d. ges. Therapie*, No. 12, 1891; *Lo Sperimentale*, No. 23, 1891) gives the following in migraine:

℞ Phenacetin..... .....dgms. 3.
Sodio-salicylate of caffein.....mgms. 15.
Muriate of quinine.....dgms. 2.
Muriate of morphine..... .....mgms. 5.
Semarine.....mgms. 1.
Butter of cacao, q. s.
Sufficient for one capsule. Make thirty such capsules.

THE TREATMENT OF WHOOPING-COUGH.

According to the *Bulletin Générale de Thérapeutique*, Galvagno has employed antipyrin combined with resorcin in the following formulæ in the treatment of whooping-cough in children:

℞ Distilled water.....f ʒ iiiss.
Resorcin.
Antipyrin.....āā gr. xv.
Hydrochloric acid.....gtt. x.
Syrup.....f ʒ i.

Or,

℞ Syrup of acacia.....f ʒ iiiss.
Resorcin.
Antipyrin.....āā gr. xv.
Syrup.....f ʒ i.

Sig.—Of this, 3 to 5 dessertspoonfuls are given each day.

Under this treatment the duration of the disease, according to the author, does not exceed twelve days.

INFLUENZA.

The following is said, by Dr. Devereux Long, to have given more satisfactory results in the treatment of influenza than any of the more commonly employed remedies:

℞ Spirits of camphor.
Comp. tinct. of lavender.....ʒ ij.
Spirits of chloroform.....ʒ j.
Mucilage of tragacanth.....ʒ j.
Distilled water.....ʒ iij.
M. Sig.—Tablespoonful every four hours.

—*British Medical Journal.*

AN OINTMENT FOR USE IN BURNS.

According to Siebel, of Elberfeld, the following ointment is an excellent application in all cases of burns. It is much to be preferred to iodoform, not only on account of the absence of the penetrating odor of the latter, but mainly on account of the analgesic action of the europhen, and the property which it possesses of diminishing in a marked manner the secretions of wounds, thereby allowing the dressing to remain intact for three or four days. The formula is as follows:

℞ Europhen..... 3 grammes (gr. xlv).
Olei olivæ..... 7 grammes (gr. cv).
Vaselini.....60 grammes (ʒ ij).
Lanolini.....30 grammes (ʒ j).—M.
Sig.—For external use.

—*La Semaine Médicale*, suppl., March 9, 1892, p. li.

SWEATING FEET.

Dr. Rabow (*Therapeut. Monatshefte*, No. 10, 1891) dusts the following powder into the shoes and stockings of patients suffering from profuse sweating of the feet:

℞ Acid salicylic.....
Alum.....
Pulver. oryzæ.....
} āā gms. 10.

ACUTE NEPHRITIS.

For acute parenchymatous nephritis following the puerperal condition in a young married woman, aged twenty-seven years, Prof. DaCosta prescribed the following:

℞ Tinct. belladonnæ.....gtt. iij.
Tinct. digitalis.....gtt. x.
Liq. potassii citratis.....f ʒ ij. M.
Sig.—Three times a day.

Apply dry cups over the kidneys and also counter-irritation over the kidneys with croton oil. The patient was directed to stay in bed for two weeks and her diet to be absolutely of milk, the kidneys to be kept washed out by drinking plenty of water or by using any mild diuretic.

—*Coll. and Clin. Record.*

STYPTIC FOR BLEEDING GUMS.

Viau recommends the following styptic for bleeding gums after the extraction of teeth:

Chloroform .....60 grs.
Tannic acid .....30 "
Menthol.....30 "
Tincturæ krameria..... 1 fl. oz.
Distilled water.....16 "

—*After Pharm. Centralb.*

BRANDRETH'S PILLS.

Dr. D. S. Clark (*American Druggist*) says the following is the formula:

Take of
Extract colocynth.....1 scruple.
Aloes, socotrine.....2 drams.
Gamboge.....1 dram.
Castile soap.....½ dram.
Oil peppermint.....2 drops.
Oil cinnamon.....1 drop.
Powd. arabic and alcohol, of each sufficient quantity.
Mix and make eighty pills.
Dose: One to three as directed.

ASTHMA.

℞ Pulv. stramonii fol.....ʒ i.
Potass. nitrate.....ʒ iv.
Sem anisi.....ʒ ii.
M.—Ft. pulv. No. i.
Sig.—Monld into cones āā ʒ ss, burn on plate and inhale fumes; may add opium, tannic acid, etc., if thought uecessary.

PRURITIS.

The following (*Le Progrès Médical*, No. 49, 1891) is praised:

℞ Menthol.....gms. 4 (ʒ j).
Alcohol.....gms. 30 (fl. ʒj).
Aquæ.....gms. 60 (fl. ʒ ij).
Acid acetic.....gms. 150 (fl. ʒ ivss).
Apply with a sponge.

CHRONIC ECZEMA.

In a child three years of age, Dr. Henry W. Stelwagon (Clinical Lecturer on Skin Diseases) prescribed the following:

℞ Unguent picis liquid.....ʒ j
Unguent. zinci.....ʒ vj.—M.
Apply locally.
The child must be given cod-liver oil, and its diet should be of plain, nourishing food.

THE

MEDICAL and SURGICAL

REPORTER.

ISSUED EVERY SATURDAY.

DIRECT COMMUNICATIONS TO

P. O. Box 843, Philadelphia, Pa.

EDWARD T. REICHERT, M. D., Editor.

(Professor of Physiology, University of Penna.)

BUSINESS OFFICES:

29 to 35 North Tenth Street, Cor. Filbert.

EDITORIAL OFFICE:

Southeast Cor. 36th and Woodland Ave.

TERMS: Five dollars a year, strictly in advance, unless otherwise specifically agreed upon. Sent three months on trial for $1.00

REMITTANCES should be made payable to THE MEDICAL AND SURGICAL REPORTER, and when in sums of five dollars or less should be made by Postal Note, Money Order or Registered Letter.

—o—

Pocket Record and Visiting List.

Two sizes. Prices to Subscribers of THE REPORTER.
For 30 patients a week (with or without dates)....$1.00
For 60 patients a week (without dates)..... 1.25
Prices to non-subscribers, $1.25 and $1.50 respectively.

The Model Ledger.

Physicians who keep their own books will find this of great value. It enables the Physician to make out his bills with great ease and gives at a glance the amount earned, received and due in any quarter. Sample pages sent on application. Price, $5.00.

Binders.

Patent binders for the Reporter, each lettered on the back in gilt **"The Medical and Surgical Reporter"** and made to hold the issues of six months. Price, 50 cents.

Vaccine Matter.

Bovine Crusts.....$1.50 each.
Bovine Points or Quills..... 1.00 a doz.
Humanized Crusts..... 1.00 small.
Humanized Crusts..... 2.00 large.
Guaranteed in every respect.

Books.

Books will be supplied to our subscribers, transportation prepaid, at the regular prices.

☞Please accompany orders with the money, and address all communications to

Leading Articles.

LYSOL IN GYNÆCOLOGY AND OBSTETRICS.

It must be confessed that but few if any drugs fully answer the requirements demanded of them. The majority either lack in efficacy or possess such toxic properties as to render them dangerous. Again, those that are useful and comparatively innocuous in therapeutic doses frequently leave us in the lurch just at such times as we most need their aid. So is it with antiseptics. The best are the most dangerous; the least poisonous are the least efficacious. Out of the long list of antiseptics at present in use we must regard corrosive sublimate, carbolic acid and creolin the most important in gynæcology and obstetrics. But even these are for various reasons far from being ideal antiseptics.

The requirements of such an antiseptic would be, as nearly as we can hope to realize them, as follows:

1. It must be easily soluble in water, and making a transparent solution.

2. Even in weak solutions it must act as a speedy and positive germicide.

3. It must be very slightly if at all poisonous to the human organism.

4. Its price must be reasonable enough to permit of its general and free use.

5. It should have freedom from offensive odor.

In what way does lysol answer these requirements?

In the first place it is soluble in water in all proportions. The second proposition has been answered by the results of the investigations of Schottelius and Gerlach. They state that they have found solutions of ⅓ per cent. of lysol, 5 per cent. of carbolic acid, and 2 per cent. of creolin to be of equal efficacy as germicides. In creolin, however, the uncertainty of its composition renders positive experiments impossible. But the most recent investi-

gations regarding the comparative strength of antiseptics show that the antimycotic actions of carbolic acid and lysol are equal, and two or three times more active than creolin. Of course, as regards germicidal strength, bichloride of mercury always takes the lead, but on account of its dangerously poisonous and irritating properties should be replaced by an effective safer germicide, especially for general use.

From the experiences of investigators abroad, and especially from the results obtained from at Dr. Martin's Institute in Berlin, where the drug has been extensively tested, we are inclined to think that lysol is a near approach to an ideal antiseptic for gynæcological and obstetrical practice. A most important contribution in this connection is an article by Dr. Pèe in one of the last numbers of the *Duetsche Med. Wochenschrifte*, which we freely draw upon.

The generally accepted and extensively used method of an aseptic cleansing designed by Fürbinger necessitates a rather cumbersome apparatus—the washing and brushing with soap and water, rinsing with 80 per cent. alcohol, and the subsequent scrubbing in a 2 per mille solution of bichloride of mercury—three wash basins are required besides the necessary solutions, etc. In the often limited quarters of the lying-in room this paraphernalia is likely to prove very inconvenient. When we find that in a 1 per cent. solution of lysol, we have an antiseptic that will render the hands of the operator, the instruments and the parts aseptic, at the same time a solution that can be made in any quantity with the greatest ease, we have surely gained something, against which the slight objection of slipperiness of the solution need scarcely be considered.

Regarding the toxicity of lysol, Gerlach, Remochamps, and Sugg, although experimenting separately, have arrived at the same result. The minimal fatal doses for each kilo of body weight are as follows;

For carbolic acid.....0.3 grammes.
" creolin.....1.1 grammes.
" lysol.....2.3 grammes.

To express this in other words: carbolic acid is eight times more poisonous than lysol, and creolin twice as poisonous as lysol.

These facts have been amply proven by the results of laparotomies, in which the merits of the drug have been clearly proven. Michelsen flooded the entire abdominal cavity with a ⅓ per cent. hot lysol solution, and did not observe even the slightest symptoms of poisoning. The same writer states that when using the solution of this strength for instruments, sponges, etc., most excellent results were obtained; the reaction of the peritoneum was remarkably slight, and rapid, uninterrupted healing occurred, so that the patients were able to leave the hospital within two weeks. The weak lysol solution has the advantage over sterilized water or the normal salt solution in that while being equally harmless it may abort a pre-existing infection. According to Pée, the only symptoms of irritation following the use of 1 per cent. solution of lysol were slight burning and itching of the skin.

The price of lysol is about one-fourth that of carbolic acid, and considering that a 1 per cent. lysol solution answers the same purposes as a 5 per cent. carbolic acid solution, the comparative prices of these solutions would be as one to twenty, in favor of lysol. This is a very important feature, especially in hospital and dispensary work; and the odds in favor of lysol are still further increased when we consider the comparative poor solubility and dangers of carbolic acid.

Dr. Pée reports that in the Berlin Obstetric Clinic lysol has been used in about 550 cases, including 300 cases of childbirth, 200 abortions, and the rest lacerations of the perineum, etc. In twenty-three cases of septic abortion, a removal of the septic matter followed by the use of a 1 per cent lysol solution brought the

temperature down to the normal within twenty-four hours. While it cannot be said that in these cases lysol was the sole factor in saving the patients' lives, it must nevertheless be acknowledged that the uniformly excellent results when the drug was used speak eloquently in its favor.

The directions for the aseptic toilet with lysol are as follows: The hands and arms of the operator should be washed in 1 per cent. warm solution of lysol for two minutes and thoroughly scrubbed; the nails should then be most carefully cleansed, and the hands again washed in a similar solution for two minutes, during which an energetic use of the nail-brush should be practised. The previously dried and sterilized instruments should be placed in a half per cent. lysol solution. In cases of child-birth the patient's genitalia should be washed with a 1 per cent. solution of lysol and if the smallness of the parts or other condition indicates the probability of perineal rupture the pubic hairs may be shaved off.

Only when positively indicated, either by fever or fœted discharge, should the internal genitalia be syringed or washed. After syringing or washing the vagina with lysol solution, contrary to carbolic acid or the bichloride, the natural slipperiness of the passage is not only retained, but possibly increased. Before the production of abortions or the performance of plastic operations, it is understood that the internal as well as the external genitalia should be cleansed with the solution.

Lysol is to be recommended for its powerful antimycotic properties, its relative freedom from danger, its easy solubility in water, its cheapness, and its remarkably convenient applicability, the odor is, however, unpleasant, and consequently a disadvantage.

Book Reviews.

A DICTIONARY OF TREATMENT, or Therapeutic Index. Including Medical and Surgical Therapeutics. By William Whitla, M.D., Professor of Materia Medica and Therapeutics in the Queen's College, Belfast. Revised and adapted to the Pharmacopœia of the United States. 8vo, 917 pp. Philadelphia: Lea Brothers & Co., 1892. Price, cloth, $4.

This is a decidedly useful index, consisting of an alphabetical arrangement of diseases, each of which receives most careful attention regarding treatment. The author adheres pretty clearly to his own views as expressed in his work on Materia Medica, but also quotes largely from the experience of other distinguished clinicians. The treatment of each disease is carefully reviewed, and old as well as new therapeutic measures receive attention. A conservative element (exceedingly grateful in these days of too rapid conclusions in medical affairs) plainly runs through the book, and yet the very latest modes of treatment have seldom been neglected. The arrangement is simple and very convenient; the disease about which information is wanted can be most readily found; and in all cases the facts are given in detail and most concisely, thus making the work of special value to the practising physician, for whom it is most suitable. Hygiene and dietetics are considered in all diseases in which they constitute an important factor in treatment.

Alcohol is recommended as a substitute for opium in dealing with the opium habit, and the author prefers that the opium be wholly withdrawn at once, alcohol being given in quantities sufficient to control the symptoms.

The chapter devoted to phthisis is well written, and well worth reading.

The value of digitalis in pneumonia is deprecated, and cardio-vascular depressants are not referred to in the initial stages of the disease. The author relies chiefly on antipyrine to control the temperature in acute pneumonia.

In the section devoted to the treatment of typhoid fever, the use of quinine is looked upon rather unfavorably, and the careful employment of antipyrine as an antipyretic is advised. The author remarks that from all available means of arriving at a correct conclusion he believes that the routine cold bath treatment has lowered the mortality fifty per cent. Concerning the use of alcohol in continued fevers, Whitla remarks that it is being used less and less every year, and that the majority of cases of typhoid fever do not require any stimulants at any stage of the

disease. In this he differs from a large class of physicians in America, who routinely give small amounts of alcohol in some form from the beginning to aid digestion and conserve the strength of the patient.

Taken altogether the book admits of but little adverse criticism. It is the most exhaustive index to treatment that we have seen, and since it is bright, new and quite up to date and carefully written we heartily recommend it to the profession as a very useful, practical book.

OUTLINES OF ZOOLOGY. By J. Arthur Thompson, M. A., F. R. S. E., Lecturer on Zoology in the School of Medicine, Edinburgh. With 32 full page illustrations, 12 mo., 641 pp. New York: D. Appleton & Co., 1892.

This book is intended to serve as a manual for the use of students in the lecture-room, museum, and laboratory, and as an accompaniment to certain other works. The first seven chapters treat of a general survey of the animal kingdom, physiology, morphology, reproduction and life history, palæontology, geographical distribution, and ætiology. The next seven chapters are devoted to the characters and classification of the invertebrates. The remaining chapters to the vertebrates.

The author has done his work in a most excellent manner, and the student will find this little book all that can be desired. The plates are diagrammatic, well executed, and capitally illustrate the points referred to. The typographical appearance of the work is very creditable to the publishers.

Periscope.

THERAPEUTICS.

CREASOTE IN THE GRIPPE.

Dr. Jselin (*Lo Sperimentale*, No. 1, 1892) gives creasote in large doses in the grippe, either administering it in pill form, each containing five centigrammes (one drop), and the daily dose ranging from twenty to twenty-five pills, or by inhalation in the rhinitis and laryngitis which develop during this disease.

STRYCHNIN AS AN ANTIDOTE TO OPIUM.

M. C. T. Dercum reports (*Pharm. Zeitung*) the recovery of a patient who had taken 30 grammes of the extract of opium, by hypodermic injections of 0.00375 of a gramme dose of strychnin every hour for seven doses. Prior to using the strychnin, all the usual antidotes and restorative methods were unsuccessfully tried.—*Répertoire de Pharmacie*, No. 8, 1891.

THE TREATMENT OF CARCINOMA.

At a recent meeting of the Royal Society of Physicians of Vienna, Adamkiewicz (*Wiener klin. Wochenschr.*, No. 47, 1891, p. 888) presented a case of epithelioma of the inner angle of the right eye, in in which cicatrization had taken place in the course of treatment by means of subcutaneous injections of a substance called cancroin that, it was claimed, exerted a specific influence upon carcinoma.

Billroth, Kaposi, Dittel, and others, however, maintained that the progress of the case was not unusual and were unwilling to admit any specific action or curative result not to be obtained by other methods of treatment.

THE CARDINAL TRUTH OF CLIMATE-THERAPY.

"The one great truth stands ever before the eye of the modern surgeon—cleanliness; absolute, scrupulous cleanliness leads to success. Change of climate for consumptives is extremely valuable, but it involves many disadvantages which are far more fatal to its success than the abuse of antiseptics is in wound-treatment, and yet we continue to send patients away from comfortable homes to uncomfortable hotels and boarding-houses, or incomplete sanitaria, where many disadvantages in diet and probable indiscretions in exercise neutralize the most valuable element of all appropriate climates—pure air. It will be a glorious day for medicine when the physician will recognize that the *constant exposure of the phthisical patient to pure air* is the cardinal truth of climate-therapy, as cleanliness is now recognized by the surgeon in wound-treatment."—Dr. Simon Baruch in the *Dietetic and Hygienic Gazette*, January, 1892.

SUBCUTANEOUS INJECTION OF SALT SOLUTION IN DIARRHŒAL COLLAPSE.

Demiéville (*Rev. Méd. de la Suisse Romande*, No. 1, 1892) recommends the subcutaneous injection of sterilized salt solu-

tion in the collapse produced by acute gastro-enteritis in infants. The apparatus required is simple: A piece of elastic India-rubber tubing about a yard and a-half long, provided with a weight at one end, and at the other connected with a small aspirator needle. The tube and needle should be disinfected, either in a stove, if one be available, or with corrosive sublimate (1 in 1,000), and then washed in boiled water. The salt solution used for injection is a solution of chloride of sodium, of the strength of 6 in 1,000, and should be boiled before use. As the solution is rapidly cooled by passing through the tubing, it is well to employ a large reservoir, and to be sure that the solution as it leaves the needle is warm. The skin must be thoroughly disinfected. As to the quantity to be used, a case is related in which a child aged 4½ months received about ʒiv; the injections was made into the thighs, and were followed by gentle massage. The patient in the case mentioned appeared to be *in extremis* when the injections were given, but began to improve almost at once, and reaction was established in a few hours. The injection made the child cry, but did not seen to cause much suffering. Demiéville believes that the good results obtained by this method are to be attributed to the improvement thus produced in the circulation, especially in that of the nervous centres.—*Brit. Med. Jour.*

ON THE TREATMENT OF SCROFULODERMA AND LUPUS.

H. G. Brooke (*The British Journal of Dermatology*, Dec. 1891) reports several cases which could not be treated with radical measures; but in which he obtained satisfactory results by the use of an ointment suggested by himself about a year previously. Case 1 was an old lupus, involving the whole ear and lower part of the cheek and also extending upon the neck. In this case the first combination did not prove satisfactory on account of its color, etc., and he modified it as follows:

℞ Zinc. oxid.
Pulv. amyli.....āā ¼ oz.
Vaselin alb.....½ oz.
Hydrarg. oleat.....5 per ct., 1 oz.
Acid. salicyl.....20 grs.
Icthyol.....20 grs.
Ol. lavandulæ.....q. s.
M. Et fiat ung.

This ointment was well rubbed in and under its use the disease began disappearing slowly and the affected field became greatly reduced.

Case 2 was also one of lupus and very much severer than in the previous patient. The use of the ointment, however, gave very satisfactory results. Case 3 was one of scrofulodermic abscesses, and likewise Case 4. The effect of the treatment in these two was also excellent. Brooke states that the best effects are obtained in cases of scrofulodermic tumors and ulcerations, but it is also pronounced in those cases in which lupus has developed from a scrofulodermic base. For pure lupus, the effect is weaker, especially if there is much sclerosis or old scarring, and he only uses it as an auxiliary measure, when the disease is in form of simple yellow-brown nodules without apparent inflammation.

SALICYLATE OF SODA IN PLEURITIC EXUDATION.

Dr. Oerl has, during the past five years, treated nine similar cases of pleuritic effusion with salicylate of soda, after other remedies, such as phenacetin, pilocarpine, etc., had failed, and with the exception of two instances the results were favorable. In these two the resorption was only partial. The author concludes: 1. Serous pleuritic exudations of long standing may be removed by the administration of the salicylate of soda. 2. The salicylate has in exudative pleuritis, just as in polyarthritis, an apparently specific effect. 3. The fact that, so far as experience with this remedy has gone, no new collection of fluid is observed, makes surgical interference in serous pleuritic exudation not only not imperative, but, indeed, puts operative procedures in the background.—*Medizinal Zeitung*, No. 98, 1891.

TRAUMATIC TETANUS TREATED BY CARBOLIC ACID INJECTIONS.

Many are the methods which have been designed and given a trial in the treatment of traumatic tetanus. As a complication of wounds and surgical treatment nothing is more terrible either in its immediate or remote effects. And yet there is much evidence to show that its onset and development are largely dependent upon septic influences, suggesting the inference that the disease is probably in most cases preventible. The bacillus of tetanus has been for some time recognised by bacteriologists,

and with the introduction of strict antiseptic precautions in the treatment of wounds during the present day, the complication of tetanus is as a result but seldom seen. In a recent number of *Riforma Med.*, Messrs. Stazzeri and Titone record a case of traumatic tetanus treated with injections of carbolic acid, after the method of Baccelli. The patient was a boy, nine years of age, in whom the disease had developed as the result of contusion of the right knee with excoriation of the skin. Improvement was noted after the first injections, the paroxysms diminishing both in number and intensity. Encouraged by this fact, the authors kept up the injections for four weeks, administering them every six hours. At the end of fifteen days the patient had so far recovered as to be able to masticate his food, and at the end of the month the cure was complete. Baccelli used a 2 per cent. solution of carbolic acid.—*Med. Press.*

BENZOSOL AS A SUBSTITUTE FOR CREASOTE.

To some tuberculous patients the odor and taste of creasote are extremely unpleasant, and in some the administration of the remedy in suitable doses gives rise to impairment of appetite and derangement of digestion. Guaiacol, the active constituent of creasote, is open to similar objections. The most recent substitute proposed consists of a combination of guaiacol and benzoic acid, (the proportions are not stated), designated benzosol. Hughes (*Duetsche med. Wochenschr.*, 1891, No. 53, p. 1435) has employed benzosol in a series of twenty cases of pulmonary tuberculosis, with highly gratifying results Appetite returned, cough diminished, the subjective condition improved, and there was increase in weight. Benzosol is a white powder that may be administered thrice daily, after meals, in doses of three grains, made into troches, with the addition of a twelfth of a minim or more of oil peppermint. For a week, three troches may be given daily; then for three weeks, six troches daily; for the next week, three troches daily; in the sixth week the administration is intermitted, to be recommenced in the seventh.

LACTOSE AND GLUCOSE AS DIURETICS.

B. Vespa (*Rif Med.*, November 30th, 1891) has made a number of experiments as to the diuretic effect of lactose and glucose in various diseases. The following are his results: In the ascites of hepatic cirrhosis the diuretic effect was almost *nil*, and in acute and chronic nephritis it was hardly appreciable. In pleurisy with effusion, on the other hand, and in cardiac disease with disturbed compensatory action, the diuretic effect of lactose and glucose was most marked. As neither of these substances has any bad effect on the heart or on the nervous system they can be given at all times and in combination with any other remedy. They are well borne and do not cause nausea or other disagreeable effects.—*Brit. Med. Jour.*

PHOSPHORUS POISONING

Elkins and Middlemass (*British Medical Journal*, December 19, 1891) report the case of a lady, aged thirty-four, who suffered from mental depression, but was otherwise intelligent and coherent in conversation, and had a good memory. After sucking the phosphorus ends of two boxes of matches she died in about one hundred hours. Briefly, the mental symptoms were in order of appearance: listlessness; drowsiness; restlessness; mental confusion; inability to understand what was said; inability to answer questions readily or correctly; inability to recognize friends; semi-consciousness; semi-delirium; delirium; fits of great restlessness and violence; constant use of the word "yellow" when delirious; maniacal expression and behavior; coma. Sensory symptoms: Rheumatic pains; blindness.

Motor symptoms: Thick and drunken-like speech; pupils fixed and dilated; external strabismus of left eye. The pathological interest of the case lies in the changes in the nerve-cells of the cortex. Sections of the cortex showed fatty particles in the walls of the larger capillaries and fatty granules in the larger nerve-cells, most pronounced in the fourth layer. The authors state that the power of phosphorous to cause fatty degeneration in nerve-cells has lately been denied, but that this case shows that the nervous system does not escape. The occurrence of fatty degeneration in so many tissues of the body, points to some fundamental alteration in the processes of metabolism which phosphorous has the power of bringing about, but what this really consists in we can as yet only conjecture.

MEDICINE.

DISTURBANCE OF THE EQUILIBRIUM BY TUMORS OF THE FRONTAL LOBES.

Bruns (*Deutsche medicinische Wochenschrift*, February 18, 1892) reports four cases of tumors of the frontal lobes, confirmed by autopsies, where a disturbance of the equilibrium was a chief symptom, just as it is often the chief symptom in tumors of the cerebellum. He concludes his article as follows: "First, a disturbance of the equilibrium, exactly similar to the so-called cerebellum ataxia, very frequently appears as a symptom of tumors of the frontal regions. Second, this symptom is much less frequent in tumors of other brain regions."—*Univ. Med. Mag.*

SOME GENERAL CONSIDERATIONS ON THE SO-CALLED FEVER OF GROWTH.

Barbillion (*Mal. de l'Enf.*, Paris, 1892, x., 1,) writes:

The fever of growth does not exist as a morbid entity.

Growth does not cause fever any more than does pregnancy, the establishment of puberty, or senile decay.

The facts which have been grouped under the head of fever of growth are of varied causes, some of febrile states more or less clearly characterized (ephemeral fevers, fevers due to overwork, etc.), the others are slight degrees of acute osteomyelitis. Their relations proceed from secondary characteristics, such as pain in the epiphysis and the increase in height. The pains in the epiphysis may be observed in young subjects in all febrile states. The notable increase in height may show itself equally in the course of any of the maladies of childhood, or of adolescence, be these maladies acute or chronic.

There is no ground to establish on this basis, a morbid group which could only be constituted by the artificial re-union of dissimilar cases.

TREATMENT OF TUBERCULOUS RETROPHARYNGEAL ABSCESS.

Kramer (*Centralbl f. Chir.*, No. 12, 1892) advocates the view held by many modern surgeons that an external incision in the neck is a preferable method of dealing with retropharyngeal abscess of tuberculous origin. The old method of dealing with such abscesses by the mouth is attended with much risk, as it is impossible, with a wound freely exposed to the air, to prevent putrid infection of the suppurating cavity, and tuberculous material may be carried into the air passages and the gastro-intestinal canal. Moreover, in many cases the patient is troubled by a persistent fistulæ, and by long continued discharge of pus. An external opening in the neck, of sufficient extent to permit a strict antiseptic treatment of the tuberculous abscess, and a free application of iodoform, can, as has been shown by Chiene and Burckhardt, be made without difficulty or danger. In a case reported by the author, an incision about three inches in length was made on the left side of the neck between the larynx and the inner edge of the sterno-mastoid muscle. After division of the skin and the platysma, the deeper portion of the wound was opened up by blunt instruments until the well of the abscess was exposed below and to the inner side of the carotid artery. The wall was then punctured by a director, and the sac, after it had been emptied of its fluid contents, was freely laid open, and its inner surface scraped. Finally the exposed cavity was washed out with sublimate solution and plugged with iodoform gauze. The wound was quite healed by the end of the fourth week, and she patient, a girl, aged 4½ years, made a good recovery.—*Brit. Med. Jour.*

THE RELATION OF LARYNGEAL CATARRH TO LARYNGEAL PHTHISIS.

R. Norris Wolfenden (*Jour of Laryngology*, November, 1891) writes: There may be active epithelial destruction in the larynx of a non-specific character. The condition termed by Virchow, Pachydermia Laryngis Diffusa, is an illustration of this. It consists of a primary epithelial thickening, which may be followed by involvement of the mucous membrane, perichondritis and ulceration. It occurs where the laryngeal cartilages lie most near the surface, the mucous layer being very thin and covered by squamous epithelium, such are the edge of the epiglottis, the interarytenoid space, the processus-vocales and edges of the vocal bands. During the ulcerative process a strongly marked catarrh of the larynx exists, the erosions may be deep, having gray bases and red elevated edges. They rarely involve the vocal bands, as do tubercular ulcers. The acute form may develop very rapidly; it leaves slowly, the ulcers being frequently six to eight weeks in healing.

The symptoms consist of burning pain in the throat, hoarseness, sensation of dryness and expectoration of blood-stained sputum. These cases of ulcerative pachyderma do not pass into laryngeal phthisis. Catarrhal laryngitis may occur in a phthisical subject and be non-specific. Chronic catarrh of the throat, however, acts as a predisposing cause of laryngeal tuberculosis, by lowering the resisting power of the laryngeal mucous membrane, or by causing erosions which absorb the infectious materials. The invasion of a larynx by tuberculosis, is indicated by the following characteristics. Marked anæmia of the larynx and pharynx, which may be distinguished from simple constitutional anæmia by its dead yellow-white color and by its absence in the mouth, lips and face. The vessels of the larynx often stand well defined on the anæmic surface, and there is often paræsthesia of pharynx. Localized congestion of the faucial pillars, or of one vocal band, is important if associated with pharyngeal anæmia. These symptoms with laryngeal catarrh may constitute the only throat indications during the pulmonary affection, more commonly if the throat be at all implicated in the disease the process advances to infiltration and ulceration.

SURGERY.

THE STOMACH AFTER GASTROSTOMY.

Ewald (*Deut. Medizinal-Zeitung*, March 24th, 1892) has made the following observations in the case of a patient on whom gastrostomy had been performed. After the operation the peptic function of the stomach is entirely destroyed, and the nutrition of the patient takes place through the intestine. The movements of the stomach also suffer owing to adhesions, and hence a certain stagnation of its contents occurs. Thus the author has suggested that the fistula should be made near the pylorus, so that the food could be passed by means of a tube at once into the intestine. As long as the patient's strength is maintained, gastrostomy cannot be strongly recommended. The prognosis of stricture due to pressure from without is much the same unless the tumor be syphilitic. It is different with stricture brought about by corrosion, syphilis, or tubercle. Rarely the stricture may be due to cicatrization of a peptic ulcer in the lower part of the œsophagus. This ulcer is due to corrosion by the gastric juice, and occurs in anæmic individuals. The age is very important. Unlike carcinoma, attacks of pain are noted first and obstruction after. The patient was a girl, aged 19, who had previously suffered from gastric symptoms followed by an interval of a few months of health. At Easter, 1891, there was attacks of pain, and later difficulty of swallowing. The bougie could not be passed. There was wasting; no syphilis. In June, gastrostomy was performed by Oppenheim, the stomach being opened at an interval of five days. There was an escape at that time of the contents of the stomach, which contained free hydrochloric acid up to an acidity of 60 per cent. The acidity increased in a few days to 81 to 104 per cent. The patient gained 4.5 kilo. in weight; still the æsophageal bougie could not be passed. The dilatation of the stomach with delay in passing on the food was in favor of a cicatrized ulcer near the pylorus as well as in the æsophagus. Through a speculum the cardiac end of the stomach looked too red, and the pyloric too pale. The sound passed 13 centimetres upwards, 15 centimetres downwards, but did not enter the œsophagus or duodenum. The pressure in the moderately-filled organ was 30 to 35 millimetres, and with moderate compression of the abdomen 80 to 100 millimetres. This pressure was increased by applying the faradic current to the abdominal wall, but not by applying it to the inside of the stomach. This was due to adhesions. Salol excretion was delayed, salicylic acid appearing in the urine two and a-half to three hours afterwards. Secretion of hydrochloric acid lasted for ten and a-half hours after food, owing to dilatation of the stomach. If the stomach were washed out the night before, a fluid containing free hydrochloric acid and with peptic properties was found in it the next morning.—*Brit. Med. Jour.*

CANCER OF THE TESTICLE IN CHILD.

Dr. Sabrazes and Fromaget write: A young child, two and a half years of age, presented a round and regular tumor of the left testicle of about the size of a small orange. It was heavy, tense, opaque, and but little sensitive to pressure. The scrotum, which was covered with a network of veins, was free from adhesions, and the

spermatic cord seemed normal. No enlarged glands could be detected, either in the groins or pelvis. Castration was performed, and a solid and voluminous tumor removed, involving the whole testicle, except the epyidymis. Three ligatures were applied to the spermatic cord, which the tumor had implicated, the scrotum was stitched up, drained and dressed antiseptically. Recovery took place without complication, except a slight œdematous induration of the scrotum and concomitant rise in temperature immediately following the operation. The tumor, on microscopical examination, was found to be an epithelial cancer. The writer emphasizes the rarity of tumors of the testicle in children. Ch. Monod reported in the *Progrès Medical*, 1884, twenty-six cases of malignant tumor of the testicles in children, of which in the majority of cases the growth was either sarcoma or carcinoma; in two the tumor in question was a true enchondroma. To these may be added a case described by M. Piechand in his *Lecons Cliniques*, Bordeaux, 1889. The prognosis of these neoplasms is so grave that M. Monod thinks these patients condemned to certain death in six months to a year.—*Journal de Médicine de Bordeaux*, No. 20, 1890.

ON THE TREATMENT OF PSOAS ABSCESSES BY MEANS OF INJECTIONS OF IODOFORM.

Dr. Johann P. Bitsch (Copenhagen), after treating several cases of psoas abscess by means of iodoform suspended in glycerine, arrives at the following conclusions:

1. This method of treatment should be tried in every case of psoas abscess. If the result be unfavorable there will still remain an opportunity to employ operative procedures, while the prognosis is not unfavorably influenced by this treatment.

2. The treatment by injection has the advantage of being a slight operation, without danger and requiring no special skill. Anæsthesia is only exceptionally necessary as the procedure is not painful. Any physician will have the necessary instruments. It may be employed in patients who are up and about, and promises a greater degree of success than any other method and, lastly, causes no disfigurement.

3. As to its disadvantages they are only slight. Iodoform poisoning may occur, yet this may be avoided by not injecting too large quantities of the fluid holding the iodoform. If it should happen, one may be assured that it will be easily overcome; no fatal case has been observed.

4. On the contrary, it may take much time before the abscess is entirely healed, even one half year. But this disadvantage is over-balanced by the fact that the patient can be up and attend to his business during the whole time of treatment, except one or two days after each injection. Then he should rest in bed.

5. This method is adapted to the treatment of every cold, tuberculous abscess, whether it be of osteopathic, glandular or idiopathic origin. It is especially useful in small abscesses following osteitis, where it is astonishingly efficacious.

6. Finally, it has been successfully used in all other tuberculous affections where local treatment is possible, especially in osseous and articular tuberculosis.

The writer used this method with excellent results in a case of tuberculous coxitis in which resection was thought indicated.—*Hospitals Tidende*, No. 49, 1890.

SURGICAL TREATMENT OF GANGRENE OF THE LUNG.

At the last meeting of the Académie de Mèdicine, M. Périer related the case of a man aged fifty-eight, who was attacked with intra-pulmonary gangrene which was first thought to be interlobar pleurisy. But the sudden appearance of the fœtid odour of the breath revealed the true nature of the case. Antisepsy by the mouth having given no favorable result, M. Périer incised the chest over the left intercostal space, and seized with the forceps the subjacent lung tissue with its pleural covering. He cut the serous envelope and plunged the knife into the lung, and at a distance of one inch he penetrated into the seat of the gangrene. The place was carefully cleaned out and the surface touched with camphorated naphthol and two drainage tubes fixed in the wound. A fortnight afterwards one of the tubes was withdrawn, and the other four days subsequently. The fistula closed in three weeks, and the man is in perfect health he neither coughs nor expectorates, nor does his chest show any stethoscopical signs of a pulmonary lesion.

M. Lancereaux said that in cases of pulmonary gangrene he frequently succeeded with hyposulphite of soda given in large doses, one drachm in the twenty-four hours.

TREATMENT OF LUPUS BY EXCISION.

Kramer (*Centralbl. f. Chir.* No. 8. 1892) holds that the present methods of treating lupus by caustics and by scraping are very unsatisfactory, and advocates excision of the whole of the diseased portion of skin. This is removed with the knife together with the subcutaneous tissue as far down as the muscular layer. After an interval of about twelve days, when granulations have formed, the defect is closed either by transplantation after Thiersch's method, or by a plastic operation. The author states that he has carried out this treatment in eleven cases during the past two years, and that it has invariably resulted in permanent healing at the seat of operation. Although this method is more applicable to cases in which a portion of an extremity or of the trunk is affected, it may be practised with good results in many cases of lupus of the face. In this region excision should be performed as early as possible; and even if the wound be an extensive one the surgeon will be able to close it, thanks to the improved methods of transplantation, implantation, and plastic procedure. The scar thus formed, though more apparent than that produced after other methods of treatment, has the advantage of being quite sound, and free from any remains of the disease.—*Brit. Med. Jour.*

TRANSPERITONEAL NEPHRECTOMY.

Heinricus (*Centralbl. f. Chirurgie,* 1892, No. 14, p. 297) reports the case of a woman, twenty-seven years old, who presented an abdominal tumor below and to the left of the umbilicus. The swelling had first been observed two years previously, when it was as large as a fist. It had subsequently increased in size, but for a year its growth had ceased. The tumor was tense and mobile. Over it, and in the left lumbar region, the percussion-note was dull. The position of the uterus was normal. On vaginal and rectal examination no connection between the tumor and the internal genitalia could be detected. The urine was clear, of a specific gravity of 1015, and contained no albumin. A diagnosis of hydronephrosis was made, and celiotomy decided upon. The colon was displaced from in front of the tumor, the peritoneum incised, and the cyst punctured. The ureter and the pedicle of the mass were secured by several double ligatures, and the kidney was removed. No cause for the abnormal condition could be found. After the operation, the quantity of urine passed gradually increased, until it reached the normal. The patient ultimately recovered. —*News.*

THE RADICAL CURE OF HYPERTROPHY OF THE PROSTATE.

R. Eigembrodt (*Bonn Beitiäge zur klin.* Chirurgie, Bd. viii). The following conclusions are reached in E's valuable paper: A radical operation for obstructive hypertrophy of the prostate is possible in the majority of cases, the method by supra-pubic scystotomy being the preferable one. An early operation is much to be preferred to a late one, although even in advanced cases some improvement may be expected by an operation. The condition of the bladder itself demands careful treatment following the operation. In case the obstruction to urination is found not to be due to a prominent or valve-like projection, but rather by a general enlargement of the prostate body, in connection with a sacculation of the bladder, provision for free escape of urine may be provided for by a deep cuneiform excision of the posterior portion of of the urethral orifice.

OBSTETRICS.

PORRO OPERATION, WITH INTRAPERITONEAL TREATMENT OF STUMP.

Bossi (*Gazetta degli Ospitali*, abstracted in *Nouvelles Archives d' Obstetrique*, 1892, p. 129) reports another case of Porro operation, with intrauterine treatment of the stump and uninterrupted convalescence. The cervical canal was disinfected by the actual cautery. The stitches are inserted in tiers. He presents the following arguments against fixation of the stump in the abdominal wound after hysterectomy:

The pedicle fixed externally is a constant menace of infection. The pedicle fixed externally threatens to retract within the abdomen. It needs prolonged care and multiplied precautions before it is exfoliated and the base cicatrized. It exposes

the woman to the danger of a fistula, often permanent or difficult to heal. It exposes her to the danger of hernia at the point where the stump was fixed. If the stump is not long enough, the dragging of the vagina and attached organs gives rise to very disagreeable sensations.—*Univ. Med. Mag.*

ANÆSTHESIA IN PREGNANCY AND DISEASES OF WOMEN.

Marcel Baudoin (*Nouv. Arch. d'Obstét. et de Gynéc.*, February, 1892) claims especial advantages for his method of administering anæsthetics when required for women who are pregnant or subject to diseases of the internal organs. The method consists in the administration of small quantities of chloroform in continuous doses. The excited stage is very mild or absent, vomiting does not occur, the anæsthesia is complete, and the patient can sleep comfortably for hours after the operation. No discomfort follows the awakening from insensibility. Anæsthesia is complete when the reflexes are abolished. The pelvic reflexes do not disappear till after the palpebral reflex. It is very hard to suppress local sensitiveness in some hysterical women with tubo-ovarian inflammation; Baudoin believes that this method abolishes the reflexes completely. Severe operations on pregnant women can be safely performed by this method, as in a case of radical cure of umbilical hernia which the author quotes. The method is also well suited for other morbid conditions which may exist in pregnant subjects, such as alcoholism, where the excited stage is always marked when chloroform is given rapidly, and also cardiac and pulmonary diseases.—*Brit. Med. Jour.*

PUERPERAL TETANUS AFTER ABORTION.

Vinay (*Arch. de Tocol. et de Gynèc.*, March, 1892) reports a case of this rare complication which occurred last autumn in the practice of a medical man in Paris. The patient was a 4-para, aged 36. On November 10th, 1891, when in the second month of pregnancy, uterine hæmorrhages set in, and abortion took place unobserved in the course of these attacks. No tampon was applied. The lochia became fœtid, there was hypogastric pain, and it was deemed necessary to use the curette. The operation was done on November 17th under chloroform. Some putrid membrane was removed, and the endometrium was scraped and carefully washed. One hour later a rigor occurred. On the night of November 19th stiffness began to be felt in the region of the masseters, then trismus, rapidly followed by pharyngeal spasm. In the course of the 20th, the most pronounced tetanus developed. during the attacks emprosthotonus instead of opisthotonus occurred, the head and trunk being violently bent forwards. On the morning of the 21st the attacks were very frequent and severe, and the patient died thirty-six hours after the appearance of the first symptoms. She was conscious throughout, the pulse did not exceed 108, nor the vaginal temperature 99.8°. Vinay has collected 106 cases of puerperal tetanus. The recoveries only amounted to 12; 59 occurred in labors at term, 7 recovering; and 47 in abortions, 5 recovering. Hence the total mortality is 88.67 per cent., or higher than in any form of surgical tetanus, excepting in cases of wounds on the battlefield, where the mortality is as follows: In tetanus after wounds of the head and neck, 95.2 per cent.; after wounds of the lower extremity, 89.7 per cent.; after wounds of the upper extremity, 86.3 per cent. Relapses after one attack of puerperal tetanus have always proved fatal, hence the necessity of prolonged rest in bed when the patient has recovered from tetanus. The disease is as deadly when it sets in late as when it occurs within a day or two of labor. The only treatment which has afforded distinctly good results is inhalation of chloroform carefully maintained for several hours; or large doses of chloral (15 grains) hourly, with narcotization when the attacks of spasm set in. Localized tetanus of the uterus is a disease completely distinct from puerperal tetanus. —*Brit. Med. Jour.*

ASAFŒTIDA FOR HABITUAL ABORTION.

In support of the utility of asafœtida in the prevention of habitually repeated abortion not dependent upon a recognizable cause, such as syphilis, tuberculosis, disease of the uterus or its appendages, Turazzi (*Centralbl. für Gynäkol*, 1892, No. 9, p. 164) has collected forty-one cases from various sources, in thirty-seven of which the use of the remedy was followed by normal labor. Three grains of

the gum-resin are given daily from the beginning of pregnancy, the quantity being gradually increased to fifteen grains, with a subsequent gradual diminution in the dose.—*News.*

GYNECOLOGY.

ELECTROTHERAPY OF UTERINE FIBROIDS.

A. Martin and Mackenrodt (*Deutsche med. Wochenschr.*, No. 2, 1892) strongly deprecate the new method of treating fibroids by electricity. Of 36 cases so treated in their own hospital, only 20 (in these the fibroids were mostly small) derived distinct benefit. On the other hand, it was noticed that in none of the 20 was there any distinct diminution in the size of the tumor, and that in 8 cases the patients were over 45, so that the climacteric played a greater or lesser part in the relief afforded by the electricity. In the remaining 12 the amelioration was but temporary or partial, the pains and hæmorrhage often recurring. The remaining 16 of the entire 36 were distinctly made worse, and 3 died. In the first fatal case the patient was aged 50, and after recurrence of symptoms, with subsequent fresh application of electricity, great hæmorrhage occurred; and had to be checked by other means. When apparently convalescent the patient died of pulmonary embolism. In the second case the tumor was large. After twenty-nine applications of electricity the temperature rose and the tumor grew soft. Abdominal section was needed to remove the tumor, which was suppurating; the patient was already septic. She died on the day after operation. In the third case fever appeared after seventeen applications. No operation was permitted. Peritonitis set in and death followed within three weeks. Drs. Martin and Mackenrodt's experience of cases partially under the treatment of others is not more favorable. Comparing these cases with a series of 39, where fibroids were treated by operation, they recorded 20 cases of myomatous uteri by abdominal section with 2 deaths; 14 cases of removal of myomatous uteri through the vagina, with careful closure of Douglas's pouch, no deaths; 3 cases of enucleation of fibroids by abdominal section with no death; and 2 cases of enucleation through the vagina with no death. Thus their series stand as follows:—Treatment by electricity (36 cases): Symptomatic improvement, 20 cases, or 55.5 per cent.; condition of patient aggravated (including 3 deaths), 16 cases, or 45.5 per cent. Treatment by operation (39 cases): Recovered, 37, died 2. The percentage of mortality was thus only 5.1 per cent. for operations, but 8.5 for electricity. Martin and Mackenrodt conclude that they feel bound to reject the electric treatment of myomata. Small fibroids should be left alone as long as they do no harm, but when serious constitutional disturbance sets in operative measures are necessary.—*Brit. Med. Jour.*

STERILITY AND HYDATID DISEASE OF LIVER.

Petit (*Arch. de Tocol. et d'Obstèt.*, December, 1891) reports the case of a patient who had a hydatid cyst of the liver, which contained over 8 pints of fluid. She had uterine catarrh, and was sterile. Laparotomy was performed, the hydatid disease was cured, and the patient immediately became pregnant. On that account Petit believes that the catarrh and sterility might have been due to the large tumor of the liver, since the removal of the tumor was so soon followed by pregnancy. —*Brit. Med. Jour.*

HYPERTROPHY OF THE BREAST.

Lihotzky (*Centralbl. f. Gynäk.*, No 10, 1892) exhibited before the Vienna Obstetrical Society in February a hypertrophied breast removed from a single woman, aged 26. When fresh it weighed nearly 10 lbs. There was uniform increase in the interglandular connective tissue with development of glandular acini in abundance.

SUBACUTE ENDOMETRITIS IN THE LATTER MONTHS OF GESTATION.

Löhlein reports in the *Centralblatt für Gynäkologie*, 1892, No. 11, the case of a woman, aged forty-six years, who had borne a number of children. She was admitted to the clinic suffering from endometritis following an abortion; was treated by curetting, and discharged as recovered. She returned near the end of her next pregnancy, complaining of a chill, followed by fever, prostration, and obstinate pain. The pain was worst upon the left side of the patient's abdomen, and radiated over her body. On examination the abdomen was found painful, the uterus sensitive to

pressure, especially upon the right side. Clonic contractions of the uterine muscle were present; the membranes were tense, but dilatation was proceeding slowly. Her fever was remittent in character, and persistent, with diminution of sleep and appetite during an entire week. Labor pains finally ensued, and a living child was born. The placenta was retained, and when the hand was introduced it was found to be completely adherent in the right half of the uterus. There were no infarcts in the placenta, but old, thick, and brownish extravasations of its uterine surface. The delivery of the placenta was followed by cessation of pain and rapid recovery.—*Amer. Jour. Med. Sci.*

PEDIATRICS.

TWO CASES OF SCURVY IN CHILDREN.

Charpentier (*The Lancet*, October 3, 1891.) reports the following:

Case 1.—This patient was brought on account of pain and tenderness when moved The patient was a boy, nine months old.

From soon after birth he was fed on diluted cow's milk. Gastric catarrh developing, condensed milk was used until three months of age, when a "patent" starchy food was used. On examination the child was fat, but flabby and pale, and in pain when moved. The thighs were tender to the touch. The fontanels were quite open, and the ends of the bones were slightly enlarged. The abdomen was swollen. There were no teeth. He was restless at night, and sweated profusely. The bowels acted freely, and the motions were pasty and very offensive.

Rickets was diagnosed, and the child was ordered a malted food with diluted cow's milk, gradually increasing strength. Beef tea was given once daily, and a mixture of iodide of potash and lacto-phosphate of lime.

A fortnight later he was brought again, showing a small bruise on the back, and later he developed ecchymoses on the eyelids, while the left thigh was swollen, hard, and brawny, and very tender to the touch. The mouth was sore, and the gums tender and red. A meal of potato pulp was ordered twice a day, as well as raw meat juice and the milk, The improvement was most marked; a fortnight later he could take iron and cod-liver oil with advantage to health.

The second case was one of sporadic cretinism, which also developed scurvy. A girl, sixteen years old, with the typical appearance of a cretin. The mother states that the child was dull at birth, and when seven weeks old, had convulsions for a week; since then she had never been like other children.

The child cannot stand or speak, takes no interest in life, and can only swallow liquids; she has a goitre the size of an orange. She has been fed on fresh milk with beef tea and minced meat occasionally.

On examination the gums were swollen, deep reddish-purple, and prone to bleed.

There was a small bruise on the left forearm, one on the left thigh, and another on the right leg, which could not be accounted for.

The patient was ordered lime juice to drink and potato pulp three times a day. In a week's time all the symptoms of scurvy had disappeared. Remarks: The occurrence of these two cases illustrates the necessity of a better knowledge of dietetics in medical practice.

Another point is the common use of condensed milk. It is unquestionably very bad for infants.

It has been said that fresh cow's milk has anti-scorbutic properties. One of these cases had always had new milk, and never condensed milk, while the other developed scurvy while he was taking new milk when under treatment for rickets. We must admit that the scorbutic condition depends more particularly on the lack of other appropriate food. The author thinks that rickets and scurvy are more benefited by raw meat juice and potato pulp, than by the freshness of the milk.

MENSTRUATION IN A CHILD.

V. F. Iakubovitch, of St. Petersburg (*Vratch*, No. 9, 1892, p. 214), reports the case of a girl, at present 6½ years old, who has been menstruating since the age of 2. The catamenia occur several times a year (most frequently during the summer months), lasting on each occasion three or four days. The bleeding is preceded by irritability and a tendency to shed tears, and is followed by headache, giddiness, and other signs of anæmia. The girl's mammæ are each as large as a small orange, the clitoris and the labia minora being somewhat hypertrophied but the majora

normal. When examining the child during her first menstruation the author found the external genitals healthy, while the breasts proved to be of the size of a hen's egg, tender, tense, and discharging a milky fluid. The author points out that (1) cases of precocious menstruation are rare; Henning was able to collect from international literature not more than thirty-five instances;(2) the prognosis, on the whole, is favorable, still the hæmorrhage may give rise to anæmia and chlorosis; (3) no wine, or coffee, or any stimulants should be allowed to such children, while if bleeding is profuse hydrastis canadensis or ergot should be given internally.—*Brit. Med. Jour.*

TUBERCULOSIS OF THE TESTES IN CHILDREN.

Nine cases of tuberculosis of the testes have been observed at *L' Hospital des Enfants-Malades* by Hutinel and Deschamps (*Arch. Gènerales de Médecine*). The authors believe, from their studies, that the disease is most frequent during the first years of life, and not on the approach of puberty, as has been supposed. The affection exhibits the same symptomatology, with few exceptions, as it does in the case of adults. Sometime it begins as an acute tubercular orchitis, resembling a blennorrhagic orchitis, at others, it makes its appearence only after a course of peritoneal or intestinal tuberculosis. Its march is the as that of any other local tubercular affection. The diagnosis is easily made. The prognosis is generally serious. In order to obtain a cure in these cases, an active medical treatment should be pursued. This should consist in the administration of codliver oil, creosote, arsenic, phosphate of calcium, sea-bathing, etc. The authors do not favor castration, and believe that the general treatment is sufficient for all practical purposes. Puncturing may be restored to when the testicle has become caseous.—*Le Bulletin Mèdical*, December 9, 1891.

HYGIENE.

AN ASSERTED INFECTIOUS ORIGIN OF RHACHITIS.

Mircoli (*Gaz. degli Ospitali*, August 16, 1891, and *Deutsche med. Zeit.*, No. 80, 1891), in previous publications, has reported his discovery of the presence of staphylococci and streptococci in the nervous system in certain nervous affections, such as sciatica, chorea, and hydrocephalus. More recent investigations have enabled him to confirn this result in a new case of hydrocephalus, and, strange to say, in a case of rhachitis. Cultures made from scrapings from the bones of a rhachitic child are said to have given material for pure cultures of these pyogenic micrococci. The most notable point of difference from the results in the other cases was that the colonies of the streptococcus from the bone scrapings of the rhachitic case were not numerous.

The author supposses that in adults the pyogenic micrococci provoke local lesions, while in children they give rise to a general infection, which manifests itself more particularly in the organs that are the seat of greatest formative and functional activity, namely, the osseous and nervous systems.—*Amer. Jour. Med. Soc.*

BACILLIAN INFECTION.

The invasion of this theory into the domain of neurology has extended beyond that of tetanus, etc., into the region of other nervous affections. The *Supplement to the British Medical Journal* refers to a short account of the epidemic reported by Medin, of Stockholm, before the Tenth International Congress, and appearing in the "Transactions," is given in the *Centralblatt f. klin. Medicin*, Sept. 5th, 1891. Within some five months, forty-four cases were observed occurring in previously healthy children and without apparent cause. In the febrile stage there was besides the fever somnolence, dyspepsia, rarely vomiting and diarrhœa, more often constipation. Paralytic symptoms showed themselves in this stage. The fever and somnolence lasted in some cases several days after the onset of the paralysis, but further paralysis did not take place after the fever had disappeared. Facial monoplegia was noted in three cases, and facial paralysis with pyomyelitis and polyneuritis in another five. Abducens paralysis was present in five case, twice together with ordinary poliomyelitis, once at the same time as polyneuritis, once in a case of polio-encephalitis and once in a fatal case. All the nuclei in the pons and medulla corresponding morphologically and

physiologically with the cells in the anterior horns of the spinal cord were at times affected

In the discussion which followed, Heubner looked upon it as an infective desease. Professor Henoch spoke concerning the question of identity in the cases and said that the presence of so many cerebral symptoms was very striking.

COMPARATIVE PATHOLOGY OF THE WHITE MAN AND THE NEGRO.

From an analysis of the cases of 430,466 negro patients treated by them edical department of the American Bureau of Refugees, from 1865 to 1872, Dr. Reyburn, late Surgeon United States Volunteers, draws certain conclusions as to the proclivity of the African race to particular types of disease. A basis of comparison between the pathological tendencies of white people and negroes respectively is afforded by 22,053 cases of disease in white patients treated during the same period. Among the negroes there were 152,141 cases of remittent and intermittent fever, and Dr. Reyburn thinks there is no difference as regards susceptibility to these fevers between the white and the colored populations of the Southern States. The statistics futher show that the statements commonly made concerning the extreme liability of negroes to scrofulous disease and pulmonary tuberculosis rest on no solid foundation. The deaths from typhoid fever among the negroes amounted to 25 per cent. of the cases treated, this high mortality being dependent on the frequency of severe intestinal lesions, The death-rate from diarrhœa and dysentery was also high, owing, according to Dr. Reyburn, to the ignorance of hygienic laws which prevails among the colored people. The negro freedman and the white refugee alike fell victims to epidemic cholera, one half of the patients dying under every variety of treatment. Delirium tremens was of very rare occurrence among the negroes a circumstance which Dr. Reyburn attributes to "the want of development of the cerebral hemispheres." Alcoholism, he says, is in the negro more apt to lead to epileptiform convulsions or mania than to delirium tremens. Dr. Reyburn concludes that the negro has not the same power of resistance to acute inflammations, such as pneumonia, as the Caucasian, and does not recover from protracted and exhausting illness, such as typhoid fever, so well as the latter. On the other hand the negro has greater reparative power after injuries and surgical operations than the white man, in this resembling the dark races in Asia and elsewhere.—*Brit. Med. Jour.*

CONTAGIOUSNESS OF ACUTE TONSILLITIS.

Dubousquet-Laborderie (*Jour. de Méd. d. Paris*, December, 1891), states that cases which show the contagiousness of tonsillitis are numerous. It is observed in families, hospitals, schools—more rarely a veritable epidemic is observed. We do not deny the contagiousness of measles, scarlatina, mumps—though we are equally in ignorance of the agent of the contagion.

The incubation varies from two to six days. The conditions favorable for the production of the disease are: an epidemic, cold, sudden changes of temperature, crowding, lack of cleanliness. Internal conditions are the age of the subject, scrofula. There is an incontestable predisposition; a first attack predisposes to others.

The disease appears to lie latent as in erysipelas where there are repeated attacks.

The germs of the disease remain inactive in the crypts of the tonsil until such time as the internal and external conditions give them a vicious activity. The infectious nature of the disease and its contagiousness being admitted, certain therapeutic and prophylactic measures should not be neglected. Antiseptics, internally and externally, at the onset, an emetic or a cathartic, sulphate of quinine, salicylate of soda or salol, gargles of a solution of boric acid, four per cent., or carbolic acid, one per cent. A solution of chloral, which is antiseptic and calmative at the same time, may be used if the pain is the considerable and swallowing difficult.

MEDICAL CHEMISTRY.

PURIFIED KOLA.

A chocolate manufacturer of Berlin has patented a process by which the bitter principle of the kola nut is completely removed, so that it may be employed in admixture with cacao in the preparation of chocolate. The purified kola is also proposed to be used for the preparation of kola wine, kola pastils, etc.

DIFFERENTIATION OF PHENACETIN FROM OTHER ANTIPYRETICS.

Autenreith and Hirschberg, in a paper in the *Archiv für Chemie* on the derivatives of phenacetin, say that phenacetin may be distinguished from antifebrin and antipyrin, by boiling the suspected substances with dilute nitric acid (10-12 per cent.) for a short time. Phenacetin is thus nitrated, and the nitroderivative colors the nitric acid solution yellow or orange, whereas a similar solution of antifebrin and antipyrin remains colorless. When the yellow solution is cooled, the nitrophenacetin crystallizes in yellow needles.

CARBONATE OF GUAIACOL, GUAIACOLUM CARBONICUM.

Is the latest of the patented guaiacol preparations; it is made by dissolving two molecules guaiacol in the proper quantity of sodium hydrate solution and then slowly passing carbonyl chloride (one molecule) through the solution; the precipitated carbonate is washed with soda and water and recrystallized from alcohol. It has the formula $CO\ (OC_6H_4OCH_3)_2$, is soluble in hot alcohol, ether, chloroform and benzol, insoluble in water and nearly so in cold alcohol; it forms an odorless and tasteless crystalline powder, melting at 85°C. It is easily saponified by alkalies and taken internally this change is produced in the intestines, the products formed being guaiacol and carbonic acid. —J. Reich, *Oesterr. Ztschr. f. Pharm.*, 1891, 725.

NEWS AND MISCELLANY.

ALKALOIDS AND ALCOHOL.

In Mr. Goschen's Budget speech he made an interesting comparison between the consumption of alcoholic spirits, coffee, and tea at the present day and fifty years ago. In 1841 the average of alcohol absorbed per head of the population was 30 ounces, whilst of coffee 17½ ounces were consumed, and of tea 18½ ounces. In 1891 56 ounces of alcohol *per capita* were consumed, whilst the consumption of coffee and tea had risen to nearly 100 ounces. It is curious that whilst the consumption of coffee as compared with fifty years ago has gone down 5 ounces a head, the consumption of tea has gone up nearly 80 ounces.—*Brit. Med. Jour.*

MEDICO-CHIRURGICAL COLLEGE OF PHILADELPHIA

At a special meeting of the Board of Trustees, the following elections were made:

Dr. W. Frank Haehnlen, Demonstrator of Obstetrics at the Univ. of Penn. was elected Professor of Obstetrics.

Dr. W. Easterly Ashton, Lecturer on Gynæcology at Jefferson Medical College, Professor of Gynæcology.

Dr. Chas. M. Seltzer, Professor of Hygiene.

Dr. H. H. Boom, Adjunct Professor of Chemistry.

Dr. B. T. Shimwell, Adjunct Professor of Operative Surgery.

SURGEON WANTED FOR THE PEARY RELIEF EXPEDITION.

We understand that the surgeon for the Peary Relief Expedition, which is to start in the latter part of the present month, has not yet been selected. Those of our medical brethren who desire to avail themselves of the privilege of visiting the Arctic solitudes will do well to make early application to Prof. Angelo Heilprin, of the Academy of Natural Sciences, the leader of the Expedition.

AMERICAN NEUROLOGICAL ASSOCIATION.

The Eighteeth Annual Meeting will be held at the New York Academy of Medicine June 22nd, 23rd, and 24th, 1892.

The Incandescent Electric Light is claimed by authorities to be the most satisfactory artificial light known to science. The arc light should never be used for indoor illumination, being detrimental to the eyes.

BAKER'S EMULSION

WITH HYPOPHOSPHITES OF LIME AND SODA.

Among many points in which this preparation excels are:

1st—In quality of the Pure Oil used in its composition, being the finest Norwegian, of a special manufacture, receiving the highest prizes at late European Expositions.

2d—In the Proportion of Oil it contains.

3d—In mode of manipulation and thorough incorporation, rendering it Permanent and Palatable, and of proper consistence, about that of Rich Cream.

4th—In Size of Bottles, containing 16 ounces.

Confidence in the merit of our preparation leads us to respectfully ask a specification of our Brand when prescribing.

ESTABLISHED 1830.

JOHN C. BAKER & CO., Philadelphia.

Clinical Lectures.

DISEASES OF THE JOINTS IN HÆMOPHILIACS, WITH SPECIAL REFERENCE TO DIAGNOSIS.

By DR. FRANZ KONIG,*
GÖTTINGEN, GERMANY.

Gentlemen:—Under the manifestations of that most peculiar and problematic disease, hæmophilia, there is not one perhaps that is of such importance to surgeons as that of bleeding into the synovial sac. While many chapters relating to hæmophilias, as for instance its ætiology, are still surrounded by the darkness of uncertainty, and the history of the disease in the family and its heredity is in no way understood, yet the clinical histories of those conditions of the joints, which we all want to designate as "bleeding joints" are very accessible, and may be easily obtained. To be sure it was a long time before the articular affection so common to hæmophiliacs, was recognized as a repeated bleeding into the synovial sac, or as a "bleeding joint."

The older authors of this century who have occupied themselves with this question, had a variety of opinions concerning both the nature and origin of the disease. Many attributed them to gout, a disease which they had opportunity of seeing a great deal of. Indeed, the knowledge of diseases of the joints being at that time very crude, nearly all such fell under the above heading. Some physicians, who had enjoyed larger experience recognized different varieties.

So Elsässer speaks of the gouty joints, but tells also of a patient, in whom after one joint became affected, developed a "*tumor albus*" at the knee, which after suitable treatment, such as rest and blisters, was ultimately cured.

We will see that Elsässer recognized various stages of the disease with correctness.

Wachsmuth, during the forties, was unable to see any difference between bleeding joints and articular rheumatism. He spoke of the disease in the joint as pseudo-rheumatism, and *rheumatismus spurius.*

Lange, in 1851, took a similar view of the affection. He interprets Elsässer's *tumor albus,* as a rheumatic tumor, with now greater and now less inflammatory manifestations. Finally, Grandidier, the physician and writer who made so extended a study of hæmophilias, in a monograph published in the seventies, ascribed the articular affections of hæmophiliac subjects to either gouty or rheumatic origins.

It was first during the sixties, that a few surgeons leaned towards the idea that the articular diseases in bleeders, at least in part, was due to a bleeding into the joint.

Richard von Volkmann, in his magnificent work on the diseases of the bones and joints, which appeared in 1868, said that both in hæmophilias and scorbutis, hæmarthrosis occurred either spontaneously or else with but very slight exciting cause. Reinert endeavored to prove most emphatically by the history of a very interesting case that the great majority of cases of bleeding-joints could be traced to intra-articular hæmorrhage.* Most emphatically also Lossen endeavored to turn aside the current idea of a uric acid diathesis or rheumatism in the bleeders. He explained that the "bleeders" joint was due to hæmorrhage into the synovial sac, and disturbance caused by this.

It is necessary thus to review the

*From *Volkmann's Collection of Clinical Lectures,* delivered before the Society of Natural Scientists, at Halle.

*Göttinger, 1869.

history of this disease in order to understand why it is yet, even among specialists, comparatively little known. The rarity of its occurance alone does not explain this.

As long as the profession remained of the opinion that bleeders were subject to various rheumatic, arthritic and other diseases of the joints, it did not seem worth the while to investigate these forms of otherwise well-known diseases. The question, however, assumed an entirely different aspect, when it was learned that the articular diseases of bleeders were entirely characteristic and distinct from others, and that their study offered a most interesting field for pathologico-anatomical research. Furthermore, that under certain circumstances their clinical study will enable the physician, from the character of the disease, to diagnose the hæmophilias as well as the bleeder's-joint, and many important points regarding the treatment may also be gleaned.

We are of the opinion that if physicians had a thorough understanding of the matter, it would be seen that the "bleeder's joint" was not such a rare affection as had been thought; especially may this be true since the clinical picture presented would almost justify a diagnosis of *tumor albus* (white swelling,) or articular tuberculosis. The possibility of such a diagnostic error can, as one can readily see, be a fatal mistake to the bleeder. Out of 8 bleeders with bleeder's-joints, which were treated during the last ten years at the clinic in Göttingen, two died from the results of a mistaken diagnosis, a surgical operation, for the relief of their condition having been attempted.

The object of this lecture is a practical one. It is designed to furnish the profession with a guard against similar mistakes to the above, which occurred to the writer.

Anyone who has stood helplessly by the bleeding operative wound of a hæmophiliac subject, and who has been forced to endure the sight of seeing such a subject die, before his very eyes, from a wound which he has inflicted with the best intentions—such a one will gratefully acknowledge the attempt that is made here; at least the attempt to render the diagnosis of bleeder's-joint a matter of possibility, if not certainty, in many cases.

The peculiar manifestations of a bleeder's-joint, not only those which occur at the first appearance of the hæmorrhage, but the many changing symptomatic pictures which occasionally assume a very chronic course, and are caused by the repeated hæmorrhages in the joint or joints.

To the hæmorrhages are added motor disturbances, and these, as we shall presently see, give rise to a typical inflammatory condition of the joint, which later may result in a loss of the joint, severe contractures, ankyloses, and great deformity.

According to this, we are justified in dividing the joint disease of the hæmophiliacs into three stages. The first stage is that of the first hæmorrhage into the joint. The clinical picture of this stage is that of a true hæmarthrosis. Of course, in certain cases and under certain circumstances the disease can end also with this stage, that is, the hæmarthrosis may be cured. If this is not the case the presence of the blood causes irritation, and there develops a peculiar form of inflammation, which develops as a panarthritis, and the pathalogico-anatomical as well as the clinical manifestations greatly resemble those of tuberculosis of the joint, especially that variety which is known by the name of *hydrops tuberculosus fibrinosus*. This stage might well be designated as the inflammatory stage, and it is certainly that stage which former authors have designated as white swelling, or *tumor albus*.

The third stage includes those regressive metamorphoses of the joint; the stage of pathological change of the joint, of adhesions, of displacement of the articular surfaces, of contractions, of ankylosis, and of deformities of the joint.

In brief, therefore, we can divide the course of the disease as follows:

1. The stage of the first hæmorrhage—the hæmarthrosis of bleeders.
2. The stage of inflammation—the panarthrosis in the bleeder's-joint.
3. The regressive stage—the stage which leads to permanent deformities of the bleeder's-joint — the contracted bleeder's-joint.

If we now turn to a consideration of the clinical manifestations of the bleeder's-joint, it need scarcely be said that a hæmorrhage which occurs spontaneously does not conduct itself with any material difference from one which is caused traumatically as is a rule, however, there is no traumatism in the case of the bleeders, and there must

be other grounds that will enable us to diagnose a discharge into the joint as a hæmorrhage. In this connetion it must be taken into consideration that the hæmorrhagic discharge into the joint of the bleeders occurs rapidly, similarly as though a traumatism had been effected. In individual cases subcutaneous ecchymoses may appear around the joint, or the green discoloration of the skin near the joint may point to the correct diagnosis. Naturally, the diagnosis will be greatly facilitated if it is previously known that the subject is a bleeder, or belongs to a bleeding family. In this connection I will introduce the clinical history of a patient treated by me during the last term:

Dr. H., seventeen years of age. The man was pale, and a few months previously had developed, quite suddenly, a painless swelling of the knee. The knee was slightly distended, fluctuated plainly and the patella vibrated. Up to the time of examination the patient had been able to use the leg without inconvenience; all normal movements were possible. While I was describing the case to the class, and laying particular stress upon the fact that the pallor of the patient and the sudden appearance of the disease, together with the retention of motor power and painlessness, led me to believe the case one of bleeder-joint, the patient interrupted me by saying, that his physician had cautioned him not to forget to mention that he came from a bleeder family. He himself, he added, bled profusely from the slightest wound and one of his family had a most severe hæmorrhage after the extraction of a tooth.

The trocar evacuated about 100 grammes of fluid blood; a compress was applied, and a protective apparatus made for the patient's knee. He was discharged cured.

As a rule, however, the surgeon does not see this first hæmorrhage, the first step of the disease, but meets with the manifestation described in our second, or inflammatory stage. We have already repeatedly called attention to the fact that the external symptomalogical and clinical picture of the bleeder's-joint is remarkably like that of fibrinous dropsical tuberculosis of the joint.

In the discussion of the pathological anatomy of the disease, the cause of this resemblance will at once be understood. Here we will only say that in both cases we are dealing with an effiux of fluid into the joint, from which fluid fibrinous matter is cast down, which in part remains free in the fluid, and in part deposits itself upon the surface of the joint, and partially, at least, becomes organized. Therefore, in both diseases we find a fluctuating enlargement of the joint with changeable thickening of the synovial membrane.

In the face of these facts one may well be uncertain as to whether it be at all possible to determine upon the correct diagnosis in such cases. We are also of the opinion that under certain circumstances this is impossible. If we know nothing of the history of the case, nothing of the manner in which this questionable disease of the joint has occurred, and above all, have no suspicion that the patient is a bleeder, but only that he has a diseased joint, then, indeed, even the most skillful specialist would fail to diagnose a case presenting the above symptomalogical picture as one of bleeder's joint.

We will now endeavor to discuss such points as may lead to the formation of a correct diagnosis. In the first case, it should be brought forward that youthful subjects, and male subjects at that, are those who are usually subject to the bleeder's-joint. The large majority of male subjects with bleeder's-joints, may be well explained by the large predominance of male bleeders, generally. To this should be added that, as a rule, the patient has a more or less striking paleness of the face. If added to these general symptoms, it happens that apart from the freshly inflamed joint the patient also has one or more deformed limbs that previously have been diseased, or indeed, if while the diagnostician is watching the case, a fresh hæmorrhage into the joint occurs, then the diagnosis of one of the progressive stages of bleeder's-joints becomes greatly strengthened. It becomes almost a certainty when the patient tells us that the first attack came on suddenly in the joint, and that the latter was painless, and primarilly functionally undisturbed, and that the regression has occurred gradually.

All these reasons for assuming the presence of bleeder's-joint, I have unfortunately had to learn through the sad experience of diagnostic mistakes of my own. I

feel that it will be instructive, if I here report the histories of a few of these cases.

In 1880 I received a boy for treatment, thirteen years old, Richard Rose by name. His father had died from consumption. He is said to have been well until about a year and a half before he came under treatment, when he acquired some disease of the left knee-joint. This would first grow better and then worse, but finally the swelling went down, the limb remaining partly flexed, and in a genu-valgum position. Simultaneously the left ankle-joint became diseased and the boy was compelled to walk on the toes of that foot. Three months after the left knee was attacked the right also became diseased. Upon admission the boy's condition was to all appearances that of dropsical tuberculosis of the joints. The joint fluctuated, and there was a knotty, crackling enlargement of the synovialis. During the course of treatment the elbow joint exhibited a passing swelling. No other symptoms of disease were found.

After many attempts to stretch the contracted knee-joint (the left) and to reduce the inflammatory swelling, I proceded to make an incision, feeling confident that I was dealing with a case of articular tuberculosis. The incision revealed the fact that I had to deal with a characteristic bleeder's-joint. I contented myself with draining the joint. On the third day, in spite of all efforts to check the uncontrolable hæmorrhage, the boy was a corpse.

The parents of the boy were both dead, and, therefore, the question of hæmophilias being in the family could not be answered. His mother had died shortly after his birth (from hæmorrhage ?).

The case occurred (in 1880) at a time when as yet I had seen but little of bleeder's-joints. But during the course of the same year I met with a second case and although several manifestations that should have led me to suspect bleeder's-joint were present, I failed to diagnose the case correctly, to the misfortune of the patient. The patient was a very pale boy, eight years old, whose parents were both dead. For three months he had suffered from a diseased knee-joint. The joint had a spindle-formed swelling, in the upper recess of which one could detect obscure fluctuation. A short time before the elbow joint also became swollen. Both joints were painful, and their motion impaired. After many curative attempts, the knee-joint was incised, with a view of resecting it. The first incision revealed clearly the presence of a bleeder's-joint, and in consequence the operation was abandoned, and the joint simply drained. In ten days the patient died from the effects of uncontrollable and repeated hæmorrhages, which persisted in spite of all that could be done.

The experience gained by this case at least sufficiently warned me not to make an incorrect diagnosis in the case of the boy's brother. He was also admitted a few days later, suffering from a joint disease that seemed to be of a tuberculosis origin, with contraction. His right knee was slightly flexed, and in the genu-valgum position, and the medial condyle was very prominent. The synovial swelling was slight. An attempt was made to correct the deformity and to fix the limb in a plaster of Paris bandage. Suddenly both elbows were similarly affected. The boy was eleven years old and very pale. In the meantime the brother had been operated upon and it was learned from evidence obtained from their home that they were from a bleeder family.

In distinction to these cases, the diagnosis of bleeder's-joint was made in the case of a man 23 years old, who simultaneously had tuberculosis (lupus of the face, and tubercular epidydimitis). When ten years old the patient developed a swelling of his left knee-joint. When fourteen years old his right knee became diseased, and while the trouble of the left knee ameliorated the right again became worse and finally ended in contraction and genu-valgum position. Also the left hip-joint had been filled with an effusion, which gradually receded.

I was informed that this patient also belonged to a bleeder family.

During the winter of 1890 to 1891, he was treated with Koch's lymyh for lupus and tuberculous epidydimitis. While the lupus and epidydimitis reacted intensely in response to the injections the joints showed no reaction. Here tuberculin undoubtedly proved that the joints were not tuberculous.

After the above details of symptomatology and diagnostic points, you see that we are in a position very frequently to diagnose the bleeder's-joint. We have already stated that if the disease occurs in the case of a known bleeder, or member of

a bleeder family, that the diagnosis is comparatively easy, and for certainty in such a case, it is only necessary to know that the swelling occurred very suddenly. If one knows nothing of the patients being a bleeder a correct diagnosis can frequently be made. An accurate diagnosis is possible when we meet with rapidly developing enlargements of the joints in pallid youthful subjects; furthermore by the simultaneous characteristics of other joints, and also by the ecchymoses and blue spots which appear upon the body of the patient.

We have gone so far as to show how we can be able to determine upon a correct diagnosis in recent cases of bleeder's-joint after the first hæmorrhage or hæmarthrosis, or after repeated hæmorrhages—panarthritis. On the contrary we have said nothing as to the recognition of the disease in its third or regressive stage.

In order to answer this question, or, indeed, to broaden our knowledge of bleeder's-joint we must look for a few moments at the pathological anatomy of the disease.

This we can do with the aid of two specimens I have at hand, since one can gain but little on the subject in medical literature, and as few if any pathologico-anatomical collections contain specimens of bleeder's joint. My preparations are unfortunately from the two cases that succumbed to my operative interference, and one from a man who lived after such an operation. The findings in each one are identical. All three are from knee joints. One was the subject of a long dissertation by Dr. Bockelmann, as long ago as 1881.

Proceeding from the earlier stages of the disease, the condition which is present a few weeks after the initial hæmorrhage into the joint, we find that the articular space is filled with fluid blood. Apart from this there are some clots, in part discolorized, some floating in the liquid, and others adherent to the capsule. The capsule itself is thickened, succulent, imbibed with blood coloring matter, and therefore discolored accordingly. At some places the fibrinous deposit has begun not only on the capsule but also upon typical places of the surface of the cartilage, sometimes upon the femur, from one side to the other of the upper surface of the cartilage. Here and there brownish pigmented tufts were beginning to form. At this time the cartilage also begins to degenerate, and to become ragged, and sharp-edged peculiar defects appear, which are described below.

The anatomical picture in the second stage of the disease, when it resembles fibrinous dropsical tuberculosis, is similar to the above, save that it is more advanced and greater changes have taken place. The contents of the joint, unless a fresh hæmorrhage has just occurred is not pure blood, but composed of bloody serum, or pure serum of a light brown color. Especially prominent to the eye when such a joint is cut open are the large numbers of floating, brownish, synovial tufts. In the joint of the child who was operated upon and died, the slightly thickened synovial membrane seemed overgrown with moss. In the fluid a large number of delicate brown tufts floated by each other like a Medusa's head, indeed the whole synovial membrane has this appearance, but the discoloration of this membrane varies, sometimes being reddish, brown or gray.

Besides these characteristic changes, the appearance of the surface of the cartilage is none the less peculiar. All over it has lost both its white color and gloss, it is now a dirty reddish-brown or gray. In some cases filiform masses seemed to have raised themselves from its surface, which seem to tend toward the formation of connecting tissue. They are of importance as forerunners of *synechia* in the joint. The principal characteristic changes are sharp-bordered defects of the cartilage, of a map-like appearance, some small and some large. These are found on different parts of the surface of the cartilage, but especially where these filiform masses are seen. Their cause I have not been able to discover. Changes of the articular surfaces of the cartilage, as seen in arthritis deformans are not met with here, although there were unevennesses in the cartilage's surface.

A bleeder's joint does not stay long in this stage, unless additional hæmorrhage occurs. As a rule, after the above anatomical picture the already mentioned regressive changes take place, and the tissues undergo a metamorphosis. There occur adhesions, formations of connective tissue, and contractions with deformity, which need not be further traced. But while the position resulting is not dissimilar to that caused by tuberculosis, yet there is no tendency to the formation of either ab-

scesses or fistulæ; on the contrary, healing often occurs with remarkable rapidity.

The first hæmorrhage into a joint is frequently followed by entire cure, and without leaving any trouble behind it; but I doubt, if the disease has once reached the second stage, that it can ever again become a perfectly mobile joint. To the prognosis must also be added the fact that as the patient is a bleeder, he will very likely get other bleeder's joints.

A fresh hæmartherosis in a bleeder should be so treated that the patient does not use the limb. If a lower limb is affected the patient must not walk, and if an arm is affected he must not use it. But, as a rule, he will disregard this injunction, since the first evidences of the disease are so slight as to be little thought of by the patient.

Moderate compression undoubtedly assists resorption, and I have frequently seen cures result from it.

In the second stage the matter is a different one, and on account of the inflammatory process and pain to the patient the question of operation comes to the fore, and with it the knowledge that we are dealing with a bleeder. I have used puncture in three cases without incurring any serious bleeding, and followed it by irrigation of the joint with carbolic acid solution. Two patients were cured and one improved.

But I would let all operative procedures cease here. Of the three cases in which I, owing to incorrect diagnosis, made an incision into the joint, two died, and one barely recovered.

The contractures may often be helped by plaster of Paris bandages or suitable mechanical appliance. The question "What is to be done in a case of bleeder's-joint?" sinks into utter insignificance in the face of the question "What *not* to do?"

The object of this clinical study is to cause greater familiarity with a not altogether rare disease, but, above all, to save the subject suffering from a bleeder's-joint from untimely death.

TREATMENT OF SUMMER DIARRHŒA IN CHILDREN.

By ALICE McLEAN ROSS, M. D.,
PHYSICIAN TO BAPTIST HOSPITAL, SWATOW, CHINA.

Last summer, while physician to the Woman's Hospital of Detroit, I had exceptionally good results from the following plan of treatment for summer diarrhœa. My infant ward contained on an average forty-five babes, and at one time I had fourteen sick with cholera infantum but I had no deaths from this dread disease during the summer months. As the hot weather is approaching, it is appropriate to discuss this exceedingly prevalent malady.

At the onset of bowel trouble give ʒiss of castor oil to clear out the bowels thoroughly, and after every movement following that caused by the oil, give a teaspoonful of the following mixture:

℞ Bismuth. subnit.....gr. cccxx.
Acid. carbolic.....
Spt. menth. pip.....
Tinct. capsici.....
Spt. camphor.....
Syr. simplic.....
āā mx.
Aq. cinnamon.....āā qs. ad. ʒviii.

If movements are very frequent, the same dose may be given every 2h. When temperature runs over 102°F. and patient is pretty strong, give acetanilid gr. iss every 3 h. I have observed that the antipyretic effects of this drug last almost exactly 3 hours in children. If patient is weak, lower the temperature by sponge baths, and where fever runs below 102° F, substitute for these, aconite gr. $\frac{1}{15}$, every h. Spirit. frumenti is necessary in small frequent doses where exhaustion supervenes. Give every morning and evening, with soft rubber catheter, a high irrigation of starch water, warm, to which is added ʒss. soda bicarb. to the pint.

Children usually cry a great deal and it is the natural thing for the mother or nurse to give them their accustomed food to stop them. This must not be allowed. They are inclined to drink greedily and overload their already weakened stomachs, and aggravate their trouble. It is best to feed them at their accustomed times only, and give them plain cool boiled water to quench their thirst. Plenty of fresh air

is desirable, and a cool, even temperature is best. Upon very hot days it is well to remove the ordinary clothes and put on a light flannel night dress guarding against sudden changes of temperature, of course. I have tried other plans, but this gave very satisfactory results.

TREND OF MODERN NEUROLOGY*

By L. BREMER, M.D.,
ST. LOUIS, MO.

ABSTRACT OF REPORT ON PROGRESS IN NEUROLOGY.

Cerebral localization and its utilization for brain surgery is not now as much in the foreground of neurology as it has been in former years. Instead of this neuropathology and anatomy engage the attention of investigators. The "weeding-out" process of the neuroses in noseology is actively and successfully being pushed in the medical centers of the various countries. The number of the purely functional nervous disorders is constantly being diminished by the discovery of their etiological factors and their anatomical substratum. Even "idiopathic" epilepsy, so-called, seems to depend almost always on minute sclerotic patches in the brain which escape detection on naked eye examination. It stands to reason that the rest of the recognized neuroses, hysteria and neurasthenia, will follow suit in the course of time. Bacteriology has been most prominent in making inroads on the supposed functional nervous diseases.

New views and new fields for investigation have been opened by the discovery of the toxines (tetano-toxine, typho-toxine, etc.) and their elective affinity for certain nerve-centers and nerve-tracts.

The toxines led to the discovery of the auto-intoxications, which play such important part in initiative and paralytic nervous diseases.

The knowledge of such pathological conditions, due no doubt to a faulty or perverted metabolism, is of great practical import, affecting principally our notions as to dietetics in disease.

The existence and reality of such auto-intoxications seems to have been demonstrated in the various forms of insanity, in which the urine of the patients greatly exceeds in toxicity that of healthy individuals.

The attempts of some neurologists to annex even such diseases as tuberculosis or cholera, etc., as being nervous diseases, is to be deprecated, being in antagonism to our present accepted nosological and pathological conceptions.

Another divergent movement in neurology is hypnotism as a remedial agent. In the vast majority of cases, where it might perhaps be indicated, simple suggestion does all, and even more than hypnotism and the cultivation of a sanguine temperament in the neurologist will stand very well in place of what is, at best, a species of mummery savoring of and leading to humbuggery. The introduction of hypnosis as such into therapeusis is not to be classed as progress.

CODEINE, ITS PHYSIOLOGICAL ACTION AND THERAPEUTICAL EMPLOYMENT.

Dr. William Heidingsfield, of Strassburg, reports (*Maug. Disser.*) on observations made at the Strassburg Insane Asylum, on twenty-four patients treated with codeine.

The usual dose was 0.02 gramme (⅓ grain) three times a day, in powders or in pills. He found that:

1. Codeine has very little or no anæsthetic action; as a rule, it disappointed in bodily pains, as well as in hysterical disturbances.

2. As a narcotic, it acts better in conditions of depression than in exaltation; but only when given in doses three to four times as large as narcotic doses of morphine. In acute mania, consequently, it is usually without effect.

3. In morphinism, its action is doubtful.

4. Codeine is to be recommended as an extremely prompt sedative in affections of the respiratory tract. It might also be employed where a medicament to quiet and to alleviate pain must be given continuously for a long time; or when a change of remedy is necessary in such cases.

5. Codeine is devoid of any injurious or even merely disagreeable accessory effects, aside from an occasional, slightly itching eruption, which, however, disappears in a few days.—*Merck's Bulletin.*

SOME POINTS IN THE SYMPTOMATOLOGY OF GENERAL PARALYSIS.*

By PHILIP ZENNER, A. M., M. D.,
CLINICAL LECTURER ON DISEASES OF THE NERVOUS SYSTEM IN THE MEDICAL COLLEGE, OF CIN., OHIO.

After some mention of causes of the disease a brief outline of symptoms was given. The latter are gradual failures of mental powers, attention, judgment, memory, the manifestation of delusions, especially delirium of grandeur, and motor symptoms, paresis of facial muscles, tremor of lips and tongue, a stammering speech, and sometimes spinal paralysis. There are sometimes attacks of acute mania, and paroxysms of an epileptic or apoplectic character. The average duration of the disease is three years. The earliest symptoms are most important to recognize, for if the disease be detected at an early period, financial calamities may sometimes be averted, and it is only then that anything could be hoped from treatment. Ordinarily the disease begins so insidiously that nothing is observed excepting by those coming most intimately in contact with the patient, and by them the changes are not attributed to disease; the early changes are impairment of powers of attention, of judgment, of quick perception, of memory for recent occurrences, etc. The affections become less strong, though the patient may be emotional, cry easily and the like. There is less attention paid ordinary ceremonials, to matters of dress, table manners, etc., and the patient often becomes indecent in his actions. There are usually some objective symptoms, even at an early period, such as tremor of the lips, and in equality of pupils. Spinal myosis is a very early and important symptom. The union of the latter and absent knee-jerks had been often seen in such cases by the writer.

The disease was often supposed to be ushered in abruptly with an attack of acute mania, when changes had taken place long prior to such an attack but their significance had not been recognized. The writer then reported such a case in which the condition of the pupils enabled him to make a correct diagnosis.

*Abstract of the paper read before the Ohio State Medical Society, May 6, 1892.

TREATMENT OF ORCHITIS AND EPIDIDYMITIS.*

By O. HASENCAMP, M. D.,
TOLEDO, OHIO.

When it is convenient for the patient, or the severity of his case demands that he rests in bed, the scrotum should be supported on a pillow or on a support placed across the thighs. At the beginning of the treatment, a good saline purgative should be administered, preceded by a large dose of calomel if a very active purge is needed. If there is much constitutional disturbance antiphlogistic remedies should be given. Tincture veratrum viride will reduce the heart's action. Acetanilid or phenacetin are useful to reduce the temperature and also relieve the pain to a certain extent. Aconite and antimony are also useful. Phytolacca and pulsatilla are said to have a specific effect in these troubles. Bromide of potash and opium are sometimes needed for rest and relieving pain. Local applications play an important rôle in the treatment, they relieve pain and are necessary to hasten a cure as constitutional remedies. Electricity is the best remedy we have in the treatment of these troubles, and one advantage is that it can be used in connection with any other method of treatment. The galvanic current should be used, the positive pole fitted with a cup or large sponge electrode applied over the enlargement and the negative pole over the abdomen or along the upper part of the spermatic cord, using from six to ten milliamperes for five to ten minutes at each treatment, which should be given at least once daily until relieved, using a suspensory bandage to support the testicle. This method of treatment is painless and that which pleases the patient best because he is not obliged to leave his business, and I have seldom found it necessary to order the patient to his bed or room. The trouble is generally relieved in from three to five days, and I have not had suppuration in any case of orchitis or epididymitis treated by electricity. Electricity, although most useful in acute and simple chronic cases, is very beneficial in enlargements caused by

*Read before the Ohio State Medical Society, May 5, 1892.

syphilitic and strumous conditions, but constitutional treatment is, of course, necessary. The application of cold is very useful in most cases. Orchitis due to metastasis is best treated by hot fomentations, in old and feeble subjects, when the circulation is poor, hot applications should be used in preference to cold. Cold can be supplied by the ice bag, Leiter's coils, cloths dipped in ice water, or cold evaporating lotions. To get the best results, cold should be applied as early in the disease as possible. In cases where there exists great pain, swelling or tension, local blood-letting or scarification may be resorted to. Painting with a strong solution of nitrate of silver (90 grs. to the ounce.) If there is fluid in the cavity of the tunica vaginalis a small trocar can be used to allow the fluid to escape. Pressure by elastic bag or stopping with plaster sometimes gives relief, but it is very troublesome, annoying and of doubtful utility. A treatment for epididymitis which has proven sucessful in my hands, although I have used it only a limited number of times, was given in a paper, read by Dr. G. E. Brewer before the American Association of Andrology and Syphilis, upon the treatment of epididymitis, and published in *The Philadelphia Medical News*, Oct. 1891. He called attention to this method of treatment that he had found very useful in both acute and chronic cases of this disease. The inflamed organ is covered with a thick layer of cotton wool which is surrounded by a layer of rubber tissue, extending beyond the wool to the healthy skin of the scrotum, a gauze bandage is next firmly applied and the whole is kept in place and supported by a suspensory bandage. It relieved the pain promptly and has a marked influence in promoting the rapid dissipation of the inflammatory induration.

In syphilitic orchitis specific constitutional treatment should be given in connection with local treatment. In malarial subjects quinine should be administered. Rheumatic patients should be given the salicylate of soda in ten grain doses every four hours. The diet should be light, principally milk, and animal food should be avoided. Tonics and alteratives should be used in the later stages of the disease and with hygienic measures be of assistance in completing the cure.

TREATMENT OF PNEUMONIA WITH REPORT OF CASES.*

By H. PERDUE, M. D.,

BARNESVILLE, GA.

Pneumonia holds a high position among the fatal diseases of the human race. Its victims yearly darken the plane of life from the palatial residence to poverty's hut. It claims a mighty host in the army of the dead.

While its mortality ranges from 3 to 35 per cent., its average under all circumstances, according to statistics is 20 per cent. or one out of every five. This stamps it as a fearful disease, and should claim our most serious attention and study. Human life is a precious gift from the hands of the Almighty, and it is an imperative duty to prolong it, if possible, to the extreme limit of old age.

Passing by the ætiology, pathology and diagnosis of this disease in its various forms, which being in recent works and accessible to all physicians, I shall devote my time in as concise a form as possible to the most successful methods of treatment, especially in my hands.

I shall consider principally acute croupous or lobar pneumonia. Taking as a definition of this disease that given by Dr. A. L. Loomis in his work on "Practical Medicine," viz., that it "is an acute general disease, characterized by an inflammation of the vesicular structures of the lungs with an exudation in the alveoli, which renders them impermeable to air," I shall proceed to give some of the points of treatment.

In the congestive stage, which lasts from one to three days, the patient is generally very restless, with high pyrexia, a sharp, stabbing pain beneath the nipple of the affected side, except in central pneumonia. Pleurisy, which gives so much pain, is said to be present in about 85 per cent. of all cases. In the beginning nausea and vomiting occur in about ¾ of the cases.

The first step to be taken is to relieve these distressing symptoms. Some give morphine hypodermically before the exudative process is completed. This will generally give quick relief, the thing so much desired by the patient, but I gener-

*Read before the Ga. State Medical Association, April 21, 1892.

ally prefer phenacetine, as some people do not bear opiates well. It reduces the fever, produces sweating, and gives ease. It is, in my opinion, *the* remedy *par excellence* at this period. I give it in nearly all cases, except the very old, the very young, and the very feeble, always giving alcoholics with it. I have many a time with it had my patients resting quietly and asleep 20 to 30 minutes. Five grains is the average dose for adults; about four hours apart. In a very few cases six grains will be required, and occasionally four grains will prove to be enough. The second dose may have to be given in two or three hours. The guide for diminishing or increasing the dose is the reduction of temperature produced. Sleeping and sweating are the conditions desired. I once gave 7½ to 8 grains of this medicine at a dose, but am now satisfied that five grains with whiskey should be the average dose. Sometimes it is more effective, as well as satisfactory, to give a smaller dose, and at shorter intervals. Some use cold applications to reduce the fever and give ease. Believing that the inconvenience, exposure and depressing effects are too great, I have never tried it. American practitioners are generally against it.

Some give large doses of quinine to reduce the fever. I have tried it to some extent, but like my present method better.

As soon as located some counter-irritant or soothing application should envelop the affected side, and, if the inflammation is in both lungs, the whole chest should be encased. That application may be a hot poultice, spongio-piline or cotton-batting covered with oil silk, a flannel cloth saturated with spirits of turpentine, or a mustard plaster. These should be renewed from time to time.

After some rest has been obtained, if the patient has not already been purged, it is well to give a dose of calomel. Sometimes we find a patient in great peril from venous engorgement and exhaustion of the right heart in its efforts to propel the venous blood through the capillaries of the lungs.

Formerly, to relieve this distressing symptom, venesection was practised by some, removing a portion of the venous blood; but that has been abandoned, on account of its depressing effect.

The effect of the nitrites in dilating the arterioles meets the urgent demand. Nitro-glycerine especially fulfills the indication. It is a valuable fact that it is as quickly absorbed through the stomach as when given hypodermically. It does its work quickly. On wings of mercy it flies to the rescue of the beleaguered one, unlocks the pent-up channels, and permits the waste product of the venous blood to become purified in the lungs, and the pure life-giving liquid to go on in its mission of love. It should be given in doses of $\frac{1}{100}$ gr., and be repeated in twenty or thirty minutes, if necessary, and afterwards every two or three hours as long as needed.

I always give strychnia in $\frac{1}{60}$ gr. dose, and atropia in $\frac{1}{100}$ gr. dose in this condition at the same time. They are heart and respiratory stimulants, and should be continued about four hours apart until this condition is well relieved. The strychnia, generally, should be continued through the whole disease. It strengthens and sustains the tired and flagging heart until recuperating nature comes to the rescue.

I have used, in nearly all my cases of lobar pneumonia, this season, the peroxide of hydrogen, and with good effect, I am sure. It was given for its germicidal properties, the oxygen it furnished the patients, exhilarating and strengthening them. The most remarkable therapeutic effects of this remedy in this disease that I have seen is from Dr. J. L. Green of Colorado. It is to be found in the "*Medical Record*," of New York, Feb. 6th, 1892. All of his uncomplicated cases, which were more than 150, got well. I have been giving one teaspoonful of Marchand's preparation in an ounce or two of water every ½ hour or hour. When the patient is evidently better, to prevent worrying him too much, it was given further apart. If it nauseates, and sometimes it does, the quantity should be diminished. I feel confident it has saved valuable lives. Any other good preparations of the peroxide, no doubt, would do the same.

Throughout the stages of congestion and consolidation, phenacetine in 5 gr. doses should be given in connection with whiskey, or milk punch every four hours, unless the temperature should get below 103° F. Midway between I generally give carbonate or muriate of ammo. with prun. virg. and syr. senega. In all bad cases, it is good policy to continue the peroxide about two hours apart. It hastens the crisis.

If the patient is disposed to be very

restless, and the phenacetine does not keep him quiet, I sometimes give the spts. eth. co. in teaspoonful doses. If it becomes very necessary that he should have something else to produce sleep, chloral in 8 to 12 gr. doses is an excellent remedy. If he has not had whiskey sufficiently, it should precede the chloral to prevent its depressing effects.

The patient should be kept in bed and not disturbed by conversation in the room. He should have rest, to conserve the power of nature. Good nursing is a very important part in the management of pneumonia patients.

A nutritious liquid diet, such as sweet milk, beef tea and palatable broths should be given. Sometimes the nausea is so great that patients will not readily take the diet named above. I have found Reed & Carnrick's Kumysgen, claimed to be a product of pure sweet milk, to be well borne and to sustain the patient.

The room of the patient should have fresh air throughout the whole treatment, and should be kept at a temperature of 65° to 70° F. In convalescence, stimulating expectorants and tonics are indicated.

In catarrhal pneumonia, the supporting treatment should be given from the beginning. Liquid diet, principally, should be given frequently, as the patient will not generally take much at a time. Patients should take stimulants from the beginning, and continue them throughout the treatment. I generally give carb. or muriate of ammonia during the entire treatment. Quinine is a very valuable remedy in reducing the temperature, and as an aid to resolution.

Mild mustard poultices or plasters to the chest are very valuable; also flannel cloths or jackets saturated with turpentine, diluted with oil if the patient is a child.

Great care should be exercised in convalescence to prevent a relapse or second attack.

REPORT OF CASES.

Before I begin this report I wish to state that my partner, Dr. M. A. Clark, and I visited all of these cases, sometimes together and sometimes separately, and were in perfect accord in their management.

Since the first of January we have had besides several of the lobular variety, fifteen cases of the lobar. Three of the lobar class had one lobe of the lungs affected, four had two, seven had three, and one had four. This shows an unusual *pro rata* number of the lobes attacked, yet we have not lost a *single* case. To prevent the lengthening out of this paper I will report only two cases.

Case I. January 24th. J. C. B., male, white, age 75, had bronchitis for 20 years, had *la grippe* recently, and was just beginning to sit up from it. Had a chill night before. Was called at 3 P. M. Could not take his temperature on account of extreme nervousness. Inspection showed diminished breathing on right side, and increased on left. Palpation, increased vocal fremitus on right side. Percussion, beginning dullness over lowest lobe of right lung. Auscultation, numerous crepitant râles over middle right lobe. Pulse, 120; respiration, 38. Put him on phenacetine grs. 5, every 4 hours, with whiskey and milk; also ammonia carb. grs. 5, syr., synegæ m, 10, syr. prun. virg., ℥ss. aquae qs. ad., ℥i. To be taken in water between doses of the other medicine. 8 P. M. dullness over middle and lowest lobes of right lung, bronchophony, crepitant râles over left lower lobes showing very rapid spread of trouble. Patient unconscious and very restless. Had the lungs completely enveloped in turpentine chloths. On account of extreme restlessness, added morph. sul., $\frac{1}{16}$ gr. to each dose of cough mixture.

January 25th, 8 A. M. Right, middle and lowest lobes solidified, and upper lobe of same side evidently involved. Left lower lobe solidified. Pulse, 140. Pespiration, 48. Had a bad night, but somewhat more quiet this morning. Continued former treatment except stopped phenacetine. Prescribed Marchand's peroxide of hydrogen, one teaspoonful in water every ½ hour or hour between doses of other medicines. Three P. M. Slightly more quiet. Eight P. M. Resting more quietly. Not so hot. Unconscious. Stopped morphine.

January 26th, 8 A. M. Spent a bad night. Occasional muttering, very restless, pulse and respiration very rapid. Increased the milk punch. Put him on atropia sul. gr. $\frac{1}{100}$ and strychnia, $\frac{1}{60}$ every 4 hours. Seven P. M. Very restless, low muttering delirium, carphologia, subsultus tendinum, sordes, pulse very rapid and respiration labored, lips livid. Gave cal-

omel, grs. 30, for its sedative effect. Returned in 2 hours, found him sleeping quietly, but heart labored and respiration difficult. On awaking he was given nitro-glycerine, gr. $\frac{1}{100}$, and repeated in ½ hour, and after that 4 hours apart. Continued other medicines.

January 27th, 8 P. M. More quiet. Left off nitro-glycerine. Continued other treatment. Besides milk punch, gave beef peptonoids. Eight P. M. More restless. respiration labored, venous engorgement. Put him on nitro-glycerine again. Reduced atropia to $\frac{1}{150}$ gr.

January 28th, 8 A. M.—Rested better during the night. Continued same treatment. 7 P. M.—Rested much better during the day. Stopped nitro-glycerine.

January 29th, 8 A. M.—Death seemed imminent from exhaustion. Pushed nourishment and whiskey to the exclusion of medicines. 7 P. M.—More quiet every way.

January 30th, 8 A. M.—Rested tolerably well during the night. Dropped the atropia, but continued the strychnia, the ammonia mixture, and peroxide of hydrogen as regularly as could without disturbing him too much. 7 P. M.—Better.

January 31st, 8 A. M.—Very much better. Continued to visit him until March 9th, when he was dismissed as safe after visiting him seventeen days.

Case II.—Harry A., male, white, age 17, family history good, previous health good. Had *la grippe* with acute gastritis just preceding this attack.

February 6th, 4 P. M.—Found lowest and middle lobes of right lung involved. Temperature 105° F. Gave phenacetine, grs. five, every four hours to reduce fever. Patient being very nervous and restless, gave chloral hydrate, grs. 7½, to be repeated every two to four hours as needed to make rest. Gave Mallinkrot's peroxide of hydrogen, ℥ss in water every one or two hours. Had whole chest completely enveloped in turpentine cloths.

February 7th, 9 A. M.—Temperature 104.5° F. Respiration 28. Pulse 120. Still restless. Continued phenacetine. Gave ammon. carb., grs. v., syr. senegæ, m x., syr. prun. virg., aquæ aa℥ss every four hours. Milk punch every four hours, following each dose of phenacetine. Continued peroxide. 2 P. M.—Temperature 105° F., though we had continued phenacetine, which produced profuse sweating; changed to 3 grs. every three hours. Continued ammon. mixture. Left off chloral as he was resting better.

February 8th, 8 A. M.—Temperature 103.5° F. Respiration 28. Pulse 120. Two lowest lobes of right lung completely consolidated. Crepitant râles in upper left lobe. Continued same treatment. Sweating not quite so profuse as before, but still too great. Gave atropia sul. gr. $\frac{1}{200}$ every four hours to check excessive sweating. 3 P. M.—Temperature 104.5° F. Upper left lobe in second stage. Pulse weak and rapid, and respiration labored. Sweating not so great. Stopped atropia separately, and gave in combination atropia sul., gr. $\frac{1}{200}$, and strychnia, gr. $\frac{1}{60}$ every four hours. Left off peroxide during night, with instructions to begin again in the morning.

February 9th.—Temperature 103.5° F. Continued treatment. 3 P. M.—Temperature 103.5° F. Resting quietly; respiration and pulse showing some improvement. Left off peroxide after bedtime, so as not to disturb sleep.

February 10th, 8 A. M.—Temperature 102° F. Left off strychnia and atropia, but continued ammonia, whiskey and peroxide. Left off phenacetine, as temperature was below 103° F. 3 P. M.—Temperature 102.5° F. Resolution beginning in lowest right lobe.

February 11th, 8 A. M.—Temperature 101.5°. Better every way. 3 P. M.—Temperature 102°. Continued ammonia, milk punch and peroxide.

February 12th, 8 A. M.—Temperature 99°. General resolution over whole of affected area. Continued treatment.

February 13th.—Temperature normal. Continued to visit him till February 15th, when he was dismissed as safe after visiting him 10 days.

PREVENTION OF COCAINE POISONING.

Smith recommends that patients be prepared by giving them a drop of one per cent. alcoholic solution of trinitrine a minute before administering the cocaine, repeating the dose at intervals if the pulse be not affected and no pain of fulness in the temporal region be felt. The trinitrine acts almost as rapidly and continues to affect the vaso-dilators for upwards of half an hour longer than nitrite of amyl.

Society Reports.

THE MEDICO-CHIRURGICAL SOCIETY, OF LOUISVILLE.

Stated Meeting May 13, 1892.

Dr. Wm. Cheatham, President, in the Chair.

SUPRA-PUBIC CYSTOTOMY FOR ENLARGED PROSTATE.

Dr. A. M. Vance: I will report a case of considerable interest. About five weeks ago I was called by Dr. Bates to see a patient seventy-eight years of age, who had been for three years subject to bladder trouble. He had occasional attacks of retention of the urine, due to enlarged prostate. The day I saw the case, the patient had ridden fifteen miles, was suffering greatly and could not empty his bladder. Previous to my seeing him, several physicians had failed to relieve by catheterization I at once aspirated the bladder, and, afterward, repeated the operation fifteen times. Then a supra-pubic cystotomy was done making the incision through the site of these sixteen aspirations. The bladder was emptied and washed out. Case progressed nicely for seven days, wound did well, had primary union. The patient was allowed to walk about. On the eighth day, however, he died suddenly, probably from heart clot. No post-mortem examination was made. There was some induration around the site of the punctures. No urine passed through the urethra after the operation.

Dr. A. M. Cartledge: The case related by Dr. Vance gives us something new to talk about. The treatment of enlarged prostate is very varied. I believe that we have especially struck a new era for dealing with enlarged prostate in old people. The question to be decided is when, and in what cases, are radical measures justifiable. It has been the rule in my practice, after failing to introduce a catheter, to aspirate, then give cathartics, quinine etc. together with hot applications. This plan usually gives relief and the bladder for some time afterward can be emptied by catheter. The attacks of retention, however, will generally recur, and the patient dies usually in the third attack. I think it time to formulate this rule: If, after an hour or two, the catheter cannot be passed, then do a supra-pubic cystotomy at once. In my opinion the operation is often put off too long in these cases.

Dr. E. R. Palmer: Dr. Watson has written the best article on enlarged prostate that I have ever read. In these cases there are so many collateral troubles that the patients are usually ready to die, and, if an operation is done, the knife gets the credit of killing them. There are nearly always degenerate changes in the mucous membrane of the bladder, ureter, pelvis of the kidney, and in the structure of the kidney itself, consequently, an operation is badly borne. I like the perineal operation in middle life; in old men, the operation ought to be the supra-pubic. The operation ought to be regarded as the first, rather than the last resort.

Dr. W. O. Roberts: I strongly advise the supra-pubic operation to relieve retention of the urine from enlarged prostate. The retention is apt to recur often, and each time damages the case. The operation is simple, and when done early gives excellent results. Dr. Davis read a paper before the Southern Surgical Association in which he stated that it was his rule, when called to a case of retention due to enlarged prostate, to operate at once. Dr. Davis first passed a large trocar, then withdraws and inserts a catheter. Later on he uses a tube, the outer end of which can be closed by a cork. I have operated once according to the plan of Dr. Davis, using a large trocar and then inserting a No. 12 catheter. I think, however, there is always danger of introducing germs when catheters are used.

Dr. Wm. Bailey: I have recently seen two cases of retention of urine. both of which were relieved by the hot bath. In one case, where the patient was under forty-years of age, the tumor extended above the umbilicus. There was a history of gonorrhœa. I passed a soft catheter and only removed one drachm of urine. I thought I had not reached the bladder, but only a little sac in the urethra with the catheter. I then placed the patient in a hot bath, and the tumor disappeared without the patient being conscious that he had passed any urine. I believe that it is oftentimes better to temporize than to subject an old man to a capital operation. I think, however, that cystotomy is a less evil than repeated catheterization.

Dr. J. W. Irwin: I commend all that

Dr. Bailey has said on this subject. I have never seen a case of retention in an old man in which I have not been able to enter the bladder without restorting to a cutting operation. In case an operation is imperative, I prefer the operation through the perineum, rather than the supra-pubic, because it establishes drainage. In these cases there is always more or less muco-pus, and this cannot be emptied through the supra-pubic opening. I believe that I have prolonged the life of many patients by not performing any surgical operation.

OPERATIONS IN NEW YORK HOSPITALS.

Dr. W. O. Roberts: Having just returned from New York, I have been requested by our Honorable President, and several Fellows of the Society, to give a short resumé of my trip, and of the operations I witnessed in the East.

I saw Dr. Polk, at Bellevue Hospital, operate for fibroid of the uterus. He did a hysterectomy according to Freund's method. Used drainage tube and packed the vagina with iodofom gauze. The patient's temperature was 100° on second day, afterwards was normal. Dr. Polk does this operation in all cases of fibroid tumors of the uterus, when they give rise to symptoms. In case of chronic endometritis, Dr. Polk first dilates the cervical canal by Goodell's dilator, then scrapes the cavity of the body with a sharp curette, after which he washes out the cavity and packs it through a speculum with iodofom gauze; he also plugs the vagina with the same material. This vaginal plug is removed on third day and the canal douched. The uterine plug is allowed to remain one week. All the cases got well under this treatment.

At the Hospital for the Ruptured and Crippled, I saw Dr. Gibney do a number of tenotomies for deformities of the neck, foot and hand; he employs the subcutaneous method. Many surgeons in New York, however, do the open operation, even when the tendo-achillis has to be cut. Dr. Abbe employs the open method. Saw Dr. Abbe tie a fractured patella with subcutaneous ligature, after which the leg was put in fixed dressing.

At Presbyterian Hospital, Whitehead's operation, also an operation for hare-lip, were witnessed, Dr. McCosh being the operator.

Saw Dr. McBurnie do an amputation: Case was a young woman with an enlarged leg from middle of thigh to toes; marked hyperæsthesia in the limbs. Diagnosis not made. A circular amputation of thigh was done, hæmorrhage in the case controlled by digital compression of femoral artery. The amount of blood lost was very small.

In skin grafting operations, Dr. McBurnie frequently uses grafts four inches long. He first places, the grafts in a salt solution (.6 of 1 per cent.), and, after applying them to the wound, covers them with sterilized gauze which has been previously soaked in the same solution. Around this is put absorbent cotton. The dressing is changed every forty-eight hours, except the rubber tissue which covers the drafts, this is allowed to remain seven days.

Saw Dr. McBurnie remove a portion of a very large thyroid gland, which was interfering with the respiratory act. A large number of vessels were ligatured before cutting. The enlargement proved to be cystic.

While in Philadelphia, visited Dr. Pierce and Dr. Goodell and witnessed several of their operations.

REMOVAL OF ENLARGED INGUINAL GLAND.

Dr. W. L. Rodman:—The specimen I have to exhibit is an enlarged gland removed from the inguinal region. The patient was a young man eighteen years of age, and the tumor before removal looked to be as large as a duck's egg. There was no suppuration. I removed all of the superficial inguinal glands, and the largest (which you see here) was close to the femoral artery. In dissecting it I used my fingers very largely. Some of the glands were almost ready to break down. I would advise this operation as the quickest way to cure these cases.

Dr. T. L. McDermott:—I have seen three cases of bubo of non-venereal origin during the last ten days.

Dr. E. R. Palmer:—I regard the surgery of bubo faulty, and think that the whole literature concerning its surgical treatment ought to be re-written. I agree with Dr. Rodman in advising enucleation. I strongly condemn the modern practice of removing the roof of the bubo, curetting, packing and leaving it to granulate. This always leaves a large unsightly scar. I always urge enucleation in non-venereal enlarged inguinal glands, and, believe, that it shortens what would otherwise be a tedious recovery.

Dr. H. A. Cottell:—Two or three years ago, I published from advance sheets, an article of some English surgeon, in which he advised the early removal of these glands, especially those about the neck.

I believe, however, that enlarged lymphatics, non-venereal in origin, do not require surgical interference, but can be made to resolve under alteratives and appropriate local applications.

PERIARTICULAR INJECTIONS OF CHLORIDE OF ZINC IN RECURRENT DISLOCATION OF THE SHOULDER.

Dubrueil (*Sem. Méd.* February 27th, 1892) relates the case of a muscular man, aged 40, who was subject to frequent dislocation of the shoulder, which made it difficult for him to earn his living. The accident occured five times in two and a half months, owing to such apparently inadequate causes as throwing a stone, sudden abduction of the arm, etc. It occurred to Dubrueil to try the effect of chloride of zinc injections, such as Lannelongue has found so successful in tuberculous inflammations of joints. (See *British Medical Journal*, 1891, vol. ii, p. 86). His idea was that the chloride of zinc would have a "sclerogenic" effect on the tissues about the shoulder-joint, thickening, tightening, and strengthening the capsule. Between January 5th and 16th he made six injections of 2 drops of a 1 in 10 solution of chloride of zinc at various points of the superior and anterior part of the shoulder underneath the acromion. Strict antiseptic precautions were taken both before and after the injection, and the point of the syringe was thrust into the tissues deep enough for the chloride of zinc solution to come into contact with the capsule. The injections caused only a trifling amount of pain, and were never followed by reaction. After the sixth injection the patient was directed to assist in the work of the ward, and in particular not to spare his shoulder. He was also made to perform violent movements of abduction and circumduction of the point in presence of the surgeon, but no luxation took place, and he was discharged on January 28th, with his shoulder apparently perfectly sound. Dubrueil thinks it probable that the cure will be permanent, and recommends the method as, at any rate, easy and harmless.—*Brit. Med. Jour.*

Selected Formulæ.

OTALGIA.

Dr. A. Dixon (*The Prescription*, No. 1, 1892) employs the following:

℞ Cocain. muriat. (4 per cent. sol.).....fl. ʒj.

Drop three or four drops into the patient's ear. Repeat in fifteen minutes if not better.

COUGH OF PHTHISIS.

Professor Pepper states that inhalations are to be preferred in the paroxysms of cough. He has found the following formula of service:

℞ Creasoti.....ʒj.
Tr. iodi.....ʒiij.
Chloroform.....ʒij.
Sp. vini rect.....q. s. ad. ʒj.
M. Sig.—Inhale 10 drops.

Carbolic acid, in somewhat smaller dose, or thymol may be substituted for the creasote, and tincture of conium for the chloroform.

PRURITIS.

℞ Menthol..... 4 grms.
Alcohol..... 30 grms.
Water..... 60 grms.
Acetic acid.....150 grms.
M. Sig.—Apply with a sponge.

—*Le Progrès Médical.*

DYSPNŒA OF HEART DISEASE.

Little, in the *Birmingham Medical Review*, states that he has employed for many years the following solution in the hypodermic treatment of the dyspnœa of cardiac disease:

℞ Sulphate of morphine.....gr. iv.
Hydrate of chloral.....gr. ii.
Atropine sulphate.....1-10 gr.
Camphor water, enough to make 4 drachms.
Sig.—Fifteen minims at a dose.

The chloral is added merely to make the solution keep. It renders the injection slightly painful, and may be left out if the liquid is to be used within two or three weeks of the time that it is prepared.

LEMON TONIC (CHARITY HOSPITAL).

℞ Cinchonine sulphate.....30 grains.
Citric acid.....30 grains.
Tinct. chlor. iron.....30 minims.
Syrup.....1½ fluid ounces.
Water to make.....4 fluid ounces.—M.
Dose.—A teaspoonful.

INJECTION OF AMMONIA-CITRATE OF IRON IN CHLOROSIS.

Dr. Alvazzi, of Turin, has successfully used the following formula:

℞ Ammonio-citrate of iron.....1.20 grms.
Distilled water.
Laurel water.....āā 5.00 grms.—M.

The Pravaz syringe was used, the dose in the beginning being 2 centigrammes of the salt, once daily, gradually increased to 12 centigrammes.

ANTISEPTIC MOUTH WASH.

℞ Acidi thymici..... 0.25 grams.
Acidi benzoici..... 3. "
Tincturæ Eucalypti..... 15. "
Spiritus vini rectificati.....100. "
Essentiæ menthæ piperitæ..... 0.75. "
M. Sig.—Drop enough into a glass of water to cause turbidity, and rinse the mouth morning and night.

—*Muller.*

A REFRESHING BEVERAGE.

Bamberger (*Formulaire de la Fac. de Méd. de Vienne*) suggests the following potion to quench the thirst of pneumonia patients:

℞ 1. Acidi phosphorici..... 8 grammes (ʒij).
Syrupi rubi idæi..... 90 grammes (ʒiij).
M. Sig —To be taken in water.

℞ 2. Potassii bitartratis..... 8 grammes (ʒij).
Syrupi rubi idæi..... 40 grammes (ʒx).
Aquæ.....400 grammes (ʒxiiss).
M. Sig.—Use as a refreshing drink.

—*Le Progrès Médical*, February 6, 1892, p. 109.

DIPHTHERIA.

Dr. T. M. Culver (*Med. Free Press*, 1891, ix., 211.) says the patient should be completely isolated, the room maintained at a temperature of 70°, and kept moist with steam. Bowels kept open and chlorate of potash water given as a drink.

Internally,

℞ Hydrarg. bichlor..... ...gr. j.
Ess. pepsin.....ʒss.
Elix. simpl, q. s. ad.....ʒjv.
M. Sig.—Teaspoonful every two hours.

Locally,

℞ Papoid.....ʒj.
Sal. lister.....ʒij.
M. Sig.—Blow x grs. in throat every two hours.

Out of a record of forty cases treated as above, thirty-five recovered. In two cases the larynx was so seriously involved that intubation was done. Of these cases, one recovered and the other died of heart failure.

DIARRHŒA.

℞ Salol.....ʒij.
Bismuthi subnitratis.....ʒiv.
Mist. cretæ.....q. s. ad. ʒiij.
M. Sig.—One teaspoonful every two hours.

OCCUPATION FOR THE FEEBLE-MINDED.

From time to time we are reminded by by its effects upon social or political conditions that the thinking power of Birmingham is not bounded in its applications even by the wide circle of its varied industries. Art and science have been appreciably indebted to its influence. It is, however, especially in the guidance and reform of civic and social usages that we are accostomed to trace the effects of this healthily active leauen. By way of illustrations, we may mention a recent project which owes its rise to the kind originality of a ladies' committee. There exists in the hardware capital, as in order cities, a residuum of mentally weak but not incapable persons. Overmatched intellectually by the average man or woman, they have no definite position or sphere of usefulness among their neighbors, and are consequently as a rule dependent either on friendly maintenance or on parish relief. The committee already mentioned has taken account of these poor people, or more strictly, of the women among them, and has organised for them a system of profitable employment. This consists in the establishment of a laundry with adjacent cottage homes. The household and working expenses of the institution are to be defrayed partly by the earnings of the inmates and partly by subscriptions paid by their relatives or by parochial guardians. In this way their intellectual talent, however meagre, will be utilised, and it is at least probable that an effectual check will be placed upon the reproduction by such persons of a progeny as lacking in parental care as in mental capacity. There is also a very fair prospects that the mere process of employment will do something to awaken and strengthen the dull faculties of these semi-imbeciles. Eve[illegible] true friend of his species will therefor[illegible]sh well to the Birmingham experi[illegible]ment, which might even be extended to meet the case of half-witted men, and which, if successful, will certainly not fail to be repeate[illegible] in the social usage of other communities.—*Lancet.*

THE

MEDICAL and SURGICAL REPORTER.

ISSUED EVERY SATURDAY.

DIRECT COMMUNICATIONS TO
P. O. Box 843, Philadelphia, Pa.

EDWARD T. REICHERT, M. D., Editor.
(Professor of Physiology, University of Penna.)

BUSINESS OFFICES:
29 to 35 North Tenth Street, Cor. Filbert.

EDITORIAL OFFICE:
Southeast Cor. 36th and Woodland Ave.

TERMS: Five dollars a year, strictly in advance, unless otherwise specifically agreed upon. Sent three months on trial for $1.00

REMITTANCES should be made payable to THE MEDICAL AND SURGICAL REPORTER, and when in sums of five dollars or less should be made by Postal Note, Money Order or Registered Letter.

Pocket Record and Visiting List.

Two sizes. Prices to Subscribers of THE REPORTER.
For 30 patients a week (with or without dates).... $1.00
For 60 patients a week (without dates)..... 1.25
Prices to non-subscribers, $1.25 and $1.50 respectively.

The Model Ledger.

Physicians who keep their own books will find this of great value. It enables the Physician to make out his bills with great ease and gives at a glance the amount earned, received and due in any quarter. Sample pages sent on application. Price, $5.00.

Binders.

Patent binders for the Reporter, each lettered on the back in gilt "**The Medical and Surgical Reporter**" and made to hold the issues of six months. Price, 50 cents.

Vaccine Matter.

Bovine Crusts.....$1.50 each.
Bovine Points or Quills..... 1.00 a doz.
Humanized Crusts..... 1.00 small.
Humanized Crusts..... 2.00 large.
Guaranteed in every respect.

Books.

Books will be supplied to our subscribers, transportation prepaid, at the regular prices.

☞Please accompany orders with the money, and address all communications to

Leading Articles.

THE THERAPY AND ÆTIOLOGY OF ACUTE DIGESTIVE DISTURBANCES OF CHILDHOOD.

When the still enormous death-rate among children and infants is contemplated, and at the same time it is known that a large number of these deaths are directly or indirectly due to some acute digestive disturbance, then anything that tends to throw any light upon the subject cannot fail to awaken the keen interest of every practitioner. True, our increased knowledge of the hygiene of childhood, and especially of infant dietetics, has materially increased the chances of life of such children as come under our care, yet even our present therapeutic means are far from being all that could be desired, and the experiences of those who have made this subject one of special study must be of immediate value.

Dr. Sonnenberger, of Worms, in an article on acute digestive disturbances of childhood, especially cholera infantum, which appeared in a recent number of the *Allegemeine Medicinische Central-Zeitung*, speaks extensively of his experiences with resorcin in these and kindred troubles. It has been some time since Dr. Frühwald called the attention of German physicians to the value of this drug, laying special stress upon its happy action in those digestive disturbances of childhood accompanied with vomiting, and especially on its value in cholera infantum. Since that time, which is now several years ago, Dr. Sonnenberger has been constantly using the drug in these ailments in the St. Anna's Children's Hospital of Vienna, and in the majority of cases has had occasion to be more than satisfied with its prompt and efficient action. Especially in cases of obstinate vomiting can one rely upon its efficiency. Nor has Dr. Sonnenberger been alone in his high opinion of the value of

this drug, for Dr. Menche, a German pædiatrist of note, has recently contributed an article to the *Centralblatt fur Klin. Medicin*, entitled "Nine Year's Experience with Resorcin as an Internal Medicament," which is an encomium of the therapeutic value of this agent.

Until recently the therapy of acute digestive derangements of children has been rather uncertain, and guided more by individual than general experience. The use of calomel in cholera infantum is certainly of great value, but the most threatening and dangerous symptom—the vomiting—is not always checked by it, and for this very symptom we have a most prompt and efficacious remedy in resorcin. In doses varying from 0.15 to 0.20 gramme daily, resorcin never gives rise to any symptoms of poisoning or intolerance. Upon the diarrhœa it seems to exert but little influence, so that in the therapy of cholera infantum an astringent should also be administered.

Considering that resorcin has such valuable properties it is rather surprising that its use in this class of cases is almost wholly unknown. It is equally surprising that the majority of writers on pædiatrics have completely overlooked the drug, although this may be explained by the fact that as in large doses it is apt to cause toxic symptoms writers have hesitated to recommend it. Among authors who refer to it are—Bredent (*Lehrbuch für Kinderkrankheiten*); Epstein, in a recent work (*Uber das Wesen und Behandlung der Cholera Infantum*, who discards its use altogether, as being a dangerous drug in infancy; Baginsky, in the first edition of his well-known work, (*Lehrbuch fur Kinderkrankheiten*), who speaks of its efficacy, yet refers with caution to its powerful toxic properties, but in the third edition of the same work he makes no reference to the drug whatever.

These fears of a possible poisoning, we are told by Menche, are without foundation when the drug's use is confined to the daily dose of 0.1 to 0.12 gramme during the first months and 0.15 to 0.2 gramme for older children. Similar doses are recommended by Seifert in his work on Children's Diseases, and by H. Guttmann in his book on the same subject. Sonneberger, Menche, Fruhard, and Concetti (who used it even in larger doses in whooping-cough), who constitute the authorities who have used the drug and given it the most careful study, have never observed the slightest unpleasant symptoms accompanying or following its use when employed in the above named doses. The danger of possible poisoning is greatly lessened by the use of a pure drug.

It has been recently conceded that opium should never be given alone in acute digestive disturbances of children, but always in conjunction with some disinfectant. Moreover, the use of this drug in infants should be restricted to very small doses, never exceeding one or two drops of the tincture per diem. Many of the most recent writers discard opium entirely. Liebermeister, for instance, asserts that in children under one year of age opium should never be used, claiming that even when given in minimum doses so small that no beneficial action can be obtained, there is possible danger. He substitutes the tincture of nux vomica, and in cases of cholera infantum in infants about six months old uses the following formula:

℞ Sodii bicarb .....2 grams.
Tinct. nucis vomica,.....gtt V
Aquæ foeniculi.....60 grams
Sacch. alba.....5 grams.
M. Sig. One half teaspoonful every half hour

The use of opium is attended with far greater danger in children than in adults, and symptoms of poisoning and collapse are only too easily produced, especially as in these cases of digestive derangement there is a tendency to collapse. Sonnenberger reports a case of severe opium poisoning, which fortunately terminated favorably, in a child one and a half years

old, that had been given seven drops in the course of a day and a half of the simple tincture of opium. If opium be given at all it should be only in those cases in which there is no tendency to collapse. Seifert, the eminent German pædiatrist, gives the following table of doses:

For children up to one year of age ½ to 1 drop of the simple tincture of opium daily; from one to two years of age, 1 to 2 drops, always in combination.

The formula in which Sonnenberger has so successfully employed resorcin is as follows:

℞ Resorcin pur..... 0.1-0.25 gram.
Infus. chamom.....70.0 grams.
Tr. opii camph.....gtt. 1 to 11.
Syr. aurant. cort.....20.0 grams.
M. Sig.—Half a teaspoonful every one or two hours.

The opium may be replaced by tincture of rhatany or tincture of cascarilla. Excellent results can confidently be expected from the use of this formula.

Finally, regarding the ætiology of cholera infantum, Sonnenberger, Meinert and other recent investigators of the subject do not consider it a specific disease, rather a symptomatic complex which may be regarded as acute gastro-enteritis. Ætiologically, the disease may be the result of varied factors. In one case it may truly be due to the action of a specific germ; in another the result of poisoning by means of chemical compounds, or poison in food or milk, in the latter case the poison may be some vegetable alkaloid in the milk. This much mooted question is one open for discussion, but surely these recent contributions are of great value.

Book Reviews.

A TREATISE ON DISEASES OF THE NOSE AND ITS ACCESSORY CAVITIES. By Greville MacDonald, M. D. (London), Physician to the Hospital for Diseases of the Throat. Second edition. London and New York: MacMillan & Co., 1892. Price, $2.50.

The perusal of the first chapter, if no more, of this work will amply repay even the most preoccupied of the profession. The masterly manner in which the functions of the nose are discussed and the lucid descriptions of the methods of determining the conditions present, lead one to marvel that so many special books on the nose should have been issued.

The author presents his subject in an interesting and pleasing manner, and his deductions are logical and deliberate; his expressions are frank and without egotism; and his composition is so enticing that one finds himself in the midst of the work and in possession of accurate and carefully sifted information, without effort.

The views on vexed questions of function, pathology and ætiology are set forth with great fairness, and the conclusions are the natural outcome of the author's logical mind and scrupulous methods. The chapter on nasal reflexes is particularly frank and modern, and the suggestion that judgment be suspended "until future and more precise observations are forthcoming" cannot fail of approval. While placing great stress on the significance of the presence of abnormal conditions in the nose, it is only in their relations to nasal breathing, and not to hastily inferred reflex bronchial conditions, that he attributes the necessity for their removal.

In discussing surgical procedures the methods are clearly and concisely set forth. While illustrations of instruments are few, they are well chosen and fairly drawn. The absence of gaudy lithographic plates is quite refreshing. In typography, marginal notes, excellent paper, perfect proofreading and full index, the work is highly commendable.

A TREATISE ON BRIGHT'S DISEASE OF THE KIDNEYS: Its Pathology, Diagnosis and Treatment; with Chapters on the Anatomy of the Kidney, Albuminuria and the Urinary Secretion. By Henry B. Millard, M. A., M.D., Fellow of the Acad. of Med. of New York, and of the American Acad. of Med., etc, etc. Third edition. New York: William Wood & Co., 1892.

This well-written treatise upon the various forms of renal disease, which collectively are classified as Bright's disease, has reached its third edition, and we note several improvements both in revision and addition. The author has not changed his views regarding the supremacy of his own test for minute quantities of albumen, and, indeed, gives much confirmatory evidence of its extreme delicacy.

A striking feature in this edition is the

change which has occurred in the author's mind concerning physiological albuminuria. After summing up the available evidence and considering carefully the result of more extended clinical observation, he has made up his mind that physiological albuminuria does not exist, and that when albumin is present in the urine it depends upon a structural lesion. This portion of the book is of great interest, and the position taken by Millard, which to us is untenable, will no doubt be widely discussed by those interested in renal medicine. The chapter on the tests for albumin in the urine has been largely rewritten, and is now quite up to date.

The book is essentially a practical one, and the repeated editions prove beyond doubt that it fills a field of usefulness. It is attractively printed and bound, and presents the most modern views concerning the important subject of Bright's disease. The portion devoted to treatment is of great interest, and is admirably arranged. The drugs which have really been found of service have been given due prominence, while those that are of future promise have not been overlooked. As a readable and serviceable book we heartily recommend it to the profession.

Periscope.

THERAPEUTICS.

THILANINE, A LANOLINE DERIVATIVE.

Dr. Siebels (*La Semaine Medicale*, No. 57, 1891) has obtained by the action of sulphur upon lanoline a new lanoline derivative—thilanine—brown sulphurated lanoline. This substance, of which the chemical composition is still unknown, is a chemical compound and not a mechanical mixture. It contains three per cent. of sulphur. According to Dr. Saalfeld, who tried it in a large number of cutaneous diseases, it is a precious acquisition to dermato-therapy. It is entirely devoid of irritating action, and it cures such dermatoses as dry and humid eczemas, sycosis, acne rosacea, much more quickly than Hebra's salve, borated vaseline or lanoline. He regards it as specially a substitute for Hebra's salve. It has a sedative action upon pruritus.

NITRO-GLYCERINE FOR ASPHYXIA.

In a case of asphyxia from the inhalation of gas, Hoffman succeeded in relieving the symptoms by the subcutaneous administration of nitro-glycerine in doses of one hundredth of a grain. The injection was made in the precordial region, and was followed by marvelously prompt results.—*Journal American Medical Association*, December 26, 1891.

TREATMENT OF RINGWORM.

Dr. Goldsmith writes to the *British Medical Journal* that, when all other remedies had failed to effect a cure in three cases of ringworm of the scalp, in his own family, he tried Dr. Illingworth's method with prompt success. The formula for this strong blistering fluid, one application of which its originator claims will cure an ordinary case, is as follows:

℞ Hydrarg. biniodid.....ʒ ss.
Sal. sodii iodidi (1 in 4).....ʒ ss.

A small portion of this is to be diluted with three parts of water, at the time of application. It is to be painted on with a camel's hair pencil.

COFFEE AS AN ANTISEPTIC.

The experiments of Luderitz, of Vienna, tend to establish the belief in the antiseptic properties of coffee. A strong solution of coffee, for example, ended the career of a bacillus of typhoid in about twenty-four hours, the active streptococcus of erysipelas in twelve hours, while not longer than from three to four hours was sufficient to kill the malignant comma bacillus of cholera. Strong decoctions acted more quickly still; the effects, however, are stated to be due more to the products of the roasting of the coffee than to the active principle of the berry. In this connection it has been pointed out by a correspondent of the *Indian Medical Gazette* that it would be worth while to substitute coffee for tea among the cases of enteric fever in the European military hospitals in India. Coffee also might be given a trial in the treatment of typhoid fever in this country. As a beverage, doubtless, it would be appreciated by the patient, and in the light of Luderitz's researches, there is just the possibility that it might have some controlling influence over the disease.—*Medical Press.*

MEDICINE

TUBERCULOSIS OF THE TESTICLE.

Dr. Reboul, of Marseilles, treated three cases of this disease by injections of naphthol-camphor. He injected four to five drops every eight to ten days into the thickened tissues of the testicle and epididymis. Marked improvement was effected, the diseased parts becoming more indurated and contracted; and these results are more noteworthy since in two of the cases other measures continued for a long time had been unsuccessful.—*Allgem. Medicin. Central Ztg.*

A CAUSE IN THE PATHOLOGY OF THE ARREST OF GROWTH.

Fourriére (*Journ. de Mèd. de Paris*, 1892, January 4.) says: To the two recognized causes of arrest of growth, poverty, want and rachitis, should be added dyspepsia combined with dilatation of the stomach.

"The arrest of growth occurring among those suffering from dyspepsia with dilatation, probably from insufficient assimilation, constitutes a disease curable by means addressed to the treatment of the dilatation of the stomach, notably by massage of the stomach." M. Fourrière reports six cases.

DIPHTHERITIC DEGENERATION OF THE NERVES.

According to Moos (*Rev. Mens. des Mal. de l' Enf.*, September, 1891), there are two groups of changes which depend upon diphtheritic paralysis. In the first the changes affect the vascular system; in the second the nervous. The principal lesions of the vessels are thrombo-arteritis, phlebitis and hæmorrhage. The changes in the nerves are degenerative. Hæmorrhages have been observed in the intervertebral ganglia, the cord, the protuberance, the bulb, and even in the cerebrum. Most frequently there is parenchymatous neuritis of the peripheral nerves. In several cases the author has discovered micro-organisms, not only in the perineurium, but also in the nerve bundles. The paralysis may be attributed to specific organisms, or to secondary infections, caused by streptococci. The toxalbumins secreted by microbes may also be influential in the pathogenesis of the paralysis.

SURGERY.

A NEW METHOD OF SKIN-GRAFTING.

Dr. Prince A. Morrow, of New York, describes a new method of skin-grafting, the peculiarity of which consists (1) in the depth of the graft, which includes the entire thickness of the skin, and in some cases a layer of subcutaneous tissue; (2) in the method of precedure, which consists in removing a button of tissue (35 to 40 millimetres in circumference), of any required depth, by means of a round, cutting instrument, known as the Keyes cutaneous punch, and immediately inserting it in a receptacle or bed previously made by the same instrument.

In this way there is obtained perfect coaptation of graft with the base and margins of the surrounding tissues, thus insuring the most favorable conditions for immediate union of the parts. In fact, the absolute accuracy with which this may be done leaves nothing to be desired from a mechanical point of view.—*The International Journal of Surgery*, February, 1892, p. 41.

A CASE OF PRETERNATURAL ANUS; ENTERECTOMY, ENTERRORHAPHY, FOLLOWED BY IMMEDIATE RECOVERY.

Prof. Angelo Mazzucchelli (Pavia, Italy) records the case of a boy, æt 8. The preternatural anus presented itself after operation on a gangrenous loop of intestine belonging to an incarcerated inguinal hernia. The spur which separated the two intestinal ends was destroyed by means of an elastic ligature, which was left in situ for eight days. After the lapse of this period it was attempted to close the fistula, but the edges would not unite. The author, subsequently, performed in this case enterectomy and enterrorhaphy. About three centimeters were resected from each end of the intestines toward the convexity of the spur, in such a manner as to decrease towards the mesentery. Then the sutures after Czerny's method were applied. The intestines were then replaced into the abdominal cavity, the parietal peritoneum, as well as the abdomino-scrotal wound closed. The wound healed by first intention and the patient recovered quickly.—Meeting of Medico-Chirurgical Society, Pavia; *Gazzetta degli Ospitali*, No. 89, p. 708, 1890.

OBSTETRICS.

CÆSAREAN SECTION FOR ECLAMPSIA.

Swiecicki (Przeglad Lekarski, abstracted in *Repertoire Universel d' Obstetrique*, 1891) reports a case as follows: A 7-para, who for five hours had eclamptic seizures and had been comatose. There was œdema of the lungs with a scarcely countable pulse. The os was not at all dilated. Cæsarean section was done without special difficulty, the operation lasting thirty minutes. The child was asphyxiated and could not be revived. The woman's pulse, during and after the operation, improved a little, but the coma deepened, and the woman died of œdema of the lungs. The course of this case disproves Halbertsma's assertion that the operation always has a favorable influence upon the eclampsia. Here the effect was practically *nil*. In another case, quoted by Swiecicki, there were maniacal attacks after the operation. —*Univ. Med. Mag.*

LEUCEMIA AND PREGNANCY.

Laubenburg says that (*Archiv für Gynakologie*, Band xl., Heft 3, 1891).—Leucemia in women is an exceedingly rare affection, much rarer than in men (according to Birch-Hirschfeld, 32.5 per cent to 67.5 per cent). Laubenburg was able to find only three cases reported in literature. He has a case under observation, the history of which is briefly as follows: Patient 32 years old, pregnant, came to the hospital with marked symptoms of anemia; these she had had for three years and they had been the direct cause of three miscarriages. She had been married twelve years; six children four abortions. Her previous history was negative. Present illness began about seven years ago; no assignable cause. She complained of weakness, loss of appetite, indigestion, palpatation, dizziness, etc. The weakness frequently compelled her to remain in bed for from four to six weeks at a time. Of late she menstruated very irregularly, only a small quantity, and this very pale. She never had any hæmorrhages. During the past year she had a yellowish hue, lasting for a short time. For three or four years she had observed a tumor growing on the left side. An examination on admission to the hospital revealed great pallor and somewhat icteric hue, general anasarca. Uterus (fundus) three fingers below the umbilicus. The left hypochondrium filled by an enlarged spleen. The liver extended four centimetres below the free border of the ribs. Lungs normal. Heart not enlarged; systolic murmur at the apex. Pulse small and rapid (100). The jugulars showed a venous pulsation. A diagnosis of pregnancy (fifth month) was made. Examination of urine showed considerable albumin and a few granular casts. Examination of blood: Increased number of white blood corpuscles (w : r : : 1 : 10). Miscarriage on December 19th; breech presentation; amount of blood lost slight; child macerated and corresponding in size to about the twentieth week; duration of labor, twelve and a quarter hours. Three hours after labor patient's condition became very bad, and she gradually grew comatose. A difficulty in hearing was especially marked. At the expiration of forty hours, in spite of stimulation, she died of pulmonary œdema. Just before death a peculiar cadaverous odor developed (this has been noticed and described by Eichhorst, Steinberg, and Schultze). Fifteen hours after delivery the urine contained albumin and a few granular casts; in the blood the ratio of white to the red corpuscles was one to fifteen. Thirty hours after delivery there was scarcely a trace of albumin and no casts in urine; the ratio of white and red corpuscles was 1 :20. No micro-organisms found in the blood. Autopsy: Substance of brain exceedingly pale. In abdomen moderate quantity of yellowish, transparent fluid. Mesenteric glands not swollen. Spleen markedly enlarged and adherent to the diaphragm. On its posterior surface a white cicatrix can be seen; this is partially calcified (rupture of spleen?). Microscopically, hyperplasia of the spleen pulp, slight increase and extension of the trabecula. Liver enlarged, yellowish-brown. Microscopically, increase of interstitial connective tissue and cellular infiltration; many liver cells atrophied; fatty degeneration. Capsule of kidneys adherent in places. Kidneys on section are pale; the right has red and yellow spots upon it. Microscopically, principal change is in the cortex; the cells of the glomeruli and canaliculi show a cloudy swelling, and in their vicinity, are lymphoid infiltrations. Left ovary atrophied; the right enlarged, containing a small cyst; alongside of this a corpus luteum verum.

Microscopically, the follicular ovarian tissue is very feebly developed; otherwise nothing pathological. Uterus well contracted; mucous membrane extremely pale. From a study of this and the other reported cases Laubenburg concludes:

1. That leucemia may at times stand in direct relation with the disturbances caused by pregnancy, labor, or the puerperium; 2, that it may be the direct cause of an abortion; 3, that it becomes more severe during pregnancy; 4, the prognosis becomes decidedly worse, even very grave, at times during pregnancy or labor; 5, the induction of premature labor is to be recommended, and that in the early months of pregnancy.

GYNECOLOGY.

WHAT CASES SHOULD BE DRAINED AFTER ABDOMINAL SECTION?

Dr. Rufus B. Hall, of Cincinnati, has drained in every case of abdominal section which he has made since 1886. The objections to the drainage-tube that have been given at various times are that it is a source of septic infection, a frequent cause of hernia, a foreign body, a cause of irritation, and not infrequently omentum becomes fastened in the perforation, preventing its easy removal. As to the first objection, the author has seen no case of sepsis developed from the use of the drainage-tube; but it is evident that, unless the utmost care is taken, such an accident might occur. The tube should be pumped out every hour or two until it is removed. In his own cases he has seen two hernias developed in the line of cicatrix, but in neither of them did the hernia occur at the point where the drainage-tube was placed. He has seen no appreciable disturbance from irritatian of the tube since he commenced using the small, perfectly smooth tube with no side perforations. The small, perforated tube of Dr. Price fulfils the requirements for abdominal drainage perfectly. If the dressing is so arranged as not to make pressure upon the outer end of the tube, no apprehension need be entertained as to it causing trouble from irritation, provided it be removed just as soon as the fluid becomes straw-colored. If one employs the old style tube, with large side perforations, there is danger of omentum becoming forced through the openings, causing difficulty in removing the tube and possibly favoring the development of hernia; but in the use of the small tube with the narrow perforations, these dangers are reduced to a minimum.—*Medic. Record.*

PEDIATRICS.

ORBITAL HÆMORRHAGE IN YOUNG CHILDREN.

Spicer (*Brit. Med. Journ.* 1891, ii., 1313.) writes—These hæmorrhages occurred beneath the periosteum, in the course of infantile scurvy, a disease generally known as scurvy rickets. The subjects were hand-reared infants, generally between six and eighteen months of age, who has been brought up mostly on "infant foods." After a period of ill-health, spontaneous hæmorrhage came on beneath the periosteum in various parts of the body, sometimes, but not always, during the course of an attack of rickets. In the orbit the hæmorrhage in two forms, either as a line of blood-staining at the orbital margin, or as a large effusion producing displacement of the eye and distension of the upper lid; the form which the hæmorrhage assumed was due to the anatomical disposition of parts in the orbit. The hæmorrhage subsided rapidly at first, but did not disappear entirely; the eye was left prominent for many months. The treatment was essentially that of scurvy; in addition to the ordinary food, juice of fresh meat, a little fruit or vegetable, cod-liver oil, or cream should be given. The slighter cases recovered rapidly; the more serious ones were slow in progress and often fatal.

HYGIENE.

DENTISTS: A NECESSITY, NOT A LUXURY.

Dentistry is undoubtedly the most useful and the most reputed of the departments of specialised surgery. The idea that the care of the teeth might safely be confided to the extractive mercies of the family medical attendant has long since been exploded, and of late years people of the middle classes of society have more and more availed themselves of the services of the skilled dentist. As a nation we are still far behind our Transatlantic cousins in the amount of attention and care bestowed on the beautification and conservation

of the teeth, but year by year the prophylactic value of the dentist's skill is becoming more widely appreciated. At the last meeting of the Board of Management it was decided to appoint a paid dentist to attend to the teeth of the children in the Hanwell Parochial Schools, and few persons will be disposed to find fault with an innovation so conducive to comfort and health. There still survives an impression that a dentist is a luxury, but it is not so long since that the importance of attending to the eyesight of school children has come to be generally recognized. The dentist will probably do more to procure relief from suffering and to promote health than even the optician, and we cannot but applaud the new departure.—*Med. Press.*

PROGRESS OF CREMATION.

Cremation appears to be making steady progress. The Sanitary Council of Vienna has passed resolutions to the effect that the burning of the bodies of the dead is the safest mode of preventing the evils of earth burial. It has been decided by the Bombay Municipal Corporation to grant the request of an Englishman to be allowed to erect a crematorium for Europeans in the municipal burying ground. The Corporation has granted a plot of ground measuring 40 feet square for that purpose, at a nominal rent of one rupee per annum. The condition attached is to the effect that the crematorium shall be removed at one month's notice if the Corporation so requires.—*Brit. Med. Jour.*

MEDICAL CHEMISTRY.

CALCIUM SALICYLATE.

This salt is now being used alone or with bismuth salicylate as a remedy for diarrhœa and gastro-enteritis. The following formula for its preparation is suggested by Herr Vonjescu in *Zeit. Ost. Apot. Ver.*, page 630: Dissolve 200 grams sodium salicylate in 5000 grams distilled water, filter, add 10 grams solution soda sp. gr. 1.160. Make a separate solution of 100 grams of calcium carbonate by means of dilute acetic acid to neutrality, filter and add slowly to the former solution. Wash the precipitate on a filter to free it from sodium acetate and dry at 35° C. (95° F.) and keep in well-closed bottle. It is a white, odorless and tasteless crystalline powder soluble in cold water 1 in 2000, readily soluble by means of carbonated water or by dilute acids. Dose, 0.5–1.5 grams.

NEW REAGENTS FOR COPPER SALTS.

Le Moniteur de la Pharmacie (1891, 1006) states that pyrogallic acid and a cold solution of neutral sulphate of sodium yield with small quantities of copper salts a blood red color. I cc. of a solution of copper sulphate, $\frac{1}{3000000}$, still shows the reaction.

Mr. Deniges evaporates the solution to be analyzed, to dryness, and adds to the calcined residue one drop of a 5 per cent. solution of bromide of potassium. The mixture is again evaporated to dryness when, if copper be present, a characteristic violet zone of anhydrous copper bromide appears.

NEWS AND MISCELLANY.

School Trustee.—"Your class in physiology does not appear to be up to the standard, Miss Birch.

Teacher.—"I've done the best I could with the charts that I found here, Mr. Small."

School Trustee.—"Um–er–what did the charts consist of?

Teacher.—"Six views of a whiskey stomach."

—*Puck.*

EFFECT OF DYNAMITE ON FISH.

M. Regnard recently read notes on this subject before the Société de Biologie de Paris. A cartridge containing thirty grammes of dynamite was exploded in a pond full of fish. The fish which were closest to the cartridge were annihilated, those farther off lay motionless on the surface. They were not, however, dead, for even when touched very gently they recovered their usual agility and disappeared. This fact is known to poachers, who catch the fish stunned in this manner in a landing net, taking care not to touch it until it is fairly in the net. M. Regnard suggests that the vibrations set up by the violent explosions are transmitted to the nerve centres, and produce effects similar to those seen in man in cases of mine explosions and railway accidents.—*Brit. Med. Jour.*

STUDY OF EXALGINE AFTER OBSERVATIONS MADE AT THE LARIBOISIÈRE HOSPITAL.

BY DR. ÉMILE DÉSIRÉ.

(*Concluded from last number.*)

Hutchinson's Face.

CASE 20.—R., a woman of 34. **Violent syphilitic cephalalgias** which prevented sleep and did not give way to specific treatment. May 9: four grains of exalgine twice. May 10: the same dose gave the patient a fairly good night. May 11: same dose; no more pain; appetite better. Took the drug until the 13th, when she left considering herself cured of the pain.

CASE 21.—B., woman of 22 years. Chloro-anæmia; neuro-pathic; has suffered with **cephalalgia** for three months. The pain comes on after dinner and continues until the next morning at 11 o'clock; it is accompanied with nausea, and has remained in spite of a great variety of treatment. May 11; 4 grains of exalgine at 2 and 5 o'clock P. M. Slept that evening without pain. The pain reappeared the next day but was again cured by the same doses. May 13: no more pain and the drug was suppressed. Eight days after there was no return of the complaints.

CASE 22.—T., man of 58; an **old facial neuralgia** with contracture. Took 4 grains of exalgine on the 27th, the 28th and 29th of May, at the end of which time the pain was less and the patient was able to sleep at night. May 30: 7 grains of the drug caused still greater improvement. This dose was continued for five days with result of a perfect cure.

CASE 23.—T., a girl of 19. Accident to wisdom tooth. Suffered much from **facial neuralgia** on the same side. June 1 to 5: 4 grains of exalgine twice daily; the pain disappeared and the patient left.

CASE 24.—I., aged 28: chloro-anæmic; **cephalalgia.** Four grains of exalgine from June 1 to 6; not much improvement until June 5. June 7: the cure is complete.

CASE 25.—L., woman of 37. **Bone-pains** in a syphilitic subjected to specific treatment. For five days took four grains of exalgine without much effect. On June 1 the dose was increased to 7 grains, and a relatively good night passed. June 2, same dose: pain only at times. June 3: 4 grains: scarcely any pain. This last dose was continued for five days, and the patient complained no more of suffering.

CASE 26.—M., woman of 40 years. **Occipito-facial neuralgia** for 14 days, unable to leave her bed. May 23 to 26: 4 grains of exalgine; May 27 to June 1: 7 grains; June 2 to June 4: 12 grains of exalgine, with no improvement. June 5, 15 grains produced sensible improvement. This last dose was continued to June 8, when the pains returned and the drug was stopped.

CASE 27.—G., woman of 23; **dysphagia** with aryteno-epiglottis in a tuberculous patient. June 1: 4 grains of exalgine, which was continued for some days. Amelioration was manifested on the first day and the improvement continued until she left the hospital.

CASE 28.—J., 27; **intercostal neuralgia.** Four grains of exalgine from the 1st to the 8th of June with gradual amelioration and cure of the pain.

CASE 29.—A., woman of 29. **Dysphagia** with aryteno-epig)ottitis in a tuberculous patient. Four grains of exalgine from May 27 to June 3. Improvement began on the first day and deglutition was painless on the last.

CASE 30.—R., woman of 24. **Inter-costal neuralgia:** pains in the head almost continuous. Four grains of exalgine for eight days, when the patient considered herself well and left.

CASE 31.—F., woman of 30. Similar to Case 30, except that the dose was increased to 7 grains on the third day.

CASE 32.—L., woman of 49. **Old intercostal neuralgia,** which had rebelled against all kinds of treatment. Four grains of exalgine were given for a few days, with little amelioration; there was some vertigo, but it did not interfere with treatment. On June 3, the dose was increased to 7 grains, with very sensible improvement. June 5, the vertigo had disappeared and the pain was almost nothing. June 8, the patient left, cured, having taken 7 grains of the exalgine without inconvenience.

TABLE OF THE CASES TREATED BY EXALGINE.

	NO. OF CASES TREATED.	SUCCESSFUL OR AMELIORATED	UNSUCCESSFUL.
Facial Neuralgia	3	2	1
Intercostal Neuralgia	4	3	1
Migraine	5	5	—
Hysteralgia	2	2	—
Bone-pains of syphilis	4	4	—
Dysphagia	8	8	—
Subacute Rheumatism	2	2	—
Subacute Sciatica	2	2	—
Laryngeal Epithelioma	1	1	—
Dental Neuralgia	1	1	—
	32	30	2

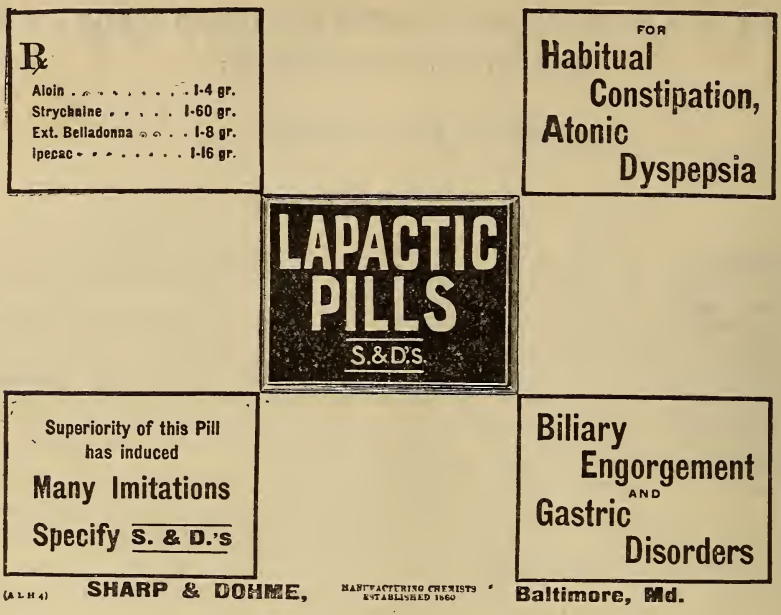
Conclusions—We have employed exalgine entirely as an analgesic and not as an antipyretic; we have not given it where fever was present.

The great diversity of affections in which we have employed exalgine with success authorize us to conclude that, without prejudice to general treatment, it is an admirable specific against pain.—*Society for Scientific Studies*, Paris.

THE END.

Full notes on the use of this analgesic sent free to physicians by

McKESSON & ROBBINS,
New York.



LAPACTIC PILLS.

A combination introduced by us and found in practice to possess superior advantages over other similar formulæ. The well known mild action of Aloin on the lower portion of the intestinal canal, and its power of stimulating the hepatic functions, is supplemented by the action of Ipecac as a stomachic tonic and by increasing the gastric secretions; the Belladonna acts specially upon the involuntary muscular fibres of the bowels, increasing peristalsis, diminishing the harshness and at the same time increasing the effectiveness of the laxative. The general tonic effect of Strychnine upon the stomach and bowels and its direct action upon the sympathetic make it a valuable addition in the permanent cure of **habitual constipation and atonic dyspepsia.**

Since we first called attention to our Lapactic Pills, some four years ago,—publishing the composition of the same,—a number of Manufacturers have adopted the same formulæ and have furnished these pills under the same name. Should Physicians fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints from physicians by letter), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term "LAPACTIC PILLS, S. & D.'S," when prescribing these pills.

SAMPLES WILL BE MAILED ON APPLICATION.

SPECIAL FORMULÆ MADE TO ORDER.

WHEN PURCHASING PLEASE SPECIFY S. & D's.

SHARP & DOHME, MANUFACTURING CHEMISTS ESTABLISHED 1860. **BALTIMORE, Md.**

SCOTT'S EMULSION

VERSUS

PLAIN COD LIVER OIL.

Plain Cod Liver Oil *is indigestible, deranges the stomach, destroys the appetite is not assimilated,* and in a majority of cases is detrimental to the patient.

SCOTT'S EMULSION

Can be *digested in nearly all cases, is assimilated, does not derange the stomach, nor overtax the digestive functions,* and can be taken for an indefinite period when the plain cod liver oil cannot be tolerated at all, and with most marked results in *Anæmia, Consumption* and all wasting conditions. It also contains the *Hypophosphites of Lime and Soda with Glycerine,* which are most desirable adjuncts.

WHEN PHYSICIANS TRY IT THEY INVARIABLY USE IT

in preference to the plain cod liver oil or other *so-called Emulsions* that invariably separate, and hence their integrity and value is destroyed. *Scott's Emulsion is palatable and absolutely permanent* hence its integrity is always preserved.

The formula for SCOTT'S EMULSION is 50 per cent. of the finest Norwegian Cod Liver Oil, 6 grains Hypophosphite of Lime and 3 grains Hypophosphite of Soda to the fluid ounce, Emulsified, or digested to the condition of assimilation with chemically pure Glycerine and Mucilage.

We also wish to call your attention to the following preparations:

CHERRY MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain aud nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula).

Prepared from carefully selected German Buckthorn Bark, Juglans Bark and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

SCOTT & BOWNE, 132 South Fifth Avenue, NEW YORK.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

— Landois and Sterling.

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

— Materia Medica and Therapeutics, Dr. Mitchell Bruce.

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

— Eustace Smith, M.D., F.R.C.S.

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

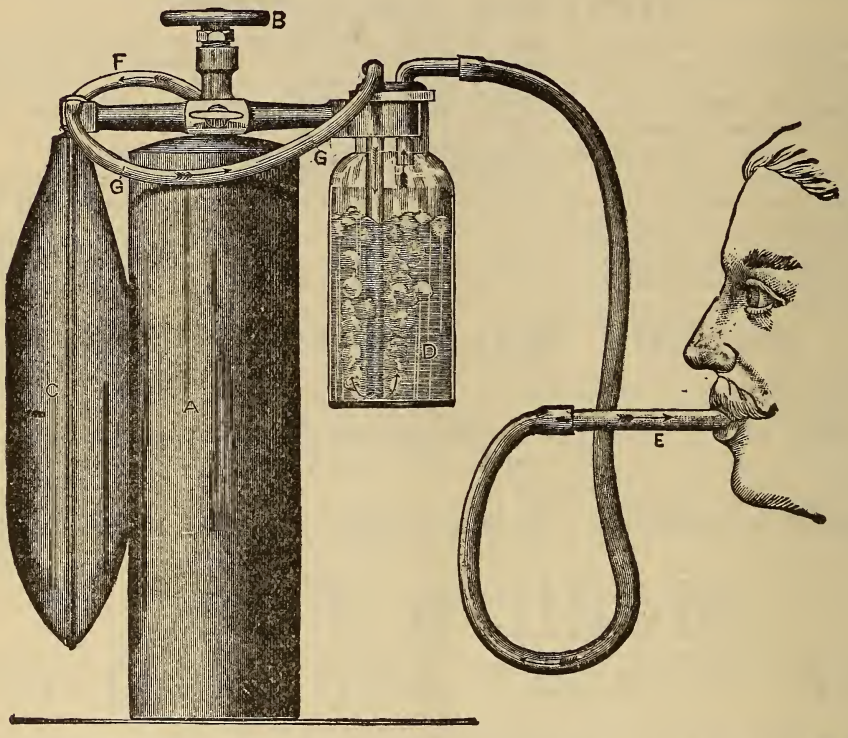
THE DOLIBER-GOODALE CO.,

BOSTON, MASS.

INHALATION APPARATUS

FOR

THE THERAPEUTIC ADMINISTRATION OF OXYGEN.



In the treatment of lung troubles by Oxygen its exhibition by inhalation is preferred. The apparatus herewith shown is a modification of the Nitrous Oxide apparatus which we have supplied for many years. It is made in the best manner throughout, and is the outcome of years of experience in the manufacture of gas apparatus. It will be found to meet all the requirements.

We supply the gas in two sizes of cylinders, containing respectively forty and one hundred gallons, either pure Oxygen, or a mixture of Oxygen and Nitrous Oxide in definite proportions of 20 per cent., and forty per cent. of Nitrous Oxide.

Whether pure or mixed the gas is sold at the uniform price of 5 cents a gallon. The cost of the cylinders will be refunded on their return empty with the valves in good condition. Full description of Inhalation and Enema apparatuses with directions for use accompany each apparatus, or will be supplied on application.

PRICES.

Inhalation Apparatus	$5.00
Cylinder, 40 gallons' capacity	6.00
40 gallons Gas, either pure Oxygen or mixed Oxygen and Nitrous Oxide	2.00
Complete Apparatus, Cylinder, and 40 gallons Gas	$13.00
Inhalation Apparatus	$5.00
Cylinder, 100 gallons' capacity	15.00
100 gallons Gas, either pure or mixed	5.00
Complete Apparatus, Cylinder, and 100 gallons Gas	$25.00

Scherff's Syrup of Hydriodic Acid.

A Permanent Unalterable Preparation.

NON-IRRITANT. PALATABLE. EFFICIENT.

Each fluid ounce of this Syrup represents the equivalent of 6.72 grains of absolute Hydriodic Acid. Particular stress is laid on the one great superiority: this Syrup **will not decompose**, and the danger (so common to other like preparations) of administering a preparation of **free iodine**, is absolutely avoided.

Circulars Mailed Free to Physicians, on Request.

WALNUT LODGE HOSPITAL,

HARTFORD, CONN.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefited from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M.D.,
Sup't Walnut Lodge, Hartford, Conn.

DR. MASSEY'S

PRIVATE SANATORIUM.

Presenting the comforts of an elegant private residence, this institution is specially equipped for the use of electricity and allied remedial measures in the diseases of women and in diseases of the nervous system. For particulars address

Prickly Heat, Chafing, Dandruff,

Odors from Perspiration, etc. Speedy Relief by Using

Packer's Tar Soap.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

ST. LOUIS, MO.

A WEEKLY JOURNAL.

ESTABLISHED IN 1853 BY
S. W. BUTLER, M. D.

—THE—

Medical and Surgical Reporter.

EDWARD T. REICHERT, M. D., Editor.
(Prof. Physiology, University of Penna.)

CHAS. K. MOUNT, Advertising Manager.

PROSPECTUS.

For nearly forty years ***The Medical and Surgical Reporter*** has held a position of influence and popularity second to that of no other publication in medicine. Last May the Editorial and Business Management was changed, the journal was enlarged from twenty-eight to forty pages, and the publication in almost every way was radically improved. That these changes have been appreciated by the profession is evident in the phenomenal increase of our subscription list and in the number of new advertisements.

The enlarged ***Reporter*** now enables us to offer more pages of reading matter each year than are given by any other medical periodical in America, and more material of direct practical value to the practising physician than is furnished in any other journal in the English language. We now publish during the year over 3500 separate articles, representing the best thought in the profession. These include about as follows:—

75 Clinical Lectures by leading clinicians in this country and abroad.
200 Original Communications.
60 Society Reports.
25 Letters by Special Correspondents.
800 Selected Prescriptions.
75 Editorials on Timely Topics.
150 Letters from our Subscribers.
150 Book Reviews.
2000 Periscope Articles, carefully selected and condensed, and representing all important progress in medicine in all branches and languages.

The ***Reporter*** is truly a magazine of medical progress, it is thoroughly practical, and is especially adapted to the wants of the busy practitioner. There is no State or Country in America that it does not reach, and no civilized Country that does not regularly receive it.

The ***Reporter*** is published every Saturday, and is mailed to subscribers in the United States and Canada for $5.00 a year in advance, and to those in foreign countries for $6.00 in advance. It will be sent for three months on trial for $1.00.

TONICS, ANTIPERIODICS, EXPECTORANTS.

We desire to mention the special advantages of a few eligible preparations which meet many indications in Tonic, Antiperiodic and Expectorant Treatment.

ESENCIA DE CALISAYA.

An agreeable, general tonic and stimulant, the equivalent of 40 grains Calisaya Bark in each ounce. As a palatable stimulant, antiperiodic and febrifuge, possess-all the medicinal virtues of Calisaya, it may be relied upon.

Emulsion of COD LIVER OIL with HYPOPHOSPHITES

This is the perfection of an emulsion, pure, fluid, palatable. Each fluidounce contains: Cod Liver Oil, 4 fluidrachms; Hypophosphite of Lime, 8 grains; Hypophosphite of Soda, 4 grains; Gum Arabic, Sugar, Glycerin. Water and Carminatives.

GRINDELIA ROBUSTA, QUEBRACHO, CHEKAN, YERBA SANTA, LIPPIA MEXICANA, ANODYNE PINE EXPECTORANT, BRONCHIAL SEDATIVE, all have had their value proven in relieving respiratory affections.

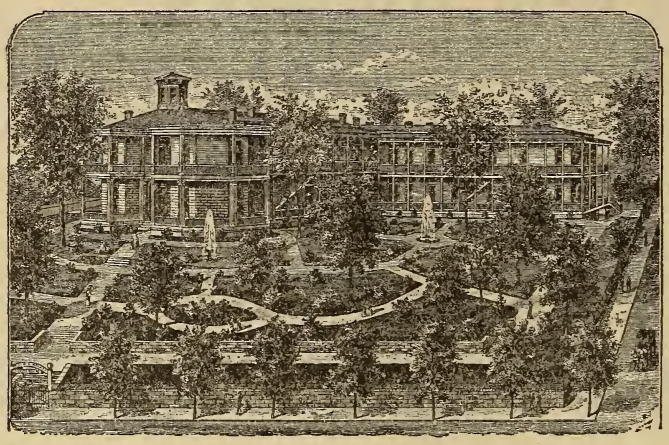
Among Compressed Troches for Throat and Bronchial Trouble, we may mention Ammonium Muriate, Borax, Potassium Bicarbonate, Potassium Bromide, Potassium Chlorate, Potassium Chlorate and Ammonia Muriate, Potassium Chlorate and Borax, Sodium Bicarbonate, Soda Mint.

Descriptive Literature and all information regarding our products promptly furnished on request.

PARKE, DAVIS & COMPANY,

DETROIT, NEW YORK AND KANSAS CITY.

DR. J. B. S. HOLMES'



Private Sanitarium for diseases of women is now open for the reception of patients. Location beautiful; grounds large and handsome; building new; rooms well heated and ventilated; have inside and outside blinds; gas and electric bells; all handsomely furnished; building has passenger elevator; MATERNITY DEPARTMENT; trained nurses; cuisine and service equal to the best. Institution first class in all of its appointments.

☞Physicians desiring to send their patients South for the winter are respectfully invited to correspond with me. Address:

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{60}$ gr.), Atropiæ Sulph. ($\frac{1}{100}$ gr.), Codeia ($\frac{1}{60}$ gr.), Antimony Tart. $\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{60}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

LONDONDERRY LITHIA

"The Most Wonderful American Water."

From I. N. Danforth, A. M., M. D., Prof. Pathology and Renal Diseases, Women's Medical College, Chicago.

"I have had a long experience in the treatment of *Kidney Diseases* with LONDONDERRY, and am pleased to add my testimonial, although I think it unnecessary from the fact that the *effects of the water speak more eloquently than any words* which I might utter. I prize it very highly in all cases of *Chronic Rheumatism* or other manifestations of the condition known as the 'Lithic Acid Diathesis." I have used the water extensively in my practice and intend to continue the use of it."

From Henry M. Lyman, A. M., M. D., Professor of Physiology and Diseases of the Nerves in Rush Medical College. Prof. of Theory and Practice of Medicine in the Woman's Medical College. Physician to Presbyterian Hospital, of Chicago. Author of "Insomnia and Disorders of Sleep," etc.

* * * * I have used it for several years, and I like it as remedial agent in *releasing* the *secretions* of the *Kidneys.* It is a pleasant drink also. I think that it is a *blessing* to the *club men.* At any rate that class of Chicagoans known as 'high livers' whose diet is not confined to the narrow limits of plebeianism, are gradually recognizing the LONDONDERRY LITHIA WATER as their nostrum."

From Henry M. Field, M. D., Prof. Therapeutics, Dartmouth Med. College, etc.

"I feel under a sort of obligation to send you a word of unsolicited and favorable testimony respecting the values and virtues of your LITHIA WATER. * * * * Since my attention was first called to your LITHIA WATER—several years ago—and *I became satisfied respecting its pre-eminent power, I have used no other Lithia Water,* and in the case just characterized (gravel), I depend upon the LONDONDERRY invariably and often as a *last resource.* Thus far it has rendered so good an account of itself that I feel bound to make the account, which I render, good. I trust to your discretion and sense of propriety as to any disposition you may make of this letter."

NERVES.

Suppose we find the patient a little giddy upon rising in the morning. This means that the nerves do not have perfect control of the muscular system. As a test for this, direct the patient to stand with his feet close together, shut his eyes, and if the tendency is to reel, it is another evidence of lowered nerve tone. Or, stand with the arms extended, shut the eyes, and then try to bring the tips of his forefingers together in front of him. If they pass by or meet imperfectly, it shows the same thing.

Or, the person may not be able to think as quickly as he should. To test this, ask the patient three simple questions in rapid succession, as, Where were you just before you came into this room? What were you doing? How long did you remain? The rapidity with which the answers are given indicate the rapidity of brain action.

All these things show that it is of the utmost importance that the nervous system should be kept in tone. Otherwise, every part of the body languishes.

This condition indicates the use of Celerina (Rio) in teaspoonful doses four times a day, *to increase the nerve capital of your patient.*

ESTABLISHED 1855.

DR. STRONG'S SANITARIUM,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for TREATMENT, CHANGE, REST, OR RECREATION.

And places them under well-regulated hygienic conditions so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it has a Sun Parlor and Promenade on the roof. Turkish, Roman, Sulphur, Electro-Thermal, the French Douche, and all Hydropathic Baths; Vacuum Treatment, Swedish Movements, Massage, Pneumatic Cabinet Inhalations of Medicated, Compressed, and Rarefied Air, Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, with elevator, electric bells, open fire-places, steam, and thorough ventilation. With cheering influences and avoiding the pressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in winter tobogganing, elegant sleighing, etc.; in Summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience.

A liberal discount to physicians and their families for board or treatment. For illustrated Circular, Address:

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1891–92.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof T. M. T. McKENNAN, 81c Penn Ave.

Business correspondence should be addressed to PROF. W. J. ASDALE, 2107 Penn Avenue, Pittsburgh.

SYRUP OF FIGS.

(Syr. Fici Cal.)

In order to meet the almost universal demand for a safe, reliable and elegant liquid laxative, the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

is utilizing the delicious blue Fig of California in the preparation of

SYRUP OF FIGS,

an agreeable and effective laxative or purgative, according to the dose and manner of administration.

Syrup of Figs is delightful to the taste, and may be taken by every one, from infancy to old age.

Syrup of Figs does not debilitate, and is perfectly safe.

The dose as a purgative for an adult is from one-half to one tablespoonful and may be repeated in six hours if required. As a laxative, one or two teaspoonfuls may be given at bed-time or before breakfast.

For children the dose may be regulated according to age and desired effect.

SYRUP OF FIGS

is recommended and prescribed by prominent physicians in all sections of the United States, and gives general satisfaction.

In addition to the blue Figs of California, we use the juice of true Alexandria Senna, representing the laxative and purgative principles without its griping properties, also pure white sugar and an excellent combination of carminative aromatics.

Devoting our entire attention to the manufacture of **Syrup of Figs** after a thorough study of the results to be accomplished and of the best methods to produce a perfect laxative, and with complete manufacturing facilities especially adapted to the purpose, we are enabled to offer to the medical profession, in **Syrup of Figs**, a laxative which, though simple in itself, cannot be produced in all its excellence by other parties, and we believe and trust that physicians will not permit imitations to be used when they prescribe **Syrup of Figs** (Syr. Fici Cal.).

SYRUP OF FIGS

is manufactured only by the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

It is sold to the drug trade in bottles of two sizes only: the smaller bottles containing full four ounces and the large size about ten ounces.

THE BEST FRENCH TONIC

Vin de Bugeaud

A TONIC AND NUTRITIVE WINE WITH CINCHONA AND COCOA

VIN DE BUGEAUD is prepared with the greatest care, with active substances of the very best quality, and chiefly with wild Bolivian Cinchona, the cultivated species being strictly discarded, and the proportions being precisely in accordance with the French pharmacopœa.

It is perfectly tolerated by the most delicate stomachs, owing to the emollient action of the Cocoa it contains, which favourably corrects the over exciting properties and the bitter taste of the Cinchona.

In preparing it, a full-bodied Spanish wine is employed, this wine being more than any other capable of dissolving the medicinal ingredients.

VIN DE BUGEAUD commends itself to the medical profession both by its tonic and antiperiodic properties, and by the certainty and continuity of its action in cases of

Anæmia, Chlorosis, Intermittent Fever, Chronic Diarrhœa, Gastralgia, Convalescences,

in a word to combat

Constitutional or Accidental Debility

no matter from what cause arising.

It is specially suitable for convalescents, debilitated children, delicate women and old persons enfeebled by age and infirmities.

VIN DE BUGEAUD has enjoyed since 1858 the high approbation of the New-York Academy of Medicine. Thousands of practitioners of all countries have spontaneously borne testimony to its efficacy.

Professionnal gentlemen are invited to apply for a copy of the pamphlet (sent free on demand) which contains, along with a few remarks on **VIN DE BUGEAUD** and the opinions of the French medical press on the subject, a number of the most recent testimonials.

VIN DE BUGEAUD may be obtained of all good Chemists and Druggists.

P. LEBEAULT & Cie

PARIS : 5, Rue Bourg-l'Abbé.

NEW-YORK : 6, Harrison Street.

CH. TERTRAIS manager.

Sold by HENRY C. BLAIR'S SONS, Philadelphia.

The only prominent Emulsion of Cod-Liver Oil introduced directly to the medical profession. It is advertised exclusively in medical journals.

HYDROLEINE.

(HYDRATED OIL.)

Produces rapid increase in Flesh and Strength.

FORMULA.—Each Dose contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	1-3 Grains.
Distilled Water	35 "	Salicylic Acid	1-4 "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	1-30 "

Recommended and Prescribed by EMINENT PHYSICIANS Everywhere. It is pleasant to the Taste and acceptable to the most delicate Stomach.

IT IS ECONOMICAL IN USE AND CERTAIN IN RESULTS.

HYDROLEINE (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhuæ, but a hydro-pancreated preparation, containing acids and a small percentage of soda. Pancreatin is the digestive principle of fatty foods, and in the soluble form here used, readily converts the oleaginous material into assimilable matter, a change so necessary to the reparative process in all wasting diseases.

The following are some of the diseases in which **HYDROLEINE** is indicated:

Phthisis, Tuberculosis, Catarrh, Cough, Scrofula, Chlorosis, General Debility, etc.

TO BRAIN WORKERS of all classes, **HYDROLEINE** is invaluable, supplying as it does, the true brain-food, and being more easily assimilated by the digestive organs than any other emulsion.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," and "Consumption and Wasting Diseases," by two distinguished London physicians, which will be sent free on application.

SOLD BY DRUGGISTS GENERALLY.

C. N. CRITTENTON,

SOLE AGENT FOR THE UNITED STATES. 115 FULTON STREET, N. Y.

A Sample of Hydroleine will be sent free upon application, to any physician (enclosing business card) in the U. S.

"What a boon it would be to the Medical Profession if some reliable Chemist would bring out an Extract of Malt in combination with a well-digested or Peptonized Beef, giving us the elements of Beef and the stimulating and nutritious portions of Ale.—J. MILNER FOTHERGILL, M. D."

ALE & BEEF

"PEPTONIZED"

EXTRACT—BOVIS CUM MALTO.

IS THE IDENTICAL COMBINATION SUGGESTED BY THE LATE EMINENT FOTHERGILL.

Each Bottle Represents 1-4 Pound of Lean Beef Thoroughly Peptonized.

PREPARED BY

THE ALE & BEEF COMPANY,

DAYTON, OHIO, U. S. A.

Two full-sized bottles will be sent FREE to any physician who will pay express charges.

"Orders from all parts of the Dominion of Canada, supplied by The Canadian Peptonized Beef & Ale Co., Limited, 153 Hollis Street, Halifax, N. S."

The Perfectly Prepared Pill:

ITS ESSENTIAL POINTS may be thus formulated:

PURITY of medicaments and excipients.
PRECISION as to weight and division.
PERFECT UNIFORMITY as to activity and identity.
PROMPT SOLUBILITY of mass and coating.
PERMANENCE as to conservation.
PALATABILITY; and ELEGANCE of appearance.

PURITY OF MEDICAMENTS is, of course, indispensable to the perfect pill. Less obvious, but equally true, is the proposition that upon this factor the value of its other qualities is largely dependent. Exactitude of weight and uniformity of preparation have little significance if the medicament be impure, while indifferent drugs are liable to chemical changes which affect their stability and activity.

SAFE AND CERTAIN RESULTS are only to be obtained with pure remedies. The methodical treatment of disease calls for therapeutic agents which are as nearly absolute in quality as they can be made by the combined resources of chemistry and pharmacy under competent and conscientious direction.

IN THE W. H. S. & CO. pill these conditions are fully realized. Only the purest materials are employed; no component is substituted, either for economy's sake or for any other reason; and the formula is exactly followed. We believe that the W. H. S. & Co. pill fully meets the requirements of modern therapeutics.

SOME OF THESE PREPARATIONS are specified below, and they are offered as being especially useful at this time.

Pil. Phenacetine (Bayer), "W. H. S. & Co."

For All Forms of Fever, Pain, Rheumatism and Neuralgia; for Pertussis, and for conditions in which pain or fever, or both, are to be combated. (Pills of 2, 3, 4 and 5 grs.)

Pil. Phenacetine et Salol, 5 grs., "W. H. S. & Co."

For Influenza, (La Grippe), Acute Articular Rheumatism, Neuralgia, Migraine, Whooping Cough, and all painful febrile conditions. (Pills containing 2½ grains each of Phenacetine-Bayer and Salol. Half strength also prepared.)

Pil. Terpin Hydrat., "W. H. S. & Co."

For Coughs, Colds, Catarrh, Bronchitis and all Acute and Chronic Respiratory Maladies. No unpleasant symptoms follow its continuous use. (Pills of 2 and 5 grains.)

Pil. Quiniæ, Ferri et Zinci Valerianat., "W. H. S. & Co."

For Nervous Tension, Melancholia, Epilepsy, Hysteria, Delirium Tremens, Dysmenorrhœa, and all Neuroses dependent upon the cares of life. (Pills of 3 grains.)

IN PRESCRIBING BE PARTICULAR TO SPECIFY "W. H. S. & CO."

W. H. Schieffelin & Co., New York.

It is Important

For the Physician to watch the character and quality of the remedies used in his prescriptions. Responsibility *does not cease* when the patient leaves the office; for impure, stale, or inferior preparations may be used without his knowledge. Personal examination of remedies prescribed—is the best check upon substitution.

FERRO-SALICYLATA

LIQUID.

MERRELL.

An eligible combination of Methyl Salicylate and Tinct. Citro-Chloride Iron, in a pleasant and permanent form.

EACH FLUID DRACHM CONTAINS

True Salicylic Acid—from Oil Wintergreen (Methyl Salicylate), - - - - 5 grs.
Tinct. Citro-Chloride Iron, 5 min.

Not Sold in Bulk.

ELIXIR Pinus Compositus.

MERRELL.

Each Fluid Drachm Contains

White Pine—fresh Bark,	2½ grs.
Balm Gilead Buds,	2 grs.
Spikenard,	2 grs.
Cherry Bark,	1¾ grs.
Ipecac,	1-4 gr.
Sanguinarina Nitrate,	1-64 gr.
Morphine Acetate,	1-16 gr.
Ammonium Chloride,	1-2 gr.
Chloroform	1-2 minim.

Not Sold in Bulk.

FERRO-SALICYLATA.---*Merrell.*

Ferro-Salicylata is especially valuable in that shade of disease peculiar in anæmic, delicate, poorly nourished or broken-down patients—usually aged people—children or youth—but met with in all ages. In adults, and often in children when the disease is not plainly chronic, there will be a long series of recurrences with intervals of doubtful health. It may also be employed in acute articular rheumatism, and in some cases of acute tonsillitis, especially where the diagnosis is at first in doubt between rheumatic angina and diphtheria; also, in acute rheumatism and rheumatic affections generally.

Ferro-Salicylata may be used in combination with the Iodides and Bromides of Potassium and Sodium. Associated with the former, it will prove an admirable alterative and tonic in second syphilis attended by a debilitated condition of the general system. It also combines well with Chlorate Potassium, the Hypophosphites, with Fowler's Solution, the vegetable bitter tonics, either in Fluid Extract or Tincture Form.

Ferro-Salicylata and all other preparations of this Company reach the laity through professional channels only. We therefore avoid entering into the minute details of their application, leaving the physician to make such practical use of our therapeutic notes as in his judgment may be best suited to individual cases.

Ferro-Salicylata may be obtained of wholesale druggists throughout the United States, of our Eastern Office, 96 Maiden Lane, New York City, or direct from the Laboratory.

Please designate "Ferro-Salicylata—*Merrell.*"

ELIXIR PINUS COMPOSITUS---*Merrell.*

An admirable combination of well known and highly approved medicinal agents; recommended in acute, chronic, and capillary bronchitis—in ordinary coughs and colds, and wherever a "routine" expectorant is suggested. In the troublesome cough following the recent epidemic "La Grippe," it proved invaluable—many of our correspondents looking upon it as a "specific" in this stage of the disease.

CAUTION.—Physicians are reminded that the Elixir Pinus Compositus of this manufacturer is wholly unlike the many syrups, etc., under similar names, and the difference will be readily appreciated when tried. In testing the physical properties of the Elixir Pinus, note especially its delicate taste and perfect freedom from the odor of rank syrup, the drastic, harsh and repulsive characteristics of the crude blood-root, and other coarser ingredients characteristic of competing preparations.

"Merrell Co.'s" "Green Drug," Fluid Extracts, True Salicylic Acid, Salts of Hydrastis, Fluid Hydrastis, and Specialties may be obtained of wholesale druggists throughout the United States, at the Home Office at Cincinnati, or the New York Office, 96 Maiden Lane, New York City, Richards Drug Co., San Francisco, Agents for Pacific Coast. Prices-current and printed matter cheerfully supplied.

The WM. S. MERRELL CHEMICAL CO.

CINCINNATI. NEW YORK.

VIN MARIANI

"The Standard Preparation of Erythoxylon Coca."

CAREFUL, continued testing, by upwards of seven thousand practitioners in America, whose written opinions over their signatures (in our possession) are fully in accord and clearly prove the efficacy and merits of "VIN MARIANI," may be thus summarized:

"Diffusible stimulant and tonic in anæmia, nervous depression, sequelæ of childbirth, lymphatism, tardy convalescence, general 'Malaise,' and after wasting fevers.

"Special reference to the nervous system, in all morbid states, melancholia, etc.

"Tonic in laryngeal and gastric complications, stomach troubles.

"All cases where a general toning or strengthening of the system is needed.

"The only tonic stimulant without any unpleasant reaction, and may be given indefinitely, never causing constipation."

N. B.—This Wine has been found always uniform and reliable, owing to the selection of finest ingredients and the greatest accuracy in its manipulation. When prescribing, therefore, the Medical Profession are strongly advised to specify "VIN MARIANI," in order to avoid the substitution of imitations, often worthless and consequently disappointing in effect.

Please specify VIN MARIANI.

Per case of Half-Dozen Bottles, . . . $6.00
Per case of One Dozen Bottles, . . . 12.00

NEW EDITION FOR 1892.

Pocket Record AND Visiting List.

TWO SIZES. PRICE TO SUBSCRIBERS TO THE REPORTER:

For 30 Patients a week (with or without dates), ... $1.00
For 60 Patients a week (without dates), ... 1.25

Containing Table to find Day of Confinement, Table of Doses, New Remedies, Incompatibles, Urine Analysis, Poisons and Antidotes, Artificial Respiration, and a variety of other contents of immediate value in every day practice.

PLEASE SEND MONEY WITH ORDER.

ADDRESS:

THE BUTLER PUBLISHING COMPANY,

P. O. BOX 843. PHILADELPHIA.

VACCINE MATTER.

For the accommodation of our Subscribers we will supply both Bovine and Humanized Vaccine Virus.

Guaranteed to be fresh and in every respect first class.

PRICES:

Bovine Crusts, - - - -	**$1.50 each.**
Bovine Points or Quills, - -	**1.00 a dozen.**
Humanized Crusts, - - -	**1.00 small.**
Humanized Crusts, - - -	**2.00 large.**

The Humanized Crusts are warranted to be from typical cases and in every instance from healthy children, with unquestionable family histories.

PLEASE ACCOMPANY THE ORDER WITH THE MONEY.

Address, THE BUTLER PUBLISHING COMPANY,

P. O. BOX 843. PHILADELPHIA PA.

DEFINITE CHEMICAL COMPOUNDS

of Superior Therapeutic Value.

THE NEW HYPNOTIC:

CHLORALAMID—SCHERING.

As a safe and reliable hypnotic, Chloralamid is taking a foremost place. Even in cases where the patients have suffered from painful diseases, sleep has been successfully induced by its administration; the effect is different from that of soporifics, in that it is light, refreshing and free from after-symptoms. In epilepsy it has been recently shown to be superior to other remedies generally adopted. The dose varies from 15 to 40 grains, and the hypnotic effect is produced within half-an-hour. It is noteworthy that the action of the drug is not deferred, and no craving for it seems to be excited even by prolonged administration. According to DR. JOHN GORDON (*Therapist*, 1891, No. 6), Chloralamid proved highly satisfactory in senile insomnia, pulmonary diseases, and hysteria. Another recent contribution to our knowledge of Chloralamid calls attention to its value in quieting the nervous system, and inducing sleep after severe operations.

THE NEW ANTIPYRETIC:

PHENOCOLL Hydrochloride—SCHERING.

Among antipyretics this compound is destined to take a foremost place by virtue of its free solubility, which enables it to be very conveniently given and also ensures its prompt and ready absorption. According to VON MERING 8 grains reduced the febrile temperature as much as 12 to 16 grains of antipyrin. HERTEL gave Phenocoll hydrochloride in powder form (in wafer), 1¼ drachms being divided over the 24 hours. In severe articular rheumatism with some fever the remedy has exerted a beneficial action upon the swollen joints, when all other remedies have failed. (*Therapist.*)

THE NEW URIC ACID SOLVENT:

PIPERAZINE—SCHERING.

The most characteristic property of this compound is its power of dissolving uric acid and forming a comparatively freely soluble urate. It takes up in the cold twelve times as much uric acid as carbonate of lithium under the same conditions, and the salt formed (always the neutral urate, even in the presence of an excess of acid) is taken up by one-seventh of the volume of water required to dissolve the same quantity of lithium urate. The experience of a number of authors is sufficiently encouraging to make further trials seem very desirable. DR. UMPFENBACH believes the compound may prove a valuable diuretic, while some observers record tonic and stimulant effects. The dose is 15 grains per day, divided in acceptable doses, or dissolved in a quart of mineral water which patient may drink *ad libitum*.

Sole Agents and Licensees for America:

LEHN & FINK, NEW YORK.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK:)

Each fluid drachm represents 15 grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium and Lithium.

USES: EPILEPSY, UTERINE CONGESTION, HEADACHE, AND ALL CONGESTIVE, CONVULSIVE AND REFLEX NEUROSES.

This preparation produces results, which can not be obtained from the use of commercial Bromide substitutes.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK.)

From Sea Weed. **Uses: Malaria, Phthisis, Etc.**

An ALLY of quinine—quinine CHECKS the Malarial Chill; Fucus Marina ELIMINATES the Malarial CAUSE; and thus prevents the recurrence of the Chill *after* it has been *checked* by quinine.

An INVALUABLE REMEDY in the treatment of Phthisis—it arrests the decay of lung tissue, diminishes the fever, lessens the cough, abates the soreness in the lungs, improves the appetite, and impedes the progressive emaciation.

DOSE.—One Teaspoonful IN WATER, four times a day.

CHIONIA FROM CHIONANTHUS.

Uses: Biliousness, Jaundice, Dyspepsia, Constipation, and all Diseases Caused by Hepatic Torpor.

CHIONIA stimulates the Liver and restores it to a healthy condition, without debilitating the system by Catharsis; does not purge, per se, but under its use the Liver and Bowels gradually resume their normal functions.

DOSE.—One Fluid Drachm three times a day.

PEACOCK CHEMICAL CO., ST. LOUIS.

STUDY OF EXALGINE AFTER OBSERVATIONS MADE AT THE LARIBOISIÈRE HOSPITAL.

BY DR. ÉMILE DÉSIRÉ.

A. Mesmer.

THE following observations on the analgesic effects of exalgine were made at the Lariboisière Hospital in the service of Dr. Gouguenheim. The remarkable analgesic effects of this drug were first pointed out by MM. Dujardin-Beaumetz and Bardet in a note to the Academy of Sciences, March, 1889. M. Bardet has since, in many other publications, mentioned the elective action of exalgine upon the element of pain. Among others who have had a favorable experience with the drug may be mentioned Gaudireau, Desnos, Peterson, Gorodichze, Thomas Frazer, Herschel, Farrar, Rabow and Heintz of Berlin, Moncorvo and Ferreira.

In our cases the patients were carefully observed from day to day, and we may begin by saying that all our observations have been in favor of the medicament. The dose was rarely over four grains, given twice daily in solution.

Although used in very diverse affections there were but two failures: one of these was a woman with occipito facial neuralgia, the origin of which it was difficult to trace. The dose was increased in this case and relief was obtained for a time, but the pain recurred. It might have been permanently cured by higher doses, but we concluded not to push the drug. The other case was one of intercostal pain against which the ordinary remedies had been used in vain.

In our experience, if the ordinary dose of four grains does not clearly act favorably, it is useless to increase the amount.

In facial, intercostal, uterine, etc., neuralgias which we have treated with exalgine, amelioration has been almost immediate, and the complete cure has been obtained at the end of about one or two days. Patients who have suffered for weeks and months were completely relieved at the end of some days of treatment. Search should of course be made for the cause of the malady.

The bone-pains of syphilis and the violent headaches, which anti-syphilitic treatment had not relieved, yielded in a short time to 4 grains of exalgine. These patients, who had no rest either night or day and were absolutely prostrated, have been relieved by the first dose, and completely cured of their intense pains after some days.

We have also employed the exalgine to combat the pain and dysphagia in those suffering from tuberculosis, which presents a swelling and redness of the aryteno-epiglottic region. The experiments were rendered more easy as M. Gouguenheim's clinic includes a great number of laryngological cases. Exalgine was prescribed for a great number, **some hundreds**, of the out-patients with good results. We do not pretend that it acted upon the lesion, but it certainly relieved the pain. Muriate of cocaine and menthol have only a transitory effect in these cases.

We have rarely obtained the complete disappearance of these pains by exalgine alone, but, supplemented with other treatment the results have given great relief to the patient.

CASE 1.—M., aged 53, May 1, woman. **Bone-pains of syphilis** and **intense cephalalgia.** Energetic anti-syphilitic treatment and every means tried for the headache, but the patient could not sleep. May 25: four grains of exalgine at 2 and 5 o'clock in the afternoon; no amelioration. May 26: same doses, but does not sleep very well. May 27, 28: same doses; much better, but the pain continues. May 29: dose raised to 7½ grains; marked amelioration; patient sleeps well without pain in the head. May 30: four grains. The condition is maintained and is excellent. May 31: discharged completely cured of the cephalalgia.

CASE 2.—A., girl of 22 years; **dysphagia**; complains of much pain at the level of the larynx at the moment of deglutition. May 22: 8 grains of exalgine in two doses; not much change. May 23: 4 grains; less pain in swallowing. May 24: much less pain; 4 grains of exalgine. May 25: 4 grains more of the drug. The patient feels scarcely any pain in swallowing although the laryngoscope shows no diminution in the swelling. She left the hospital.

CASE 3.—L., 33 years; **subacute sciatica** in the left leg. May 22: 4 grains of exalgine; no sensible amelioration. May 23, 24, and 25: 4 grains daily without much improvement. May 26: 4 grains. Much less pain; patient walks better. May 29: 8 grains continued on the 30th and 31st. Pain only at distant intervals. June 1, 2, 3, 4 and 5: 4 grains of exalgine daily. No pain at all and left the hospital.

CASE 4.—C., 30 years, **dysphagia**, very pronounced, depending on an aryteno-epiglottic tuberculosis. Has fits of coughing when he drinks, and prickling sensations at the level of the larynx. May 15, 16, 17: 4 grains of exalgine twice a day. Less pain on deglutition; but the patient complained of some vertigo, nausea, and visual trouble after the third dose. The exalgine was continued, however, for eight days when he left the hospital suffering much less pain in the region of the larynx.

CASE 5.—G., woman of 28 years. Albuminuria with uræmic crises; **acute purulent otitis** on the left side; tonsilitis; facial neuralgia. May 11: 4 grains of exalgine were given twice in the afternoon with rapid amelioration of the neuralgia. By evening all pain had nearly disappeared and the patient was able to sleep for the first time in many days. May 12: 4 grains more were given; the neuralgic pain had not returned several days after.

LAPACTIC PILLS.

A combination introduced by us and found in practice to possess superior advantages over other similar formulæ. The well known mild action of Aloin on the lower portion of the intestinal canal, and its power of stimulating the hepatic functions, is supplemented by the action of Ipecac as a stomachic tonic and by increasing the gastric secretions; the Belladonna acts specially upon the involuntary muscular fibres of the bowels, increasing peristalsis, diminishing the harshness and at the same time increasing the effectiveness of the laxative. The general tonic effect of Strychnine upon the stomach and bowels and its direct action upon the sympathetic make it a valuable addition in the permanent cure of **habitual constipation and atonic dyspepsia.**

Since we first called attention to our Lapactic Pills, some four years ago,—publishing the composition of the same,—a number of Manufacturers have adopted the same formulæ and have furnished these pills under the same name. Should Physicians fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints from physicians by letter), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term "LAPACTIC PILLS, S. & D.'S," when prescribing these pills.

SAMPLES WILL BE MAILED ON APPLICATION.

SPECIAL FORMULÆ MADE TO ORDER.

WHEN PURCHASING PLEASE SPECIFY S. & D's.

SCOTT'S EMULSION

VERSUS

PLAIN COD LIVER OIL.

Plain Cod Liver Oil ***is indigestible, deranges the stomach, destroys the appetite is not assimilated,*** and in a majority of cases is detrimental to the patient.

SCOTT'S EMULSION

Can be ***digested in nearly all cases, is assimilated, does not derange the stomach, nor overtax the digestive functions,*** and can be taken for an indefinite period when the plain cod liver oil cannot be tolerated at all, and with most marked results in ***Anæmia, Consumption*** and all wasting conditions. It also contains the ***Hypophosphites of Lime and Soda with Glycerine,*** which are most desirable adjuncts.

WHEN PHYSICIANS TRY IT THEY INVARIABLY USE IT

in preference to the plain cod liver oil or other ***so-called Emulsions*** that invariably separate, and hence their integrity and value is destroyed. ***Scott's Emulsion is palatable and absolutely permanent*** hence its integrity is always preserved.

The formula for SCOTT'S EMULSION is 50 per cent. of the finest Norwegian Cod Liver Oil, 6 grains Hypophosphite of Lime and 3 grains Hypophosphite of Soda to the fluid ounce, Emulsified, or digested to the condition of assimilation with chemically pure Glycerine and Mucilage.

We also wish to call your attention to the following preparations:

CHERRY MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain aud nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula).

Prepared from carefully selected German Buckthorn Bark, Juglans Bark and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

SCOTT & BOWNE, 132 South Fifth Avenue, NEW YORK.

CH. MARCHAND'S

PEROXIDE OF HYDROGEN.

(MEDICINAL) H_2O_2 (ABSOLUTELY HARMLESS.)

THE MOST POWERFUL BACTERICIDE AND PUS DESTROYER.
ENDORSED BY THE MEDICAL PROFESSION.
UNIFORM IN STRENGTH, PURITY, STABILITY.
RETAINS GERMICIDAL POWER FOR ANY LENGTH OF TIME.
TAKEN INTERNALLY OR APPLIED EXTERNALLY WITH PERFECT SAFETY.

Send for free book of 72 pages giving articles by the following contributors:

ABOUT GAS TREATMENT.

We make and sell oxygen and nitrogen monoxide for therapeutic use, and we guarantee them pure They are put up in compact form. (A cylinder containing 100 gallons of nitrogen monoxide or 40 gallons of oxygen measures 12 inches in length, has a diameter of 3½ inches, and weighs 10½ lbs. A cylinder containing 450 gallons of nitrogen monoxide or 100 gallons of oxygen measures 25 inches in length, has a diameter of 4½ inches, and weighs 34 lbs.)

INSOMNIA. Dr. Allan McLane Hamilton states that nitrogen monoxide, N_2O (nitrous oxide of the old nomenclature) has no equal in the treatment of this difficulty.

MELANCHOLIA. A short course of nitrogen monoxide is said to change the face of nature for such patients.

ANÆMIA. Where iron is not tolerated or proves inefficient, the addition of oxygen or a combination of oxygen and nitrogen monoxide has proven very beneficial.

For those who should, but cannot, go from home for rest or a change of air, or for those who, from any cause fail to get air enough into their lungs, the inhalation of one or other of these gases, or both in combination, promises great benefit. The testimony is that in cases of

ASTHMA, more than fifty per cent. of the cases yield to oxygen treatment, others are very greatly relieved, and a very small per cent. are not improved.

INDIGESTION and CONSTIPATION are said to be greatly relieved and very often conquered by continued treatment.

A highly esteemed New York physician has used more than twenty thousand gallons of nitrogen monoxide in his private practice. The letters received from his patients, largely from those who were afflicted with nervous disorders, are enthusiastic in their testimony as to the benefit received.

Regular practitioners who are using gas treatment testify that when *pure* oxygen and *pure* nitrogen monoxide, or a mixture of these, is used, no therapeutic agents are more uniformly successful when intelligently prescribed.

Packer's Tar Soap.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

A WEEKLY JOURNAL.

ESTABLISHED IN 1853 BY
S. W. BUTLER, M. D.

THE Medical and Surgical Reporter.

EDWARD T. REICHERT, M. D., Editor.
(Prof. Physiology, University of Penna.)

CHAS. K. MOUNT, Advertising Manager.

PROSPECTUS.

For nearly forty years ***The Medical and Surgical Reporter*** has held a position of influence and popularity second to that of no other publication in medicine. Last May the Editorial and Business Management was changed, the journal was enlarged from twenty-eight to forty pages, and the publication in almost every way was radically improved. That these changes have been appreciated by the profession is evident in the phenomenal increase of our subscription list and in the number of new advertisements.

The enlarged ***Reporter*** now enables us to offer more pages of reading matter each year than are given by any other medical periodical in America, and more material of direct practical value to the practising physician than is furnished in any other journal in the English language. We now publish during the year over 3500 separate articles, representing the best thought in the profession. These include about as follows:—

75 ***Clinical Lectures*** by leading clinicians in this country and abroad.
200 ***Original Communications.***
60 ***Society Reports.***
25 ***Letters by Special Correspondents.***
800 ***Selected Prescriptions.***
75 ***Editorials on Timely Topics.***
150 ***Letters from our Subscribers.***
150 ***Book Reviews.***
2000 ***Periscope Articles,*** carefully selected and condensed, and representing all important progress in medicine in all branches and languages.

The ***Reporter*** is truly a magazine of medical progress, it is thoroughly practical, and is especially adapted to the wants of the busy practitioner. There is no State or Country in America that it does not reach, and no civilized Country that does not regularly receive it.

The ***Reporter*** is published every Saturday, and is mailed to subscribers in the United States and Canada for $5.00 a year in advance, and to those in foreign countries for $6.00 in advance. It will be sent for three months on trial for $1.00.

(WARNER & CO.)
SODA.

Caffein 1 Grain, Bromide Soda 30 Grains in each heaping teaspoonful.

USEFUL IN

Nervous Headache, Sleeplessness, Excessive Study, Migraine, Nervous Debility, Mania, as a Remedy in Sea-sickness, and Epilepsy.

Dose and Composition.—A heaping teaspoonful, containing Bromide Soda 30 grains, and Caffein 1 grain, in half a glass of water, to be repeated once after an interval of 30 minutes, if necessary.

ANTI-RHEUMATIC. SEDATIVE.

EFFERVESCENT

BROMO
(WARNER & CO.)
LITHIA.

EACH DESSERTSPOONFUL CONTAINS:

℞ Salicylate Lithia 10 grains, and Bromide Soda 10 grains.

A REMEDY IN THE TREATMENT OF

RHEUMATISM, GOUTY DIATHESIS, ETC.

Dr. A. Garrod, the well-known English authority on Gout, who was the first physician to introduce the Lithia Salts in the treatment of Gouty Diathesis, states that their action is materially increased by being administered in a *freely diluted form.*

This effervescing salt of Lithia furnishes an easy and elegant way of applying Dr. Garrod's methods.

INGLUVIN

A SPECIFIC FOR VOMITING IN PREGNANCY,

A POWDER:—PRESCRIBED IN THE SAME MANNER, DOSES & COMBINATION AS PEPSIN.

In Doses of from 10 to 20 Grains,

AND A POTENT AND RELIABLE REMEDY FOR THE CURE OF

Marasmus, Cholera Infantum, Indigestion, Dyspepsia and Sick Stomach,

caused from debility of that organ. It is superior to the Pepsin preparations, since it acts with more certainty, and effects cures where they fail.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

—*Landois and Sterling.*

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

—*Materia Medica and Therapeutics, Dr. Mitchell Bruce.*

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

—*Eustace Smith, M.D., F.R.C.S.*

Morph. Sulph. ($\frac{1}{30}$ gr.), Atropiæ Sulph. ($\frac{1}{600}$ gr.), Codeia ($\frac{1}{60}$ gr.), Antimony Tart. $\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{60}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

LONDONDERRY LITHIA

"The Most Wonderful American Water."

From I. N. Danforth, A. M., M. D., Prof. Pathology and Renal Diseases, Women's Medical College, Chicago.

"I have had a long experience in the treatment of *Kidney Diseases* with LONDONDERRY, and am pleased to add my testimonial, although I think it unnecessary from the fact that the *effects of the water speak more eloquently than any words* which I might utter. I prize it very highly in all cases of *Chronic Rheumatism* or other manifestations of the condition known as the 'Lithic Acid Diathesis." I have used the water extensively in my practice and intend to continue the use of it."

From Henry M. Lyman, A. M., M. D., Professor of Physiology and Diseases of the Nerves in Rush Medical College. Prof. of Theory and Practice of Medicine in the Woman's Medical College. Physician to Presbyterian Hospital, of Chicago. Author of "Insomnia and Disorders of Sleep," etc.

* * * * I have used it for several years, and I like it as remedial agent in *releasing* the *secretions* of the *Kidneys*. It is a pleasant drink also. I think that it is a *blessing* to the *club men*. At any rate that class of Chicagoans known as 'high livers' whose diet is not confined to the narrow limits of plebeianism, are gradually recognizing the LONDONDERRY LITHIA WATER as their nostrum."

From Henry M. Field, M. D., Prof. Therapeutics, Dartmouth Med. College, etc.

"I feel under a sort of obligation to send you a word of unsolicited and favorable testimony respecting the values and virtues of your LITHIA WATER. * * * * Since my attention was first called to your LITHIA WATER—several years ago—and *I became satisfied respecting its pre-eminent power, I have used no other Lithia Water*, and in the case just characterized (gravel), I depend upon the LONDONDERRY invariably and often as a *last resource*. Thus far it has rendered so good an account of itself that I feel bound to make the account, which I render, good. I trust to your discretion and sense of propriety as to any disposition you may make of this letter."

DÉVIATION DES RÈGLES.

ALETRIS CORDIAL (Rio) is, perhaps, the most important remedial agent yet known. It is *the* remedy for the wrongs of menstruation, by restoring normal functional activity to the uterine apparatus. Prolapsus, Menorrhagia, Leucorrhea, Amenorrhea, Dysmenorrhea, Subinvolution, Metritis, Ovarian Neuralgia, etc., all yield to its beneficial influence. Physicians find a certainty in its action as a uterine tonic, that is peculiar to no other remedy. A special indication for its use

IS THE DRAGGING SENSATION

in the lower bowels. It quickly restores the strength and waning vitality of the chlorotic girls and pregnant women. Habitual miscarriage and the excessive nausea of early pregnancy are effectually prevented by its timely and continued use. In a word, it restores tone to the uterine system, and thus relieves all abnormal conditions.

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1891–92.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof T. M. T. McKENNAN, 81c Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Avenue, Pittsburgh.

SVAPNIA

OR

PURIFIED OPIUM

FOR PHYSICIANS USE ONLY.

Contains the Anodyne and Soporific Alkaloids, Codeia, Narceia and Morphia.

Excludes the Poisonous and Convulsive Alkaloids, Thebaine, Narcotine and Papaverine.

SVAPNIA has been in steadily increasing use for over twenty years, and whenever used has given great satisfaction.

To PHYSICIANS OF REPUTE, not already acquainted with its merits, samples will be mailed on application.

SVAPNIA is made to conform to a uniform standard of Opium of Ten per cent. Morphia strength.

JOHN FARR, Manufacturing Chemist, New York.

C. N. CRITTENTON, Gen'l Agent, 115 Fulton St., N. Y.

To whom all orders for samples must be addressed.

SVAPNIA IS FOR SALE BY DRUGGISTS GENERALLY.

DR. WM. A. HAMMOND,

WASHINGTON, D. C.,

Surgeon-General U. S. Army (retired), formerly Professor of Diseases of the Mind and Nervous System in the University of New York, etc., says:

"I have for some time made use of the

BUFFALO LITHIA WATER

in cases of affections of the nervous system, complicated with Bright's Disease of the Kidneys or with a gouty diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite with me in like cases, but the

Buffalo Lithia Water Acts Better than Any Extemporaneous Solution

of the Lithia salts, and is moreover, better borne by the stomach. I also often prescribe it in those cases of cerebral hyperæmia resulting from over mental work—in which the condition called nervous dyspepsia exists—and generally with marked benefit."

Water in cases of one dozen half-gallon bottles, $5.00, f. o. b. here. For sale by all first-class druggists.

THOMAS F. GOODE, PROPRIETOR,

BUFFALO LITHIA SPRINGS, VA.

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 67th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 21st of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Anatomy, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M. D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin October 1st, and continue until May. PRELIMINARY SESSION begins September 7th.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required Practical laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Bacteriology, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology is a part of the regular course. Special clinical facilities.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For announcement or information apply to

JAROS HYGIENIC UNDERWEAR

WOOL FLEECE KNIT

FORMULA.—Unspun Wool, knitted into meshes of a cotton thread Basis, the theories of Profs. Von Pettenkofer, Parkes, Kreiger, Buck and others.

ADVANTAGES.—Capillary action of unspun wool upon the body. Greatest hydroscopic qualities and non-irritating. Interstices naturally formed, stores body temperature. Prevents rapid radiation during climatic changes, aids transportation of moisture. Porosity, elasticity, perfect fit and non-shrinkability are regarded.

INDICATIONS.—Rheumatism, Kidney Disease (Nephrites), Pulmonary Consumption, Catarrhal Troubles, La Grippe, etc, as well as a general prophylactic.

NOTE.—Features accomplished have been recognized by the medical profession since 1884, also endorsed by U. S. Army, U. S. Navy, Police and Fire Departments.

80-Page Treatise containing reports of results in special practice as well as from U. S Government, mailed post-paid on application

DIOVIBURNIA

UTERINE TONIC, ANTISPASMODIC AND ANODYNE.

A reliable and trustworthy remedy for the relief of Dysmenorrhœa, Amenorrhœa, Menorrhagia Leucorrhœa, Subinvolution, THREATENED ABORTION, Vomiting in Pregnancy and Chlorosis; directing its action to the entire uterine system as a general tonic and antispasmodic.

FORMULA.

Every ounce contains 3-4 dram each of the fluid extracts: Viburnum Prunifolium, Viburnum Opulus, Dioscorea Villosa, Aletris Farinosa, Helonias Dioica, Mitchella Repens, Caulophyllum Thalictroides, Scutellaria Lateriflora.

DOSE.—For adults, a desertspoonful to a tablespoonful three times a day, after meals. In urgent cases, where there is much pain, dose may be given every hour or two, ALWAYS IN HOT WATER.

Jno. B. Johnson, M. D., Professor of the Principles and Practice of Medicine, St. Louis Medical College.

ST. LOUIS, June 20, '88.

I very cheerfully give my testimony to the virtues of a combination of vegetable remedies prepared by a well-known and able pharmacist of this city, and known as DIOVIBURNIA, the component parts of which are well known to any and all physicians who desire to know the same, and therefore have no relation to proprietary or quack remedies. I have employed this medicine in cases of dysmonorrhœa, suppression of the catemania and in excessive leucorrhœa, and have been much pleased with its use. I do not think its claims (as set forth in the circular accompanying it) to be at all excessive. I recommend its trial to all who are willing to trust to its efficacy, believing it will give satisfaction. Respectfully,

Jno. B. Johnson

L. Ch. Boisliniere, M. D., Prof. of Obstetrics, St. Louis Medical College. ST. LOUIS, June 18, 1888.

I have given DIOVIBURNIA a fair trial and found it useful as an uterine tonic and antispasmodic, relieving the pains of dysmenorrhœa, and regulator of the uterine functions. I feel authorized to give this recommendation of DIOVIBURNIA, as it is neither a patented nor a secret medicine, the formula of which have been communicated freely to the medical profession.

L Ch. Boisliniere M.D.

H. Tuholske, M. D., Professor Clinical Surgery and Surgical Pathology, Missouri Medical College; also Post-Graduate School of St. Louis. ST. LOUIS, June 23, 1888.

I have used DIOVIBURNIA quite a number of times—sufficiently frequently to satisfy myself of its merits. It is of unquestionable benefit in painful dysmenorrhœa; it possesses antispasmodic properties which seem especially to be exerted on the uterus.

H. Tuholske

To any physician, unacquainted with the medicinal effect of DIOVIBURNIA, we will mail pamphlet containing full information, suggestions, commendations of some of our most prominent professors and various methods of treatment; also a variety of valuable prescriptions that have been thoroughly tested in an active practice, or to physicians desiring to try our preparation, and who will pay express charges, we will send on application a sample bottle free.

SYRUP OF FIGS.

(Syr. Fici Cal.)

In order to meet the almost universal demand for a safe, reliable and elegant liquid laxative, the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

is utilizing the delicious blue Fig of California in the preparation of

SYRUP OF FIGS,

an agreeable and effective laxative or purgative, according to the dose and manner of administration.

Syrup of Figs is delightful to the taste, and may be taken by every one, from infancy to old age.

Syrup of Figs does not debilitate, and is perfectly safe.

The dose as a purgative for an adult is from one-half to one tablespoonful and may be repeated in six hours if required. As a laxative, one or two teaspoonfuls may be given at bed-time or before breakfast.

For children the dose may be regulated according to age and desired effect.

SYRUP OF FIGS

is recommended and prescribed by prominent physicians in all sections of the United States, and gives general satisfaction.

In addition to the blue Figs of California, we use the juice of true Alexandria Senna, representing the laxative and purgative principles without its griping properties, also pure white sugar and an excellent combination of carminative aromatics.

Devoting our entire attention to the manufacture of **Syrup of Figs** after a thorough study of the results to be accomplished and of the best methods to produce a perfect laxative, and with complete manufacturing facilities especially adapted to the purpose, we are enabled to offer to the medical profession, in **Syrup of Figs**, a laxative which, though simple in itself, cannot be produced in all its excellence by other parties, and we believe and trust that pnysicians will not permit imitations to be used when they prescribe **Syrup of Figs** (Syr. Fici Cal.).

SYRUP OF FIGS

is manufactured only by the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

It is sold to the drug trade in bottles of two sizes only: the smaller bottles containing full four ounces and the large size about ten ounces.

or Carnrick's Kumyss Tablets

A PRODUCT OF PURE, SWEET MILK, PALATABLE, NUTRITIOUS, EASILY DIGESTED, AND WHEN DISSOLVED IN WATER FORMS A DELICIOUS EFFERVESCENT KUMYSS.

(*Put up in air-tight bottles, in two sizes; the larger holding sufficient Tablets for seven twelve-ounce bottles, and the smaller sufficient for three twelve-ounce bottles of Kumyss.*)

THIS PREPARATION is presented to the Medical Profession in the convenient form of Tablets, and will be found superior in every respect to ordinary *Kumyss, Wine of Milk, Fermented Milk,* or any similar preparation.

Kumysgen when prepared for use contains every constituent of a perfect Kumyss.

Kumysgen is made from fresh, sweet milk, and contains fully thirty per cent. of soluble casein, which is double the amount found in ordinary Kumyss preparations.

Kumysgen being in Tablet form, will keep indefinitely, is easily and readily prepared, less expensive than the ordinary variable and perishable Kumyss, and its *fermentative action* may be regulated at will, thus rendering it available at all times and under all circumstances.

Clinical tests gathered from every quarter of the globe attest its special value in all cases of *Gastric* and *Intestinal Indigestion* or *Dyspepsia, Pulmonary Consumption, Constipation, Gastric and Intestinal Catarrh, Fevers, Anœmia, Chlorosis, Rickets, Scrofula, Vomiting in Pregnancy, Bright's Disease, Intestinal Ailments of Infants, Cholera Infantum; for young children and for convalescents from all diseases.*

The casein being finely subdivided, it is especially valuable for all who require an easily digested or a partially digested Food.

Kumysgen is a delicious effervescent Food-Beverage, relished alike by the sick or well.

Kumysgen is tonic, stimulant, diuretic, highly nutritious, easily digested, perfectly palatable, and always *permanent* and *uniform* in strength.

Maltine

WITH

COD LIVER OIL

A combination of the best Norwegian Cod Liver Oil with MALTINE, in which, by the vacuum process, rancidity is prevented and disagreeable odor and taste of the oil removed.

Base a Powerful Reconstructive

Contains No Inert Emulsifier

Does not disturb Digestion nor offend the Palate

Is an active Starch Digester and Tissue Builder.

Produces rapid Improvement in Appetite.

Is used where "Emulsions" cannot be tolerated.

A complete list of the Maltine Preparations and their formulæ will be sent on application.

THE MALTINE MANUFACTURING CO.

(Please mention this Journal.) New York, N. Y.

IMPERFECT CURES OF CONSUMPTION.

It has frequently been demonstrated that spontaneous cures of consumption take place. The demonstration consists in the post-mortem discovery of cicactrices, caseous and calcareous foci and other evidences of previous destructive processes in the lungs of those who have died of some other acute malady and who had long been thought to be free from any pulmonary affection.

However, it has not been so generally known, although now a thoroughly established fact, that many cases are not perfectly cured; that is, incomplete calcification of the tuberculous tissue has taken place, leaving a centre of caseous or calcareous substance, with a periphery in which the tubercular process is still more or less progressive, though seemingly in a quiescent state.

The great danger to patients thus affected, as lately pointed out by Dr. Thos. Harris, M. R. C. P., of London, is that at any time the disease may take on an active form.

Any of the accidents of exposure that ordinarily induce pulmonary congestion or inflammation may light up the slumbering fires and precipitate a rapidly destructive tubercular consumption of the lungs. Or these imperfectly calcified foci may become the source of infection of the system with general acute miliary tuberculosis.

What is the great lesson in practical therapeutics to be learned from this important pathological discovery? It is that those who have ever shown signs of incipient phthisis should be thereafter kept under skilful professional observation. Appropriate treatment should be continued until all physical signs of active disease completely disappear. They should live guarded lives thereafter, conforming to correct hygienic rules. But above all, whenever any symptoms of pulmonary disturbance appear, they should be at once put upon active treatment and continued until such symptoms have entirely passed away.

Now, what is the appropriate treatment? Let us listen to the learned A. Lutaud, of Paris, who says, "The fundamental basis of all rational therapeutics must be to restore the tone and reinforce the power of resistance of the tissues. The organism must be placed in a condition, not only to provide for daily needs and to resist vicissitudes of temperature, humidity, etc., but to enable it to resist the attack of enemies in the form of the pathogenetic microbes. It is, above all, necessary to prevent that devitalization of the tissues which renders them an easy prey to the marauding bacillus. Hence the efforts of therapeutics of all nationalities have been directed to the discovery and perfection of tonic and reconstituent preparations."

It is now a well established fact in pathological science that the serum of pure, healthy blood is a sure and rapid destroyer of the germs of this disease. Hence the appropriate remedy is that which will most rapidly enrich the blood—the hypophosphites of lime and soda.

But this remedy will also promote the more rapid calcification of the diseased areas in the pulmonary tissues. Hence, it is entitled in a double sense to the claim of a SPECIFIC in this disease, first given it by the illustrious Churchill.

The patient should be given McArthur's Syrup (a syrup of the chemically pure hypophosphites of lime and soda) from the time the disease is first suspected, with appropriate intervals of intermission, until he is perfectly restored, and this treatment should be resorted to during any marked departure from health thereafter.

The McArthur Hypophosphite Co., Boston, Mass., will furnish you valuable evidence of the curability of consumption and a sample bottle of the syrup without expense, except express charges, if you wish to make a trial of it in your practice.

VIN MARIANI

"The Standard Preparation of Erythoxylon Cocoa."

CAREFUL, continued testing by upwards of seven thousand practitioners in America, whose written opinions over their signatures (in our possession) are fully in accord and clearly prove the efficacy and merits of "VIN MARIANI" may be thus summarized:

- "Diffusible stimulant and tonic in anæmia, nervous depression, sequelæ of childbirth, lymphatism, tardy convalescence, general 'Malaise,' and after wasting fevers.
- "Special reference to the nervous system, in all morbid states, melancholia, etc.
- "Tonic in laryngeal and gastric complications, stomach troubles.
- "All cases where a general toning or strengthening of the system is needed.
- "The only tonic stimulant without any unpleasant reaction, and may be given indefinitely, never causing constipation."

N. B.—This Wine has been found always uniform and reliable, owing to the selection of the finest ingredients and the greatest accuracy in its manipulation. When prescribing, therefore, the Medical Profession are strongly advised to specify "VIN MARIANI," in order to avoid the substitution of imitations, often worthless and consequently disappointing in effect.

Please Specify VI MARIANI.

SCHERING'S

CHLORALAMID.

The New Approved Hypnotic.

Dose: 30 to 45 grains; effect within 30 minutes.

Best administered in solution with whiskey, tincture of cardamoms, or other alcoholic menstruum. *Solutions must not be heated, as the Chloralamid is thereby decomposed.*

A good formula for prescribing is

Chloralamid-Schering,.....4 drachms.
Spts. Frumenti,.....3 ounces.
Elix. Aurantii, sufficient to make 4 ounces

Mix. Take one tablespoonful (30 grains Choralamid) in water.

CHLORALAMID—Schering has received merited praise and endorsement from highest medical authorities all over the world.

SCHERING'S

PHENOCOLL.

The New Antipyretic, Anti-Rheumatic, Analgesic, and Nervine.

Freely Soluble in Water, and Non-toxic.

Dose: 7 1-2 to 15 grains, three times daily.

PHENOCOLL—Schering has been very favorably endorsed by eminent physicians and clinicians in Europe and America; among others, Surgeon-Major HERTEL (MEDIC. WOCHENSCHRIFT); Dr. HERZOG, in clinic of Prof. Dr. RIEGEL, in Giesen; Dr. ISAAC OTT, Easton, Pa.; Prof. KOBERT, in Dorpat; Prof. VON MERING, in Halle, A. S.; and many more. We refer also to an editorial by Prof. J. V. SHOEMAKER, in the Philadelpnia *Medical Bulletin*, July, 1891.

SCHERING'S

PIPERAZINE.

The New and Superior Uric Acid Solvent.

Freely Soluble in Water, and Non-toxic.

Dose: 15 grains per day, divided in suitable doses.

Best administered by dissolving daily dose in one quart of aërated water, which patient may drink in wineglassful doses at frequent intervals during the day.

PIPERAZINE—Schering has proved to be a very important new theraapeutic agent; it unites readily with Uric Acid, and the resulting urate dissolves perfectly. Piperazine is twelve times more potent than Lithia.

Sole Agents and Licensees for America:

LEHN & FINK,

128 WILLIAM STREET, NEW YORK.

Notes on New Remedies.

Chloralamid in Epilepsy.

At the October meeting of the N. Y. Academy of Medicine, Dr. C. L. Dana, in speaking of the symptomatic treatment of epilepsy, refers to choralamid as follows: "The most valuable adjuvant was hydrate of chloral, but I have found a new drug in chloralamid which does all the good ascribed to the former drug, without affecting the heart or circulation."

Piperazine and Urinary Calculi.

Interesting experiments have been made recently by Dr. FINZELBERG, Director of Schering's Research Laboratory, on the action of piperzine upon artificial urinary calculi consisting of pure uric acid, or that compound with calcium phosphate, or of ammonium urate, etc. The design was to ascertain whether piperazine had any solvent effect upon these. The result of the experiment showed that all the forms of concretions alluded to dissolved freely and perfectly within a comparatively short time in a one per cent. piperazine solution. In a few cases nothing remained but a light honeycombed skeleton, which consisted of the hardened cementing mucus. It was particularly noticed that the edges of the calculi, sometimes very sharp, dissolved away rapidly in the piperazine solution.—*Chemist and Druggist.*

Phenocoll Against Epidemic Influenza.

The study of the relationship between chemical constitution and physiological action is of comparatively recent date, but it has already led to results sufficiently interesting to make it evident that along this line promising work still remains to be done.

Dr. HANS ARONSON has recently made an investigation into the therapeutical effect of certain acid derivatives of acetanilid and phenacetin. He confirmed EHRLICH'S theory that the introduction of a sulphone group into the molecule of certain compounds which act upon the central nervous system, renders them inert as regard antipyretics, and he found that a very large number of acid derivatives of the bases mentioned are equally destitute of antifebrile effect.

He concludes with the observation (*Deutsche med. Wochenschrift*): The problem of obtaining soluble antipyretics from acetanilid, or rather phenacetin, has been recently solved in another way—namely, by the introduction into the molecule, not of acid, but of basic groups. To this category belongs *Phenocoll*, recently introduced into commerce and recommended on all hands as an antipyretic and anti-rheumatic. The compound is an amidated phenacetin, and is related to the body exactly in the same way as glycocoll to acetic acid. As an antineuralgic it exerted, in a few cases observed by me, a prompt and reliable effect.

It is also worthy of note that *Phenocoll* is being successfully given *against epidemic iufluenza*, which has reappeared here and there recently. This affection is so likely to be followed by severe sequelæ, that it is important to avoid lowering the vitality of the system in every possible way. In this respect Phenocoll is specially indicated, as it has been proved to have no deleterious effect upon the blood, such as most of the antipyretics in use undoubtedly have. According to all the authorities who have hitherto recorded their experiences with Phenocoll, it is free from all unpleasant or dangerous after-effects.

In 8 to 15 grain doses, repeated at intervals of about an hour, its beneficial effect is promptly manifested. The rheumatism-like pains disappear, and the temperature falls to the normal. At the same time the patients experience a feeling of general well-being.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK:)

Each fluid drachm represents 15 grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium and Lithium.

USES: EPILEPSY, UTERINE CONGESTION, HEADACHE, AND ALL CONGESTIVE, CONVULSIVE AND REFLEX NEUROSES.

This preparation produces results, which can not be obtained from the use of commercial Bromide substitutes.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK.)

From Sea Weed. **Uses: Malaria, Phthisis, Etc.**

An ALLY of quinine—quinine CHECKS the Malarial Chill; Fucus Marina ELIMINATES the Malarial CAUSE; and thus prevents the recurrence of the Chill *after* it has been *checked* by quinine.

An INVALUABLE REMEDY in the treatment of Phthisis—it arrests the decay of lung tissue, diminishes the fever, lessens the cough, abates the soreness in the lungs, improves the appetite, and impedes the progressive emaciation.

DOSE.—One Teaspoonful IN WATER, four times a day.

CHIONIA FROM CHIONANTHUS.

Uses: Biliousness, Jaundice, Dyspepsia, Constipation, and all Diseases Caused by Hepatic Torpor.

CHIONIA stimulates the Liver and restores it to a healthy condition, without debilitating the system by Catharsis; does not purge, per se, but under its use the Liver and Bowels gradually resume their normal functions.

DOSE.—One Fluid Drachm three times a day.

PEACOCK CHEMICAL CO., ST. LOUIS.

STUDY OF EXALGINE AFTER OBSERVATIONS MADE AT THE LARIBOISIÈRE HOSPITAL.

BY DR. ÉMILE DÉSIRÉ.

(*Continued from last number.*)

Patient at the Salpetriere.

CASE 6.—J., **Dysphagia,** with arytenoid tuberculosis. Severe pain at the level of larynx increased on deglutition. May 28 and 29: 4 grains exalgine twice each day; less pain June 1 and 2: 7 grains of the drug with diminution of the dysphagia. June 3 and 4: 4 grains; very little pain. June 7: not having taken any more exalgine the pain returned. June 10: has taken exalgine three days. Left the hospital with but little pain.

CASE 7.—C., woman of 58: **neuralgic pains** in the region of the stomach, especially for the last two days. May 29: 4 grains of exalgine daily until June 1st. No more pain.

CASE 8.—D., woman of 26. **Intercostal neuralgia** in a tuberculous patient, but without pleural lesion. Severe pain for the last 15 days, especially if she attempts to move a little quickly. May 22: 4 grains of exalgine; diminution of pain. Some nausea, insignificant vertigo, no troubles of vision, or cyanosis. May 23, 24: 4 grains; considerable amelioration. May 27; the pain having recurred 7½ grains of exalgine were given; no amelioration. May 28, 29: 7½ grains twice each day without very sensible improvement. May 30: patient desired the medication to cease.

CASE 9.—S., man of 54; **subacute articular rheumatism** in nearly all the joints, but especially in the shoulder. No fever. May 25: 4 grains of exalgine. Pronounced amelioration by evening. May 26: 4 grains; nearly complete disappearance of the pain. Left the hospital.

CASE 10.—B., man of 21. Tuberculosis with hæmoptysis. Interarytenoid vegetations. Aryteno-epiglottic œdema determining an **intense dysphagia,** especially for liquids. May 22, 23, 24 and 25: 4 grains of exalgine twice daily without sensible amelioration. May 25: dose 7 grains twice daily. June 1: appreciable relief. He was now given four grains twice a day until June 4, when he left with nearly complete cure of the dysphagia.

CASE 11.—J., 19 years old. **Rheumatism** treated at first with salicylate of soda without much result. May 22 to 26: 4 grains of exalgine daily in two doses; amelioration the first day and cure the last day.

CASE 12.—B., man of 49 years. Out-patient. **Laryngeal epithelioma;** intense pain. May 14: 4 grains of exalgine; vertigo and visual troubles, doubtless due to his very feeble condition. May 15: 4 grains of exalgine gave marked relief to the pain. The patient now ceased to attend, being too weak to leave his bed.

CASE 13.—G., aged 37. Laryngo-pulmonary tuberculosis. **Dysphagia** with aryteno-epiglottic œdema. An operation gave but little relief. May 9, 10, 11; 4 grains of exalgine; some relief to the dysphagia. May 12 the dose was increased to 7 grains with very pronounced relief; less pain on deglutition. Left the hospital.

CASE 14.—J., woman of 49. **Cephalalgia in a cardiac.** Since January has suffered from violent headaches with nausea. May 25: 4 grains of exalgine with a little amelioration in the night. May 26: complete disappearance of the pain. No more of the drug was given, but the cure was maintained.

CASE 15.—S., woman of 28; **uterine neuralgia.** May 25: 4 grains of exalgine was given with diminution of the pain, which entirely ceased after a second 4 grains given on the 26th.

CASE 16.—G. Undoubted symptoms of secondary syphilis. Complains of **violent headache,** which absolutely prevents sleep. Anti-syphilitic treatment of three weeks had no effect on the cephalalgia. May 11: 4 grains of exalgine were given twice in the afternoon. The patient slept the same night, which was the first good night he had passed for three months. May 12, no exalgine was given and the pain reappeared. May 14: 7 grains of the drug given twice. The patient slept as if he taken a powerful narcotic. The headache had nearly completely disappeared. Left the hospital.

CASE 17.—A., 24 years; neuropathic; menses frequent and abundant; vertigo; vomiting; **neuralgia** in nearly all the head. **Pains in the heart** and epigastric region. May 22: 4 grains of exalgine given twice in the afternoon caused nearly all the pain to disappear that evening. May 23: same doses; some vertigo and visual trouble, but not enough to prevent the patient from considering herself much better. Map 25: has continued to take the exalgine in the same doses; left the hospital completely cured.

CASE 18.—Chloro-anæmia. **Neuralgia** in all the head, continuous and exaggerated when the patient moves. May 22, after a second dose of 4 grains of exalgine there was much improvement. May 23, the same dose caused the entire suppression of pain which has not since reappeared.

CASE 19.—H., 31 years old. **Sciatic neuralgia** in an alcoholic the subject of old syphilis. Much amelioration after a second dose of four grains of exalgine. May 28, 29: same doses. May 30: 15 grains in two doses; is able to walk up and down the ward. Continued the drug in doses of 4 grains twice daily and left the hospital two days after.

(*To be concluded in our next.*)

Lapactic Pills.

A combination introduced by us and found in practice to possess superior advantages over other similar formulas. The well known mild action of Aloin on the lower portion of the intestinal canal, and its power of stimulating the hepatic functions, is supplemented by the action of Ipecac as a stomachic tonic and by increasing the gastric secretions; the Belladonna acts specially upon the involuntary muscular fibres of the bowels, increasing peristalsis, diminishing the harshness, and at the same time increasing the effectiveness of the laxative. The general tonic effect of Strychnine upon the stomach and bowels and its direct action upon the sympathetic, make it a valuable addition in the permanent cure of **habitual constipation and atonic dyspepsia.**

Since we first called attention to our Lapactic Pills, some four years ago—publishing the composition of the same—a number of manufacturers have adopted the formula and have furnished these pills under the same name. Should Physicions fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints from physicians by letter), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term "LAPACTIC PILLS, S. & D.'S." when prescribing these pills.

SAMPLES WILL BE MAILED ON APPLICATION.

SPECIAL FORMULAS MADE TO ORDER.

SCOTT'S EMULSION

VERSUS

PLAIN COD LIVER OIL.

Plain Cod Liver Oil *is indigestible, deranges the stomach, destroys the appetite is not assimilated,* and in a majority of cases is detrimental to the patient.

SCOTT'S EMULSION

Can be *digested in nearly all cases, is assimilated, does not derange the stomach, nor overtax the digestive functions,* and can be taken for an indefinite period when the plain cod liver oil cannot be tolerated at all, and with most marked results in *Anæmia, Consumption* and all wasting conditions. It also contains the *Hypophosphites of Lime and Soda with Glycerine,* which are most desirable adjuncts.

WHEN PHYSICIANS TRY IT THEY INVARIABLY USE IT

in preference to the plain cod liver oil or other *so-called Emulsions* that invariably separate, and hence their integrity and value is destroyed. *Scott's Emulsion is palatable and absolutely permanent* hence its integrity is always preserved.

The formula for SCOTT'S EMULSION is 50 per cent. of the finest Norwegian Cod Liver Oil, 6 grains Hypophosphite of Lime and 3 grains Hypophosphite of Soda to the fluid ounce, Emulsified, or digested to the condition of assimilation with chemically pure Glycerine and Mucilage.

We also wish to call your attention to the following preparations:

CHERRY MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain aud nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula).

Prepared from carefully selected German Buckthorn Bark, Juglans Bark and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

SCOTT & BOWNE, 132 South Fifth Avenue, NEW YORK.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

—Landois and Sterling.

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

—Materia Medica and Therapeutics, Dr. Mitchell Bruce.

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

—Eustace Smith, M.D., F.R.C.S.

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

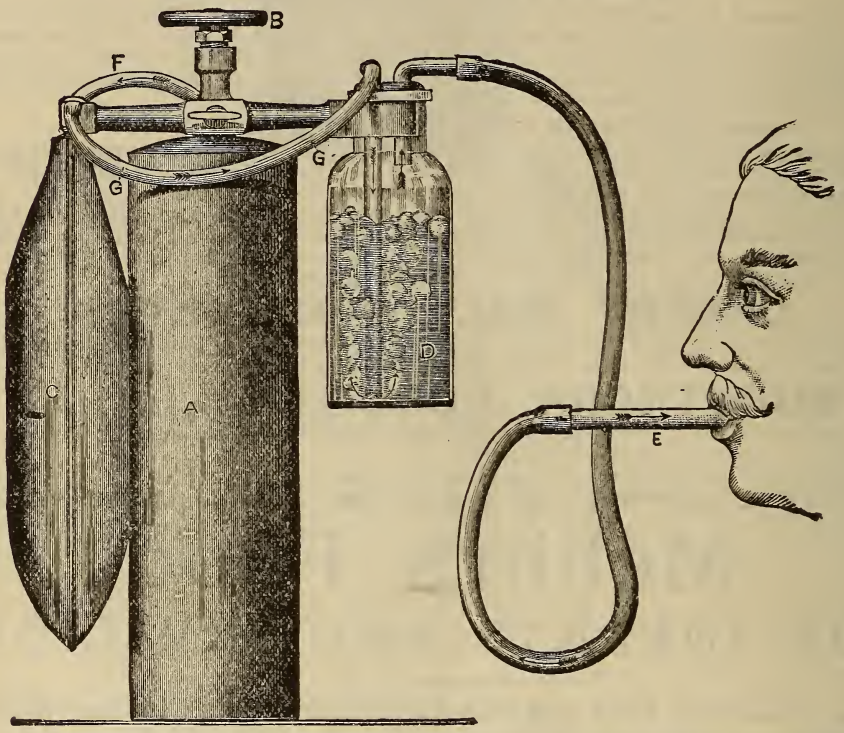
THE DOLIBER-GOODALE CO.,

BOSTON, MASS.

INHALATION APPARATUS

FOR

THE THERAPEUTIC ADMINISTRATION OF OXYGEN



In the treatment of lung troubles by Oxygen its exhibition by inhalation is preferred. The apparatus herewith shown is a modification of the Nitrous Oxide apparatus which we have supplied for many years. It is made in the best manner throughout, and is the outcome of years of experience in the manufacture of gas apparatus. It will be found to meet all the requirements.

We supply the gas in two sizes of cylinders, containing respectively forty and one hundred gallons, either pure Oxygen or a mixture of Oxygen and Nitrous Oxide in definite proportions of 20 per cent., and forty per cent. of Nitrous Oxide.

Whether pure or mixed the gas is sold at the uniform price of 5 cents a gallon. The cost of the cylinders will be refunded on their return empty with the valves in good condition. Full description of Inhalation and Enema apparatuses with directions for use accompany each apparatus, or will be supplied on application.

PRICES.

Inhalation Apparatus	$5.00
Cylinder, 40 gallons' capacity	6.00
40 gallons Gas, either pure Oxygen or mixed Oxygen and Nitrous Oxide	2.00
Complete Apparatus, Cylinder, and 40 gallons Gas	$13.00
Inhalation Apparatus	$5.00
Cylinder, 100 gallons' capacity	15.00
100 gallons Gas, either pure or mixed	5.00
Complete Apparatus, Cylinder, and 100 gallons Gas	$25.00

THE S. S. WHITE DENTAL MFG. CO.,

PHILADELPHIA. NEW YORK, BOSTON. CHICAGO. BROOKLYN.

ESTABLISHED 1855.

DR. STRONG'S SANITARIUM,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for TREATMENT, CHANGE, REST, OR RECREATION.

And places them under well-regulated hygienic conditions so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it has a Sun Parlor and Promenade on the roof. Turkish, Roman, Sulphur, Electro-Thermal, the French Douche, and all Hydropathic Baths; Vacuum Treatment, Swedish Movements, Massage, Pneumatic Cabinet Inhalations of Medicated, Compressed, and Rarefied Air, Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, with elevator, electric bells, open fire-places, steam, and thorough ventilation. With cheering influences and avoiding the pressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in winter tobogganing, elegant sleighing, etc.; in Summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience.

A liberal discount to physicians and their families for board or treatment. For illustrated Circular, Address:

DR. S. E. STRONG, THE SANITARIUM, 90 CIRCULAR ST.

Terrace Bank Sanitorium,

DR. R. S. SUTTON'S PRIVATE INSTITUTION FOR THE TREATMENT OF

DISEASES OF WOMEN.

Address, 170 Ridge Ave., Allegheny, Pa.

TO LET. STONEHAM, MASS.

The furnished office of the late Dr. W. F. Stevens. The office is centrally located, in the house owned and formerly occupied by Dr. Stevens, and the family would board and furnish room for the lessee, whether he be unmarried or have a wife.

Apply to MRS. H. M. STEVENS,
Box 559, Stoneham, Mass.

AT PRIVATE SALE.

That convenient and desirably situated property, occupied by the late Dr. Burrell, in Williamsport, Pa.

This property consists of the residence, in perfect repair, with convenient and well equipped offices attached, together with large stable and other outbuildings.

The practice has been one of the largest general practices in the City, and well established.

For Further Particulars Address:

Mrs. Margaret S. Burrell,

404 W. Fourth St., Willamsport, Pa.

PREFERABLE TO CORROSIVE SUBLIMATE

Because it is not poisonous

Because it possesses superior antiseptic properties

Because it forms no insoluble compounds with the animal fluids

Because it produces no pain or irritation even of abraded surfaces

For use in all cases and under all circumstances where CORROSIVE SUBLIMATE has hitherto been employed

APPLICABLE WHEREVER AN ANTISEPTIC IRRIGATION or Lotion is indicated and as a Prophylactic and Disinfectant under any and all circumstances

CHLORO PHENIQUE

PERFECTLY MISCIBLE WITH WATER

For washing out the cavities, or THE BLADDER IN CHRONIC CYSTITIS it has no equal

A Non-Irritant Non-Poisonous Antiseptic and Parasiticide of Great Energy

In FOUL WOUNDS, ABSCESSES, SUPPURATING SINUSES, BUBOES, etc., CHLORO-PHÉNIQUE is used to cleanse and to prepare the way for "Campho-Phenique," which latter as a permanent dressing, subdues pain, prevents the formation of pus, and hastens healing in a remarkable manner

PHENIQUE CHEMICAL COMPANY

2715 CASS AVENUE - - - ST. LOUIS, MO.

CELERINA

NERVE TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Loss of Nerve Power (so usual with Lawyers, Preachers, Writers and Business Men), Impotency, Spermatorrhea, Nervous Headache, Neuralgia, Paralysis, Hysteria, Opium Habit, Inebriety, Dyspepsia, and ALL LANGUID conditions of the System.

Indispensable to restore a patient after alcoholic excess.

DOSE.—One or two Teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One Teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation.

It Restores Normal Action to the Uterus, and Imparts Vigor to the Entire Uterine System.

Where Women have miscarried during previous pregnancies, or in any case where miscarriage is feared, ALETRIS CORDIAL is Indicated, and should be continuously administered during entire gestation.

S. H. KENNEDY'S

CONCENTRATED EXTRACT OF

PINUS CANADENSIS

DARK. A NON-ALCOHOLIC LIQUID. WHITE.

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be used,

RECOMMENDED BY PROMINENT EUROPEAN AND AMERICAN PHYSICIANS.

The above preparations are prepared exclusively for Physicians' Prescriptions, and a sample of each or all of them will be sent to any Physician who wishes to test them, if he will pay the Express Charges.

RIO CHEMICAL CO., St. Louis, Mo., U. S. A.

LONDON. PARIS. CALCUTTA. MONTREAL.

NEUROSINE

THE MOST POWERFUL NEUROTIC ATTAINABLE.

ANODYNE AND HYPNOTIC.

A most efficient and permanent preparation, **REMARKABLE** for its efficacy and **THERAPEUTIC EFFECTS** in the treatment of those **NERVOUS AFFECTIONS** and morbid conditions of the System which so often tax the skill of the Physician.

A RELIABLE AND TRUSTWORTHY REMEDY FOR THE RELIEF OF

HYSTERIA, EPILEPSY, NEURASTHENIA, MANIA, CHOREA, UTERINE CONGESTION, MAGRAINE, NEURALGIA, ALL CONVULSIVE AND REFLEX NEUROSES. THE REMEDY PAR EXCELLENCE IN DELIRIUM AND RESTLESSNESS OF FEVERS.

FORMULA:—Each fluid-drachm contains 5 grains each, C. P. Bromides of Potassium, Sodium and Ammonium 1-8 gr. Bromide Zinc, 1-64 gr. each of Ext. Belladonna and Cannabis Indica, 4 grains Ext. Lupuli and 5 minims fluid Ext. Cascara Sagrada, with Aromatic Elixirs.

DOSE:—From one teaspoonful to a tablespoonful, in water, three or more times daily as may be directed by the Physician.

To any physician, unacquainted with the medicinal effect of Neurosine, we will mail pamphlet contain full information, suggestions, and various methods of treatment; also a variety of valuable prescriptions that have been thorougly tested in active practice, or to physicians desiring to try our preparation, and who will pay express charges, we will send on application a sample bottle free.

THE SANITARIUM, BATTLE CREEK, MICHIGAN.

INCORPORATED, 1867.

The largest, most thoroughly equipped and one of the most favorably located in the United States. It is under strictly regular management. Eight physicians, well-trained and of large experience. A quiet, home-like place, where "trained nurses," "rest cure," "massage," "faradization," "galvanization," "static electrization," "Swedish movements," "dieting," "baths," "physical training," and all that pertains to modern rational medical treatment can be had in perfection at reasonable prices. **A special Hospital Building (150 Beds) for surgical cases with finest hospital facilities and appliances.**

Large Fan for Winter and Summer Ventilation. Absolutely Devoid of Usual Hospital Odors. Delightful Surroundings. Lake-side Resort. Pleasure Grounds. Steamers, Sail-boats, etc.

J. H. KELLOGG, M. D., Sup't, Battle Creek, Mich.

PURE GLUTEN BISCUIT

The undersigned have for several years been manufacturing a pure gluten for a few physicians. We are now prepared to furnish to the medical profession **the only pure gluten biscuit manufactured in America.** For samples and prices address

SANITARIUM FOOD CO., Battle Creek, Mich.

JAROS HYGIENIC UNDERWEAR

WOOL FLEECE KNIT

FORMULA.—Unspun Wool, knitted into meshes of a cotton thread Basis, the theories of Profs. Von Pettenkofer, Parkes, Kreiger, Buck and others.

ADVANTAGES.—Capillary action of unspun wool upon the body. Greatest hydroscopic qualities and non-irritating Interstices naturally formed, stores body temperature. Prevents rapid radiation during climatic changes, aids transportation of moisture. Porosity, elasticity, perfect fit and non-shrinkability are regarded

INDICATIONS.—Rheumatism, Kidney, Disease (Nephrites), Pulmonary Consumption, Catarrhal Troubles, La Grippe, etc, as well as a general prophylaxis.

NOTE.—Features accomplished have been recognized by the medical profession since 1884, also endorsed by U. S. Army, U. S. Navy, Police and Fire Departments.

80-Page Treatise containing reports of results in special practice as well as from U. S Government, mailed post-paid on application

Scherff's Syrup of Hydriodic Acid.

A PERMANENT UNALTERABLE PREPARATION.

NON-IRRITANT. PALATABLE. EFFICIENT

Each fluid ounce of this Syrup represents the equivalent of 6.72 grains of absolute Hydriodic Acid. Particular stress is laid on the one great superiority; this Syrup **will not decompose**, and the danger (so common to other like preparations) of administering a preparation of **free iodine**, is absolutely avoided.

Circular Mailed Free to Physicians, on Request.

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1892.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty. Prof. T. M. T. MCKENNAN, 810 Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Ave., Pittsburg.

THE BALTIMORE MEDICAL COLLEGE.

PRELIMINARY FALL COURSE begins Sept. 1, 1892.
REGULAR WINTER COURSE begins October 1, 1892.

DAVID STREET, M. D., Dean,

403 N. Exeter St., - Baltimore, Md.

WALNUT LODGE HOSPITAL,

HARTFORD, CONNECTICUT.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish Bath, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefitted from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experence to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M. D.,
Sup't Walnut Lodge, Hartford, Conn.

DR. MASSEY'S

PRIVATE SANATORIUM.

Presenting the comforts of an elegant private residence-this institution is especially equipped for the use of elec, tricity and allied remedial measures in the diseases of women and in diseases of the nervous system. For particulars address G. BETTON MASSEY, M. D.

212 S. Fifteenth St., Philadelphia.

ALLENTOWN, PA., January 8, 1892.

Applications with recommendations for the position of Second Assistant Female Physician of the Hospital for the Insane of South Eastern District of Pennsylvania at Norristown, will be received by the undersigned until January 30, 1892. Salary $7.00 and home.

E. G. MARTIN, Secretary.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

ST. LOUIS, MO

A WEEKLY JOURNAL.

ESTABLISHED IN 1853 BY
S. W. BUTLER, M. D.

THE Medical and Surgical Reporter.

EDWARD T. REICHERT, M. D., Editor.
(Prof. Physiology, University of Penna.)

CHAS. K. MOUNT, Advertising Manager.

PROSPECTUS.

For nearly forty years ***The Medical and Surgical Reporter*** has held a position of influence and popularity second to that of no other publication in medicine. Last May the Editorial and Business Management was changed, the journal was enlarged from twenty-eight to forty pages, and the publication in almost every way was radically improved. That these changes have been appreciated by the profession is evident in the phenomenal increase of our subscription list and in the number of new advertisements.

The enlarged ***Reporter*** now enables us to offer more pages of reading matter each year than are given by any other medical periodical in America, and more material of direct practical value to the practising physician than is furnished in any other journal in the English language. We now publish during the year over 3500 separate articles, representing the best thought in the profession. These include about as follows:—

75 Clinical Lectures by leading clinicians in this country and abroad.
200 Original Communications.
60 Society Reports.
25 Letters by Special Correspondents.
800 Selected Prescriptions.
75 Editorials on Timely Topics.
150 Letters from our Subscribers.
150 Book Reviews.
2000 Periscope Articles, carefully selected and condensed, and representing all important progress in medicine in all branches and languages.

The ***Reporter*** is truly a magazine of medical progress, it is thoroughly practical, and is especially adapted to the wants of the busy practitioner. There is no State or Country in America that it does not reach, and no civilized Country that does not regularly receive it.

The ***Reporter*** is published every Saturday, and is mailed to subscribers in the United States and Canada for $5.00 a year in advance, and to those in foreign countries for $6.00 in advance. It will be sent for three months on trial for $1.00.

TONICS, ANTIPERIODICS, EXPECTORANTS.

We desire to mention the special advantages of a few eligible preparations which meet many indications in Tonic, Antiperiodic and Expectorant Treatment.

ESENCIA DE CALISAYA.

An agreeable, general tonic and stimulant, the equivalent of 40 grains Calisaya Bark in each ounce. As a palatable stimulant, antiperiodic and febrifuge, possess-all the medicinal virtues of Calisaya, it may be relied upon.

Emulsion of COD LIVER OIL with HYPOPHOSPHITES

This is the perfection of an emulsion, pure, fluid, palatable. Each fluidounce contains: Cod Liver Oil, 4 fluidrachms; Hypophosphite of Lime, 8 grains; Hypophosphite of Soda, 4 grains; Gum Arabic, Sugar, Glycerin, Water and Carminatives.

GRINDELIA ROBUSTA, QUEBRACHO, CHEKAN, YERBA SANTA, LIPPIA MEXICANA, ANODYNE PINE EXPECTORANT, BRONCHIAL SEDATIVE, all have had their value proven in relieving respiratory affections.

Among Compressed Troches for Throat and Bronchial Trouble, we may mention Ammonium Muriate, Borax, Potassium Bicarbonate, Potassium Bromide, Potassium Chlorate, Potassium Chlorate and Ammonia Muriate, Potassium Chlorate and Borax, Sodium Bicarbonate, Soda Mint.

Descriptive Literature and all information regarding our products promptly furnished on request.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{60}$ gr.), Atropiæ Sulph. ($\frac{1}{600}$ gr.), Codeia ($\frac{1}{10}$ gr.), Antimony Tart. $\frac{1}{15}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{60}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

I. O. WOODRUFF & CO.,

LONDONDERRY LITHIA

"The Most Wonderful American Water."

From I. N. Danforth, A. M., M. D., Prof. Pathology and Renal Diseases, Women's Medical College, Chicago.

"I have had a long experience in the treatment of *Kidney Diseases* with LONDONDERRY, and am pleased to add my testimonial, although I think it unnecessary, from the fact that the *effects of the water speak more eloquently than any words* which I might utter. I prize it very highly in all cases of *Chronic Rheumatism* or other manifestations of the condition known as the 'Lithic Acid Diathesis.'' I have used the water extensively in my practice and intend to continue the use of it."

From Henry M. Lyman, A. M., M. D., Professor of Physiology and Diseases of the Nerves in Rush Medical College ; Prof. of Theory and Practice of Medicine in the Woman's Medical College ; Physician to Presbyterian Hospital, of Chicago ; Author of 'Insomnia and Disorders of Sleep," etc.

I have used it for several years, and I like it as remedial agent in *releasing* the *secretions* of the *Kidneys*. It is a pleasant drink, also. I think that it is a *blessing* to the *club men*. At any rate that class of Chicagoans known as 'high livers' whose diet is not confined to the narrow limits of plebeianism, are gradually recognizing the LONDONDERRY LITHIA WATER as their nostrum."

From Henry M. Field, M. D., Prof. Therapeutics, Darthmouth Med. College, etc.

"I feel under a sort of obligation to send you a word of unsolicited and favorable testimony respecting the values and virtues of your LITHIA WATER. * * * Since my attention was first called to your LITHIA WATER—several years ago— and *I became satisfied respecting its preemine nt power, I have used no other Lithia Water*, and in the case just characterized (gravel),I depend upon the LONDONDERRY invariably and often as a *last resourse*. Thus far it has rendered so good an account of itself that I feel bound to make the account which I render, good. I trust to your discretion and sense of propriety as to any disposition you may make of this letter."

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 67th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 21st of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Anatomy, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M. D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin October 1st, and continue until May. PRELIMINARY SESSION begins September 7th.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required Practical laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Bacteriology, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology is a part of the regular course. Special clinical facilities.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For announcement or information apply to

ERNEST LAPLACE, M. D.,
1617 Arch Street, Philadelphia, Pa.

MEDICAL DEPARTMENT OF COLUMBIAN UNIVERSITY,
WASHINGTON, D. C.

The Seventieth Winter Session will begin October 1st, 1891 and end March 1st, 1892. Spring Course from April 1st to May 30th. Graded three year course required. Women admitted. Clinical facilities.

FACULTY.

J. F. THOMPSON, Surgery.
W. W. JOHNSTON, Practice.
A. F. A. KING, Obstetrics.
E. T. FRISTOE, Chemistry.
WILLIAM LEE, Physiology.

UNIVERSITY OF MARYLAND.—School of Medicine.

The Eighty-Fifth Annual Session will begin October 1st, 1891, and will end in April, 1892. Didactic lectures are illustrated by daily clinical instruction in general medicine and surgery, and the various special branches. Laboratory instruction in chemistry and normal and pathological histology. All candidates for graduation have personal experience in practical obstetrics.

For further information and circular apply to

I. E. ATKINSON, M D., Dean,
605 Cathedral Street, Baltimore.

UNIVERSITY OF PENNSYLVANIA.—Medical Department.

THE PRELIMINARY SESSION has been discontinued; the Spring Term begins early in May, 1892.

The curriculum is graded and three annual winter sessions are required. Practical instruction, including laboratory work in Chemistry, Histology, Osteology and Pathology; with bedside instruction in Medicine, Surgery, Gynæcology and Obstetrics, are a part of the regular course and without additional expense.

FACULTY.

D. HAYS AGNEW, M.D., LL.D., Honorary Professor of Clinical Surgery.
WILLIAM PEPPER, M.D., LL.D., Professor of Theory and Practice of Medicine, and of Clinical Medicine.
WILLIAM GOODELL, M.D., Professor of Gynecology.
JAMES TYSON, M.D., Professor of Clinical Medicine.
HORATIO C. WOOD, M.D., LL.D., Professor of Materia Medica, Pharmacy and General Therapeutics.
THEODORE G. WORMLEY, M.D., LL.D., Professor of Chemistry and Toxicology.
JOHN ASHURST, JR., M.D., Professor of Surgery and of Clinical Surgery.
EDWARD T. REICHERT M.D., Professor of Physiology.
WILLIAM F. NORRIS, M.D., Professor of Ophthalmology.
BARTON COOKE HIRST, M.D., Professor of Obstetrics.
J. WILLIAM WHITE, M.D., Professor of Chemical Surgery.
JOHN GUITERAS, M.D., Professor of General Pathology and Morbid Anatomy.
GEORGE A. PIERSOL, M.D., Professor of Anatomy.
LEWIS A. DUHRING, M.D., Professor of Diseases of the Skin.

REPORTER for one year, . . . $5.00
Wood's Nervous Diseases and Their Diagnosis, ... 4.00
$9.00

Nervous Diseases and Their Diagnosis

By H. C. WOOD, M. D., LL. D..

Professor of Therapeutics and Nervous Diseases, University of Pennsylvania.

8vo., pp. 501, Cloth, $4.

It is invaluable as a work of diagnosis.—*Virginia Medical Monthly.*

It is at once a substantive contribution to neurology and a trustworthy guide to what has already been done in the subject.—*Practitiöner.*

As a whole, the work is one which cannot fail to be of great service to the practicing physician.—*Medical and Surgical Reporter.*

The volume is a distinct help to the student, and is a necessary supplement to the systematic works on diseases of the nervous system.—*Boston Med. Surg. Jour.*

The author's originality is evident to every reader of his work; and we trust, for the advancement of knowledge, his readers will be many.—*New England Med. Gaz.*

This work fills a long-felt need in this department.—*Buffalo Med. Surg. Jour.*

Dr. Wood is an able clinician, and this makes his book valuable. His observations are practical and to the point and show careful study of a large number of cases which have fallen under his care.—*N. Y. Med. Jour.*

The honest effort of one who never writes without teaching and who always writes and teaches well.—*Journal of Insanity.*

To students and practitioners who have read other works this production will prove extremely valuable in time of need, to the former just before examination; to the latter in everyday practice.—*London Lancet.*

Not a compilation, but rather the record of independent opinions and investigations.—*Canadian Practitioner.*

The book is written in the characteristic vigorous style of its able and versatile author—*American Practitioner.*

Lucid language, clear type, a full index, and, above all, the presentation of the late advances in this department of science constitute the truly great attractions of this book.—*Albany Med Annals.*

It is not until the volume has been carefully read, and perhaps re-read, that its true excellence begins to dawn upon the reader.—*Maryland Med. Jour.*

SYR. HYPOPHOS. CO., FELLOWS

Contains the Essential Elements of the Animal Organization—Potash and Lime;

The Oxidizing Agents—Iron and Manganese;

The Tonics—Quinine and Strychnine;

And the Vitalizing Constituent—Phosphorus; the whole combined in the form of a Syrup with a **Slightly Alkaline Reaction.**

It Differs in its Effects from all Analogous Preparations; and it possesses the important properties of being pleasant to the taste, easily borne by the stomach, and harmless under prolonged use.

It has Gained a Wide Reputation, particularly in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs. It has also been employed with much success in various nervous and debilitating diseases.

Its Curative Power is largely attributable to its stimulant, tonic, and nutritive properties, by means of which the energy of the system is recruited.

Its Action is Prompt; it stimulates the appetite and the digestion, it promotes assimilation, and it enters directly into the circulation with the food products.

The prescribed dose produces a feeling of buoyancy, and removes depression and melancholy; *hence the preparation is of great value in the treatment of mental and nervous affections.* From the fact, also, that it exerts a double tonic influence, and induces a healthy flow of the secretions, its use is indicated in a wide range of diseases.

NOTICE—CAUTION.

The success of Fellows' Syrup of Hypophosphites has tempted certain persons to offer imitations of it for sale. Mr. Fellows, who has examined samples of several of these, ***finds that no two of them are identical,*** and that all of them differ from the original in composition, in freedom from acid reaction, in susceptibility to the effects of oxygen when exposed to light or heat, ***in the property of retaining the strychnine in solution,*** and in the medicinal effects.

As these cheap and inefficient substitutes are frequently dispensed instead of the genuine preparation, physicians are earnestly requested, when prescribing the Syrup, to write "Syr. Hypophos. ***Fellows.***"

As a further precaution, it is advisable that the Syrup should be ordered in the original bottles; the distinguishing marks which the bottles (and the wrappers surrounding them) bear, can then be examined, and the genuineness—or otherwise—of the contents thereby proved.

Medical Letters may be addressed to:

Mr. FELLOWS, 48 Vesey Street, New York.

PHILLIPS' COD LIVER OIL

EMULSION.

A TRUE EMULSION WITHOUT SAPONIFICATION.

In all essential features, it represents the highest degree of perfection in the Emulsionizing of Cod Liver Oil.

This preparation is not advertised to the public, and enjoys Professional popularity because of its high standard of excellence, uniformity and reliability.

(*A pamphlet, with formula, Photo-Micrographic illustrations, etc., mailed upon application.*)

PHILLIPS' DIGESTIBLE COCOA.

A Peptonized Cocoa in which the fat of the bean is wholly retained and pre-digested by means of Pancreatine. It is a **delicious food beverage** rendered **assimilable,** and is **nourishing to a high degree.**

Besides its adaptability as a **substitute for tea and coffee** in daily use, and as a **convenient and reliable article of diet** in the sick room, it is **particularly recommended in many conditions of debility** where a supply of carbonaceous food is indicated, but where there is difficulty attending the digestion of ordinary fatty foods.

VIN MARIANI

"The Standard Preparation of Erythoxylon Cocoa."

CAREFUL, continued testing by upwards of seven thousand practitioners in America, whose written opinions over their signatures (in our possession) are fully in accord and clearly prove the efficacy and merits of "VIN MARIANI" may be thus summarized:

"Diffusible stimulant and tonic in anæmia, nervous depression, sequelæ of childbirth, lymphatism, tardy convalescence, general 'Malaise,' and after wasting fevers.

"Special reference to the nervous system, in all morbid states, melancholia, etc.

"Tonic in laryngeal and gastric complications, stomach troubles.

"All cases where a general toning or strengthening of the system is needed.

"The only tonic stimulant without any unpleasant reaction, and may be given indefinitely, never causing constipation."

N. B.—This Wine has been found always uniform and reliable, owing to the selection of the finest ingredients and the greatest accuracy in its manipulation. When prescribing, therefore, the Medical Profession are strongly advised to specify "VIN MARIANI," in order to avoid the substitution of imitations, often worthless and consequently disappointing in effect.

Please Specify VI MARIANI.

SCHERING'S

CHLORALAMID.

The New Approved Hypnotic.

Dose: 30 to 45 grains; effect within 30 minutes.

Best administered in solution with whiskey, tincture of cardamoms, or other alcoholic menstruum. *Solutions must not be heated, as the Chloralamid is thereby decomposed.*

A good formula for prescribing is

Chloralamid-Schering,.....4 drachms.
Spts. Frumenti,.....3 ounces.
Elix. Aurantii, sufficient to make 4 ounces

Mix. Take one tablespoonful (30 grains Choralamid) in water.

CHLORALAMID—Schering has received merited praise and endorsement from highest medical authorities all over the world.

SCHERING'S

PHENOCOLL.

The New Antipyretic, Anti-Rheumatic, Analgesic, and Nervine.

Freely Soluble in Water, and Non-toxic.

Dose: 7 1-2 to 15 grains, three times daily.

PHENOCOLL—Schering has been very favorably endorsed by eminent physicians and clinicians in Europe and America; among others, Surgeon-Major HERTEL (MEDIC. WOCHENSCHRIFT); Dr. HERZOG, in clinic of Prof. Dr. RIEGEL, in Giesen; Dr. ISAAC OTT, Easton, Pa.; Prof. KOBERT, in Dorpat; Prof. VON MERING, in Halle, A. S.; and many more. We refer also to an editorial by Prof. J. V. SHOEMAKER, in the Philadelpnia *Medical Bulletin*, July, 1891.

SCHERING'S

PIPERAZINE.

The New and Superior Uric Acid Solvent.

Freely Soluble in Water, and Non-toxic.

Dose: 15 grains per day, divided in suitable doses.

Best administered by dissolving daily dose in one quart of aërated water, which patient may drink in wineglassful doses at frequent intervals during the day.

PIPERAZINE—Schering has proved to be a very important new therapeutic agent; it unites readily with Uric Acid, and the resulting urate dissolves perfectly. Piperazine is twelve times more potent than Lithia.

LEHN & FINK,

128 WILLIAM STREET, NEW YORK.

Notes on New Remedies.

Chloralamid in Epilepsy.

At the October meeting of the N. Y. Academy of Medicine, Dr. C. L. Dana, in speaking of the symptomatic treatment of epilepsy, refers to choralamid as follows: "The most valuable adjuvant was hydrate of chloral, but I have found a new drug in chloralamid which does all the good ascribed to the former drug without affecting the heart or circulation."

Piperazine and Urinary Calculi.

Interesting experiments have been made recently by Dr. FINZELBERG, Director of Schering's Research Laboratory, on the action of piperzine upon artificial urinary calculi consisting of pure uric acid, or that compound with calcium phosphate, or of ammonium urate, etc. The design was to ascertain whether piperazine had any solvent effect upon these. The result of the experiment showed that all the forms of concretions alluded to dissolved freely and perfectly within a comparatively short time in a one per cent. piperazine solution. In a few cases nothing remained but a light honeycombed skeleton, which consisted of the hardened cementing mucus. It was particularly noticed that the edges of the calculi, sometimes very sharp, dissolved away rapidly in the piperazine solution.—*Chemist and Druggist.*

Phenocoll Against Epidemic Influenza.

The study of the relationship between chemical constitution and physiological action is of comparatively recent date, but it has already led to results sufficiently interesting to make it evident that along this line promising work still remains to be done.

Dr. HANS ARONSON has recently made an investigation into the therapeutical effect of certain acid derivatives of acetanilid and phenacetin. He confirmed EHRLICH'S theory that the introduction of a sulphone group into the molecule of certain compounds which act upon the central nervous system, renders them inert as regard antipyretics, and he found that a very large number of acid derivatives of the bases mentioned are equally destitute of antifebrile effect.

He concludes with the observation (*Deutsche med. Wochenschrift*): The problem of obtaining soluble antipyretics from acetanilid, or rather phenacetin, has been recently solved in another way—namely, by the introduction into the molecule, not of acid, but of basic groups. To this category belongs *Phenocoll*, recently introduced into commerce and recommended on all hands as an antipyretic and anti-rheumatic. The compound is an amidated phenacetin, and is related to the body exactly in the same way as glycocoll to acetic acid. As an antineuralgic it exerted, in a few cases observed by me, a prompt and reliable effect.

It is also worthy of note that *Phenocoll* is being successfully given *against epidemic iufluenza*, which has reappeared here and there recently. This affection is so likely to be followed by severe sequelæ, that it is important to avoid lowering the vitality of the system in every possible way. In this respect Phenocoll is specially indicated, as it has been proved to have no deleterious effect upon the blood, such as most of the antipyretics in use undoubtedly have. According to all the authorities who have hitherto recorded their experiences with Phenocoll, it is free from all unpleasant or dangerous after-effects.

In 8 to 15 grain doses, repeated at intervals of about an hour, its beneficial effect is promptly manifested. The rheumatism-like pains disappear, and the temperature falls to the normal. At the same time the patients experience a feeling of general well-being.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK:)

Each fluid drachm represents 15 grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium and Lithium.

USES: EPILEPSY, UTERINE CONGESTION, HEADACHE, AND ALL CONGESTIVE, CONVULSIVE AND REFLEX NEUROSES.

This preparation produces results, which can not be obtained from the use of commercial Bromide substitutes.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK.)

From Sea Weed. **Uses: Malaria, Phthisis, Etc.**

An ALLY of quinine—quinine CHECKS the Malarial Chill; Fucus Marina ELIMINATES the Malarial CAUSE; and thus prevents the recurrence of the Chill *after* it has been *checked* by quinine.

An INVALUABLE REMEDY in the treatment of Phthisis—it arrests the decay of lung tissue, diminishes the fever, lessens the cough, abates the soreness in the lungs, improves the appetite, and impedes the progressive emaciation.

DOSE.—One Teaspoonful IN WATER, four times a day.

CHIONIA FROM CHIONANTHUS.

Uses: Biliousness, Jaundice, Dyspepsia, Constipation, and all Diseases Caused by Hepatic Torpor.

CHIONIA stimulates the Liver and restores it to a healthy condition, without debilitating the system by Catharsis; does not purge, per se, but under its use the Liver and Bowels gradually resume their normal functions.

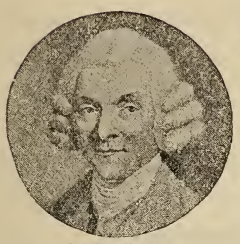
DOSE.—One Fluid Drachm three times a day.

PEACOCK CHEMICAL CO., ST. LOUIS.

STUDY OF EXALGINE AFTER OBSERVATIONS MADE AT THE LARIBOISIÈRE HOSPITAL.

BY DR. ÉMILE DÉSIRÉ.

(*Concluded from last number.*)



William Hunter.

CASE 20.—R., a woman of 34. **Violent syphilitic cephalalgias** which prevented sleep and did not give way to specific treatment. May 9: four grains of exalgine twice. May 10: the same dose gave the patient a fairly good night. May 11: same dose; no more pain; appetite better. Took the drug until the 13th, when she left considering herself cured of the pain.

CASE 21.—B., woman of 22 years. Chloro-anæmia; neuro-pathic; has suffered with **cephalalgia** for three months. The pain comes on after dinner and continues until the next morning at 11 o'clock; it is accompanied with nausea, and has remained in spite of a great variety of treatment. May 11; 4 grains of exalgine at 2 and 5 o'clock P. M. Slept that evening without pain. The pain reappeared the next day but was again cured by the same doses. May 13: no more pain and the drug was suppressed. Eight days after there was no return of the complaints.

CASE 22.—T., man of 58; an **old facial neuralgia** with contracture. Took 4 grains of exalgine on the 27th, the 28th and 29th of May, at the end of which time the pain was less and the patient was able to sleep at night. May 30: 7 grains of the drug caused still greater improvement. This dose was continued for five days with result of a perfect cure.

CASE 23.—T., a girl of 19. Accident to wisdom tooth. Suffered much from **facial neuralgia** on the same side. June 1 to 5: 4 grains of exalgine twice daily; the pain disappeared and the patient left.

CASE 24.—I., aged 28: chloro-anæmic; **cephalalgia**. Four grains of exalgine from June 1 to 6; not much improvement until June 5. June 7: the cure is complete.

CASE 25.—L., woman of 37. **Bone-pains** in a syphilitic subjected to specific treatment. For five days took four grains of exalgine without much effect. On June 1 the dose was increased to 7 grains, and a relatively good night passed. June 2, same dose; pain only at times. June 3; 4 grains: scarcely any pain. This last dose was continued for five days, and the patient complained no more of suffering.

CASE 26.—M., woman of 40 years. **Occipito-facial neuralgia** for 14 days, unable to leave her bed. May 23 to 26: 4 grains of exalgine; May 27 to June 1: 7 grains; June 2 to June 4: 12 grains of exalgine, with no improvement. June 5, 15 grains produced sensible improvement. This last dose was continued to June 8, when the pains returned and the drug was stopped.

CASE 27.—G., woman of 23; **dysphagia** with aryteno-epiglottis in a tuberculous patient. June 1: 4 grains of exalgine, which was continued for some days. Amelioration was manifested on the first day and the improvement continued until she left the hospital.

CASE 28.—J., 27; **intercostal neuralgia**. Four grains of exalgine from the 1st to the 8th of June with gradual amelioration and cure of the pain.

CASE 29.—A., woman of 29. **Dysphagia** with aryteno-epiglottitis in a tuberculous patient. Four grains of exalgine from May 27 to June 3. Improvement began on the first day and deglutition was painless on the last.

CASE 30.—R., woman of 24. **Inter-costal neuralgia:** pains in the head almost continuous. Four grains of exalgine for eight days, when the patient considered herself well and left.

CASE 31.—F., woman of 30. Similar to Case 30, except that the dose was increased to 7 grains on the third day.

CASE 32.—L., woman of 49. **Old intercostal neuralgia,** which had rebelled against all kinds of treatment. Four grains of exalgine were given for a few days, with little amelioration; there was some vertigo, but it did not interfere with treatment. On June 3, the dose was increased to 7 grains, with very sensible improvement. June 5, the vertigo had disappeared and the pain was almost nothing. June 8, the patient left, cured, having taken 7 grains of the exalgine without inconvenience.

TABLE OF THE CASES TREATED BY EXALGINE.

	NO. OF CASES TREATED.	SUCCESSFUL OR AMELIORATED	UNSUCCESSFUL
Facial Neuralgia	3	2	1
Intercostal Neuralgia	4	3	1
Migraine	5	5	—
Hysteralgia	2	2	—
Bone-pains of syphilis	4	4	—
Dysphagia	8	8	—
Subacute Rheumatism	2	2	—
Subacute Sciatica	2	2	—
Laryngeal Epithelioma	1	1	—
Dental Neuralgia	1	1	—
	32	30	2

Conclusions—We have employed exalgine entirely as an analgesic and not as an antipyretic; we have not given it where fever was present.

The great diversity of affections in which we have employed exalgine with success authorize us to conclude that, without prejudice to general treatment, it is an admirable specific against pain.—*Society for Scientific Studies*, Paris.

THE END.

Lapactic Pills.

A combination introduced by us and found in practice to possess superior advantages over other similar formulas. The well known mild action of Aloin on the lower portion of the intestinal canal, and its power of stimulating the hepatic functions, is supplemented by the action of Ipecac as a stomachic tonic and by increasing the gastric secretions; the Belladonna acts specially upon the involuntary muscular fibres of the bowels, increasing peristalsis, diminishing the harshness, and at the same time increasing the effectiveness of the laxative. The general tonic effect of Strychnine upon the stomach and bowels and its direct action upon the sympathetic, make it a valuable addition in the permanent cure of **habitual constipation and atonic dyspepsia.**

Since we first called attention to our Lapactic Pills, some four years ago—publishing the composition of the same—a number of manufacturers have adopted the formula and have furnished these pills under the same name. Should Physicions fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints from physicians by letter), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term "LAPACTIC PILLS, S. & D.'S." when prescribing these pills.

SAMPLES WILL BE MAILED ON APPLICATION.

SPECIAL FORMULAS MADE TO ORDER.

WHEN PURCHASING, PLEASE SPECIFY S. & D's.

SCOTT'S EMULSION

VERSUS

PLAIN COD LIVER OIL.

Plain Cod Liver Oil *is indigestible, deranges the stomach, destroys the appetite is not assimilated,* and in a majority of cases is detrimental to the patient.

SCOTT'S EMULSION

Can be *digested in nearly all cases, is assimilated, does not derange the stomach, nor overtax the digestive functions,* and can be taken for an indefinite period when the plain cod liver oil cannot be tolerated at all, and with most marked results in *Anæmia, Consumption* and all wasting conditions. It also contains the *Hypophosphites of Lime and Soda with Glycerine,* which are most desirable adjuncts.

WHEN PHYSICIANS TRY IT THEY INVARIABLY USE IT

in preference to the plain cod liver oil or other *so-called Emulsions* that invariably separate, and hence their integrity and value is destroyed. *Scott's Emulsion is palatable and absolutely permanent* hence its integrity is always preserved.

The formula for Scott's Emulsion is 50 per cent. of the finest Norwegian Cod Liver Oil, 6 grains Hypophosphite of Lime and 3 grains Hypophosphite of Soda to the fluid ounce, Emulsified, or digested to the condition of assimilation with chemically pure Glycerine and Mucilage.

We also wish to call your attention to the following preparations:

CHERRY MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain aud nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula).

Prepared from carefully selected German Buckthorn Bark, Juglans Bark and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

SCOTT & BOWNE, 132 South Fifth Avenue, NEW YORK.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

— Landois and Sterling.

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

— Materia Medica and Therapeutics, Dr. Mitchell Bruce.

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

— Eustace Smith, M.D., F.R.C.S.

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

ABOUT GAS TREATMENT.

We make and sell oxygen and nitrogen monoxide for therapeutic use, and we guarantee them pure They are put up in compact form. (A cylinder containing 100 gallons of nitrogen monoxide or 40 gallons of oxygen measures 12 inches in length, has a diameter of 3½ inches, and weighs 10½ lbs. A cylinder containing 450 gallons of nitrogen monoxide or 100 gallons of oxygen measures 25 inches in length, has a diameter of 4½ inches, and weighs 34 lbs.)

INSOMNIA. Dr. Allan McLane Hamilton states that nitrogen monoxide, N_2O (nitrous oxide of the old nomenclature) has no equal in the treatment of this difficulty.

MELANCHOLIA. A short course of nitrogen monoxide is said to change the face of nature for such patients.

ANÆMIA. Where iron is not tolerated or proves inefficient, the addition of oxygen or a combination of oxygen and nitrogen monoxide has proven very beneficial.

For those who should, but cannot, go from home for rest or a change of air, or for those who, from any cause fail to get air enough into their lungs, the inhalation of one or other of these gases, or both in combination, promises great benefit. The testimony is that in cases of

ASTHMA, more than fifty per cent. of the cases yield to oxygen treatment, others are very greatly relieved, and a very small per cent. are not improved.

INDIGESTION and CONSTIPATION are said to be greatly relieved and very often conquered by continued treatment.

A highly esteemed New York physician has used more than twenty thousand gallons of nitrogen monoxide in his private practice. The letters received from his patients, largely from those who were afflicted with nervous disorders, are enthusiastic in their testimony as to the benefit received.

Regular practitioners who are using gas treatment testify that when *pure* oxygen and *pure* nitrogen monoxide, or a mixture of these, is used, no therapeutic agents are more uniformly successful when intelligently prescribed.

For descriptive circulars, and term for gas outfits, address

The S. S. White Dental Manufacturing Company,

AT EITHER OF THE BELOW NAMED PLACES:

Twelfth and Chestnut Sts., Philadelphia, Pa. 160 Tremont St., Boston, Mass.
767 and 769 Broadway (cor. 9th St.), New York, N. Y. 151 and 153 Wabash Ave., Chicago, Ill.
1260 and 1262 Broadway (cor. 32d St.), New York, N. Y. 444 Fulton St., Brooklyn, N. Y.

AT PRIVATE SALE.

That convenient and desirably situated property, occupied by the late Dr. Burrell, in Williamsport, Pa.

This property consists of the residence, in perfect repair, with convenient and well equipped offices attached, together with large stable and other outbuildings.

The practice has been one of the largest general practices in the City, and well established.

For Further Particulars Address:

Mrs. Margaret S. Burrell,

404 W. Fourth St., Williamsport, Pa.

ALLENTOWN, PA., January 8, 1892

Applications, with recommendations, for the position of Second Assistant Female Physician of the Hospital for the Insane of South Eastern District of Pennsylvania at Norristown, will be received by the undersigned until January 30, 1892. Salary $7.00 and home. E. G. MARTIN, Secretary.

FOR SALE.

A physician's property and practice, about twenty-two miles from Philadelphia, in lower end of Bucks county, for sale. Practice established a number of years, and worth from $2,500 to $3,000 a year; fine property, fitted up especially for physician, fine country and desirable location. Price, $5,000. About half can remain upon mortgage at 5 per cent.

Address, **SAM'L J. GARNER,**
HATBORO, PA.

SVAPNIA
OR
PURIFIED OPIUM

FOR PHYSICIANS USE ONLY.

Contains the Anodyne and Soporific Alkaloids, Codeia, Narceia and Morphia.

Excludes the Poisonous and Convulsive Alkaloids, Thebaine, Narcotine and Papaverine.

SVAPNIA has been in steadily increasing use for over twenty years, and whenever used has given great satisfaction.

To PHYSICIANS OF REPUTE, not already acquainted with its merits, samples will be mailed on application.

SVAPNIA is made to conform to a uniform standard of Opium of Ten per cent. Morphia strength.

JOHN FARR, Manufacturing Chemist, New York.

C. N. CRITTENTON, Gen'l Agent, 115 Fulton St., N. Y.

To whom all orders for samples must be addressed.

SVAPNIA IS FOR SALE BY DRUGGISTS GENERALLY.

DIOVIBURNIA

UTERINE TONIC, ANTISPASMODIC AND ANODYNE.

A reliable and trustworthy remedy for the relief of Dysmenorrhœa, Amenorrhœa, Menorrhagia Leucorrhœa, Subinvolution, THREATENED ABORTION, Vomiting in Pregnancy and Chlorosis; directing its action to the entire uterine system as a general tonic and antispasmodic.

FORMULA.

Every ounce contains 3-4 dram each of the fluid extracts: Viburnum Prunifolium, Viburnum Opulus, Dioscorea Villosa, Aletris Farinosa, Helonias Dioica, Mitchella Repens, Caulophyllum Thalictroides, Scutellaria Lateriflora. DOSE.—For adults, a desertspoonful to a tablespoonful three times a day, after meals. In urgent cases, where there is much pain, dose may be given every hour or two, ALWAYS IN HOT WATER.

Jno. B. Johnson, M. D., Professor of the Principles and Practice of Medicine, St. Louis Medical College.

ST. LOUIS, June 20, '88.

I very cheerfully give my testimony to the virtues of a combination of vegetable remedies prepared by a well-known and able pharmacist of this city, and known as DIOVIBURNIA, the component parts of which are well known to any and all physicians who desire to know the same, and therefore have no relation to proprietary or quack remedies. I have employed this medicine in cases of dysmonorrhœa, suppression of the catemania and in excessive leucorrhœa, and have been much pleased with its use. I do not think its claims (as set forth in the circular accompanying it) to be at all excessive. I recommend its trial to all who are willing to trust to its efficacy, believing it will give satisfaction. Respectfully,

Jno. B. Johnson

L. Ch. Boisliniere, M. D., Prof. of Obstetrics, St. Louis Medical College. ST. LOUIS, June 18, 1888.

I have given DIOVIBURNIA a fair trial and found it useful as an uterine tonic and antispasmodic, relieving the pains of dysmenorrhœa, and regulator of the uterine functions. I feel authorized to give this recommendation of DIOVIBURNIA, as it is neither a patented nor a secret medicine, the formula of which have been communicated freely to the medical profession.

L. Ch. Boisliniere M.D.

H. Tuholske, M. D., Professor Clinical Surgery and Surgical Pathology, Missouri Medical College; also Post-Graduate School of St. Louis. ST. LOUIS, June 23, 1888.

I have used DIOVIBURNIA quite a number of times—sufficiently frequently to satisfy myself of its merits. It is of unquestionable benefit in painful dysmenorrhœa; it possesses antispasmodic properties which seem especially to be exerted on the uterus.

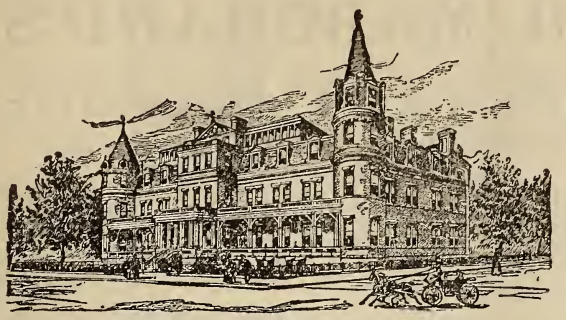
Wm. H. Tuholske

To any physician, unacquainted with the medicinal effect of DIOVIBURNIA, we will mail pamphlet containing full information, suggestions, commendations of some of our most prominent professors and various methods of treatment; also a variety of valuable prescriptions that have been thoroughly tested in an active practice, or to physicians desiring to try our preparation, and who will pay express charges, we will send on application a sample bottle free.

DIOS CHEMICAL CO., ST. LOUIS, MO., U. S. A.

DYSPEPSIA.

Deranged digestion is the most common of all human ailments. It is a truism that no organ of the body can preserve its normal integrity **when** its supplying nerve is disordered **by lowered tones.** But this fact is largely ignored in these modern pepsin days—the **cause** being lost sight of whilst trying to remedy the effect. It is well known that any unusual worry or anxiety will upset the digestion of **the neurotic** patient. Hence, in treating dyspepsia, particularly atonic dyspepsia, that form met with in persons of low vitality and poor appetite, there are **two distinct INDICATIONS.** One is to subserve the needs of general nutrition, the other is to subserve the needs of the nervous system. This can be done by giving the patient good nutritious food and a good nerve tonic. This explains why such remarkable results follow the daily use of **CELERINA** in all dyspeptic troubles.



Dr. Wm. A. Hammond's Sanitarium for Treatment of Diseases of Nervous System, 14th St. and Sheridan Ave., Washington, D C.

DR. WM. A. HAMMOND,

WASHINGTON, D. C.,

Surgeon-General U S. Army (retired), formerly Professor of Diseases of the Mind and Nervous System in the University of New York, etc. says:

"I have for some time made use of the

BUFFALO LITHIA WATER

in cases of affections of the nervous system, complicated with Bright's Disease of the Kidneys or with a gouty diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite with me in like cases, but the

Buffalo Lithia Water Acts Better than Any Extemporaneous Solution

of the Lithia salts, and is moreover, better borne by the stomach. I also often prescribe it in those cases of cerebral hyperæmia resulting from over mental work—in which the condition called nervous dyspepsia exists—and generally with marked benefit."

Water in cases of one dozen half-gallon bottles, $5.00, f. o. b. here. For sale by all first-class druggists.

THOMAS F. GOODE, PROPRIETOR,

BUFFALO LITHIA SPRINGS, VA.

JAROS HYGIENIC UNDERWEAR

WOOL FLEECE KNIT

FORMULA.—Unspun Wool knitted into meshes of a cotton thread Basis, the theories of Profs. Von Pettenkofer, Parkes, Kreiger, Buck and others.

ADVANTAGES.—Capillary action of unspun wool upon the body. Greatest hydroscopic qualities and non-irritating Interstices naturally formed, stores body temperature Prevents rapid radiation during climatic changes, aids transportation of moisture. Porosity, elasticity, perfect fit and non-shrinkability are regarded

INDICATIONS.—Rheumatism, Kidney, Disease (Nephrites), Pulmonary Consumption, Catarrhal Troubles, La Grippe, etc, as well as a general prophylactic.

NOTE.—Features accomplished have been recognized by the medical profession since 1884, also endorsed by U. S. Army, U. S. Navy, Police and Fire Departments.

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1892.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty. Prof. T. M. T. MCKENNAN, 810 Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Ave., Pittsburg.

The Baltimore Medical College.

PRELIMINARY FALL COURSE begins Sept. 1, 1891.
REGULAR WINTER COURSE begins October 1, 1891.

WALNUT LODGE HOSPITAL,

HARTFORD, CONNECTICUT.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish Bath, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefitted from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experence to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M. D.,
Sup't Walnut Lodge, Hartford, Conn.

DR. MASSEY'S

PRIVATE SANATORIUM.

Presenting the comforts of an elegant private residence, this institution is specially equipped for the use of electricity and allied remedial measures in the diseases of women and in diseases of the nervous system. For particulars address

212 S. Fifteenth St., Philadelphia.

Prickly Heat, Chafing, Dandruff,

Odors from Perspiration, etc. Speedy Relief by Using

Packer's Tar Soap.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

ST. LOUIS, MO

A WEEKLY JOURNAL.

ESTABLISHED IN 1853 BY
S. W. BUTLER, M. D.

THE Medical and Surgical Reporter.

EDWARD T. REICHERT, M. D., Editor.
(Prof. Physiology, University of Penna.)

CHAS. K. MOUNT, Advertising Manager.

PROSPECTUS.

For nearly forty years ***The Medical and Surgical Reporter*** has held a position of influence and popularity second to that of no other publication in medicine. Last May the Editorial and Business Management was changed, the journal was enlarged from twenty-eight to forty pages, and the publication in almost every way was radically improved. That these changes have been appreciated by the profession is evident in the phenomenal increase of our subscription list and in the number of new advertisements.

The enlarged ***Reporter*** now enables us to offer more pages of reading matter each year than are given by any other medical periodical in America, and more material of direct practical value to the practising physician than is furnished in any other journal in the English language. We now publish during the year over 3500 separate articles, representing the best thought in the profession. These include about as follows:—

75 Clinical Lectures by leading clinicians in this country and abroad.
200 Original Communications.
60 Society Reports.
25 Letters by Special Correspondents.
800 Selected Prescriptions.
75 Editorials on Timely Topics.
150 Letters from our Subscribers.
150 Book Reviews.
2000 Periscope Articles, carefully selected and condensed, and representing all important progress in medicine in all branches and languages.

The ***Reporter*** is truly a magazine of medical progress, it is thoroughly practical, and is especially adapted to the wants of the busy practitioner. There is no State or Country in America that it does not reach, and no civilized Country that does not regularly receive it.

The ***Reporter*** is published every Saturday, and is mailed to subscribers in the United States and Canada for $5.00 a year in advance, and to those in foreign countries for $6.00 in advance. It will be sent for three months on trial for $1.00.

THE BUTLER PUBLISHING CO.,

P. O. Box 843. ***PHILADELPHIA, PA.***

A Menstruum.

HORSFORD'S ACID PHOSPHATE.

This preparation has been found especially serviceable as a menstruum for the administration of such alkaloids as morphine, quinine and other organic bases which are usually exhibited in acid combination.

The admixture with pepsin has been introduced with advantage when indicated.

The Acid Phosphate does not disarrange the stomach, but, on the contrary, promotes in a marked degree the process of digestion.

DR. R. S. MILES, Glencoe, Minn., says: "I use it in a great many cases as a menstruum for quinine, when an acid is necessary."

Send for descriptive circular. Physicians who wish to test it will be furnished a bottle on application, without expense, except express charges.

Prepared under the direction of Prof. E. N. HORSFORD, by the
Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION:—Be sure the Word "HORSFORD'S" is PRINTED on the label. All others are spurious. NEVER SOLD IN BULK.

JUST ISSUED.

THE COMPLETE
MEDICAL POCKET-FORMULARY,

AND

PHYSICIAN'S VADE-MECUM.

Containing upwards of 2500 prescriptions, collected from the practice of Physicians and Surgeons of experience, American and Foreign. Arranged for ready reference under an Alphabetical List of Diseases.

Also, a Special List of New Drugs, with their Dosage, Solubilities and Therapeutical Applications; together with a Table of Formulæ for Suppositories; a Table of Formulæ for Hypodermic Medication; a List of Drugs for Inhalation; a Table of Poisons, with their Antidotes; a Posological Table; a List of Incompatibles; a Table of Metric Equivalents; a Brief Account of External Antipyretics, Disinfectants, Medical Thermometry, the Urinary Tests, and much other useful information.

COLLATED FOR THE USE OF PRACTITIONERS BY J. C. WILSON, A.M., M.D.,
Physician to the German Hospital, Philadelphia, etc., etc.

262 Pages. Bound in Leather, Pocket-Book Form, $2.00.
(Size of book, 3¾x8 inches.)

If not obtainable at your Booksellers', send direct to the Publishers, who will forward the work, postpaid, on receipt of the price.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{30}$ gr.), Atropiæ Sulph. ($\frac{1}{500}$ gr.), Codeia ($\frac{1}{60}$ gr.), Antimony Tart $\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{30}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address.

LONDONDERRY LITHIA

"The Most Wonderful American Water."

From I. N. Danforth, A. M., M. D., Prof. Pathology and Renal Diseases, Women's Medical College, Chicago.

"I have had a long experience in the treatment of *Kidney Diseases* with LONDONDERRY, and am pleased to add my testimonial, although I think it unnecessary, from the fact that the *effects of the water speak more eloqueutly than any words* which I might utter. I prize it very highly in all cases of *Chronic Rheumatism* or other manifestations of the condition known as the 'Lithic Acid Diathesis." I have used the water extensively in my practice and intend to continue the use of it."

From Henry M. Lyman, A. M., M. D., Professor of Physiology and Diseases of the Nerves in Rush Medical College ; Prof. of Theory and Practice of Medicine in the Woman's Medical College; Physician to Presbyterian Hospital, of Chicago ; Author of 'Insomnia and Disorders of Sleep," etc.

I have used it for several years, and I like it as remedial agent in *releasing* the *secretions* of the *Kidneys*. It is a pleasant drink, also. I think that it is a *blessing* to the *club men*. At any rate that class of Chicagoans known as 'high livers' whose diet is not confined to the narrow limits of plebeianism, are gradually recognizing the LONDONDERRY LITHIA WATER as their nostrum."

From Henry M. Field, M. D., Prof. Therapeutics, Darthmouth Med. College, etc.

"I feel under a sort of obligation to send you a word of unsolicited and favorable testimony respecting the values and virtues of your LITHIA WATER. * * * Since my attention was first called to your LITHIA WATER—several years ago— and *I became satisfied respecting its preeminent power, I have used no other Lithia Water*, and in the case just characterized (gravel), I depend upon the LONDONDERRY invariably and often as a *last resou'se*. Thus far it has rendered so good an account of itself that I feel bound to make the account which I render, good. I trust to your discretion and sense of propriety as to any disposition you may make of this letter."

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 67th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 21st of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Anatomy, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M. D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin October 1st, and continue until May. PRELIMINARY SESSION begins September 7th.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required Practical laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Bacteriology, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology is a part of the regular course. Special clinical facilities.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For announcement or information apply to

ERNEST LAPLACE, M. D.,
1617 Arch Street, Philadelphia, Pa.

MEDICAL DEPARTMENT OF COLUMBIAN UNIVERSITY,
WASHINGTON, D. C.

The Seventieth Winter Session will begin October 1st, 1891 and end March 1st, 1892. Spring Course from April 1st to May 30th. Graded three year course required. Women admitted. Clinical facilities.

FACULTY.

J. F. THOMPSON, Surgery.
W. W. JOHNSTON, Practice.
A. F. A. KING, Obstetrics.
E. T. FRISTOE, Chemistry.
WILLIAM LEE, Physiology.
D. W. PRENTISS, Therapeutics.
D. K. Shute, Anatomy.
W. K. BUTLER, Ophthalmology.
W. W. GODDING, Mental Disease.

UNIVERSITY OF MARYLAND.—School of Medicine.

The Eighty-Fifth Annual Session will begin October 1st, 1891, and will end in April, 1892. Didactic lectures are illustrated by daily clinical instruction in general medicine and surgery, and the various special branches. Laboratory instruction in chemistry and normal and pathological histology. All candidates for graduation have personal experience in practical obstetrics.

For further information and circular apply to

I. E. ATKINSON, M D., Dean,
605 Cathedral Street, Baltimore.

UNIVERSITY OF PENNSYLVANIA.—Medical Department.

THE PRELIMINARY SESSION has been discontinued; the Spring Term begins early in May, 1892.

The curriculum is graded and three annual winter sessions are required. Practical instruction, including laboratory work in Chemistry, Histology, Osteology and Pathology; with bedside instruction in Medicine, Surgery, Gynæcology and Obstetrics, are a part of the regular course and without additional expense.

FACULTY.

D. HAYS AGNEW, M.D., LL.D., Honorary Professor of Clinical Surgery.
WILLIAM PEPPER, M.D., LL.D., Professor of Theory and Practice of Medicine, and of Clinical Medicine.
WILLIAM GOODELL, M.D., Professor of Gynecology.
JAMES TYSON, M.D., Professor of Clinical Medicine.
HORATIO C. WOOD, M.D., LL.D., Professor of Materia Medica, Pharmacy and General Therapeutics.
THEODORE G. WORMLEY, M.D., LL.D., Professor of Chemistry and Toxicology.
JOHN ASHURST, JR., M.D., Professor of Surgery and of Clinical Surgery.
EDWARD T. REICHERT M.D., Professor of Physiology.
WILLIAM F. NORRIS, M.D., Professor of Ophthalmology.
BARTON COOKE HIRST, M.D., Professor of Obstetrics.
J. WILLIAM WHITE, M.D., Professor of Chemical Surgery.
JOHN GUITERAS, M.D., Professor of General Pathology and Morbid Anatomy.
GEORGE A. PIERSOL, M.D., Professor of Anatomy.
LEWIS A. DUHRING, M.D., Professor of Diseases of the Skin.

For Catalogue and announcement containing particulars, apply to DR. JAMES TYSON, Dean,
36th and Woodland Avenue, Philadelphia.

REPORTER for one year, . . . $5.00
Wood's Nervous Diseases and Their Diagnosis, ... 4.00
$9.00

Nervous Diseases and Their Diagnosis

By H. C. WOOD, M. D., LL. D..

Professor of Therapeutics and Nervous Diseases, University of Pennsylvania.

8vo., pp. 501, Cloth, $4.

It is invaluable as a work of diagnosis.—*Virginia Medical Monthly.*

It is at once a substantive contribution to neurology and a trustworthy guide to what has already been done in the subject.—*Practitioner.*

As a whole, the work is one which cannot fail to be of great service to the practicing physician.—*Medical and Surgical Reporter.*

The volume is a distinct help to the student, and is a necessary supplement to the systematic works on diseases of the nervous system.—*Boston Med. Surg. Jour.*

The author's originality is evident to every reader of his work; and we trust, for the advancement of knowledge, his readers will be many.—*New England Med. Gaz.*

This work fills a long-felt need in this department.—*Buffalo Med. Surg. Jour.*

Dr. Wood is an able clinician, and this makes his book valuable. His observations are practical and to the point and show careful study of a large number of cases which have fallen under his care.—*N. Y. Med. Jour.*

The honest effort of one who never writes without teaching and who always writes and teaches well.—*Journal of Insanity.*

To students and practitioners who have read other works this production will prove extremely valuable in time of need, to the former just before examination; to the latter in everyday practice.—*London Lancet.*

Not a compilation, but rather the record of independent opinions and investigations.—*Canadian Practitioner.*

The book is written in the characteristic vigorous style of its able and versatile author—*American Practitioner.*

Lucid language, clear type, a full index, and, above all, the presentation of the late advances in this department of science constitute the truly great attractions of this book.—*Albany Med Annals.*

It is not until the volume has been carefully read, and perhaps re-read, that its true excellence begins to dawn upon the reader.—*Maryland Med. Jour.*

or

Carnrick's Kumyss Tablets.

A PRODUCT OF PURE SWEET MILK.
PALATABLE, NUTRITIOUS,
EASILY DIGESTED.
AND WHEN DISSOLVED IN WATER
FORMS A DELICIOUS EFFER-
VESCENT KUMYSS.

(*Put up in air-tight bottles, in two sizes; the larger holding sufficient Tablets for seven twelve-ounce bottles, and the smaller sufficient for three twelve-ounce bottles of Kumyss.*)

THIS PREPARATION is presented to the Medical Profession in the convenient form of Tablets, and will be found superior in every respect to ordinary *Kumyss, Wine of Milk, Fermented Milk,* or any similar preparation.

Kumysgen when prepared for use contains every constituent of a perfect Kumyss.

Kumysgen is made from fresh, sweet milk, and contains fully thirty per cent. of soluble casein, which is double the amount found in ordinary Kumyss preparations.

Kumysgen being in Tablet form, will keep indefinitely, is easily and readily prepared, less expensive than the ordinary variable and perishable Kumyss, and its *fermentative action* may be regulated at will, thus rendering it available at all times and under all circumstances.

Clinical tests gathered from every quarter of the globe attest its special value in all cases of *Gastric* and *Intestinal Indigestion* or *Dyspepsia, Pulmonary Consumption, Constipation, Gastric and Intestinal Catarrh, Fevers, Anæmia, Chlorosis, Rickets, Scrofula, Vomiting in Pregnancy, Bright's Disease, Intestinal Ailments of Infants, Cholera Infantum; for young children and for convalescents from all diseases.*

The casein being finely subdivided, it is especially valuable for all who require an easily digested or a partially digested Food.

Kumysgen is a delicious effervescent Food-Beverage, relished alike by the sick or well.

Kumysgen is tonic, stimulant, diuretic, highly nutritious, easily digested, perfectly palatable, and always *permanent* and *uniform* in strength.

Maltine

WITH

COD LIVER OIL

A combination of the best Norwegian Cod Liver Oil with MALTINE. in which, by the vacuum process, rancidity is prevented and disagreeable odor and taste of the oil removed.

Base a Powerful Reconstructive

Contains No Inert Emulsifier

Does not disturb Digestion nor offend the Palate

Is an active Starch Digester and Tissue Builder.

Produces rapid Improvement in Appetite.

Is used where "Emulsions" cannot be tolerated.

A complete list of the Maltine Preparations and their formulæ will be sent on application

THE MALTINE MANUFACTURING CO.

(Please mention this Journal.)

New York, N. Y.

IMPERFECT CURES OF CONSUMPTION.

It has frequently been demonstrated that spontaneous cures of consumption take place. The demonstration consists in post-mortem discovery of cicactrices, caseous and calcareous foci and other evidences of previous destructive processes in the lungs of those who have died of some other acute malady and who had long been thought to be free from any pulmonary affection.

However, it has not been so generally known, although now a thoroughly established fact, that many cases are not perfectly cured ; that is, incomplete calcification of the tuberculous tissue has taken place, leaving a centre of caseous or calcareous substance, with a periphery in which the tubercular process is still more or less progressive, though seemingly in a quiescent state.

The great danger to patients thus affected, as lately pointed out by Dr. Thos. Harris, M. R. C. P., of London, is that at any time the disease may take on an active form.

Any of the accidents of exposure that ordinarily induce pulmonary congestion or inflammation may light up the slumbering fires, and precipitate a rapidly destructive tubercular consumption of the lungs. Or these imperfectly calcified foci may become the source of infection of the system with general acute miliary tuberculosis.

What is the great lesson in practical therapeutics to be learned from this important pathological discovery? It is that those who have ever shown signs of incipient phthsis should be thereafter kept under skilful professional observation. Appropriate treatment should be continued until all physical signs of active disease completely disappear. They should live guarded lives thereafter, conforming to correct hygienic rules. But above all, whenever any symptoms of pulmonary disturbance appear, they should be at once put upon active treatment and continued until such symptoms have entirely passed away.

Now, what is the appropriate treatment? Let us listen to the learned A. Lutaud, of Paris, who says, "The fundamental basis of all rational therapeutics must be to restore the tone and reinforce the power of resistance of the tissues. The organism must be placed in a condition, not only to provide for daily needs and to resist vicissitudes of temperature, humidity, etc., but to enable it to resist the attack of enemies in the form of the pathogenetic microbes. It is, above all, necessary to prevent that devitalization of the tissues which renders them an easy prey to the marauding bacillus. Hence the efforts of therapeutists of all nationalities have been directed to the discovery and perfection of tonic and reconstituent preparations."

It is now a well established fact in pathological science that the serum of pure, healthy blood is a sure and rapid destroyer of the germs of this disease. Hence the appropriate remedy is that which will most rapily enrich the blood —the hypophosphites of lime and soda.

But this remedy will also promote the more rapid calcification of the diseased areas in the pulmonary tissues. Hence, it is entitled in a double sense to the claim of a SPECIFIC in this disease, first given it by the illustrious Churchill.

The patient should be given McArthur's Syrup (a syrup of the chemically pure hypophosphites of lime and soda) from the time the disease is first suspected, with appropriate intervals of intermission, until he is perfectly restored, and this treatment should be resorted to during any marked departure from health thereafter.

The McArthur Hypophosphite Co., Boston, Mass., will furnish you valuable evidence of the curability of consumption, and a sample bottle of the syrup, without expense, except express charges, if you wish to make a trial of it in your practice.

VIN MARIANI

"The Standard Preparation of Erythoxylon Cocoa."

CAREFUL, continued testing by upards of seven thousand practitioners in America, whose written opinions over their signatures (in our possession) are fully in accord and clearly prove the efficacy and merits of "VIN MARIANI" may be thus summarized:

- "Diffusible stimulant and tonic in anæmia, nervous depression, sequelæ of childbirth, lymphatism, tardy convalescence, general 'Malaise,' and after wasting fevers.
- "Special reference to the nervous system, in all morbid states, melancholia, etc.
- "Tonic in laryngeal and gastric complications, stomach troubles.
- "All cases where a general toning or strengthening of the system is needed.
- "The only tonic stimulant without any unpleasant reaction, and may be given indefinitely, never causing constipation."

N. B.—This Wine has been found always uniform and reliable, owing to the selection of the finest ingredients and the greatest accuracy in its manipulation. When prescribing, therefore, the Medical Profession are strongly advised to specify "VIN MARIANI," in order to avoid the substitution of imitations, often worthless and consequently disappointing in effect.

Please Specify VI MARIANI.

SCHERING'S

CHLORALAMID.

The New Approved Hypnotic.

Dose: 30 to 45 grains; effect within 30 minutes

Best administered in solution with whiskey, tincture of cardamoms, or other alcoholic menstruum. *Solutions must not be heated, as the Chloralamid is thereby decomposed.*

A good formula for prescribing is

Chloralamid-Schering,.....4 drachms.
Spts. Frumenti,.....3 ounces.
Elix. Aurantii, sufficient to make 4 ounces

Mix. Take one tablespoonful (30 grains Choralamid) in water.

CHLORALAMID—Schering has received merited praise and endorsement from highest medical authorities all over the world.

SCHERING'S

PHENOCOLL.

The New Antipyretic, Anti-Rheumatic, Analgesic, and Nervine.

Freely Soluble in Water, and Non-toxic.

Dose: 7 1-2 to 15 grains, three times daily.

PHENOCOLL—Schering has been very favorably endorsed by eminent physicians and clinicians in Europe and America; among others, Surgeon-Major HERTEL (MEDIC. WOCHENSCHRIFT); Dr. HERZOG, in clinic of Prof. Dr. RIEGEL, in Giesen; Dr. ISAAC OTT, Easton, Pa.; Prof KOBERT, in Dorpat; Prof. VON MERING, in Halle, A. S.; and many more. We refer also to an editorial by Prof. J. V. SHOEMAKER, in the Philadelpnia *Medical Bulletin*, July, 1891.

SCHERING'S

PIPERAZINE.

The New and Superior Uric Acid Solvent.

Freely oluble in Water, and Non-toxic.

Dose: 15 grains per day, divided in suitable doses.

Best administered by dissolving daily dose in one quart of aërated water, which patient may drink in wineglassful doses at frequent intervals during the day.

PIPERAZINE—Schering has proved to be a very important new therapeutic agent; it unites readily with Uric Acid, and the resulting urate dissolves perfectly. Piperazine is twelve times more potent than Lithia.

Write for Pamphlets, Circulars, and Samples to the

Sole Agents and Licensees for America:

LEHN & FINK,

128 WILLIAM STREET, NEW YORK.

Notes on New Remedies.

Chloralamid in Epilepsy.

At the October meeting of the N. Y. Academy of Medicine, Dr. C. L. Dana, in speaking of the symptomatic treatment of epilepsy, refers to choralamid as follows: "The most valuable adjuvant was hydrate of chloral, but I have found a new drug in chloralamid which does all the good ascribed to the former drug without affecting the heart or circulation."

Piperazine and Urinary Calculi.

Interesting experiments have been made recently by Dr. FINZELBERG, Director of Schering's Research Laboratory, on the action of piperzine upon artificial urinary calculi consisting of pure uric acid, or that compound with calcium phosphate, or of ammonium urate, etc. The design was to ascertain whether piperazine had any solvent effect upon these. The result of the experiment showed that all the forms of concretions alluded to dissolved freely and perfectly within a comparatively short time in a one per cent. piperazine solution. In a few cases nothing remained but a light honeycombed skeleton, which consisted of the hardened cementing mucus. It was particularly noticed that the edges of the calculi, sometimes very sharp, dissolved away rapidly in the piperazine solution.—*Chemist and Druggist.*

Phenocoll Against Epidemic Influenza.

The study of the relationship between chemical constitution and physiological action is of comparatively recent date, but it has already led to results sufficiently interesting to make it evident that along this line promising work still remains to be done.

Dr. HANS ARONSON has recently made an investigation into the therapeutical effect of certain acid derivatives of acetanilid and phenacetin. He confirmed EHRLICH'S theory that the introduction of a sulphone group into the molecule of certain compounds which act upon the central nervous system, renders them inert as regard antipyretics, and he found that a very large number of acid derivatives of the bases mentioned are equally destitute of antifebrile effect.

He concludes with the observation (*Deutsche med. Wochenschrift*): The problem of obtaining soluble antipyretics from acetanilid, or rather phenacetin, has been recently solved in another way—namely, by the introduction into the molecule, not of acid, but of basic groups. To this category belongs *Phenocoll*, recently introduced into commerce and recommended on all hands as an antipyretic and anti-rheumatic. The compound is an amidated phenacetin, and is related to the body exactly in the same way as glycocoll to acetic acid. As an antineuralgic it exerted, in a few cases observed by me, a prompt and reliable effect.

It is also worthy of note that *Phenocoll* is being successfully given *against epidemic iufluenza*, which has reappeared here and there recently. This affection is so likely to be followed by severe sequelæ, that it is important to avoid lowering the vitality of the system in every possible way. In this respect Phenocoll is specially indicated, as it has been proved to have no deleterious effect upon the blood, such as most of the antipyretics in use undoubtedly have. According to all the authorities who have hitherto recorded their experiences with Phenocoll, it is free from all unpleasant or dangerous after-effects.

In 8 to 15 grain doses, repeated at intervals of about an hour, its beneficial effect is promptly manifested. The rheumatism-like pains disappear, and the temperature falls to the normal. At the same time the patients experience a feeling of general well-being.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK:)

Each fluid drachm represents 15 grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium and Lithium.

USES: EPILEPSY, UTERINE CONGESTION, HEADACHE, AND ALL CONGESTIVE, CONVULSIVE AND REFLEX NEUROSES.

This preparation produces results, which can not be obtained from the use of commercial Bromide substitutes.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK.)

From Sea Weed. **Uses: Malaria, Phthisis, Etc.**

An ALLY of quinine—quinine CHECKS the Malarial Chill; Fucus Marina ELIMINATES the Malarial CAUSE; and thus prevents the recurrence of the Chill *after* it has been *checked* by quinine.

An INVALUABLE REMEDY in the treatment of Phthisis—it arrests the decay of lung tissue, diminishes the fever, lessens the cough, abates the soreness in the lungs, improves the appetite, and impedes the progressive emaciation.

DOSE.—One Teaspoonful IN WATER, four times a day.

CHIONIA FROM CHIONANTHUS.

Uses: Biliousness, Jaundice, Dyspepsia, Constipation, and all Diseases Caused by Hepatic Torpor.

CHIONIA stimulates the Liver and restores it to a healthy condition, without debilitating the system by Catharsis; does not purge, per se, but under its use the Liver and Bowels gradually resume their normal functions.

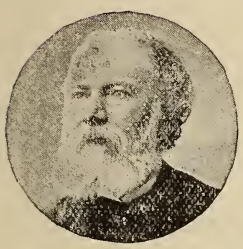
DOSE.—One Fluid Drachm three times a day.

PEACOCK CHEMICAL CO., ST. LOUIS.

NOTE UPON A POSSIBLE SERVICE TO BE EXPECTED FROM DIURETIN IN GENITO-URINARY SURGERY

BY EDWARD L. KEYES, M. D., NEW YORK.

(*Medical News, Philadelphia, 1891, October.*)



Fr. Dumontpallier.

IN June last I went to a city near New York to take a large stone from the bladder of an old gentleman, and at the same time to remove an outstanding third lobe. His case was desperate. He had suffered long, and for four years he had been an invalid, spending most of the last year in bed, taking opium suppositories, and passing his catheter hourly sometimes, and again at longer intervals. He could not urinate at all without the catheter. I cut this patient above the pubes, and took out a stone as large as an egg and a prostatic third lobe as large as the last joint of the thumb. The bladder was thin-walled, corrugated, trabeculated, and sacculated. I put my finger into holes on each side which seemed like ureteral orifices, but did not stop to investigate closely. They could not have been orifices of the ureters, because they are closed even when the ducts are enormously dilated. His urine had been like gruel, full of albumen and all sorts of detritus. There was no question of there being dilated ureters, pyelitis, and more or less interstitial nephritis on both sides. The operation was done simply because it had to be done in compassion for the old man's sufferings. The outlook was desperate.

I thought then, of trying diuretin, and telephoned for it before the patient recovered from his anesthetic, ordering 10 grains to be given at once, and frequently repeated. This patient got well.

Since that time I have used diuretin in every case of urethral or bladder operation that has fallen under my hands. I give 60 grains of salol per day for forty-eight hours before operating, and commence diuretin on the day of the operation; given it also in doses of 10 grains every four hours for forty-eight hours. I, of course, irrigate the bladder and urethra; I did this before, but my results have been better since using the diuretin. I have used it in every major operation that I have performed, and my assistant, Dr. Fuller, has used it twice, and in no instance has there been any urinary fever proper—that is, there never has been a chill or a suppression. The cases cover all ages from eighteen to eighty, with desperate complications, such as pyelitis, urine loaded with albumen and casts, diabetes, etc. Patients have had shock, fever sometimes, and various complications, but never chill or suppression. The number operated on is 13; not large, it is true, but it was in the summer season, and all were private patients. The time is too short for generalization, but when it is remembered that the cases were: Supra-pubic prostatectomy, 6; supra-pubic lithotomy (diabetes), 1; perineal section, 3; perineal section without guide, 2; litholapaxy, 1; mostly in old men with damaged kidneys, all of whom recovered without chill or any tendency to suppression, it is fair to imagine that the means used had something to do with it, and the diuretin is the only new drug. In three of the cases there was profound shock after the chloroform (which I now always use), but the kidneys acted all along.

Diuretin appears to be a diuretic, seemingly pretty constant in its action. It does not irritate the stomach, bowels, or nerves, and does not depress a weak heart. The dose is 10 to 15 grains often repeated, to 90 or even 120 grains a day, given in powder or in pill form—preferably gelatin-coated pill, as the powder deteriorates on exposure. If it will prevent, or even moderate urinary fever, it is a valuable drug.—*Medical News, Philadelphia.*

McKesson & Robbins'

Gelatine Coated Pills of Diuretin-Knoll, 5 grains.

CAUTION!

All the observations in this pamphlet have reference to the use of the preparation of Knoll & Co.; as there are imitations in the market, physicians should see that the genuine is supplied. It is put up only in original vials of one ounce, and in McK. & R. 5 gr. pills in bottles of 100 and 500 each, and is plainly labeled DIURETIN–KNOLL.

Full notes sent on request, by

(ALH4) SHARP & DOHME, MANUFACTURING CHEMISTS ESTABLISHED 1860 Baltimore, Md.

Lapactic Pills.

A combination introduced by us and found in practice to possess superior advantages over other similar formulas. The well known mild action of Aloin on the lower portion of the intestinal canal, and its power of stimulating the hepatic functions, is supplemented by the action of Ipecac as a stomachic tonic and by increasing the gastric secretions; the Belladonna acts specially upon the involuntary muscular fibres of the bowels, increasing peristalsis, diminishing the harshness, and at the same time increasing the effectiveness of the laxative. The general tonic effect of Strychnine upon the stomach and bowels and its direct action upon the sympathetic, make it a valuable addition in the permanent cure of **habitual constipation and atonic dyspepsia.**

Since we first called attention to our Lapactic Pills, some four years ago—publishing the composition of the same—a number of manufacturers have adopted the formula and have furnished these pills under the same name. Should Physicions fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints from physicians by letter), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term "LAPACTIC PILLS, S. & D.'S." when prescribing these pills.

SAMPLES WILL BE MAILED ON APPLICATION.

SPECIAL FORMULAS MADE TO ORDER.

WHEN PURCHASING, PLEASE SPECIFY S. & D's.

SCOTT'S EMULSION

VERSUS

PLAIN COD LIVER OIL.

Plain Cod Liver Oil *is indigestible, deranges the stomach, destroys the appetite is not assimilated,* and in a majority of cases is detrimental to the patient.

SCOTT'S EMULSION

Can be *digested in nearly all cases, is assimilated, does not derange the stomach, nor overtax the digestive functions,* and can be taken for an indefinite period when the plain cod liver oil cannot be tolerated at all, and with most marked results in *Anæmia, Consumption* and all wasting conditions. It also contains the *Hypophosphites of Lime and Soda with Glycerine,* which are most desirable adjuncts.

WHEN PHYSICIANS TRY IT THEY INVARIABLY USE IT

in preference to the plain cod liver oil or other *so-called Emulsions* that invariably separate, and hence their integrity and value is destroyed. *Scott's Emulsion is palatable and absolutely permanent* hence its integrity is always preserved.

The formula for SCOTT'S EMULSION is 50 per cent. of the finest Norwegian Cod Liver Oil, 6 grains Hypophosphite of Lime and 3 grains Hypophosphite of Soda to the fluid ounce, Emulsified, or digested to the condition of assimilation with chemically pure Glycerine and Mucilage.

We also wish to call your attention to the following preparations:

CHERRY MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain aud nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula).

Prepared from carefully selected German Buckthorn Bark, Juglans Bark and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

SCOTT & BOWNE, 132 South Fifth Avenue, NEW YORK.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

— Landois and Sterling.

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

— Materia Medica and Therapeutics, Dr. Mitchell Bruce.

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

— Eustace Smith, M.D., F.R.C.S.

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

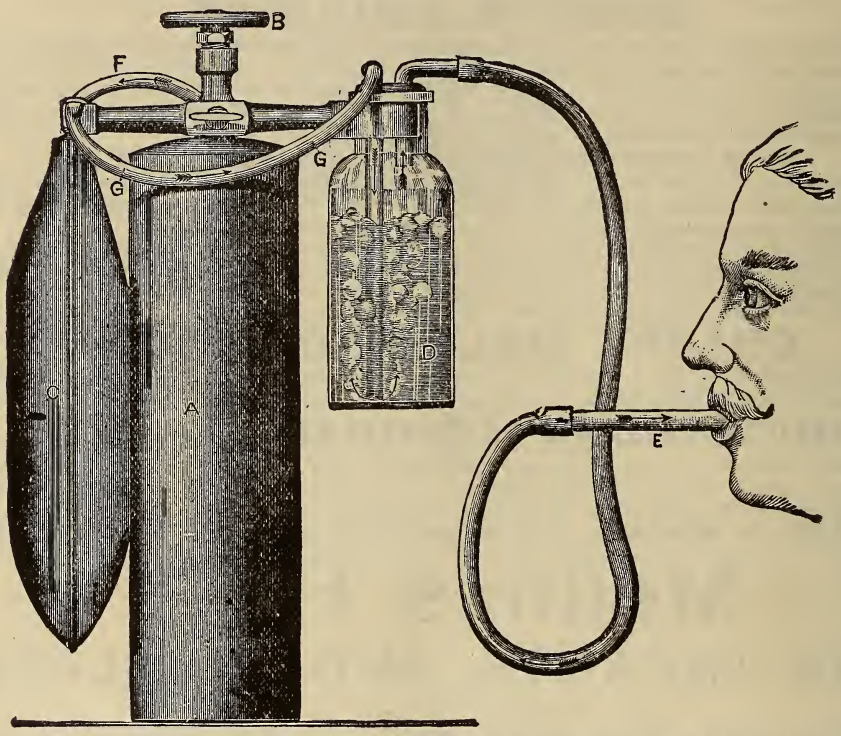
THE DOLIBER-GOODALE CO.,

BOSTON, MASS.

INHALATION APPARATUS

FOR

THE THERAPEUTIC ADMINISTRATION OF OXYGEN



In the treatment of lung troubles by Oxygen its exhibition by inhalation is preferred. The apparatus herewith shown is a modification of the Nitrous Oxide apparatus which we have supplied for many years. It is made in the best manner throughout, and is the outcome of years of experience in the manufacture of gas apparatus. It will be found to meet all the requirements.

We supply the gas in two sizes of cylinders, containing respectively forty and one hundred gallons, either pure Oxygen, or a mixture of Oxygen and Nitrous Oxide in definite proportions of 20 per cent., and forty per cent. of Nitrous Oxide.

Whether pure or mixed the gas is sold at the uniform price of 5 cents a gallon. The cost of the cylinders will be refunded on their return empty with the valves in good condition. Full description of Inhalation and Enema apparatuses with directions for use accompany each apparatus, or will be supplied on application.

PRICES.

Inhalation Apparatus	$5.00
Cylinder, 40 gallons' capacity	6.00
40 gallons Gas, either pure Oxygen or mixed Oxygen and Nitrous Oxide	2.00
Complete Apparatus, Cylinder, and 40 gallons Gas	$13.00
Inhalation Apparatus	$5.00
Cylinder, 100 gallons' capacity	15.00
100 gallons Gas, either pure or mixed	5.00
Complete Apparatus, Cylinder, and 100 gallons Gas	$25.00

THE S. S. WHITE DENTAL MFG. CO.

PHILADELPHIA. NEW YORK, BOSTON. CHICAGO. BROOKLYN.

ESTABLISHED 1855.

DR. STRONG'S SANITARIUM,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for TREATMENT, CHANGE, REST, OR RECREATION.

And places them under well-regulated hygienic conditions so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it has a Sun Parlor and Promenade on the roof. Turkish, Roman, Sulphur, Electro-Thermal, the French Douche, and all Hydropathic Baths; Vacuum Treatment, Swedish Movements, Massage, Pneumatic Cabinet Inhalations of Medicated, Compressed, and Rarefied Air, Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, with elevator, electric bells, open fire-places, steam, and thorough ventilation. With cheering influences and avoiding the pressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in winter tobogganing, elegant sleighing, etc.; in Summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience.

A liberal discount to physicians and their families for board or treatment. For illustrated Circular, Address:

DR. S. E. STRONG, THE SANITARIUM, 90 CIRCULAR ST.

ALLENTOWN, PA., January 8, 1892

Applications, with recommendations, for the position of Second Assistant Female Physician of the Hospital for the Insane of South Eastern District of Pennsylvania at Norristown, will be received by the undersigned until January 30, 1892. Salary $7.00 and home.

E. G. MARTIN, Secretary.

FOR SALE.

A physician's property and practice, about twenty-two miles from Philadelphia, in lower end of Bucks county, for sale. Practice established a number of years, and worth from $2,500 to $3,000 a year; fine property, fitted up especially for physician, fine country and desirable location. Price, $5,000. About half can remain upon mortgage at 5 per cent.

Address, **SAM'L J. GARNER,**
HATBORO, PA.

AT PRIVATE SALE.

That convenient and desirably situated property, occupied by the late Dr. Burrell, in Williamsport, Pa.

This property consists of the residence, in perfect repair, with convenient and well equipped offices attached, together with large stable and other outbuildings.

The practice has been one of the largest general practices in the City, and well established.

For Further Particulars Address:

Mrs. Margaret S. Burrell,

404 W. Fourth St., Williamsport, Pa.

NEUROSINE

THE MOST POWERFUL NEUROTIC ATTAINABLE.

ANODYNE AND HYPNOTIC.

A most efficient and permanent preparation, **REMARKABLE** for its efficacy and **THERAPEUTIC EFFECTS** in the treatment of those **NERVOUS AFFECTIONS** and morbid conditions of the System which so often tax the skill of the Physician.

A RELIABLE AND TRUSTWORTHY REMEDY FOR THE RELIEF OF

HYSTERIA, EPILEPSY, NEURASTHENIA, MANIA, CHOREA, UTERINE CONGESTION, MAGRAINE, NEURALGIA, ALL CONVULSIVE AND REFLEX NEUROSES

THE REMEDY PAR EXCELLENCE IN DELIRIUM AND RESTLESSNESS OF FEVERS.

FORMULA:—Each fluid-drachm contains 5 grains each, C. P. Bromides of Potassium, Sodium and Ammonium 1-8 gr. Bromide Zinc, 1-64 gr. each of Ext. Belladonna and Cannabis Indica, 4 grains Ext. Lupuli and 5 minims fluid Ext. Cascara Sagrada, with Aromatic Elixirs.

DOSE:—From one teaspoonful to a tablespoonful, in water, three or more times daily as may be directed by the Physician.

To any physician, unacquainted with the medicinal effect of Neurosine, we will mail pamphlet contain full information, suggestions, and various methods of treatment; also a variety of valuable prescriptions that have been thorougly tested in active practice, or to physicians desiring to try our preparation, and who will pay express charges, we will send on application a sample bottle free.

DIOS CHEMICAL CO.,

ST. LOUIS MO., U. S. A.

PARTURITION.

Aletris Cordial (Rio), given in Teaspoonful doses every hour or two AFTER PARTURITION, is the best agent to prevent after-pains and hemorrhage. By its DIRECT tonic action on the uterus, it expels blood clots, closes the uterine sinuses, causes the womb to contract, and prevents subinvolution. In severe cases, it can be combined with ergot in the proportion of one ounce of fluid Ext. Ergot to three ounces Aletris Cordial. It is the experience of eminent practitioners, in all cases where ergot is indicated, that its action is rendered much more efficacious by combining it with Aletris Cordial in the proportions above stated.

WESTERN PENNSYLVANIA MEDICAL COLLEGE
CITY OF PITTSBURGH.

SESSIONS OF 1892.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty. WALNUT LODGE HOSPITAL,
HARTFORD, CONNECTICUT.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish Bath, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefitted from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experence to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M. D.,
Sup't Walnut Lodge, Hartford, Conn.

DR. MASSEY'S

PRIVATE SANATORIUM.

Presenting the comforts of an elegant private residence, this institution is specially equipped for the use of electricity and allied remedial measures in the diseases of women and in diseases of the nervous system. For particulars address

G. BETTON MASSEY, M. D.,
212 S. Fifteenth St., Philadelphia.

Prickly Heat, Chafing, Dandruff,

Odors from Perspiration, etc. Speedy Relief by Using

Packer's Tar Soap.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

A WEEKLY JOURNAL.

ESTABLISHED IN 1853 BY
S. W. BUTLER, M. D.

THE Medical and Surgical Reporter.

EDWARD T. REICHERT, M. D., Editor.
(Prof. Physiology, University of Penna.)

CHAS. K. MOUNT, Advertising Manager.

PROSPECTUS.

For nearly forty years ***The Medical and Surgical Reporter*** has held a position of influence and popularity second to that of no other publication in medicine. Last May the Editorial and Business Management was changed, the journal was enlarged from twenty-eight to forty pages, and the publication in almost every way was radically improved. That these changes have been appreciated by the profession is evident in the phenomenal increase of our subscription list and in the number of new advertisements.

The enlarged ***Reporter*** now enables us to offer more pages of reading matter each year than are given by any other medical periodical in America, and more material of direct practical value to the practising physician than is furnished in any other journal in the English language. We now publish during the year over 3500 separate articles, representing the best thought in the profession. These include about as follows:—

75 ***Clinical Lectures*** by leading clinicians in this country and abroad.
200 ***Original Communications.***
60 ***Society Reports.***
25 ***Letters by Special Correspondents.***
800 ***Selected Prescriptions.***
75 ***Editorials on Timely Topics.***
150 ***Letters from our Subscribers.***
150 ***Book Reviews.***
2000 ***Periscope Articles,*** carefully selected and condensed, and representing all important progress in medicine in all branches and languages.

The ***Reporter*** is truly a magazine of medical progress, it is thoroughly practical, and is especially adapted to the wants of the busy practitioner. There is no State or Country in America that it does not reach, and no civilized Country that does not regularly receive it.

The ***Reporter*** is published every Saturday, and is mailed to subscribers in the United States and Canada for $5.00 a year in advance, and to those in foreign countries for $6.00 in advance. It will be sent for three months on trial for $1.00.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{60}$ gr.), Atropiæ Sulph. ($\frac{1}{250}$ gr.), Codeia ($\frac{1}{10}$ gr.), Antimony Tart. $\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{60}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address.

LONDONDERRY LITHIA

"The Most Wonderful American Water."

From I. N. Danforth, A. M., M. D., Prof. Pathology and Renal Diseases, Women's Medical College, Chicago.

"I have had a long experience in the treatment of *Kidney Diseases* with LONDONDERRY, and am pleased to add my testimonial, although I think it unnecessary, from the fact that the *effects of the water speak more eloquently than any words* which I might utter. I prize it very highly in all cases of *Chronic Rheumatism* or other manifestations of the condition known as the 'Lithic Acid Diathesis." I have used the water extensively in my practice and intend to continue the use of it."

From Henry M. Lyman, A. M., M. D., Professor of Physiology and Diseases of the Nerves in Rush Medical College ; Prof. of Theory and Practice of Medicine in the Woman's Medical College; Physician to Presbyterian Hospital, of Chicago ; Author of "Insomnia and Disorders of Sleep," etc.

I have used it for several years, and I like it as remedial agent in *releasing* the *secretions* of the *Kidneys*. It is a pleasant drink, also. I think that it is a *blessing* to the *club men*. At any rate that class of Chicagoans known as 'high livers' whose diet is not confined to the narrow limits of plebeianism, are gradually recognizing the LONDONDERRY LITHIA WATER as their nostrum."

From Henry M. Field, M. D., Prof. Therapeutics, Darthmouth Med. College, etc.

"I feel under a sort of obligation to send you a word of unsolicited and favorable testimony respecting the values and virtues of your LITHIA WATER. * * * Since my attention was first called to your LITHIA WATER—several years ago— and *I became satisfied respecting its preeminent power, I have used no other Lithia Water*, and in the case just characterized (gravel), I depend upon the LONDONDERRY invariably and often as a *last resourse*. Thus far it has rendered so good an account of itself that I feel bound to make the account which I render, good. I trust to your discretion and sense of propriety as to any disposition you may make of this letter."

DISTRIBUTING AGENTS,

Philadelphia, Pa.

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 67th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 21st of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Anatomy, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M. D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin October 1st, and continue until May. PRELIMINARY SESSION begins September 7th.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required Practical laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Bacteriology, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology is a part of the regular course. Special clinical facilities.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For announcement or information apply to

ERNEST LAPLACE, M. D.,
1617 Arch Street, Philadelphia, Pa.

MEDICAL DEPARTMENT OF COLUMBIAN UNIVERSITY,
WASHINGTON, D. C.

The Seventieth Winter Session will begin October 1st, 1891 and end March 1st, 1892. Spring Course from April 1st to May 30th. Graded three year course required. Women admitted. Clinical facilities.

FACULTY.

J. F. THOMPSON, Surgery.
W. W. JOHNSTON, Practice.
A. F. A. KING, Obstetrics.
E. T. FRISTOE, Chemistry.
WILLIAM LEE, Physiology.
D. W. PRENTISS, Therapeutics.
D. K. Shute, Anatomy.
W. K. BUTLER, Ophthalmology.
W. W. GODDING, Mental Disease.

UNIVERSITY OF MARYLAND.—School of Medicine.

The Eighty-Fifth Annual Session will begin October 1st, 1891, and will end in April, 1892. Didactic lectures are illustrated by daily clinical instruction in general medicine and surgery, and the various special branches. Laboratory instruction in chemistry and normal and pathological histology. All candidates for graduation have personal experience in practical obstetrics.

For further information and circular apply to

I. E. ATKINSON, M D., Dean,
605 Cathedral Street, Baltimore.

UNIVERSITY OF PENNSYLVANIA.—Medical Department.

THE PRELIMINARY SESSION has been discontinued; the Spring Term begins early in May, 1892.

The curriculum is graded and three annual winter sessions are required. Practical instruction, including laboratory work in Chemistry, Histology, Osteology and Pathology; with bedside instruction in Medicine, Surgery, Gynæcology and Obstetrics, are a part of the regular course and without additional expense.

FACULTY.

D. HAYS AGNEW, M.D., LL.D., Honorary Professor of Clinical Surgery.
WILLIAM PEPPER, M.D., LL.D., Professor of Theory and Practice of Medicine, and of Clinical Medicine.
WILLIAM GOODELL, M.D., Professor of Gynecology.
JAMES TYSON, M.D., Professor of Clinical Medicine.
HORATIO C. WOOD, M.D., LL.D., Professor of Materia Medica, Pharmacy and General Therapeutics.
THEODORE G. WORMLEY, M.D., LL.D., Professor of Chemistry and Toxicology.
JOHN ASHURST, JR., M.D., Professor of Surgery and of Clinical Surgery.
EDWARD T. REICHERT M.D., Professor of Physiology.
WILLIAM F. NORRIS, M.D., Professor of Ophthalmology.
BARTON COOKE HIRST, M.D., Professor of Obstetrics.
J. WILLIAM WHITE, M.D., Professor of Chemical Surgery.
JOHN GUITERAS, M.D., Professor of General Pathology and Morbid Anatomy.
GEORGE A. PIERSOL, M.D., Professor of Anatomy.
LEWIS A. DUHRING, M.D., Professor of Diseases of the Skin.

REPORTER for one year, . . . $5.00
Wood's Nervous Diseases and Their Diagnosis, ... 4.00
$9.00

Nervous Diseases and Their Diagnosis

By H. C. WOOD, M. D., LL. D.,

Professor of Therapeutics and Nervous Diseases, University of Pennsylvania.

8vo., pp. 501, Cloth, $4.

It is invaluable as a work of diagnosis.—*Virginia Medical Monthly.*

It is at once a substantive contribution to neurology and a trustworthy guide to what has already been done in the subject.—*Practitioner.*

As a whole, the work is one which cannot fail to be of great service to the practicing physician.—*Medical and Surgical Reporter.*

The volume is a distinct help to the student, and is a necessary supplement to the systematic works on diseases of the nervous system.—*Boston Med. Surg. Jour.*

The author's originality is evident to every reader of his work; and we trust, for the advancement of knowledge, his readers will be many.—*New England Med. Gaz.*

This work fills a long-felt need in this department.—*Buffalo Med. Surg. Jour.*

Dr. Wood is an able clinician, and this makes his book valuable. His observations are practical and to the point and show careful study of a large number of cases which have fallen under his care.—*N. Y. Med. Jour.*

The honest effort of one who never writes without teaching and who always writes and teaches well.—*Journal of Insanity.*

To students and practitioners who have read other works this production will prove extremely valuable in time of need, to the former just before examination; to the latter in everyday practice.—*London Lancet.*

Not a compilation, but rather the record of independent opinions and investigations.—*Canadian Practitioner.*

The book is written in the characteristic vigorous style of its able and versatile author.—*American Practitioner.*

Lucid language, clear type, a full index, and, above all, the presentation of the late advances in this department of science constitute the truly great attractions of this book.—*Albany Med Annals.*

It is not until the volume has been carefully read, and perhaps re-read, that its true excellence begins to dawn upon the reader.—*Maryland Med. Jour.*

or

Carnrick's Kumyss Tablets.

A PRODUCT OF PURE SWEET MILK.
PALATABLE, NUTRITIOUS,
EASILY DIGESTED.
AND WHEN DISSOLVED IN WATER
FORMS A DELICIOUS EFFERVESCENT KUMYSS.

(*Put up in air-tight bottles, in two sizes; the larger holding sufficient Tablets for seven twelve-ounce bottles, and the smaller sufficient for three twelve-ounce bottles of Kumyss.*)

THIS PREPARATION is presented to the Medical Profession in the convenient form of Tablets, and will be found superior in every respect to ordinary *Kumyss, Wine of Milk, Fermented Milk,* or any similar preparation.

Kumysgen when prepared for use contains every constituent of a perfect Kumyss.

Kumysgen is made from fresh, sweet milk, and contains fully thirty per cent. of soluble casein, which is double the amount found in ordinary Kumyss preparations.

Kumysgen being in Tablet form, will keep indefinitely, is easily and readily prepared, less expensive than the ordinary variable and perishable Kumyss, and its *fermentative action* may be regulated at will, thus rendering it available at all times and under all circumstances.

Clinical tests gathered from every quarter of the globe attest its special value in all cases of *Gastric* and *Intestinal Indigestion* or *Dyspepsia, Pulmonary Consumption, Constipation, Gastric and Intestinal Catarrh, Fevers, Anæmia, Chlorosis, Rickets, Scrofula, Vomiting in Pregnancy, Bright's Disease, Intestinal Ailments of Infants, Cholera Infantum; for young children and for convalescents from all diseases.*

The casein being finely subdivided, it is especially valuable for all who require an easily digested or a partially digested Food.

Kumysgen is a delicious effervescent Food-Beverage, relished alike by the sick or well.

Kumysgen is tonic, stimulant, diuretic, highly nutritious, easily digested, perfectly palatable, and always *permanent* and *uniform* in strength.

SAMPLE SENT ON REQUEST.

MANUFACTURED BY

REED & CARNRICK, New York,

The only prominent Emulsion of Cod-Liver Oil introduced directly to the medical profession. It is advertised exclusively in medical journals.

HYDROLEINE.

(HYDRATED OIL.)

Produces rapid increase in Flesh and Strength.

FORMULA.—Each Dose contains:			
Pure Cod Liver Oil.....80 m. (drops)	Soda.....1-3 Grains.	Recommended and Prescribed by EMINENT PHYSICIANS Everywhere. It is pleasant to the Taste and acceptable to the most delicate Stomach.
Distilled Water.....35 "	Salicylic Acid.....1-4 "	
Soluble Pancreatin..... 5 Grains.	Hyocholic Acid.....1-30 "	

IT IS ECONOMICAL IN USE AND CERTAIN IN RESULTS.

HYDROLEINE (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhuæ, but a hydro-pancreated preparation, containing acids and a small percentage of soda. Pancreatin is the digestive principle of fatty foods, and in the soluble form here used, readily converts the oleaginous material into assimilable matter, a change so necessary to the reparative process in all wasting diseases.

The following are some of the diseases in which HYDROLEINE is indicated:

Phthisis, Tuberculosis, Catarrh, Cough, Scrofula, Chlorosis, General Debility, etc.

TO BRAIN WORKERS of all classes, **HYDROLEINE** is invaluable, supplying as it does, the true brain-food, and being more easily assimilated by the digestive organs than any other emulsion.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," and "Consumption and Wasting Diseases," by two distinguished London physicians, which will be sent free on application.

SOLD BY DRUGGISTS GENERALLY.

C. N. CRITTENTON,

SOLE AGENT FOR THE UNITED STATES. 115 FULTON STREET, N. Y.

A Sample of Hydroleine will be sent free upon application, to any physician (enclosing business card) in the U. S.

"What a boon it would be to the Medical Profession if some reliable Chemist would bring out an Extract of Malt in combination with a well-digested or Peptonized Beef, giving us the elements of Beef and the stimulating and nutritious portions of Ale.—J. MILNER FOTHERGILL, M. D."

ALE & BEEF

"PEPTONIZED"

EXTRACT—BOVIS CUM MALTO.

IS THE IDENTICAL COMBINATION SUGGESTED BY THE LATE EMINENT FOTHERGILL.

Each Bottle Represents 1-4 Pound of Lean Beef Thoroughly Peptonized.

PREPARED BY

THE ALE & BEEF COMPANY,

DAYTON, OHIO, U. S. A.

Two full-sized bottles will be sent FREE to any physician who will pay express charges.

"Orders from all parts of the Dominion of Canada, supplied by The Canadian Peptonized Beef & Ale Co., Limited' 153 Hollis Street, Halifax, N. S."

The Perfectly Prepared Pill:

ITS ESSENTIAL POINTS may be thus formulated:

PURITY of medicaments and excipients.
PRECISION as to weight and division.
PERFECT UNIFORMITY as to activity and identity.
PROMPT SOLUBILITY of mass and coating.
PERMANENCE as to conservation.
PALATABILITY; and ELEGANCE of appearance.

PURITY OF MEDICAMENTS is, of course, indispensable to the perfect pill. Less obvious, but equally true, is the proposition that upon this factor the value of its other qualities is largely dependent. Exactitude of weight and uniformity of preparation have little significance if the medicament be impure, while indifferent drugs are liable to chemical changes which affect their stability and activity.

SAFE AND CERTAIN RESULTS are only to be obtained with pure remedies. The methodical treatment of disease calls for therapeutic agents which are as nearly absolute in quality as they can be made by the combined resources of chemistry and pharmacy under competent and conscientious direction.

IN THE W. H. S. & CO. pill these conditions are fully realized. Only the purest materials are employed; no component is substituted, either for economy's sake or for any other reason; and the formula is exactly followed. We believe that the W. H. S. & Co. pill fully meets the requirements of modern therapeutics.

SOME OF THESE PREPARATIONS are specified below, and they are offered as being especially useful at this time.

Pil. Phenacetine (Bayer), "W. H. S. & Co."

For All Forms of Fever, Pain, Rheumatism and Neuralgia; for Pertussis, and for conditions in which pain or fever, or both, are to be combated. (Pills of 2, 3, 4 and 5 grs.)

Pil. Phenacetine et Salol, 5 grs., "W. H. S. & Co."

For Influenza, (La Grippe), Acute Articular Rheumatism, Neuralgia, Migraine, Whooping Cough, and all painful febrile conditions. (Pills containing 2½ grains each of Phenacetine-Bayer and Salol. Half strength also prepared.)

Pil. Terpin Hydrat., "W. H. S. & Co."

For Coughs, Colds, Catarrh, Bronchitis and all Acute and Chronic Respiratory Maladies. No unpleasant symptoms follow its continuous use. (Pills of 2 and 5 grains.)

Pil. Quiniæ, Ferri et Zinci Valerianat., "W. H. S. & Co."

For Nervous Tension, Melancholia, Epilepsy, Hysteria, Delirium Tremens, Dysmenorrhœa, and all Neuroses dependent upon the cares of life. (Pills of 3 grains.)

IN PRESCRIBING BE PARTICULAR TO SPECIFY "W. H. S. & CO."

W. H. Schieffelin & Co., New York.

It is Important

For the Physician to watch the character and quality of the remedies used in his prescriptions. Responsibility *does not cease* when the patient leaves the office; for impure, stale, or inferior preparations may be used without his knowledge. Personal examination of remedies prescribed is the best check upon substitution.

FERRO-SALICYLATA
LIQUID.

MERRELL.

An eligible combination of Methyl Salicylate and Tinct. Citro-Chloride Iron, in a pleasant and permanent form.

EACH FLUID DRACHM CONTAINS

True Salicylic Acid—from oil Wintergreen (Methyl Salicylate), - - - - 5 grs.
Tinct. Citro-Chloride Iron, 5 min.

Not Sold in Bulk.

ELIXIR
Pinus Compositus.

MERRELL.

Each Fluid Drachm Contains

White Pine—fresh Bark,	2½ grs.
Balm Gilead Buds,	2 grs.
Spikenard,	2 grs.
Cherry Bark,	1¾ grs.
Ipecac,	1-4 gr.
Sanguinarina Nitrate,	1-64 gr.
Morphine Acetate,	1-16 gr.
Ammonium Chloride,	1-2 gr.
Chloroform,	1-2 minim.

Not Sold in Bulk.

FERRO-SALICYLATA.---*Merrell.*

Ferro-Salicylata is especially valuable in that shade of disease peculiar in anæmic, delicate, poorly nourished or broken-down patients—usually aged people—children or youth—but met with in all ages. In adults, and often in children when the disease is not plainly chronic, there will be a long series of recurrences with intervals of doubtful health. It may also be employed in acute articular rheumatism, and in some cases of acute tonsillitis, especially where the diagnosis is at first in doubt between rheumatic angina and diphtheria; also, in acute rheumatism and rheumatic affections generally.

Ferro-Salicylata may be used in combination with the Iodides and Bromides of Potassium and Sodium. Associated with the former, it will prove an admirable alterative and tonic in second syphilis attended by a debilitated condition of the general system. It also combines well with Chlorate Potassium, the Hypophosphites, with Fowler's Solution, the vegetable bitter tonics, either in Fluid Extract or Tincture Form.

Ferro-Salicylata and all other preparations of this Company reach the laity through professional channels only. We therefore avoid entering into the minute details of their application, leaving the physician to make such practical use of our therapeutic notes as in his judgment may be best suited to individual cases.

Ferro-Salicylata may be obtained of wholesale druggists throughout the United States, of our Eastern Office, 96 Maiden Lane, New York City, or direct from the Laboratory.

Please designate "Ferro-Salicylata—*Merrell.*"

ELIXIR PINUS COMPOSITUS---*Merrell.*

An admirable combination of well known and highly approved medicinal agents; recommended in acute, chronic, and capillary bronchitis—in ordinary coughs and colds, and wherever a "routine" expectorant is suggested. In the troublesome cough following the recent epidemic "La Grippe," it proved invaluable—many of our correspondents looking upon it as a "specific" in this stage of the disease.

CAUTION.—Physicians are reminded that the Elixir Pinus-Compositus of this manufacturer is wholly unlike the many syrups, etc., under similar names, and the difference will be readily appreciated when tried. In testing the physical properties of the Elixir Pinus, note especially its delicate taste and perfect freedom from the odor of rank syrup, the drastic, harsh and repulsive characteristics of the crude blood-root, and other coarser ingredients characteristic of competing preparations.

"Merrell Co.'s" "Green Drug," Fluid Extracts, True Salicylic Acid, Salts of Hydrastis, Fluid Hydrastis, and Specialties may be obtained of wholesale druggists throughout the United States, at the Home Office at Cincinnati, or the New York Office, 96 Maiden Lane, New York City; Richards Drug Co., San Francisco, Agents for the Pacific Coast. Prices-current and printed matter cheerfully supplied.

The WM. S. MERRELL CHEMICAL CO.

CINCINNATI. NEW YORK.

VIN MARIANI

"The Standard Preparation of Erythoxylon Cocoa."

CAREFUL, continued testing by upards of seven thousand practitioners in America, whose written opinions over their signatures (in our possession) are fully in accord and clearly prove the efficacy and merits of "VIN MARIANI" may be thus summarized:

"Diffusible stimulant and tonic in anæmia, nervous depression, sequelæ of childbirth, lymphatism, tardy convalescence, general 'Malaise,' and after wasting fevers.

"Special reference to the nervous system, in all morbid states, melancholia, etc.

"Tonic in laryngeal and gastric complications, stomach troubles.

"All cases where a general toning or strengthening of the system is needed.

"The only tonic stimulant without any unpleasant react on, and may be given indefinitely, never causing constipation."

N. B—This Wine has been found always uniform and reliable, owing to the selection of the finest ingredients and the greatest accuracy in its manipulation. When prescribing, therefore, the Medical Profession are strongly advised to specify "VIN MARIANI," in order to avoid the substitution of imitations, often worthless and consequently disappointing in effect.

Please Specify VI MARIANI.

Elixir Chloralamid-Schering.

CHLORALAMID-SCHERING, the new hypnotic introduced a little over two years ago, has now assumed a permanent position in materia medica, and is highly esteemed and largely employed by the medical profession. Reports on the therapeutics of Chloralamid-Schering have been overwhelmingly favorable, in text books, special treatises, society reports, lectures, editorials, etc.; when occasionably failure to produce sleep has been reported, we have investigated the facts and usually substantiated that the remedy was not properly administered. To preclude failure on this account once for all, we have concluded to introduce a preparation in permanent solution, elegant in appearance, palatable,—**perfect.**

It is desired that this bottle be delivered on physician's prescription complete and unopened,—first writing the necessary facts on label on opposite side.

ELIXIR
Chloralamid
(SCHERING)
Each tablespoonful contains one gramme (15 grains) of Chloralamid-Schering.

HYPNOTIC.

Chloralamid-SCHERING is a superior hypnotic; an efficient and safe sleep-producing agent; its use is not attended by unpleasant and untoward side or after-effects, nor will continued use develop a habit or necessitate increasing doses. Eminent medical authorities have endorsed Chloralamid, and full clinical reports with chemical and therapeutical data will be furnished to physicians and pharmacists on request.

Directions:—A tablespoonful at a dose, taken one-half hour before sleep is desired; if effect is not prompt and satisfactory the dose may be repeated at intervals of 15 minutes—not more than twice.

PUT UP ONLY BY THE
Sole Agents & Licensees for America:
LEHN & FINK,
IMPORTERS, WHOLESALE DRUGGISTS AND MANUFACTURING CHEMISTS,
NEW YORK.

(This descriptive label is attached to every bottle, and may be removed before dispensing.)

Elixir Chloralamid-Schering

is put up in 8 oz. prescription vials, ready for dispensing without change, except that the pharmacist must write the directions on the label and impress his stamp on same. The package is unique, and will, no doubt, meet with the approval of physicians and pharmacists.

There is no better form for administering Chloralamid Schering, and physicians will surely give it their preference.

To be obtained from all Leading Pharmacists, and Supplied by all Wholesale Druggists in the United States.

A full descriptive treatise (52 pages) on Chloralamid-Schering will be mailed to physicians on request

SOLE AGENTS AND LICENSEES:

LEHN & FINK, 128 William Street, NEW YORK.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK:)

Each fluid drachm represents 15 grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium and Lithium.

USES: EPILEPSY, UTERINE CONGESTION, HEADACHE, AND ALL CONGESTIVE, CONVULSIVE AND REFLEX NEUROSES.

This preparation produces results, which can not be obtained from the use of commercial Bromide substitutes.

DOSE.—One to two **FLUID** drachms, in **WATER**, three or more times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK.)

From Sea Weed. **Uses: Malaria, Phthisis, Etc.**

An ALLY of quinine—quinine CHECKS the Malarial Chill; Fucus Marina ELIMINATES the Malarial CAUSE; and thus prevents the recurrence of the Chill *after* it has been *checked* by quinine.

An INVALUABLE REMEDY in the treatment of Phthisis—it arrests the decay of lung tissue, diminishes the fever, lessens the cough, abates the soreness in the lungs, improves the appetite, and impedes the progressive emaciation.

DOSE.—One Teaspoonful **IN WATER**, four times a day.

CHIONIA FROM CHIONANTHUS.

Uses: Biliousness, Jaundice, Dyspepsia, Constipation, and all Diseases Caused by Hepatic Torpor.

CHIONIA stimulates the Liver and restores it to a healthy condition, without debilitating the system by Catharsis; does not purge, per se, but under its use the Liver and Bowels gradually resume their normal functions.

DOSE.—One Fluid Drachm three times a day.

PEACOCK CHEMICAL CO., ST. LOUIS.

NOTE UPON A POSSIBLE SERVICE TO BE EXPECTED FROM DIURETIN IN GENITO-URINARY SURGERY

BY EDWARD L. KEYES, M. D., NEW YORK.

(*Medical News, Philadelphia, 1891, October.*)

Dr. Brouardel.

IN June last I went to a city near New York to take a large stone from the bladder of an old gentleman, and at the same time to remove an outstanding third lobe. His case was desperate. He had suffered long, and for four years he had been an invalid, spending most of the last year in bed, taking opium suppositories, and passing his catheter hourly sometimes, and again at longer intervals. He could not urinate at all without the catheter. I cut this patient above the pubes, and took out a stone as large as an egg and a prostatic third lobe as large as the last joint of the thumb. The bladder was thin-walled, corrugated, trabeculated, and sacculated. I put my finger into holes on each side which seemed like ureteral orifices, but did not stop to investigate closely. They could not have been orifices of the ureters, because they are closed even when the ducts are enormously dilated. His urine had been like gruel, full of albumen and all sorts of detritus. There was no question of there being dilated ureters, pyelitis, and more or less interstitial nephritis on both sides. The operation was done simply because it had to be done in compassion for the old man's sufferings. The outlook was desperate.

I thought then, of trying diuretin, and telephoned for it before the patient recovered from his anesthetic, ordering 10 grains to be given at once, and frequently repeated. This patient got well.

Since that time I have used diuretin in every case of urethral or bladder operation that has fallen under my hands. I give 60 grains of salol per day for forty-eight hours before operating, and commence diuretin on the day of the operation; given it also in doses of 10 grains every four hours for forty-eight hours. I, of course, irrigate the bladder and urethra; I did this before, but my results have been better since using the diuretin. I have used it in every major operation that I have performed, and my assistant, Dr. Fuller, has used it twice, and in no instance has there been any urinary fever proper—that is, there never has been a chill or a suppression. The cases cover all ages from eighteen to eighty, with desperate complications, such as pyelitis, urine loaded with albumen and casts, diabetes, etc. Patients have had shock, fever sometimes, and various complications, but never chill or suppression. The number operated on is 13; not large, it is true, but it was in the summer season, and all were private patients. The time is too short for generalization, but when it is remembered that the cases were: Supra-pubic prostatectomy, 6; supra-pubic lithotomy (diabetes), 1; perineal section, 3; perineal section without guide, 2; litholapaxy, 1; mostly in old men with damaged kidneys, all of whom recovered without chill or any tendency to suppression, it is fair to imagine that the means used had something to do with it, and the diuretin is the only new drug. In three of the cases there was profound shock after the chloroform (which I now always use), but the kidneys acted all along.

Diuretin appears to be a diuretic, seemingly pretty constant in its action. It does not irritate the stomach, bowels, or nerves, and does not depress a weak heart. The dose is 10 to 15 grains often repeated, to 90 or even 120 grains a day, given in powder or in pill form—preferably gelatin-coated pill, as the powder deteriorates on exposure. If it will prevent, or even moderate urinary fever, it is a valuable drug.—*Medical News, Philadelphia.*

McKesson & Robbins' Gelatine Coated Pills of Diuretin-Knoll, 5 grains.

CAUTION!

All the observations in this pamphlet have reference to the use of the preparation of Knoll & Co.; as there are imitations in the market, physicians should see that the genuine is supplied. It is put up only in original vials of one ounce, and in McK. & R. 5 gr. pills in bottles of 100 and 500 each, and is plainly labeled DIURETIN–KNOLL.

Full notes sent on request, by
McKESSON & ROBBINS,
New York.

On account of the increased demand, we are able to reduce the price of Diuretin-Knoll more than 25 per cent., which is important, as the necessary doses are large.

Lapactic Pills.

A combination introduced by us and found in practice to possess superior advantages over other similar formulas. The well known mild action of Aloin on the lower portion of the intestinal canal, and its power of stimulating the hepatic functions, is supplemented by the action of Ipecac as a stomachic tonic and by increasing the gastric secretions; the Belladonna acts specially upon the involuntary muscular fibres of the bowels, increasing peristalsis, diminishing the harshness, and at the same time increasing the effectiveness of the laxative. The general tonic effect of Strychnine upon the stomach and bowels and its direct action upon the sympathetic, make it a valuable addition in the permanent cure of **habitual constipation and atonic dyspepsia.**

Since we first called attention to our Lapactic Pills, some four years ago—publishing the composition of the same—a number of manufacturers have adopted the formula and have furnished these pills under the same name. Should Physicions fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints from physicians by letter), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term "LAPACTIC PILLS, S. & D.'S." when prescribing these pills.

SAMPLES WILL BE MAILED ON APPLICATION.

SPECIAL FORMULAS MADE TO ORDER.

WHEN PURCHASING, PLEASE SPECIFY S. & D's.

SCOTT'S EMULSION

VERSUS

PLAIN COD LIVER OIL.

Plain Cod Liver Oil ***is indigestible, deranges the stomach, destroys the appetite is not assimilated,*** and in a majority of cases is detrimental to the patient.

SCOTT'S EMULSION

Can be ***digested in nearly all cases, is assimilated, does not derange the stomach, nor overtax the digestive functions,*** and can be taken for an indefinite period when the plain cod liver oil cannot be tolerated at all, and with most marked results in ***Anæmia, Consumption*** and all wasting conditions. It also contains the ***Hypophosphites of Lime and Soda with Glycerine,*** which are most desirable adjuncts.

WHEN PHYSICIANS TRY IT THEY INVARIABLY USE IT

in preference to the plain cod liver oil or other ***so-called Emulsions*** that invariably separate, and hence their integrity and value is destroyed. ***Scott's Emulsion is palatable and absolutely permanent*** hence its integrity is always preserved.

The formula for SCOTT'S EMULSION is 50 per cent. of the finest Norwegian Cod Liver Oil, 6 grains Hypophosphite of Lime and 3 grains Hypophosphite of Soda to the fluid ounce, Emulsified, or digested to the condition of assimilation with chemically pure Glycerine and Mucilage.

We also wish to call your attention to the following preparations:

CHERRY MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain aud nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula).

Prepared from carefully selected German Buckthorn Bark, Juglans Bark and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

ABOUT GAS TREATMENT.

We make and sell oxygen and nitrogen monoxide for therapeutic use, and we guarantee them pure They are put up in compact form. (A cylinder containing 100 gallons of nitrogen monoxide or 40 gallons of oxygen measures 12 inches in length, has a diameter of 3½ inches, and weighs 10½ lbs. A cylinder containing 450 gallons of nitrogen monoxide or 100 gallons of oxygen measures 25 inches in length, has a diameter of 4½ inches, and weighs 34 lbs.)

INSOMNIA. Dr. Allan McLane Hamilton states that nitrogen monoxide, N_2O (nitrous oxide of the old nomenclature) has no equal in the treatment of this difficulty.

MELANCHOLIA. A short course of nitrogen monoxide is said to change the face of nature for such patients.

ANÆMIA. Where iron is not tolerated or proves inefficient, the addition of oxygen or a combination of oxygen and nitrogen monoxide has proven very beneficial.

For those who should, but cannot, go from home for rest or a change of air, or for those who, from any cause fail to get air enough into their lungs, the inhalation of one or other of these gases, or both in combination, promises great benefit. The testimony is that in cases of

ASTHMA, more than fifty per cent. of the cases yield to oxygen treatment, others are very greatly relieved, and a very small per cent. are not improved.

INDIGESTION and CONSTIPATION are said to be greatly relieved and very often conquered by continued treatment.

A highly esteemed New York physician has used more than twenty thousand gallons of nitrogen monoxide in his private practice. The letters received from his patients, largely from those who were afflicted with nervous disorders, are enthusiastic in their testimony as to the benefit received.

Regular practitioners who are using gas treatment testify that when *pure* oxygen and *pure* nitrogen monoxide, or a mixture of these, is used, no therapeutic agents are more uniformly successful when intelligently prescribed.

JAROS HYGIENIC UNDERWEAR

WOOL FLEECE KNIT

FORMULA.—Unspun Wool, knitted into meshes of a cotton thread Basis, the theories of Profs. Von Pettenkofer, Parkes, Kreiger, Buck and others.

ADVANTAGES.—Capillary action of unspun wool upon the body. Greatest hydroscopic qualities and non-irritating Interstices naturally formed, stores body temperature. Prevents rapid radiation during climatic changes, aids transportation of moisture. Porosity, elasticity, perfect fit and non-shrinkability are regarded.

INDICATIONS.—Rheumatism, Kidney Disease (Nephrites), Pulmonary Consumption, Catarrhal Troubles, La Grippe, etc., as well as a general prophylactic.

NOTE.—Features accomplished have been recognized by the medical profession since 1884, also endorsed by U. S. Army, U. S. Navy, Police and Fire Departments.

80-Page Treatise containing reports of results in special practice as well as from U. S. Government, mailed post-paid on application

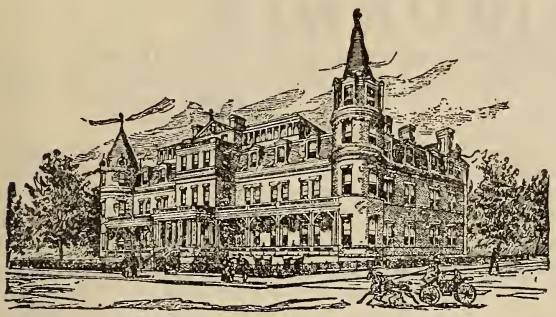
NERVES.

Suppose we find the patient a little giddy upon rising in the morning. This means that the nerves do not have perfect control of the muscular system. As a test for this, direct the patient to stand with his feet close together, shut his eyes, and if the tendency is to reel, it is another evidence of lowered nerve tone. Or, stand with the arms extended, shut the eyes, and then try to bring the tips of his forefingers together in front of him. If they pass by or meet imperfectly, it shows the same thing.

Or, the person may not be able to think as quickly as he should. To test this, ask the patient three simple questions in rapid succession, as, Where were you just before you came into this room? What were you doing? How long did you remain? The rapidity with which the answers are given indicate the rapidity of brain action.

All these things show that it is of the utmost importance that the nervous system should be kept in tone. Otherwise, every part of the body languishes.

This condition indicates the use of Celerina (Rio) in teaspoonful doses four times a day, *to increase the nerve capital of your patient.*



Dr. Wm. A. Hammond's Sanitarium for Treatment of Diseases of Nervous System, 14th St. and Sheridan Ave., Washington, D. C.

DR. WM. A. HAMMOND,

WASHINGTON, D. C.,

Surgeon-General U S. Army (retired), formerly Professor of Diseases of the Mind and Nervous System in the University of New York, etc. says:

"I have for some time made use of the

BUFFALO LITHIA WATER

in cases of affections of the nervous system, complicated with Bright's Disease of the Kidneys or with a gouty diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite with me in like cases, but the

Buffalo Lithia Water Acts Better than Any Extemporaneous Solution

of the Lithia salts, and is moreover, better borne by the stomach. I also often prescribe it in those cases of cerebral hyperæmia resulting from over mental work—in which the condition called nervous dyspepsia exists—and generally with marked benefit."

Water in cases of one dozen half-gallon bottles, $5.00, f. o. b. here. For sale by all first-class druggists.

DIOVIBURNIA

UTERINE TONIC, ANTISPASMODIC AND ANODYNE.

A reliable and trustworthy remedy for the relief of Dysmenorrhœa, Amenorrhœa, Menorrhagia Leucorrhœa, Subinvolution, THREATENED ABORTION, Vomiting in Pregnancy and Chlorosis; directing its action to the entire uterine system as a general tonic and antispasmodic.

FORMULA.

Every ounce contains 3-4 dram each of the fluid extracts: Viburnum Prunifolium, Viburnum Opulus, Dioscorea Villosa, Aletris Farinosa, Helonias Dioica, Mitchella Repens, Caulophyllum Thalictroides, Scutellaria Lateriflora.

DOSE.—For adults, a desertspoonful to a tablespoonful three times a day, after meals. In urgent cases, where there is much pain, dose may be given every hour or two, ALWAYS IN HOT WATER.

Jno. B. Johnson, M. D., Professor of the Principles and Practice of Medicine, St. Louis Medical College.

ST. LOUIS, June 20, '88.

I very cheerfully give my testimony to the virtues of a combination of vegetable remedies prepared by a well-known and able pharmacist of this city, and known as DIOVIBURNIA, the component parts of which are well known to any and all physicians who desire to know the same, and therefore have no relation to proprietary or quack remedies. I have employed this medicine in cases of dysmonorrhœa, suppression of the catemania and in excessive leucorrhœa, and have been much pleased with its use. I do not think its claims (as set forth in the circular accompanying it) to be at all excessive. I recommend its trial to all who are willing to trust to its efficacy, believing it will give satisfaction. Respectfully,

Jno. B. Johnson

L. Ch. Boisliniere, M. D., Prof. of Obstetrics, St. Louis Medical College. ST. LOUIS, June 18, 1888.

I have given DIOVIBURNIA a fair trial and found it useful as an uterine tonic and antispasmodic, relieving the pains of dysmenorrhœa, and regulator of the uterine functions. I feel authorized to give this recommendation of DIOVIBURNIA, as it is neither a patented nor a secret medicine, the formula of which have been communicated freely to the medical profession.

L. Ch. Boisliniere M.D.

H. Tuholske, M. D., Professor Clinical Surgery and Surgical Pathology, Missouri Medical College; also Post-Graduate School of St. Louis. ST. LOUIS, June 23, 1888.

I have used DIOVIBURNIA quite a number of times—sufficiently frequently to satisfy myself of its merits. It is of unquestionable benefit in painful dysmenorrhœa; it possesses antispasmodic properties which seem especially to be exerted on the uterus.

Wm. H. Tuholske

To any physician, unacquainted with the medicinal effect of DIOVIBURNIA, we will mail pamphlet containing full information, suggestions, commendations of some of our most prominent professors and various methods of treatment; also a variety of valuable prescriptions that have been thoroughly tested in an active practice, or to physicians desiring to try our preparation, and who will pay express charges, we will send on application a sample bottle free.

DIOS CHEMICAL CO., ST. LOUIS, MO., U. S. A.

WESTERN PENNSYLVANIA MEDICAL COLLEGE
CITY OF PITTSBURGH.

SESSIONS OF 1892.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty. Prickly Heat, Chafing, Dandruff,

Odors from Perspiration, etc. Speedy Relief by Using

Packer's Tar Soap.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. Imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

ST. LOUIS, MO

A WEEKLY JOURNAL.

ESTABLISHED IN 1853 BY
S. W. BUTLER, M. D.

THE Medical and Surgical Reporter.

EDWARD T. REICHERT, M. D., Editor.
(Prof. Physiology, University of Penna.)

CHAS. K. MOUNT, Advertising Manager.

PROSPECTUS.

For nearly forty years ***The Medical and Surgical Reporter*** has held a position of influence and popularity second to that of no other publication in medicine. Last May the Editorial and Business Management was changed, the journal was enlarged from twenty-eight to forty pages, and the publication in almost every way was radically improved. That these changes have been appreciated by the profession is evident in the phenomenal increase of our subscription list and in the number of new advertisements.

The enlarged ***Reporter*** now enables us to offer more pages of reading matter each year than are given by any other medical periodical in America, and more material of direct practical value to the practising physician than is furnished in any other journal in the English language. We now publish during the year over 3500 separate articles, representing the best thought in the profession. These include about as follows:—

75 ***Clinical Lectures*** by leading clinicians in this country and abroad.
200 ***Original Communications.***
60 ***Society Reports.***
25 ***Letters by Special Correspondents.***
800 ***Selected Prescriptions.***
75 ***Editorials on Timely Topics.***
150 ***Letters from our Subscribers.***
150 ***Book Reviews.***
2000 ***Periscope Articles,*** carefully selected and condensed, and representing all important progress in medicine in all branches and languages.

The ***Reporter*** is truly a magazine of medical progress, it is thoroughly practical, and is especially adapted to the wants of the busy practitioner. There is no State or Country in America that it does not reach, and no civilized Country that does not regularly receive it.

The ***Reporter*** is published every Saturday, and is mailed to subscribers in the United States and Canada for $5.00 a year in advance, and to those in foreign countries for $6.00 in advance. It will be sent for three months on trial for $1.00.

In Doses of from 10 to 20 Grains,

AND A POTENT AND RELIABLE REMEDY FOR THE CURE OF

Marasmus, Cholera Infantum, Indigestion, Dyspepsia and Sick Stomach,

caused from debility of that organ. It is superior to the Pepsin preparations, since it acts with more certainty, and effects cures where they fail.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

—*Landois and Sterling.*

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

—*Materia Medica and Therapeutics, Dr. Mitchell Bruce.*

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

—*Eustace Smith, M.D., F.R.C.S.*

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{60}$ gr.), Atropiæ Sulph. ($\frac{1}{600}$ gr.), Codeia ($\frac{1}{60}$ gr.), Antimony Tart. $\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{60}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

How Physicians Make Reputations!

THE successful doctors are those who are ever on the lookout for the best information upon the application of their remedies. They have no time to experiment, and consequently have no time to follow any but the most concise, and, at the same time, the most reliable writers. In this way they succeed, while others, who follow every rainbow simply because irresponsible people tell them there is a bag of gold on the end thereof, fail in their professions.

During the time the **Londonderry** has been before the profession it has been in constant use by the most eminent physicians. They write about it in Medical Books and Journals, report cases in Medical Societies and praise it in the Lecture Room. It has become known as a **Standard Remedy** for all forms of Lithæmia. The wise successful doctors are flocking to the standard of **Londonderry**, and when they once prove its striking power they do not forsake it. For the benefit of physicians who have not yet tried and tested this matchless gift of nature we have collected in a neat little pamphlet some of the opinions referred to above. They are from the most eminent clinicians and writers in the United States, and are well worth the perusal of live physicians who wish to know the latest thought on the subject of Gout, Rheumatism, Gravel and General Lithæmia.

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 67th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 21st of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Anatomy, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M. D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin October 1st, and continue until May. PRELIMINARY SESSION begins September 7th.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required Practical laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Bacteriology, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology is a part of the regular course. Special clinical facilities.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For announcement or information apply to

ERNEST LAPLACE, M. D.,
1617 Arch Street, Philadelphia, Pa.

MEDICAL DEPARTMENT OF COLUMBIAN UNIVERSITY,
WASHINGTON, D. C.

The Seventieth Winter Session will begin October 1st, 1891 and end March 1st, 1892. Spring Course from April 1st to May 30th. Graded three year course required. Women admitted. Clinical facilities.

FACULTY.

J. F. THOMPSON, Surgery.
W. W. JOHNSTON, Practice.
A. F. A. KING, Obstetrics.
E. T. FRISTOE, Chemistry.
WILLIAM LEE, Physiology.

Nervous Diseases and Their Diagnosis

By H. C. WOOD, M. D., LL. D..

Professor of Therapeutics and Nervous Diseases, University of Pennsylvania.

8vo., pp. 501, Cloth, $4.

It is invaluable as a work of diagnosis.—*Virginia Medical Monthly.*

It is at once a substantive contribution to neurology and a trustworthy guide to what has already been done in the subject.—*Practitioner.*

As a whole, the work is one which cannot fail to be of great service to the practicing physician.—*Medical and Surgical Reporter.*

The volume is a distinct help to the student, and is a necessary supplement to the systematic works on diseases of the nervous system.—*Boston Med. Surg. Jour.*

The author's originality is evident to every reader of his work; and we trust, for the advancement of knowledge, his readers will be many.—*New England Med. Gaz.*

This work fills a long-felt need in this department.—*Buffalo Med. Surg. Jour.*

Dr. Wood is an able clinician, and this makes his book valuable. His observations are practical and to the point and show careful study of a large number of cases which have fallen under his care.—*N. Y. Med. Jour.*

The honest effort of one who never writes without teaching and who always writes and teaches well.—*Journal of Insanity.*

To students and practitioners who have read other works this production will prove extremely valuable in time of need, to the former just before examination; to the latter in everyday practice.—*London Lancet.*

Not a compilation, but rather the record of independent opinions and investigations.—*Canadian Practitioner.*

The book is written in the characteristic vigorous style of its able and versatile author.—*American Practitioner.*

Lucid language, clear type, a full index, and, above all, the presentation of the late advances in this department of science constitute the truly great attractions of this book.—*Albany Med Annals.*

It is not until the volume has been carefully read, and perhaps re-read, that its true excellence begins to dawn upon the reader.—*Maryland Med. Jour.*

or Carnrick's Kumyss Tablets.

A PRODUCT OF PURE SWEET MILK,
PALATABLE, NUTRITIOUS,
EASILY DIGESTED,
AND WHEN DISSOLVED IN WATER
FORMS A DELICIOUS EFFER-
VESCENT KUMYSS.

(*Put up in air-tight bottles, in two sizes; the larger holding sufficient Tablets for seven twelve-ounce bottles, and the smaller sufficient for three twelve-ounce bottles of Kumyss.*)

THIS PREPARATION is presented to the Medical Profession in the convenient form of Tablets, and will be found superior in every respect to ordinary *Kumyss, Wine of Milk, Fermented Milk,* or any similar preparation.

Kumysgen when prepared for use contains every constituent of a perfect Kumyss.

Kumysgen is made from fresh, sweet milk, and contains fully thirty per cent. of soluble casein, which is double the amount found in ordinary Kumyss preparations.

Kumysgen being in Tablet form, will keep indefinitely, is easily and readily prepared, less expensive than the ordinary variable and perishable Kumyss, and its *fermentative action* may be regulated at will, thus rendering it available at all times and under all circumstances.

Clinical tests gathered from every quarter of the globe attest its special value in all cases of *Gastric* and *Intestinal Indigestion* or *Dyspepsia, Pulmonary Consumption, Constipation, Gastric and Intestinal Catarrh, Fevers, Anæmia, Chlorosis, Rickets, Scrofula, Vomiting in Pregnancy, Bright's Disease, Intestinal Ailments of Infants, Cholera Infantum; for young children and for convalescents from all diseases.*

The casein being finely subdivided, it is especially valuable for all who require an easily digested or a partially digested Food.

Kumysgen is a delicious effervescent Food-Beverage, relished alike by the sick or well.

Kumysgen is tonic, stimulant, diuretic, highly nutritious, easily digested, perfectly palatable, and always *permanent* and *uniform* in strength.

NUTRITION IN ITS RELATION TO THE NERVOUS SYSTEM.

When the batteries show signs of becoming "run down," as manifested by the progressive weakness of the current or by its complete failure to respond to the demands made upon it, the electrician proceeds to recharge them.

The nervous system, with its great cerebro-spinal centre and elaborate network of connecting nerves, extending to all parts of the body, is sufficiently analagous to an electric system to justify a comparison for the sake of illustration.

The nerve centres are recharged for their wonderful work of evolving and giving out nerve force by recreation, rest, sleep and suitable food.

They are exhausted by excessive and long-continued activity, emotional strains and physical excesses and the legion of causes incident to modern civilized life; also, by deficiency in the quality of food or by inability of the nutritive organs to assimilate the food provided, constituting a literal "starvation in the midst of plenty."

Unless the cerebro-spinal system is kept well nourished, the nervous activity of the individual—his effective force in life—shows signs of deterioration.

It has been demonstrated that the hypophosphites are the natural builders of healthy nerve structure. They should be administered in all conditions of deficient nerve vitality. Their administration should be supplemented by other suitable agents temporarily required by the particular case in hand.

Thus, in cases characterized by excessive excitability, the various nerve sedatives should be administered, as needed, to reduce the irritability and calm the patient, conjointly with McArthur's syrup to restore the integrity of the nervous system.

In cases characterized by great vital depression or more or less complete local paralyses, McArthur's syrup should be given combined with the appropriate additional stimulating treatment, as determined by the nature of the case.

That very numerous class of cases characterized by neuralgias and other painful conditions—as Romberg so well says, "The prayer of a nerve for food"—should be generously treated with McArthur's syrup, in addition to the required temporary treatment for the relief of the immediate symptom, pain.

The cases which are associated with impoverishment of the blood should be given McArthur's syrup and, in addition, a brief course of other appropriate hæmatinics.

McArthur's syrup is a syrup of the chemically pure hypophosphites of lime and soda, uncomplicated by other drugs.

It, better than any other agent, will sustain the nervous system through a long or unusual effort, or restore the system after such continued activity.

A full sized bottle of the syrup will be sent to any physician who wishes to make use of it in his practice, without expense, save express charges. Address, The McArthur Hypophosphite Co., Boston, Mass.

VIN MARIANI

"The Standard Preparation of Erythoxylon Cocoa."

CAREFUL, continued testing by upwards of seven thousand practitioners in America, whose written opinions over their signatures (in our possession) are fully in accord and clearly prove the efficacy and merits of "VIN MARIANI," may be thus summarized:

"Diffusible stimulant and tonic in anæmia, nervous depression, sequelæ of childbirth, lymphatism, tardy convalescence, general 'Malaise,' and after wasting fevers.

"Special reference to the nervous system, in all morbid states, melancholia, etc.

"Tonic in laryngeal and gastric complications, stomach troubles.

"All cases where a general toning or strengthening of the system is needed.

"The only tonic stimulant without any unpleasant reaction, and may be given indefinitely, never causing constipation."

N. B.—This Wine has been found always uniform and reliable, owing to the selection of the finest ingredients and the greatest accuracy in its manipulation. When prescribing, therefore, the Medical Profession are strongly advised to specify "VIN MARIANI," in order to avoid the substitution of imitations, often worthless and consequently disappointing in effect.

Please Specify VIN MARIANI.

Elixir Chloralamid-Schering.

CHLORALAMID-SCHERING, the new hypnotic introduced a little over two years ago, has now assumed a permanent position in materia medica, and is highly esteemed and largely employed by the medical profession. Reports on the therapeutics of Chloralamid-Schering have been overwhelmingly favorable, in text books, special treatises, society reports, lectures, editorials, etc.; when occasionably failure to produce sleep has been reported, we have investigated the facts and usually substantiated that the remedy was not properly administered. To preclude failure on this account once for all, we have concluded to introduce a preparation in permanent solution, elegant in appearance, palatable,—**perfect**

It is desired that this bottle be delivered on physician's prescription complete and unopened,—first writing the necessary facts on label on opposite side.

ELIXIR

Chloralamid

(SCHERING)

Each tablespoonful contains one gramme (15 grains) of Chloralamid-Schering.

HYPNOTIC.

Chloralamid-SCHERING is a superior hypnotic; an efficient and safe sleep-producing agent; its use is not attended by unpleasant and untoward side or after-effects, nor will continued use develop a habit or necessitate increasing doses. Eminent medical authorities have endorsed Chloralamid, and full clinical reports with chemical and therapeutical data will be furnished to physicians and pharmacists on request.

Directions:—A tablespoonful at a dose, taken one-half hour before sleep is desired; if effect is not prompt and satisfactory the dose may be repeated at intervals of 15 minutes—not more than twice.

PUT UP ONLY BY THE
Sole Agents & Licensees for America:

LEHN & FINK,

IMPORTERS, WHOLESALE DRUGGISTS AND MANUFACTURING CHEMISTS,

NEW YORK.

(This descriptive label is attached to every bottle, and may be removed before dispensing.)

Elixir Chloralamid-Schering

is put up in 8 oz. prescription vials, ready for dispensing without change, except that the pharmacist must write the directions on the label and impress his stamp on same. The package is unique, and will, no doubt, meet with the approval of physicians and pharmacists.

There is no better form for administering Chloralamid-Schering, and physicians will surely give it their preference.

To be obtained from all Leading Pharmacists, and supplied by all Wholesale Druggists in the United States.

A full desrciptive treatise (52 pages) on Chloralamid-Schering will be mailed to physicians on request.

SOLE AGENTS AND LICENSEES:

LEHN & FINK, 128 William Street, NEW YORK.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK:)

Each fluid drachm represents 15 grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium and Lithium.

USES: EPILEPSY, UTERINE CONGESTION, HEADACHE, AND ALL CONGESTIVE, CONVULSIVE AND REFLEX NEUROSES.

This preparation produces results, which can not be obtained from the use of commercial Bromide substitutes.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK.)

From Sea Weed. **Uses: Malaria, Phthisis, Etc.**

An ALLY of quinine—quinine CHECKS the Malarial Chill; Fucus Marina ELIMINATES the Malarial CAUSE; and thus prevents the recurrence of the Chill *after* it has been *checked* by quinine.

An INVALUABLE REMEDY in the treatment of Phthisis—it arrests the decay of lung tissue, diminishes the fever, lessens the cough, abates the soreness in the lungs, improves the appetite, and impedes the progressive emaciation.

DOSE.—One Teaspoonful IN WATER, four times a day.

CHIONIA FROM CHIONANTHUS.

Uses: Biliousness, Jaundice, Dyspepsia, Constipation, and all Diseases Caused by Hepatic Torpor.

CHIONIA stimulates the Liver and restores it to a healthy condition, without debilitating the system by Catharsis; does not purge, per se, but under its use the Liver and Bowels gradually resume their normal functions.

DOSE.—One Fluid Drachm three times a day.

PEACOCK CHEMICAL CO., ST. LOUIS.

NOTE UPON A POSSIBLE SERVICE TO BE EXPECTED FROM DIURETIN IN GENITO-URINARY SURGERY

BY EDWARD L. KEYES, M. D., NEW YORK.

(*Medical News, Philadelphia, 1891, October.*)

Dr. Budin.

IN June last I went to a city near New York to take a large stone from the bladder of an old gentleman, and at the same time to remove an outstanding third lobe. His case was desperate. He had suffered long, and for four years he had been an invalid, spending most of the last year in bed, taking opium suppositories, and passing his catheter hourly sometimes, and again at longer intervals. He could not urinate at all without the catheter. I cut this patient above the pubes, and took out a stone as large as an egg and a prostatic third lobe as large as the last joint of the thumb. The bladder was thin-walled, corrugated, trabeculated, and sacculated. I put my finger into holes on each side which seemed like ureteral orifices, but did not stop to investigate closely. They could not have been orifices of the ureters, because they are closed even when the ducts are enormously dilated. His urine had been like gruel, full of albumen and all sorts of detritus. There was no question of there being dilated ureters, pyelitis, and more or less interstitial nephritis on both sides. The operation was done simply because it had to be done in compassion for the old man's sufferings. The outlook was desperate.

I thought then, of trying diuretin, and telephoned for it before the patient recovered from his anesthetic, ordering 10 grains to be given at once, and frequently repeated. This patient got well.

Since that time I have used diuretin in every case of urethral or bladder operation that has fallen under my hands. I give 60 grains of salol per day for forty-eight hours before operating, and commence diuretin on the day of the operation; given it also in doses of 10 grains every four hours for forty-eight hours. I, of course, irrigate the bladder and urethra; I did this before, but my results have been better since using the diuretin. I have used it in every major operation that I have performed, and my assistant, Dr. Fuller, has used it twice, and in no instance has there been any urinary fever proper—that is, there never has been a chill or a suppression. The cases cover all ages from eighteen to eighty, with desperate complications, such as pyelitis, urine loaded with albumen and casts, diabetes, etc. Patients have had shock, fever sometimes, and various complications, but never chill or suppression. The number operated on is 13; not large, it is true, but it was in the summer season, and all were private patients. The time is too short for generalization, but when it is remembered that the cases were: Supra-pubic prostatectomy, 6; supra-pubic lithotomy (diabetes), 1; perineal section, 3; perineal section without guide, 2; litholapaxy, 1; mostly in old men with damaged kidneys, all of whom recovered without chill or any tendency to suppression, it is fair to imagine that the means used had something to do with it, and the diuretin is the only new drug. In three of the cases there was profound shock after the chloroform (which I now always use), but the kidneys acted all along.

Diuretin appears to be a diuretic, seemingly pretty constant in its action. It does not irritate the stomach, bowels, or nerves, and does not depress a weak heart. The dose is 10 to 15 grains often repeated, to 90 or even 120 grains a day, given in powder or in pill form—preferably gelatin-coated pill, as the powder deteriorates on exposure. If it will prevent, or even moderate urinary fever, it is a valuable drug.—*Medical News, Philadelphia.*

McKesson & Robbins' Gelatine Coated Pills of Diuretin-Knoll, 5 grains.

CAUTION!

All the observations in this pamphlet have reference to the use of the preparation of Knoll & Co.; as there are imitations in the market, physicians should see that the genuine is supplied. It is put up only in original vials of one ounce, and in McK. & R. 5 gr. pills in bottles of 100 and 500 each, and is plainly labeled DIURETIN–KNOLL.

Full notes sent on request, by
McKESSON & ROBBINS,
New York.

On account of the increased demand, we are able to reduce the price of **Diuretin-Knoll** more than 25 per cent., which is important, as the necessary doses are large.

Lapactic Pills.

A combination introduced by us and found in practice to possess superior advantages over other similar formulas. The well known mild action of Aloin on the lower portion of the intestinal canal, and its power of stimulating the hepatic functions, is supplemented by the action of Ipecac as a stomachic tonic and by increasing the gastric secretions; the Belladonna acts specially upon the involuntary muscular fibres of the bowels, increasing peristalsis, diminishing the harshness, and at the same time increasing the effectiveness of the laxative. The general tonic effect of Strychnine upon the stomach and bowels and its direct action upon the sympathetic, make it a valuable addition in the permanent cure of **habitual constipation and atonic dyspepsia.**

Since we first called attention to our Lapactic Pills, some four years ago—publishing the composition of the same—a number of manufacturers have adopted the formula and have furnished these pills under the same name. Should Physicians fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints from physicians by letter), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term "LAPACTIC PILLS, S. & D.'S." when prescribing these pills.

SAMPLES WILL BE MAILED ON APPLICATION.

SPECIAL FORMULAS MADE TO ORDER.

WHEN PURCHASING, PLEASE SPECIFY S. & D's.

Sharp & Dohme,

MANUFACTURING CHEMISTS,

Established 1860. Baltimore, Md.

SCOTT'S EMULSION

VERSUS

PLAIN COD LIVER OIL.

Plain Cod Liver Oil *is indigestible, deranges the stomach, destroys the appetite is not assimilated,* and in a majority of cases is detrimental to the patient.

SCOTT'S EMULSION

Can be *digested in nearly all cases, is assimilated, does not derange the stomach, nor overtax the digestive functions,* and can be taken for an indefinite period when the plain cod liver oil cannot be tolerated at all, and with most marked results in *Anæmia, Consumption* and all wasting conditions. It also contains the *Hypophosphites of Lime and Soda with Glycerine,* which are most desirable adjuncts.

WHEN PHYSICIANS TRY IT THEY INVARIABLY USE IT

in preference to the plain cod liver oil or other *so-called Emulsions* that invariably separate, and hence their integrity and value is destroyed. *Scott's Emulsion is palatable and absolutely permanent* hence its integrity is always preserved.

The formula for SCOTT'S EMULSION is 50 per cent. of the finest Norwegian Cod Liver Oil, 6 grains Hypophosphite of Lime and 3 grains Hypophosphite of Soda to the fluid ounce, Emulsified, or digested to the condition of assimilation with chemically pure Glycerine and Mucilage.

We also wish to call your attention to the following preparations:

CHERRY MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain and nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula).

Prepared from carefully selected German Buckthorn Bark, Juglans Bark and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

SCOTT & BOWNE, 132 South Fifth Avenue, NEW YORK.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

— Landois and Sterling.

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

— Materia Medica and Therapeutics, Dr. Mitchell Bruce.

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

— Eustace Smith, M.D., F.R.C.S.

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

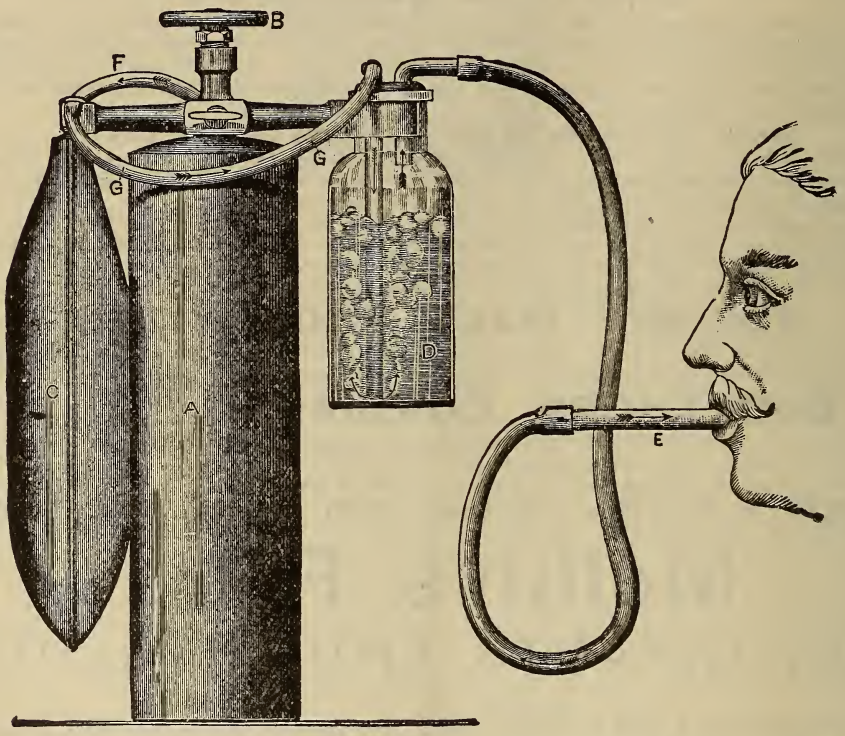
THE DOLIBER-GOODALE CO.,

BOSTON, MASS.

INHALATION APPARATUS

FOR

THE THERAPEUTIC ADMINISTRATION OF OXYGEN.



In the treatment of lung troubles by Oxygen its exhibition by inhalation is preferred. The apparatus herewith shown is a modification of the Nitrous Oxide apparatus which we have supplied for many years. It is made in the best manner throughout, and is the outcome of years of experience in the manufacture of gas apparatus. It will be found to meet all the requirements.

We supply the gas in two sizes of cylinders, containing respectively forty and one hundred gallons, either pure Oxygen or a mixture of Oxygen and Nitrous Oxide in definite proportions of 20 per cent., and forty per cent. of Nitrous Oxide.

Whether pure or mixed the gas is sold at the uniform price of 5 cents a gallon. The cost of the cylinders will be refunded on their return empty with the valves in good condition. Full description of Inhalation and Enema apparatuses with directions for use accompany each apparatus, or will be supplied on application.

PRICES.

Inhalation Apparatus	$5.00
Cylinder, 40 gallons' capacity	6.00
40 gallons Gas, either pure Oxygen or mixed Oxygen and Nitrous Oxide	2.00
Complete Apparatus, Cylinder, and 40 gallons Gas	$13.00
Inhalation Apparatus	$5.00
Cylinder, 100 gallons' capacity	15.00
100 gallons Gas, either pure or mixed	5.00
Complete Apparatus, Cylinder, and 100 gallons Gas	$25.00

THE S. S. WHITE DENTAL MFG. CO.

PHILADELPHIA, NEW YORK, BOSTON, CHICAGO, BROOKLYN, ATLANTA.

ESTABLISHED 1855.

DR. STRONG'S SANITARIUM,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for TREATMENT, CHANGE, REST, OR RECREATION.

And places them under well-regulated hygienic conditions so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it has a Sun Parlor and Promenade on the roof. Turkish, Roman, Sulphur, Electro-Thermal, the French Douche, and all Hydropathic Baths; Vacuum Treatment, Swedish Movements, Massage, Pneumatic Cabinet Inhalations of Medicated, Compressed, and Rarefied Air, Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, with elevator, electric bells, open fire-places, steam, and thorough ventilation. With cheering influences and avoiding the pressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in winter tobogganing, elegant sleighing, etc.; in Summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience.

A liberal discount to physicians and their families for board or treatment. For illustrated Circular, Address:

DR. S. E. STRONG, THE SANITARIUM, 90 CIRCULAR ST.

FOR SALE.

$7,000 RARE CHANCE.

For sale, a practice worth $5,000 a year, together with property worth over $8,000, for $7,000. Property located in a pleasant thriving town of 1600 inhabitants, on the shores of Lake Erie, in Ohio, and consists of corner lot, 175 feet front, well improved with dwelling of eleven rooms, well furnished, (Brussels carpets, piano, etc.). Two-story office building, well furnished with books, instruments, and large stock of drugs. Large barn, four good horses, three buggies, carriage, sleigh, harnesses, robes, etc.

Small payment down, balance on time, with good security. Will stay to introduce purchaser.

A fortune for a good man.

Address, DOCTOR,
Care Medical and Surgical Reporter.

Terrace Bank Sanitorium,

DR. R. S. SUTTON'S PRIVATE INSTITUTION FOR THE TREATMENT OF *DISEASES OF WOMEN.*

Address, 170 Ridge Ave., Allegheny, Pa.

FOR SALE.

A physician's property and practice, about twenty-two miles from Philadelphia, in lower end of Bucks county, for sale. Practice established a number of years, and worth from $2,500 to $3,000 a year; fine property, fitted up especially for physician, fine country and desirable location. Price, $5,000. About half can remain upon mortgage at 5 per cent.

Address, **SAM'L J. GARNER,**
HATBORO, PA.

JAROS HYGIENIC UNDERWEAR

WOOL FLEECE KNIT

FORMULA.—Unspun Wool knitted into meshes of a cotton thread Basis, the theories of Profs. Von Pettenkofer, Parkes, Kreiger, Buck and others.

ADVANTAGES.—Capillary action of unspun wool upon the body. Greatest hydroscopic qualities and non-irritating. Interstices naturally formed, stores body temperature. Prevents rapid radiation during climatic changes, aids transportation of moisture. Porosity, elasticity, perfect fit and non-shrinkability are regarded.

INDICATIONS.—Rheumatism, Kidney Disease (Nephrites), Pulmonary Consumption, Catarrhal Troubles, La Grippe, etc, as well as a general prophylactic.

NOTE.—Features accomplished have been recognized by the medical profession since 1884, also endorsed by U. S. Army, U. S. Navy, Police and Fire Departments.

80-Page Treatise containing reports of results in special practice as well as from U. S. Government, mailed post-paid on application

Jaros Hygienic Underwear Co.

831 BROADWAY, NEW YORK

For letters no street address is necessary

DÉVIATION DES RÈGLES.

ALETRIS CORDIAL (Rio) is, perhaps, the most important remedial agent yet known. It is *the* remedy for the wrongs of menstruation, by restoring normal functional activity to the uterine apparatus. Prolapsus, Menorrhagia, Leucorrhea, Amenorrhea, Dysmenorrhea, Subinvolution, Metritis, Ovarian Neuralgia, etc., all yield to its beneficial influence. Physicians find a certainty in its action as a uterine tonic, that is peculiar to no other remedy. A special indication for its use

IS THE DRAGGING SENSATION

in the lower bowels. It quickly restores the strength and waning vitality of the chlorotic girls and pregnant women. Habitual miscarriage and the excessive nausea of early pregnancy are effectually prevented by its timely and continued use. In a word, it restores tone to the uterine system, and thus relieves all abnormal conditions.

PREFERABLE TO CORROSIVE SUBLIMATE

Because it is not poisonous

Because it possesses superior antiseptic properties

Because it forms no insoluble compounds with the animal fluids

Because it produces no pain or irritation even of abraded surfaces

For use in all cases and under all circumstances where CORROSIVE SUBLIMATE has hitherto been employed

APPLICABLE WHEREVER AN ANTISEPTIC IRRIGATION or Lotion is indicated and as a Prophylactic and Disinfectant under any and all circumstances

CHLORO PHENIQUE

PERFECTLY MISCIBLE WITH WATER

For washing out the cavities, or THE BLADDER IN CHRONIC CYSTITIS it has no equal

A Non-Irritant Non-Poisonous Antiseptic and Parasiticide of Great Energy

In FOUL WOUNDS, ABSCESSES, SUPPURATING SINUSES, BUBOES, etc., CHLORO-PHÉNIQUE is used to cleanse and to prepare the way for "Campho-Phénique," which latter as a permanent dressing, subdues pain, prevents the formation of pus, and hastens healing in a remarkable manner

PHENIQUE CHEMICAL COMPANY

Dr. J. FEHR'S

"COMPOUND TALCUM" * * * * "BABY POWDER,"

THE

"HYGIENIC DERMAL POWDER"

FOR

INFANTS AND ADULTS.

Introduced to the Medical and the Pharmaceutical professions by J. FEHR, in the year 1873.

COMPOSITION:—Silicate of Magnesia with Carbolic and Salicylic Acids.

PROPERTIES:—Antiseptic, Antizymotic, and Disinfectant.

Useful as a **GENERAL SPRINKLING POWDER,** with positive Hygienic, Prophylactic, and Therapeutic properties.

GOOD IN ALL AFFECTIONS OF THE SKIN.

PER BOX, PLAIN, 25 Cents; PERFUMED, 50 Cents.
PER DOZ., PLAIN, $1.75; PERFUMED, $3.50.

SOLD BY THE DRUG TRADE GENERALLY.

MANUFACTURER:

JULIUS FEHR, M.D.,

Ancient Pharmacist, HOBOKEN, N. J.

Only advertised in Medical and Pharmaceutical prints.

NEUROSINE

THE MOST POWERFUL NEUROTIC ATTAINABLE.

ANODYNE AND HYPNOTIC.

A most efficient and permanent preparation, **REMARKABLE** for its efficacy and **THERAPEUTIC EFFECTS** in the treatment of those **NERVOUS AFFECTIONS** and morbid conditions of the System which so often tax the skill of the Physician.

A RELIABLE AND TRUSTWORTHY REMEDY FOR THE RELIEF OF

HYSTERIA, EPILEPSY, NEURASTHENIA, MANIA, CHOREA, UTERINE CONGESTION, MAGRAINE, NEURALGIA, ALL CONVULSIVE AND REFLEX NEUROSES.
THE REMEDY PAR EXCELLENCE IN DELIRIUM AND RESTLESSNESS OF FEVERS.

FORMULA:—Each fluid-drachm contains 5 grains each, C. P. Bromides of Potassium, Sodium and Ammonium 1-8 gr. Bromide Zinc, 1-64 gr. each of Ext. Belladonna and Cannabis Indica, 4 grains Ext. Lupuli and 5 minims fluid Ext. Cascara Sagrada, with Aromatic Elixirs.

DOSE:—From one teaspoonful to a tablespoonful, in water, three or more times daily as may be directed by the Physician.

To any physician, unacquainted with the medicinal effect of Neurosine, we will mail pamphlet contain full information, suggestions, and various methods of treatment; also a variety of valuable prescriptions that have been thorougly tested in active practice, or to physicians desiring to try our preparation, and who will pay express charges, we will send on application a sample bottle free.

DIOS CHEMICAL CO.,
ST. LOUIS MO., U. S. A.

VACCINE MATTER.

For the accommodation of our Subscribers, we will supply both Bovine and Humanized Vaccine Virus.

Guaranteed to be fresh and in every respect first class.

PRICES:

Bovine Crusts, - - -	**$1 50 each**
Bovine Points or Quills, -	**1.00 a dozen.**
Humanized Crusts, - -	**1.00, small.**
Humanized Crusts, - -	**2.00, large.**

The Humanized Crusts are warranted to be from typical cases, and in every instance from healthy children, with unquestionable family histories.

PLEASE ACCOMPANY THE ORDER WITH THE MONEY.

Scherff's Syrup of Hydriodic Acid.

A PERMANENT UNALTERABLE PREPARATION.

NON-IRRITANT. PALATABLE. EFFICIENT

Each fluid ounce of this Syrup represents the equivalent of 6.72 grains of absolute Hydriodic Acid. Particular stress is laid on the one great superiority; this Syrup will not decompose, and the danger (so common to other like preparations) of administering a preparation of free iodine, is absolutely avoided.

Descriptive Pamphlets and Clinical Reports mailed on request.

WESTERN PENNSYLVANIA MEDICAL COLLEGE
CITY OF PITTSBURGH.

SESSIONS OF 1892.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. MCKENNAN, 810 Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Ave., Pittsburg.

The Baltimore Medical College.

PRELIMINARY FALL COURSE begins Sept. 1, 1891.
REGULAR WINTER COURSE begins October 1, 1891.

Excellent Teaching Facilities, Capacious Hospital, Large Clinics.

DAVID STREETT, M. D., Dean,
408 N. Exeter St., Baltimore, Md.

WALNUT LODGE HOSPITAL,
HARTFORD, CONNECTICUT.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish Bath, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefitted from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M. D.,
Sup't Walnut Lodge, Hartford, Conn.

DR. MASSEY'S

PRIVATE SANATORIUM.

Presenting the comforts of an elegant private residence, this institution is specially equipped for the use of electricity and allied remedial measures in the diseases of women and in diseases of the nervous system. For particulars address

G. BETTON MASSEY, M. D.,
212 S. Fifteenth St., Philadelphia.

Prickly Heat, Chafing, Dandruff,

Odors from Perspiration, etc. Speedy Relief by Using

Packer's Tar Soap.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

ST. LOUIS, MO

A WEEKLY JOURNAL.

ESTABLISHED IN 1853 BY
S. W. BUTLER, M. D.

THE Medical and Surgical Reporter.

EDWARD T. REICHERT, M. D., Editor.
(Prof. Physiology, University of Penna.)
CHAS. K. MOUNT, Advertising Manager.

PROSPECTUS.

For nearly forty years ***The Medical and Surgical Reporter*** has held a position of influence and popularity second to that of no other publication in medicine. Last May the Editorial and Business Management was changed, the journal was enlarged from twenty-eight to forty pages, and the publication in almost every way was radically improved. That these changes have been appreciated by the profession is evident in the phenomenal increase of our subscription list and in the number of new advertisements.

The enlarged ***Reporter*** now enables us to offer more pages of reading matter each year than are given by any other medical periodical in America, and more material of direct practical value to the practising physician than is furnished in any other journal in the English language. We now publish during the year over 3500 separate articles, representing the best thought in the profession. These include about as follows:—

75 ***Clinical Lectures*** by leading clinicians in this country and abroad.
200 ***Original Communications.***
60 ***Society Reports.***
25 ***Letters by Special Correspondents.***
800 ***Selected Prescriptions.***
75 ***Editorials on Timely Topics.***
150 ***Letters from our Subscribers.***
150 ***Book Reviews.***
2000 ***Periscope Articles,*** carefully selected and condensed, and representing all important progress in medicine in all branches and languages.

The ***Reporter*** is truly a magazine of medical progress, it is thoroughly practical, and is especially adapted to the wants of the busy practitioner. There is no State or Country in America that it does not reach, and no civilized Country that does not regularly receive it.

The ***Reporter*** is published every Saturday, and is mailed to subscribers in the United States and Canada for $5.00 a year in advance, and to those in foreign countries for $6.00 in advance. It will be sent for three months on trial for $1.00.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{50}$ gr.), Atropiæ Sulph. ($\frac{1}{100}$ gr.), Codeia ($\frac{1}{10}$ gr.), Antimony Tart. $\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{10}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

How Physicians Make Reputations!

THE successful doctors are those who are ever on the lookout for the best information upon the application of their remedies. They have no time to experiment, and consequently have no time to follow any but the most concise, and, at the same time, the most reliable writers. In this way they succeed, while others, who follow every rainbow simply because irresponsible people tell them there is a bag of gold on the end thereof, fail in their professions.

During the time the **Londonderry** has been before the profession it has been in constant use by the most eminent physicians. They write about it in Medical Books and Journals, report cases in Medical Societies and praise it in the Lecture Room. It has become known as a **Standard Remedy** for all forms of Lithæmia. The wise successful doctors are flocking to the standard of **Londonderry**, and when they once prove its striking power they do not forsake it. For the benefit of physicians who have not yet tried and tested this matchless gift of nature we have collected in a neat little pamphlet some of the opinions referred to above. They are from the most eminent clinicians and writers in the United States, and are well worth the perusal of live physicians who wish to know the latest thought on the subject of Gout, Rheumatism, Gravel and General Lithæmia.

REPORTER for one year, . . . $5.00
Wood's Nervous Diseases and Their Diagnosis, ... 4.00
$9.00

Nervous Diseases and Their Diagnosis

By H. C. WOOD, M. D., LL. D.,

Professor of Therapeutics and Nervous Diseases, University of Pennsylvania.

8vo., pp. 501, Cloth, $4.

It is invaluable as a work of diagnosis.—*Virginia Medical Monthly.*

It is at once a substantive contribution to neurology and a trustworthy guide to what has already been done in the subject.—*Practitioner.*

As a whole, the work is one which cannot fail to be of great service to the practicing physician.—*Medical and Surgical Reporter.*

The volume is a distinct help to the student, and is a necessary supplement to the systematic works on diseases of the nervous system.—*Boston Med. Surg. Jour.*

The author's originality is evident to every reader of his work; and we trust, for the advancement of knowledge, his readers will be many.—*New England Med. Gaz.*

This work fills a long-felt need in this department.—*Buffalo Med. Surg. Jour.*

Dr. Wood is an able clinician, and this makes his book valuable. His observations are practical and to the point and show careful study of a large number of cases which have fallen under his care.—*N. Y. Med. Jour.*

The honest effort of one who never writes without teaching and who always writes and teaches well.—*Journal of Insanity.*

To students and practitioners who have read other works this production will prove extremely valuable in time of need, to the former just before examination; to the latter in everyday practice.—*London Lancet.*

Not a compilation, but rather the record of independent opinions and investigations.—*Canadian Practitioner.*

The book is written in the characteristic vigorous style of its able and versatile author.—*American Practitioner.*

Lucid language, clear type, a full index, and, above all, the presentation of the late advances in this department of science, constitute the truly great attractions of this book.—*Albany Med Annals.*

It is not until the volume has been carefully read, and perhaps re-read, that its true excellence begins to dawn upon the reader.—*Maryland Med. Jour.*

THE BEST FRENCH TONIC

Vin de Bugeaud

A TONIC AND NUTRITIVE WINE WITH CINCHONA AND COCOA

VIN DE BUGEAUD is prepared with the greatest care, with active substances of the very best quality, and chiefly with wild Bolivian Cinchona, the cultivated species being strictly discarded, and the proportions being precisely in accordance with the French pharmacopœa.

It is perfectly tolerated by the most delicate stomachs, owing to the emollient action of the Cocoa it contains, which favourably corrects the over exciting properties and the bitter taste of the Cinchona.

In preparing it, a full-bodied Spanish wine is employed, this wine being more than any other capable of dissolving the medicinal ingredients.

VIN DE BUGEAUD commends itself to the medical profession oth by its tonic and antiperiodic properties, and by the certainty nd continuity of its action in cases of

Anæmia, Chlorosis, Intermittent Fever, Chronic Diarrhœa, Gastralgia, Convalescences,

in a word to combat

Constitutional or Accidental Debility

no matter from what cause arising.

It is specially suitable for convalescents, debilitated children, delicate women and old persons enfeebled by age and infirmities.

VIN DE BUGEAUD has enjoyed since 1858 the high approbation of the New-York Academy of Medicine. Thousands of practitioners of all countries have spontaneously borne testimony to its efficacy.

Professionnal gentlemen are invited to apply for a copy of the pamphlet (sent free on demand) which contains, along with a few remarks on **VIN DE BUGEAUD** and the opinions of the French medical press on the subject, a number of the most recent testimonials.

VIN DE BUGEAUD may be obtained of all good Chemists and Druggists.

P. LEBEAULT & Cie.

COLDEN'S LIQUID BEEF TONIC

AN INVALUABLE AID IN MEDICAL PRACTICE.

ORIGINAL | COLDEN'S LIEBIG'S LIQUID EXTRACT OF BEEF AND TONIC INVIGORATOR. | LABEL.

ESSENTIALLY DIFFERENT FROM ALL OTHER BEEF TONICS. UNIVERSALLY ENDORSED BY LEADING PHYSICIANS.

This preparation, consisting of the Extract of Beef (prepared by Baron Liebig's process), the best Brandy obtainable, soluble Citrate of Iron, Cinchona and Gentian is offered to the Medical Profession upon its own merits. It is of inestimable value in the treatment of **Debility, Convalescence from Severe Illness Anæmia, Malarial Fever, Chlorosis, Incipient Consumption, Nervous Weakness,** and maladies requiring a Tonic and Nutrient. It is quickly absorbed by the Stomach and upper portion of the Alimentary Canal, and therefore finds its way into the circulation quite rapidly.

COLDEN'S LIQUID BEEF TONIC appeals to the judgment of intelligent Physicians in the treatment of

ALL CASES OF GENERAL DEBILITY.

By the urgent request of several eminent members of the medical profession, I have added to each wineglassful of this preparation two grains of Soluble Citrate of Iron, and which is designated on the label, "**With Iron, No. 1**;" while the same preparation, **Without Iron,** is designated on the label as "**No. 2.**"

In prescribing this preparation, physicians should be particular to mention "*COLDEN'S*," viz., "*Ext. Carnis Fl. Comp.* (*Colden*)." A Sample of **COLDEN'S BEEF TONIC** will be sent free on application, to any physician (enclosing business card) in the United States. *Sold by druggists generally.*

THE ALE & BEEF COMPANY,

DAYTON, OHIO, U. S. A.

Two full-sized bottles will be sent FREE to any physician who will pay express charges.

"Orders from all parts of the Dominion of Canada, supplied by The Canadian Peptonized Beef & Ale Co., Limited' 153 Hollis Street, Halifax, N. S."

SYR. HYPOPHOS. CO., FELLOWS

Contains the Essential Elements of the Animal Organization—Potash and Lime;

The Oxidizing Agents—Iron and Manganese;

The Tonics—Quinine and Strychnine;

And the Vitalizing Constituent—Phosphorus; the whole combined in the form of a Syrup with a **Slightly Alkaline Reaction.**

It Differs in its Effects from all Analogous Preparations; and it possesses the important properties of being pleasant to the taste, easily borne by the stomach, and harmless under prolonged use.

It has Gained a Wide Reputation, particularly in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs. It has also been employed with much success in various nervous and debilitating diseases.

Its Curative Power is largely attributable to its stimulant, tonic, and nutritive properties, by means of which the energy of the system is recruited.

Its Action is Prompt; it stimulates the appetite and the digestion, it promotes assimilation, and it enters directly into the circulation with the food products.

The prescribed dose produces a feeling of buoyancy, and removes depression and melancholy; *hence the preparation is of great value in the treatment of mental and nervous affections.* From the fact, also, that it exerts a double tonic influence, and induces a healthy flow of the secretions, its use is indicated in a wide range of diseases.

NOTICE—CAUTION.

The success of Fellows' Syrup of Hypophosphites has tempted certain persons to offer imitations of it for sale. Mr. Fellows, who has examined samples of several of these, ***finds that no two of them are identical,*** and that all of them differ from the original in composition, in freedom from acid reaction, in susceptibility to the effects of oxygen when exposed to light or heat, ***in the property of retaining the strychnine in solution,*** and in the medicinal effects.

As these cheap and inefficient substitutes are frequently dispensed instead of the genuine preparation, physicians are earnestly requested, when prescribing the Syrup, to write "Syr. Hypophos. ***Fellows.***"

As a further precaution, it is advisable that the Syrup should be ordered in the original bottles; the distinguishing marks which the bottles (and the wrappers surrounding them) bear, can then be examined, and the genuineness—or otherwise—of the contents thereby proved.

Medical Letters may be addressed to:

Mr. FELLOWS, 48 Vesey Street, New York.

PHILLIPS' COD LIVER OIL

EMULSION.

A TRUE EMULSION WITHOUT SAPONIFICATION.

In all essential features, it represents the highest degree of perfection in the Emulsionizing of Cod Liver Oil.

This preparation is not advertised to the public, and enjoys Professional popularity because of its high standard of excellence, uniformity and reliability.

VIN MARIANI

"The Standard Preparation of Erythoxylon Cocoa."

CAREFUL, continued testing by upwards of seven thousand practitioners in America, whose written opinions over their signatures (in our possession) are fully in accord and clearly prove the efficacy and merits of "VIN MARIANI," may be thus summarized:

"Diffusible stimulant and tonic in anæmia, nervous depression, sequelæ of childbirth, lymphatism, tardy convalescence, general 'Malaise,' and after wasting fevers.

"Special reference to the nervous system, in all morbid states, melancholia, etc.

"Tonic in laryngeal and gastric complications, stomach troubles.

"All cases where a general toning or strengthening of the system is needed.

"The only tonic stimulant without any unpleasant reaction, and may be given indefinitely, never causing constipation."

N. B.—This Wine has been found always uniform and reliable, owing to the selection of the finest ingredients and the greatest accuracy in its manipulation. When prescribing, therefore, the Medical Profession are strongly advised to specify "VIN MARIANI," in order to avoid the substitution of imitations, often worthless and consequently disappointing in effect.

Please Specify VIN MARIANI.

Elixir Chloralamid-Schering.

CHLORALAMID-SCHERING, the new hypnotic introduced a little over two years ago, has now assumed a permanent position in materia medica, and is highly esteemed and largely employed by the medical profession. Reports on the therapeutics of Chloralamid-Schering have been overwhelmingly favorable, in text books, special treatises, society reports, lectures, editorials, etc.; when occasionably failure to produce sleep has been reported, we have investigated the facts and usually substantiated that the remedy was not properly administered. To preclude failure on this account once for all, we have concluded to introduce a preparation in permanent solution, elegant in appearance, palatable,—**perfect**

Elixir Chloralamid-Schering

is put up in 8 oz. prescription vials, ready for dispensing without change, except that the pharmacist must write the directions on the label and impress his stamp on same. The package is unique, and will, no doubt, meet with the approval of physicians and pharmacists.

There is no better form for administering Chloralamid-Schering, and physicians will surely give it their preference.

It is desired that this bottle be delivered on physician's prescription complete and unopened,—first writing the necessary facts on label on opposite side.

ELIXIR

Chloralamid

(SCHERING)

Each tablespoonful contains one gramme (15 grains) of Chloralamid-Schering.

HYPNOTIC.

Chloralamid-SCHERING is a superior hypnotic; an efficient and safe sleep-producing agent; its use is not attended by unpleasant and untoward side or after-effects, nor will continued use develop a habit or necessitate increasing doses. Eminent medical authorities have endorsed Chloralamid, and full clinical reports with chemical and therapeutical data will be furnished to physicians and pharmacists on request.

Directions:—A tablespoonful at a dose, taken one-half hour before sleep is desired; if effect is not prompt and satisfactory the dose may be repeated at intervals of 15 minutes—not more than twice.

PUT UP ONLY BY THE
Sole Agents & Licensees for America:

LEHN & FINK,

IMPORTERS, WHOLESALE DRUGGISTS AND MANUFACTURING CHEMISTS,

NEW YORK.

(This descriptive label is attached to every bottle, and may be removed before dispensing.)

To be obtained from all Leading Pharmacists, and supplied by all Wholesale Druggists in the United States.

A full descriptive treatise (52 pages) on Chloralamid-Schering will be mailed to physicians on request.

SOLE AGENTS AND LICENSEES:

LEHN & FINK, 128 William Street, NEW YORK.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK:)

Each fluid drachm represents 15 grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium and Lithium.

USES: EPILEPSY, UTERINE CONGESTION, HEADACHE, AND ALL CONGESTIVE, CONVULSIVE AND REFLEX NEUROSES.

This preparation produces results, which can not be obtained from the use of commercial Bromide substitutes.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK.)

From Sea Weed. **Uses: Malaria, Phthisis, Etc.**

An ALLY of quinine—quinine CHECKS the Malarial Chill; Fucus Marina ELIMINATES the Malarial CAUSE; and thus prevents the recurrence of the Chill *after* it has been *checked* by quinine.

An INVALUABLE REMEDY in the treatment of Phthisis—it arrests the decay of lung tissue, diminishes the fever, lessens the cough, abates the soreness in the lungs, improves the appetite, and impedes the progressive emaciation.

DOSE.—One Teaspoonful IN WATER, four times a day.

CHIONIA FROM CHIONANTHUS.

Uses: Biliousness, Jaundice, Dyspepsia, Constipation, and all Diseases Caused by Hepatic Torpor.

CHIONIA stimulates the Liver and restores it to a healthy condition, without debilitating the system by Catharsis; does not purge, per se, but under its use the Liver and Bowels gradually resume their normal functions.

DOSE.—One Fluid Drachm three times a day.

PEACOCK CHEMICAL CO., ST. LOUIS.

NOTE UPON A POSSIBLE SERVICE TO BE EXPECTED FROM DIURETIN IN GENITO-URINARY SURGERY

BY EDWARD L. KEYES, M. D., NEW YORK.

(*Medical News, Philadelphia, 1891, October.*)

Dr. Budin.

IN June last I went to a city near New York to take a large stone from the bladder of an old gentleman, and at the same time to remove an outstanding third lobe. His case was desperate. He had suffered long, and for four years he had been an invalid, spending most of the last year in bed, taking opium suppositories, and passing his catheter hourly sometimes, and again at longer intervals. He could not urinate at all without the catheter. I cut this patient above the pubes, and took out a stone as large as an egg and a prostatic third lobe as large as the last joint of the thumb. The bladder was thin-walled, corrugated, trabeculated, and sacculated. I put my finger into holes on each side which seemed like ureteral orifices, but did not stop to investigate closely. They could not have been orifices of the ureters, because they are closed even when the ducts are enormously dilated. His urine had been like gruel, full of albumen and all sorts of detritus. There was no question of there being dilated ureters, pyelitis, and more or less interstitial nephritis on both sides. The operation was done simply because it had to be done in compassion for the old man's sufferings. The outlook was desperate.

I thought then, of trying diuretin, and telephoned for it before the patient recovered from his anesthetic, ordering 10 grains to be given at once, and frequently repeated. This patient got well.

Since that time I have used diuretin in every case of urethral or bladder operation that has fallen under my hands. I give 60 grains of salol per day for forty-eight hours before operating, and commence diuretin on the day of the operation; given it also in doses of 10 grains every four hours for forty-eight hours. I, of course, irrigate the bladder and urethra; I did this before, but my results have been better since using the diuretin. I have used it in every major operation that I have performed, and my assistant, Dr. Fuller, has used it twice, and in no instance has there been any urinary fever proper—that is, there never has been a chill or a suppression. The cases cover all ages from eighteen to eighty, with desperate complications, such as pyelitis, urine loaded with albumen and casts, diabetes, etc. Patients have had shock, fever sometimes, and various complications, but never chill or suppression. The number operated on is 13; not large, it is true, but it was in the summer season, and all were private patients. The time is too short for generalization, but when it is remembered that the cases were: Supra-pubic prostatectomy, 6; supra-pubic lithotomy (diabetes), 1; perineal section, 3; perineal section without guide, 2; litholapaxy, 1; mostly in old men with damaged kidneys, all of whom recovered without chill or any tendency to suppression, it is fair to imagine that the means used had something to do with it, and the diuretin is the only new drug. In three of the cases there was profound shock after the chloroform (which I now always use), but the kidneys acted all along.

Diuretin appears to be a diuretic, seemingly pretty constant in its action. It does not irritate the stomach, bowels, or nerves, and does not depress a weak heart. The dose is 10 to 15 grains often repeated, to 90 or even 120 grains a day, given in powder or in pill form—preferably gelatin-coated pill, as the powder deteriorates on exposure. If it will prevent, or even moderate urinary fever, it is a valuable drug.—*Medical News, Philadelphia.*

McKesson & Robbins' Gelatine Coated Pills of Diuretin-Knoll, 5 grains.

CAUTION!

All the observations in this pamphlet have reference to the use of the preparation of Knoll & Co.; as there are imitations in the market, physicians should see that the genuine is supplied. It is put up only in original vials of one ounce, and in McK. & R. 5 gr. pills in bottles of 100 and 500 each, and is plainly labeled DIURETIN–KNOLL.

Full notes sent on request, by
McKESSON & ROBBINS,
New York.

On account of the increased demand, we are able to reduce the price of Diuretin-Knoll more than 25 per cent., which is important, as the necessary doses are large.

Lapactic Pills.

A combination introduced by us and found in practice to possess superior advantages over other similar formulas. The well known mild action of Aloin on the lower portion of the intestinal canal, and its power of stimulating the hepatic functions, is supplemented by the action of Ipecac as a stomachic tonic and by increasing the gastric secretions; the Belladonna acts specially upon the involuntary muscular fibres of the bowels, increasing peristalsis, diminishing the harshness, and at the same time increasing the effectiveness of the laxative. The general tonic effect of Strychnine upon the stomach and bowels and its direct action upon the sympathetic, make it a valuable addition in the permanent cure of **habitual constipation and atonic dyspepsia.**

Since we first called attention to our Lapactic Pills, some four years ago—publishing the composition of the same—a number of manufacturers have adopted the formula and have furnished these pills under the same name. Should Physicians fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints from physicians by letter), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term "LAPACTIC PILLS, S. & D.'S." when prescribing these pills.

SAMPLES WILL BE MAILED ON APPLICATION.

SCOTT'S EMULSION

VERSUS

PLAIN COD LIVER OIL.

Plain Cod Liver Oil *is indigestible, deranges the stomach, destroys the appetite is not assimilated,* and in a majority of cases is detrimental to the patient.

SCOTT'S EMULSION

Can be *digested in nearly all cases, is assimilated, does not derange the stomach, nor overtax the digestive functions,* and can be taken for an indefinite period when the plain cod liver oil cannot be tolerated at all, and with most marked results in *Anæmia, Consumption* and all wasting conditions. It also contains the *Hypophosphites of Lime and Soda with Glycerine,* which are most desirable adjuncts.

WHEN PHYSICIANS TRY IT THEY INVARIABLY USE IT

in preference to the plain cod liver oil or other *so-called Emulsions* that invariably separate, and hence their integrity and value is destroyed. *Scott's Emulsion is palatable and absolutely permanent* hence its integrity is always preserved.

The formula for SCOTT'S EMULSION is 50 per cent. of the finest Norwegian Cod Liver Oil, 6 grains Hypophosphite of Lime and 3 grains Hypophosphite of Soda to the fluid ounce, Emulsified, or digested to the condition of assimilation with chemically pure Glycerine and Mucilage.

We also wish to call your attention to the following preparations:

CHERRY MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain aud nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula).

Prepared from carefully selected German Buckthorn Bark, Juglans Bark and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

SCOTT & BOWNE, 132 South Fifth Avenue, NEW YORK.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

—Landois and Sterling.

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

—Materia Medica and Therapeutics, Dr. Mitchell Bruce.

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

—Eustace Smith, M.D., F.R.C.S.

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

ABOUT GAS TREATMENT.

We make and sell oxygen and nitrogen monoxide for therapeutic use, and we guarantee them pure They are put up in compact form. (A cylinder containing 100 gallons of nitrogen monoxide or 40 gallons of oxygen measures 12 inches in length, has a diameter of 3½ inches, and weighs 10½ lbs. A cylinder containing 450 gallons of nitrogen monoxide or 100 gallons of oxygen measures 25 inches in length, has a diameter of 4½ inches, and weighs 34 lbs.)

INSOMNIA. Dr. Allan McLane Hamilton states that nitrogen monoxide, N_2O (nitrous oxide of the old nomenclature) has no equal in the treatment of this difficulty.

MELANCHOLIA. A short course of nitrogen monoxide is said to change the face of nature for such patients.

ANÆMIA. Where iron is not tolerated or proves inefficient, the addition of oxygen or a combination of oxygen and nitrogen monoxide has proven very beneficial.

For those who should, but cannot, go from home for rest or a change of air, or for those who, from any cause fail to get air enough into their lungs, the inhalation of one or other of these gases, or both in combination, promises great benefit. The testimony is that in cases of

ASTHMA, more than fifty per cent. of the cases yield to oxygen treatment, others are very greatly relieved, and a very small per cent. are not improved.

INDIGESTION and CONSTIPATION are said to be greatly relieved and very often conquered by continued treatment.

A highly esteemed New York physician has used more than twenty thousand gallons of nitrogen monoxide in his private practice. The letters received from his patients, largely from those who were afflicted with nervous disorders, are enthusiastic in their testimony as to the benefit received.

Regular practitioners who are using gas treatment testify that when *pure* oxygen and *pure* nitrogen monoxide, or a mixture of these, is used, no therapeutic agents are more uniformly successful when intelligently prescribed.

JAROS HYGIENIC UNDERWEAR

WOOL FLEECE KNIT

FORMULA.—Unspun Wool, knitted into meshes of a cotton thread Basis, the theories of Profs. Von Pettenkofer, Parkes, Kreiger, Buck and others.

ADVANTAGES.—Capillary action of unspun wool upon the body. Greatest hydroscopic qualities and non-irritating. Interstices naturally formed, stores body temperature. Prevents rapid radiation during climatic changes, aids transportation of moisture. Porosity, elasticity, perfect fit and non-shrinkability are regarded.

INDICATIONS.—Rheumatism, Kidney Disease (Nephrites), Pulmonary Consumption, Catarrhal Troubles, La Grippe, etc, as well as a general prophylactic.

NOTE.—Features accomplished have been recognized by the medical profession since 1884, also endorsed by U. S. Army, U. S. Navy, Police and Fire Departments.

80-Page Treatise containing reports of results in special practice as well as from U. S. Government, mailed post-paid on application

Jaros Hygienic Underwear Co.
831 BROADWAY, NEW YORK

For letters no street address is necessary

CELERINA

NERVE TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Loss of Nerve Power (so usual with Lawyers, Preachers, Writers and Business Men), Impotency, Spermatorrhea, Nervous Headache, Neuralgia, Paralysis, Hysteria, Opium Habit, Inebriety, Dyspepsia, and ALL LANGUID conditions of the System.

Indispensable to restore a patient after alcoholic excess.

DOSE.—One or two Teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One Teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation.

It Restores Normal Action to the Uterus, and Imparts Vigor to the Entire Uterine System.

Where Women have miscarried during previous pregnancies, or in any case where miscarriage is feared, ALETRIS CORDIAL is Indicated, and should be continuously administered during entire gestation.

S. H. KENNEDY'S

CONCENTRATED EXTRACT OF

PINUS CANADENSIS

DARK. A NON-ALCOHOLIC LIQUID. WHITE.

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be used,

RECOMMENDED BY PROMINENT EUROPEAN AND AMERICAN PHYSICIANS.

The above preparations are prepared exclusively for Physicians' Prescriptions, and a sample of each or all of them will be sent to any Physician who wishes to test them, if he will pay the Express Charges.

DIOVIBURNIA

UTERINE TONIC, ANTISPASMODIC AND ANODYNE.

A reliable and trustworthy remedy for the relief of Dysmenorrhœa, Amenorrhœa, Menorrhagia Leucorrhœa, Subinvolution, THREATENED ABORTION, Vomiting in Pregnancy and Chlorosis; directing its action to the entire uterine system as a general tonic and antispasmodic.

FORMULA.

Every ounce contains 3-4 dram each of the fluid extracts: Viburnum Prunifolium, Viburnum Opulus, Dioscorea Villosa, Aletris Farinosa, Helonias Dioica, Mitchella Repens, Caulophyllum Thalictroides, Scutellaria Lateriflora.
DOSE.—For adults, a desertspoonful to a tablespoonful three times a day, after meals. In urgent cases, where there is much pain, dose may be given every hour or two, ALWAYS IN HOT WATER.

Jno. B. Johnson, M. D., Professor of the Principles and Practice of Medicine, St. Louis Medical College.

ST. LOUIS, June 20, '88.

I very cheerfully give my testimony to the virtues of a combination of vegetable remedies prepared by a well-known and able pharmacist of this city, and known as DIOVIBURNIA, the component parts of which are well known to any and all physicians who desire to know the same, and therefore have no relation to proprietary or quack remedies. I have employed this medicine in cases of dysmonorrhœa, suppression of the catemania and in excessive leucorrhœa, and have been much pleased with its use. I do not think its claims (as set forth in the circular accompanying it) to be at all excessive. I recommend its trial to all who are willing to trust to its efficacy, believing it will give satisfaction. Respectfully,

Jno. B. Johnson

L. Ch. Boisliniere, M. D., Prof. of Obstetrics, St. Louis Medical College. ST. LOUIS, June 18, 1888.

I have given DIOVIBURNIA a fair trial and found it useful as an uterine tonic and antispasmodic, relieving the pains of dysmenorrhœa, and regulator of the uterine functions. I feel authorized to give this recommendation of DIOVIBURNIA, as it is neither a patented nor a secret medicine, the formula of which have been communicated freely to the medical profession.

L. Ch. Boisliniere M.D.

H. Tuholske, M. D., Professor Clinical Surgery and Surgical Pathology, Missouri Medical College; also Post-Graduate School of St. Louis. ST. LOUIS, June 23, 1888.

I have used DIOVIBURNIA quite a number of times—sufficiently frequently to satisfy myself of its merits. It is of unquestionable benefit in painful dysmenorrhœa; it possesses antispasmodic properties which seem especially to be exerted on the uterus.

Wm. H. Tuholske

To any physician, unacquainted with the medicinal effect of DIOVIBURNIA, we will mail pamphlet containing full information, suggestions, commendations of some of our most prominent professors and various methods of treatment; also a variety of valuable prescriptions that have been thoroughly tested in an active practice, or to physicians desiring to try our preparation, and who will pay express charges, we will send on application a sample bottle free.

DIOS CHEMICAL CO., ST. LOUIS, MO., U. S. A.

WESTERN PENNSYLVANIA MEDICAL COLLEGE
CITY OF PITTSBURGH.

SESSIONS OF 1892.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. MCKENNAN, 810 Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Ave., Pittsburg.

The Baltimore Medical College.

PRELIMINARY FALL COURSE begins Sept. 1, 1891.
REGULAR WINTER COURSE begins October 1, 1891.

WALNUT LODGE HOSPITAL,
HARTFORD, CONNECTICUT.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish Bath, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefitted from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M. D.,
Sup't Walnut Lodge, Hartford, Conn.

DR. MASSEY'S

PRIVATE SANATORIUM.

Presenting the comforts of an elegant private residence, this institution is specially equipped for the use of electricity and allied remedial measures in the diseases of women and in diseases of the nervous system. For particulars address

Prickly Heat, Chafing, Dandruff,

Odors from Perspiration, etc. Speedy Relief by Using

Packer's Tar Soap.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

ST. LOUIS, MO

A WEEKLY JOURNAL.

ESTABLISHED IN 1853 BY
S. W. BUTLER, M. D.

THE Medical and Surgical Reporter.

EDWARD T. REICHERT, M. D., Editor.
(Prof. Physiology, University of Penna.)

CHAS. K. MOUNT, Advertising Manager.

PROSPECTUS.

For nearly forty years ***The Medical and Surgical Reporter*** has held a position of influence and popularity second to that of no other publication in medicine. Last May the Editorial and Business Management was changed, the journal was enlarged from twenty-eight to forty pages, and the publication in almost every way was radically improved. That these changes have been appreciated by the profession is evident in the phenomenal increase of our subscription list and in the number of new advertisements.

The enlarged ***Reporter*** now enables us to offer more pages of reading matter each year than are given by any other medical periodical in America, and more material of direct practical value to the practising physician than is furnished in any other journal in the English language. We now publish during the year over 3500 separate articles, representing the best thought in the profession. These include about as follows:—

75 Clinical Lectures by leading clinicians in this country and abroad.
200 Original Communications.
60 Society Reports.
25 Letters by Special Correspondents.
800 Selected Prescriptions.
75 Editorials on Timely Topics.
150 Letters from our Subscribers.
150 Book Reviews.
2000 Periscope Articles, carefully selected and condensed, and representing all important progress in medicine in all branches and languages.

The ***Reporter*** is truly a magazine of medical progress, it is thoroughly practical, and is especially adapted to the wants of the busy practitioner. There is no State or Country in America that it does not reach, and no civilized Country that does not regularly receive it.

The ***Reporter*** is published every Saturday, and is mailed to subscribers in the United States and Canada for $5.00 a year in advance, and to those in foreign countries for $6.00 in advance. It will be sent for three months on trial for $1.00.

A Menstruum.

HORSFORD'S ACID PHOSPHATE.

This preparation has been found especially serviceable as a menstruum for the administration of such alkaloids as morphine, quinine and other organic bases which are usually exhibited in acid combination.

The admixture with pepsin has been introduced with advantage when indicated.

The Acid Phosphate does not disarrange the stomach, but, on the contrary, promotes in a marked degree the process of digestion.

DR. R. S. MILES, Glencoe, Minn., says: "I use it in a great many cases as a menstruum for quinine, when an acid is necessary."

Send for descriptive circular. Physicians who wish to test it will be furnished a bottle on application, without expense, except express charges.

Prepared under the direction of Prof. E. N. HORSFORD, by the
Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION:—Be sure the Word "HORSFORD'S" is PRINTED on the label. All others are spurious. NEVER SOLD IN BULK.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{60}$ gr.), Atropiæ Sulph. ($\frac{1}{300}$ gr.), Codeia ($\frac{1}{10}$ gr.), Antimony Tart. $\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{60}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

How Physicians Make Reputations!

THE successful doctors are those who are ever on the lookout for the best information upon the application of their remedies. They have no time to experiment, and consequently have no time to follow any but the most concise, and, at the same time, the most reliable writers. In this way they succeed, while others, who follow every rainbow simply because irresponsible people tell them there is a bag of gold on the end thereof, fail in their professions.

During the time the **Londonderry** has been before the profession it has been in constant use by the most eminent physicians. They write about it in Medical Books and Journals, report cases in Medical Societies and praise it in the Lecture Room. It has become known as a **Standard Remedy** for all forms of Lithæmia. The wise successful doctors are flocking to the standard of **Londonderry**, and when they once prove its striking power they do not forsake it. For the benefit of physicians who have not yet tried and tested this matchless gift of nature we have collected in a neat little pamphlet some of the opinions referred to above. They are from the most eminent clinicians and writers in the United States, and are well worth the perusal of live physicians who wish to know the latest thought on the subject of Gout, Rheumatism, Gravel and General Lithæmia.

Nervous Diseases and Their Diagnosis

By H. C. WOOD, M. D., LL. D..

Professor of Therapeutics and Nervous Diseases, University of Pennsylvania.

8vo., pp. 501, Cloth, $4.

It is invaluable as a work of diagnosis.—*Virginia Medical Monthly.*

It is at once a substantive contribution to neurology and a trustworthy guide to what has already been done in the subject.—*Practitioner.*

As a whole, the work is one which cannot fail to be of great service to the practicing physician.—*Medical and Surgical Reporter.*

The volume is a distinct help to the student, and is a necessary supplement to the systematic works on diseases of the nervous system.—*Boston Med. Surg. Jour.*

The author's originality is evident to every reader of his work; and we trust, for the advancement of knowledge, his readers will be many.—*New England Med. Gaz.*

This work fills a long-felt need in this department.—*Buffalo Med. Surg. Jour.*

Dr. Wood is an able clinician, and this makes his book valuable. His observations are practical and to the point and show careful study of a large number of cases which have fallen under his care.—*N. Y. Med. Jour.*

The honest effort of one who never writes without teaching and who always writes and teaches well.—*Journal of Insanity.*

To students and practitioners who have read other works this production will prove extremely valuable in time of need, to the former just before examination; to the latter in everyday practice.—*London Lancet.*

Not a compilation, but rather the record of independent opinions and investigations.—*Canadian Practitioner.*

The book is written in the characteristic vigorous style of its able and versatile author.—*American Practitioner.*

Lucid language, clear type, a full index, and, above all, the presentation of the late advances in this department of science, constitute the truly great attractions of this book.—*Albany Med Annals.*

It is not until the volume has been carefully read, and perhaps re-read, that its true excellence begins to dawn upon the reader.—*Maryland Med. Jour.*

or

Carnrick's Kumyss Tablets.

A PRODUCT OF PURE SWEET MILK.
PALATABLE, NUTRITIOUS,
EASILY DIGESTED.
AND WHEN DISSOLVED IN WATER
FORMS A DELICIOUS EFFER-
VESCENT KUMYSS.

(*Put up in air-tight bottles, in two sizes; the larger holding sufficient Tablets for seven twelve-ounce bottles, and the smaller sufficient for three twelve-ounce bottles of Kumyss.*)

THIS PREPARATION is presented to the Medical Profession in the convenient form of Tablets, and will be found superior in every respect to ordinary *Kumyss, Wine of Milk, Fermented Milk,* or any similar preparation.

Kumysgen when prepared for use contains every constituent of a perfect Kumyss.

Kumysgen is made from fresh, sweet milk, and contains fully thirty per cent. of soluble casein, which is double the amount found in ordinary Kumyss preparations.

Kumysgen being in Tablet form, will keep indefinitely, is easily and readily prepared, less expensive than the ordinary variable and perishable Kumyss, and its *fermentative action* may be regulated at will, thus rendering it available at all times and under all circumstances.

Clinical tests gathered from every quarter of the globe attest its special value in all cases of *Gastric* and *Intestinal Indigestion* or *Dyspepsia, Pulmonary Consumption, Constipation, Gastric and Intestinal Catarrh, Fevers, Anæmia, Chlorosis, Rickets, Scrofula, Vomiting in Pregnancy, Bright's Disease, Intestinal Ailments of Infants, Cholera Infantum; for young children and for convalescents from all diseases.*

The casein being finely subdivided, it is especially valuable for all who require an easily digested or a partially digested Food.

Kumysgen is a delicious effervescent Food-Beverage, relished alike by the sick or well.

Kumysgen is tonic, stimulant, diuretic, highly nutritious, easily digested, perfectly palatable, and always *permanent* and *uniform* in strength.

New York, N.Y.

NUTRITION IN ITS RELATION TO THE NERVOUS SYSTEM.

When the batteries show signs of becoming "run down," as manifested by the progressive weakness of the current or by its complete failure to respond to the demands made upon it, the electrician proceeds to recharge them.

The nervous system, with its great cerebro-spinal centre and elaborate network of connecting nerves, extending to all parts of the body, is sufficiently analogous to an electric system to justify a comparison for the sake of illustration.

The nerve centres are recharged for their wonderful work of evolving and giving out nerve force by recreation, rest, sleep and suitable food.

They are exhausted by excessive and long-continued activity, emotional strains and physical excesses and the legion of causes incident to modern civilized life; also, by deficiency in the quality of food or by inability of the nutritive organs to assimilate the food provided, constituting a literal "starvation in the midst of plenty."

Unless the cerebro-spinal system is kept well nourished, the nervous activity of the individual—his effective force in life—shows signs of deterioration.

It has been demonstrated that the hypophosphites are the natural builders of healthy nerve structure. They should be administered in all conditions of deficient nerve vitality. Their administration should be supplemented by other suitable agents temporarily required by the particular case in hand.

Thus, in cases characterized by excessive excitability, the various nerve sedatives should be administered, as needed, to reduce the irritability and calm the patient, conjointly with McArthur's syrup to restore the integrity of the nervous system.

In cases characterized by great vital depression or more or less complete local paralyses, McArthur's syrup should be given combined with the appropriate additional stimulating treatment, as determined by the nature of the case.

That very numerous class of cases characterized by neuralgias and other painful conditions—as Romberg so well says, "the prayer of a nerve for food"—should be generously treated with McArthur's syrup, in addition to the required temporary treatment for the relief of the immediate symptom, pain.

The cases which are associated with impoverishment of the blood should be given McArthur's syrup and, in addition, a brief course of other appropriate hæmatinics.

McArthur's syrup is a syrup of the chemically pure hypophosphites of lime and soda, uncomplicated by other drugs.

It, better than any other agent, will sustain the nervous system through a long or unusual effort, or restore the system after such continued activity.

A full sized bottle of the syrup will be sent to any physician who wishes to make use of it in his practice, without expense, save express charges. Address, The McArthur Hypophosphite Co., Boston, Mass.

VIN MARIANI

"The Standard Preparation of Erythoxylon Cocoa."

CAREFUL, continued testing by upwards of seven thousand practitioners in America, whose written opinions over their signatures (in our possession) are fully in accord and clearly prove the efficacy and merits of "VIN MARIANI," may be thus summarized:

"Diffusible stimulant and tonic in anæmia, nervous depression, sequelæ of childbirth, lymphatism, tardy convalescence, general 'Malaise,' and after wasting fevers.

"Special reference to the nervous system, in all morbid states, melancholia, etc.

"Tonic in laryngeal and gastric complications, stomach troubles.

"All cases where a general toning or strengthening of the system is needed.

"The only tonic stimulant without any unpleasant reaction, and may be given indefinitely, never causing constipation."

N. B.—This Wine has been found always uniform and reliable, owing to the selection of the finest ingredients and the greatest accuracy in its manipulation. When prescribing, therefore, the Medical Profession are strongly advised to specify "VIN MARIANI," in order to avoid the substitution of imitations, often worthless and consequently disappointing in effect.

Please Specify VIN MARIANI.

Elixir Chloralamid-Schering.

CHLORALAMID-SCHERING, the new hypnotic introduced a little over two years ago, has now assumed a permanent position in materia medica, and is highly esteemed and largely employed by the medical profession. Reports on the therapeutics of Chloralamid-Schering have been overwhelmingly favorable, in text books, special treatises, society reports, lectures, editorials, etc.; when occasionably failure to produce sleep has been reported, we have investigated the facts and usually substantiated that the remedy was not properly administered. To preclude failure on this account once for all, we have concluded to introduce a preparation in permanent solution, elegant in appearance, palatable,—**perfect**

It is desired that this bottle be delivered on physician's prescription complete and unopened,—first writing the necessary facts on label on opposite side.

ELIXIR
Chloralamid
(SCHERING)
Each tablespoonful contains one gramme (15 grains) of Chloralamid-Schering.

HYPNOTIC.

Chloralamid-SCHERING is a superior hypnotic; an efficient and safe sleep-producing agent; its use is not attended by unpleasant and untoward side or after-effects, nor will continued use develop a habit or necessitate increasing doses. Eminent medical authorities have endorsed Chloralamid, and full clinical reports with chemical and therapeutical data will be furnished to physicians and pharmacists on request.

Directions:—A tablespoonful at a dose, taken one-half hour before sleep is desired; if effect is not prompt and satisfactory the dose may be repeated at intervals of 15 minutes—not more than twice.

PUT UP ONLY BY THE
Sole Agents & Licensees for America:
LEHN & FINK,
IMPORTERS, WHOLESALE DRUGGISTS AND MANUFACTURING CHEMISTS,
NEW YORK.

(This descriptive label is attached to every bottle, and may be removed before dispensing.)

Elixir Chloralamid-Schering

is put up in 8 oz. prescription vials, ready for dispensing without change, except that the pharmacist must write the directions on the label and impress his stamp on same. The package is unique, and will, no doubt, meet with the approval of physicians and pharmacists.

There is no better form for administering Chloralamid-Schering, and physicians will surely give it their preference.

To be obtained from all Leading Pharmacists, and supplied by all Wholesale Druggists in the United States.

A full descriptive treatise (52 pages) on Chloralamid-Schering will be mailed to physicians on request.

SOLE AGENTS AND LICENSEES:

LEHN & FINK, 128 William Street, NEW YORK.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK:)

Each fluid drachm represents 15 grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium and Lithium.

USES: EPILEPSY, UTERINE CONGESTION, HEADACHE, AND ALL CONGESTIVE, CONVULSIVE AND REFLEX NEUROSES.

This preparation produces results, which can not be obtained from the use of commercial Bromide substitutes.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK.)

From Sea Weed. **Uses: Malaria, Phthisis, Etc.**

An ALLY of quinine—quinine CHECKS the Malarial Chill; Fucus Marina ELIMINATES the Malarial CAUSE; and thus prevents the recurrence of the Chill *after* it has been *checked* by quinine.

An INVALUABLE REMEDY in the treatment of Phthisis—it arrests the decay of lung tissue, diminishes the fever, lessens the cough, abates the soreness in the lungs, improves the appetite, and impedes the progressive emaciation.

DOSE.—One Teaspoonful IN WATER, four times a day.

CHIONIA FROM CHIONANTHUS.

Uses: Biliousness, Jaundice, Dyspepsia, Constipation, and all Diseases Caused by Hepatic Torpor.

CHIONIA stimulates the Liver and restores it to a healthy condition, without debilitating the system by Catharsis; does not purge, per se, but under its use the Liver and Bowels gradually resume their normal functions.

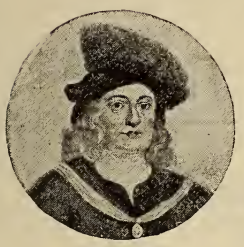
DOSE.—One Fluid Drachm three times a day.

PEACOCK CHEMICAL CO., ST. LOUIS.

NOTE UPON A POSSIBLE SERVICE TO BE EXPECTED FROM DIURETIN IN GENITO-URINARY SURGERY.

BY EDWARD L. KEYES, M. D., NEW YORK.

(*Medical News, Philadelphia, 1891, October.*)



Paracelsus.

IN June last I went to a city near New York to take a large stone from the bladder of an old gentleman, and at the same time to remove an outstanding third lobe. His case was desperate. He had suffered long, and for four years he had been an invalid, spending most of the last year in bed, taking opium suppositories, and passing his catheter hourly sometimes, and again at longer intervals. He could not urinate at all without the catheter. I cut this patient above the pubes, and took out a stone as large as an egg and a prostatic third lobe as large as the last joint of the thumb. The bladder was thin-walled, corrugated, trabeculated, and sacculated. I put my finger into holes on each side which seemed like ureteral orifices, but did not stop to investigate closely. They could not have been orifices of the ureters, because they are closed even when the ducts are enormously dilated. His urine had been like gruel, full of albumen and all sorts of detritus. There was no question of there being dilated ureters, pyelitis, and more or less interstitial nephritis on both sides. The operation was done simply because it had to be done in compassion for the old man's sufferings. The outlook was desperate.

I thought then, of trying diuretin, and telephoned for it before the patient recovered from his anesthetic, ordering 10 grains to be given at once, and frequently repeated. This patient got well.

Since that time I have used diuretin in every case of urethral or bladder operation that has fallen under my hands. I give 60 grains of salol per day for forty-eight hours before operating, and commence diuretin on the day of the operation; given it also in doses of 10 grains every four hours for forty-eight hours. I, of course, irrigate the bladder and urethra; I did this before, but my results have been better since using the diuretin. I have used it in every major operation that I have performed, and my assistant, Dr. Fuller, has used it twice, and in no instance has there been any urinary fever proper—that is, there never has been a chill or a suppression. The cases cover all ages from eighteen to eighty, with desperate complications, such as pyelitis, urine loaded with albumen and casts, diabetes, etc. Patients have had shock, fever sometimes, and various complications, but never chill or suppression. The number operated on is 13; not large, it is true, but it was in the summer season, and all were private patients. The time is too short for generalization, but when it is remembered that the cases were: Supra-pubic prostatectomy, 6; supra-pubic lithotomy (diabetes), 1; perineal section, 3; perineal section without guide, 2; litholapaxy, 1; mostly in old men with damaged kidneys, all of whom recovered without chill or any tendency to suppression, it is fair to imagine that the means used had something to do with it, and the diuretin is the only new drug. In three of the cases there was profound shock after the chloroform (which I now always use), but the kidneys acted all along.

Diuretin appears to be a diuretic, seemingly pretty constant in its action. It does not irritate the stomach, bowels, or nerves, and does not depress a weak heart. The dose is 10 to 15 grains often repeated, to 90 or even 120 grains a day, given in powder or in pill form—preferably gelatin-coated pill, as the powder deteriorates on exposure. If it will prevent, or even moderate urinary fever, it is a valuable drug.—*Medical News, Philadelphia.*

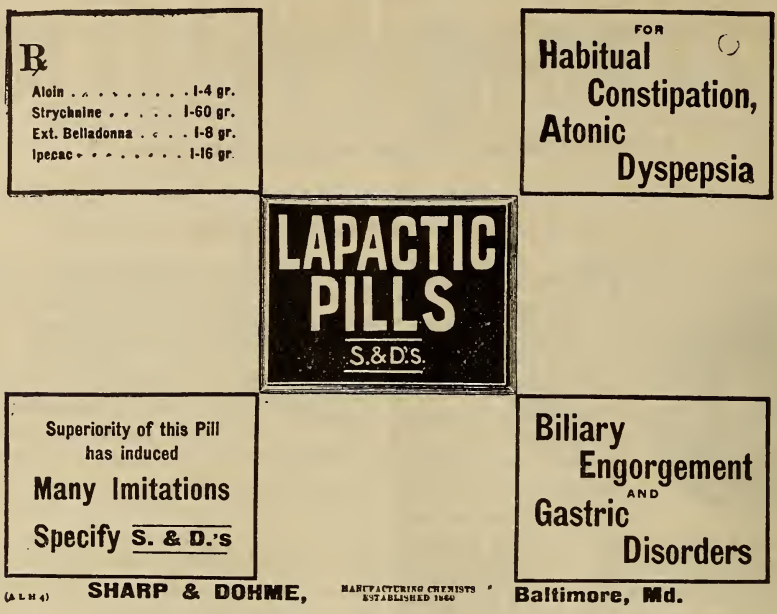
McKesson & Robbins' Gelatine Coated Pills of Diuretin-Knoll, 5 grains.

CAUTION!

All the observations in this pamphlet have reference to the use of the preparation of Knoll & Co.; as there are imitations in the market, physicians should see that the genuine is supplied. It is put up only in original vials of one ounce, and in McK. & R. 5 gr. pills in bottles of 100 and 500 each, and is plainly labeled DIURETIN–KNOLL.

Full notes sent on request, by
McKESSON & ROBBINS,
New York.

On account of the increased demand, we are able to reduce the price of Diuretin-Knoll more than 25 per cent., which is important, as the necessary doses are large.



Lapactic Pills.

A combination introduced by us and found in practice to possess superior advantages over other similar formulas. The well known mild action of Aloin on the lower portion of the intestinal canal, and its power of stimulating the hepatic functions, is supplemented by the action of Ipecac as a stomachic tonic and by increasing the gastric secretions; the Belladonna acts specially upon the involuntary muscular fibres of the bowels, increasing peristalsis, diminishing the harshness, and at the same time increasing the effectiveness of the laxative. The general tonic effect of Strychnine upon the stomach and bowels and its direct action upon the sympathetic, make it a valuable addition in the permanent cure of **habitual constipation and atonic dyspepsia.**

Since we first called attention to our Lapactic Pills, some four years ago—publishing the composition of the same—a number of manufacturers have adopted the formula and have furnished these pills under the same name. Should Physicians fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints from physicians by letter), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term "LAPACTIC PILLS, S. & D.'S." when prescribing these pills.

SAMPLES WILL BE MAILED ON APPLICATION.

SPECIAL FORMULAS MADE TO ORDER.

WHEN PURCHASING, PLEASE SPECIFY S. & D's.

Sharp & Dohme,

MANUFACTURING CHEMISTS,

Established 1860. **Baltimore, Md.**

SCOTT'S EMULSION

VERSUS

PLAIN COD LIVER OIL.

Plain Cod Liver Oil *is indigestible, deranges the stomach, destroys the appetite is not assimilated,* and in a majority of cases is detrimental to the patient.

SCOTT'S EMULSION

Can be *digested in nearly all cases, is assimilated, does not derange the stomach, nor overtax the digestive functions,* and can be taken for an indefinite period when the plain cod liver oil cannot be tolerated at all, and with most marked results in *Anæmia, Consumption* and all wasting conditions. It also contains the *Hypophosphites of Lime and Soda with Glycerine,* which are most desirable adjuncts.

WHEN PHYSICIANS TRY IT THEY INVARIABLY USE IT

in preference to the plain cod liver oil or other *so-called Emulsions* that invariably separate, and hence their integrity and value is destroyed. *Scott's Emulsion is palatable and absolutely permanent* hence its integrity is always preserved.

The formula for SCOTT'S EMULSION is 50 per cent. of the finest Norwegian Cod Liver Oil, 6 grains Hypophosphite of Lime and 3 grains Hypophosphite of Soda to the fluid ounce, Emulsified, or digested to the condition of assimilation with chemically pure Glycerine and Mucilage.

We also wish to call your attention to the following preparations:

CHERRY MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain aud nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula).

Prepared from carefully selected German Buckthorn Bark, Juglans Bark and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

SCOTT & BOWNE, 132 South Fifth Avenue, NEW YORK.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

— Landois and Sterling.

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

— Materia Medica and Therapeutics, Dr. Mitchell Bruce.

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

— Eustace Smith, M.D., F.R.C.S.

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

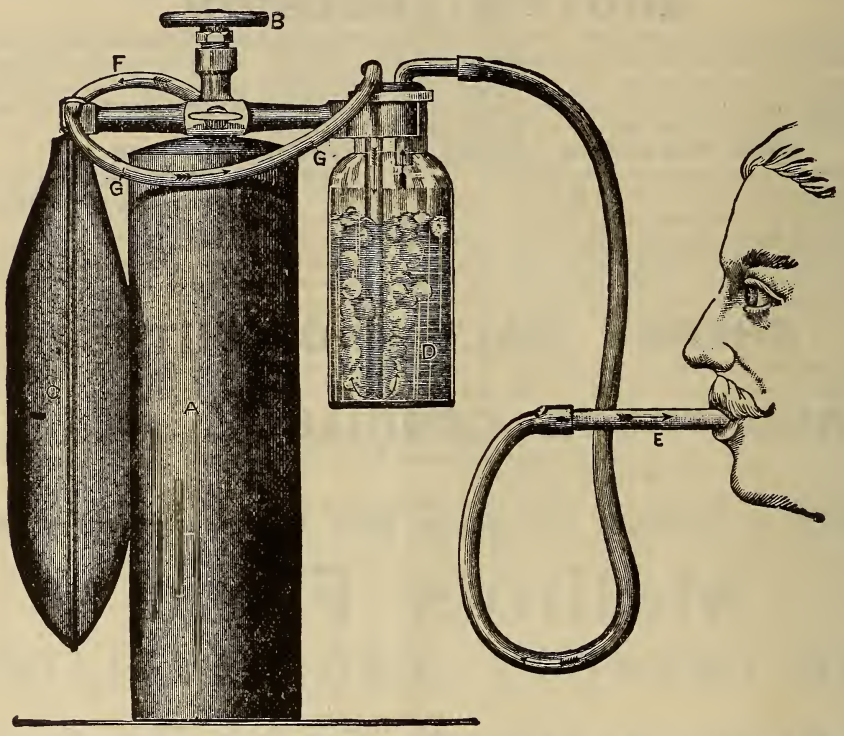
THE DOLIBER-GOODALE CO.,

BOSTON, MASS.

INHALATION APPARATUS

FOR

THE THERAPEUTIC ADMINISTRATION OF OXYGEN.



In the treatment of lung troubles by Oxygen its exhibition by inhalation is preferred. The apparatus herewith shown is a modification of the Nitrous Oxide apparatus which we have supplied for many years. It is made in the best manner throughout, and is the outcome of years of experience in the manufacture of gas apparatus. It will be found to meet all the requirements.

We supply the gas in two sizes of cylinders, containing respectively forty and one hundred gallons, either pure Oxygen, or a mixture of Oxygen and Nitrous Oxide in definite proportions of 20 per cent., and forty per cent. of Nitrous Oxide.

Whether pure or mixed the gas is sold at the uniform price of 5 cents a gallon. The cost of the cylinders will be refunded on their return empty with the valves in good condition. Full description of Inhalation and Enema apparatuses with directions for use accompany each apparatus, or will be supplied on application.

PRICES.

Inhalation Apparatus	$5.00
Cylinder, 40 gallons' capacity	6.00
40 gallons Gas, either pure Oxygen or mixed Oxygen and Nitrous Oxide	2.00
Complete Apparatus, Cylinder, and 40 gallons Gas	$13.00
Inhalation Apparatus	$5.00
Cylinder, 100 gallons' capacity	15.00
100 gallons Gas, either pure or mixed	5.00
Complete Apparatus, Cylinder, and 100 gallons Gas	$25.00

THE S. S. WHITE DENTAL MFG. CO.,

PHILADELPHIA, NEW YORK BOSTON CHICAGO, BROOKLYN, ATLANTA.

ESTABLISHED 1855.

DR. STRONG'S SANITARIUM,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for TREATMENT, CHANGE, REST, OR RECREATION.

And places them under well-regulated hygienic conditions so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it has a Sun Parlor and Promenade on the roof. Turkish, Roman, Sulphur, Electro-Thermal, the French Douche, and all Hydropathic Baths; Vacuum Treatment, Swedish Movements, Massage, Pneumatic Cabinet Inhalations of Medicated, Compressed, and Rarefied Air, Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, with elevator, electric bells, open fire-places, steam, and thorough ventilation. With cheering influences and avoiding the pressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in winter tobogganing, elegant sleighing, etc.; in Summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience.

A liberal discount to physicians and their families for board or treatment. For illustrated Circular, Address:

JAROS HYGIENIC UNDERWEAR

WOOL FLEECE KNIT

FORMULA.—Unspun Wool, knitted into meshes of a cotton thread Basis, the theories of Profs. Von Pettenkofer, Parkes, Kreiger, Buck and others.

ADVANTAGES.—Capillary action of unspun wool upon the body. Greatest hydroscopic qualities and non-irritating. Interstices naturally formed, stores body temperature. Prevents rapid radiation during climatic changes, aids transportation of moisture. Porosity, elasticity, perfect fit and non-shrinkability are regarded.

INDICATIONS.—Rheumatism, Kidney Disease (Nephrites), Pulmonary Consumption, Catarrhal Troubles, La Grippe, etc, as well as a general prophylactic.

NOTE.—Features accomplished have been recognized by the medical profession since 1884, also endorsed by U. S. Army, U. S. Navy, Police and Fire Departments.

80-Page Treatise containing reports of results in special practice as well as from U. S. Government, mailed post-paid on application

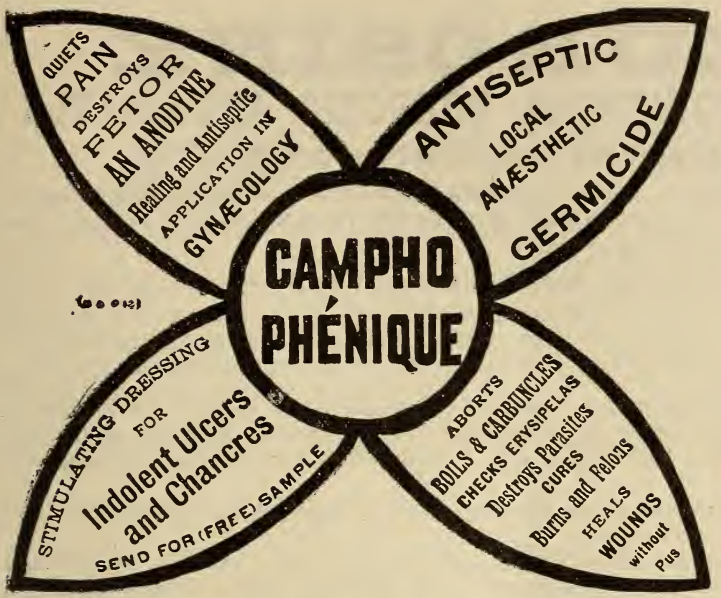
DYSPEPSIA.

Deranged digestion is the most common of all human ailments. It is a truism that no organ of the body can preserve its normal integrity **when** its supplying nerve is disordered **by lowered tones.** But this fact is largely ignored in these modern pepsin days—the **cause** being lost sight of whilst trying to remedy the effect. It is well known that any unusual worry or anxiety will upset the digestion of **the neurotic** patient. Hence, in treating dyspepsia, particularly atonic dyspepsia, that form met with in persons of low vitality and poor appetite, there are **two distinct INDICATIONS.** One is to subserve the needs of general nutrition, the other is to subserve the needs of the nervous system. This can be done by giving the patient good nutritious food and a good nerve tonic. This explains why such remarkable results follow the daily use of **CELERINA** in all dyspeptic troubles.



Non-Poisonous

Dr. J. FEHR'S
"COMPOUND TALCUM" * *
* * "BABY POWDER,"

THE

"HYGIENIC DERMAL POWDER"

FOR

INFANTS AND ADULTS.

Introduced to the Medical and the Pharmaceutical professions by J. FEHR, in the year 1873.

COMPOSITION:—Silicate of Magnesia with Carbolic and Salicylic Acids.

PROPERTIES:—Antiseptic, Antizymotic, and Disinfectant.

Useful as a **GENERAL SPRINKLING POWDER**, with positive Hygienic, Prophylactic, and Therapeutic properties.

GOOD IN ALL AFFECTIONS OF THE SKIN.

PER BOX, PLAIN, 25 Cents; PERFUMED, 50 Cents.
PER DOZ., PLAIN, $1.75; PERFUMED, $3.50.

SOLD BY THE DRUG TRADE GENERALLY.

MANUFACTURER:

JULIUS FEHR, M.D..

Ancient Pharmacist, HOBOKEN, N. J.

Only advertised in Medical and Pharmaceutical prints.

NEUROSINE

THE MOST POWERFUL NEUROTIC ATTAINABLE.

ANODYNE AND HYPNOTIC.

A most efficient and permanent preparation, **REMARKABLE** for its efficacy and **THERAPEUTIC EFFECTS** in the treatment of those **NERVOUS AFFECTIONS** and morbid conditions of the System which so often tax the skill of the Physician.

A RELIABLE AND TRUSTWORTHY REMEDY FOR THE RELIEF OF

HYSTERIA, EPILEPSY, NEURASTHENIA, MANIA, CHOREA, UTERINE CONGESTION, MAGRAINE, NEURALGIA, ALL CONVULSIVE AND REFLEX NEUROSES.
THE REMEDY PAR EXCELLENCE IN DELIRIUM AND RESTLESSNESS OF FEVERS.

FORMULA:—Each fluid-drachm contains 5 grains each, C. P. Bromides of Potassium, Sodium and Ammonium 1-8 gr. Bromide Zinc, 1-64 gr. each of Ext. Belladonna and Cannabis Indica, 4 grains Ext. Lupuli and 5 minims fluid Ext. Cascara Sagrada, with Aromatic Elixirs.

DOSE:—From one teaspoonful to a tablespoonful, in water, three or more times daily as may be directed by the Physician.

To any physician, unacquainted with the medicinal effect of Neurosine, we will mail pamphlet contain full information, suggestions, and various methods of treatment; also a variety of valuable prescriptions that have been thoroughly tested in active practice, or to physicians desiring to try our preparation, and who will pay express charges, we will send on application a sample bottle free.

DIOS CHEMICAL CO.,
ST. LOUIS MO., U. S. A.

VACCINE MATTER.

For the accommodation of our Subscribers, we will supply both Bovine and Humanized Vaccine Virus.

Guaranteed to be fresh and in every respect first class.

PRICES:

Bovine Crusts, - - -	**$1 50 each**
Bovine Points or Quills, -	**1.00 a dozen.**
Humanized Crusts, - -	**1.00, small.**
Humanized Crusts, - -	**2.00, large.**

The Humanized Crusts are warranted to be from typical cases, and in every instance from healthy children, with unquestionable family histories.

PLEASE ACCOMPANY THE ORDER WITH THE MONEY.

Scherff's Syrup of Hydriodic Acid.

A PERMANENT UNALTERABLE PREPARATION.

NON-IRRITANT. PALATABLE. EFFICIENT

Each fluid ounce of this Syrup represents the equivalent of 6.72 grains of absolute Hydriodic Acid. Particular stress is laid on the one great superiority; this Syrup will not decompose, and the danger (so common to other like preparations) of administering a preparation of free iodine, is absolutely avoided.

Descriptive Pamphlets and Clinical Reports mailed on request.

WESTERN PENNSYLVANIA MEDICAL COLLEGE
CITY OF PITTSBURGH.
SESSIONS OF 1892.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. MCKENNAN, 810 Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Ave., Pittsburg.

The Baltimore Medical College.

PRELIMINARY FALL COURSE begins Sept. 1, 1891.
REGULAR WINTER COURSE begins October 1, 1891.

Excellent Teaching Facilities, Capacious Hospital, Large Clinics.

408 N. Exeter St., Baltimore, Md.

WALNUT LODGE HOSPITAL,
HARTFORD, CONNECTICUT.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish Bath, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefitted from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M. D.,
Sup't Walnut Lodge, Hartford, Conn.

DR. MASSEY'S

PRIVATE SANATORIUM.

Presenting the comforts of an elegant private residence, this institution is specially equipped for the use of electricity and allied remedial measures in the diseases of women and in diseases of the nervous system. For particulars address

G. BETTON MASSEY, M. D.,
212 S. Fifteenth St., Philadelphia.

Prickly Heat, Chafing, Dandruff,

Odors from Perspiration, etc. Speedy Relief by Using

Packer's Tar Soap.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

ST. LOUIS, MO.

A WEEKLY JOURNAL.

ESTABLISHED IN 1853 BY
S. W. BUTLER, M. D.

THE Medical and Surgical Reporter.

EDWARD T. REICHERT, M. D., Editor.
(Prof. Physiology, University of Penna.)

CHAS. K. MOUNT, Advertising Manager.

PROSPECTUS.

For nearly forty years ***The Medical and Surgical Reporter*** has held a position of influence and popularity second to that of no other publication in medicine. Last May the Editorial and Business Management was changed, the journal was enlarged from twenty-eight to forty pages, and the publication in almost every way was radically improved. That these changes have been appreciated by the profession is evident in the phenomenal increase of our subscription list and in the number of new advertisements.

The enlarged ***Reporter*** now enables us to offer more pages of reading matter each year than are given by any other medical periodical in America, and more material of direct practical value to the practising physician than is furnished in any other journal in the English language. We now publish during the year over 3500 separate articles, representing the best thought in the profession. These include about as follows:—

75 Clinical Lectures by leading clinicians in this country and abroad.
200 Original Communications.
60 Society Reports.
25 Letters by Special Correspondents.
800 Selected Prescriptions.
75 Editorials on Timely Topics.
150 Letters from our Subscribers.
150 Book Reviews.
2000 Periscope Articles, carefully selected and condensed, and representing all important progress in medicine in all branches and languages.

The ***Reporter*** is truly a magazine of medical progress, it is thoroughly practical, and is especially adapted to the wants of the busy practitioner. There is no State or Country in America that it does not reach, and no civilized Country that does not regularly receive it.

The ***Reporter*** is published every Saturday, and is mailed to subscribers in the United States and Canada for $5.00 a year in advance, and to those in foreign countries for $6.00 in advance. It will be sent for three months on trial for $1.00.

"*Its popularity is chiefly due to its irreproachable character.*"

"*Invalids are recommended to drink it.*"

THE TIMES, LONDON.

THE APOLLINARIS CO., LD.

19 REGENT STREET, LONDON.

The Perfectly Prepared Pill:

ITS ESSENTIAL POINTS may be thus formulated:

PURITY of medicaments and excipients.
PRECISION as to weight and division.
PERFECT UNIFORMITY as to activity and identity.
PROMPT SOLUBILITY of mass and coating.
PERMANENCE as to conservation.
PALATABILITY; and ELEGANCE of appearance.

PURITY OF MEDICAMENTS is, of course, indispensable to the perfect pill. Less obvious, but equally true, is the proposition that upon this factor the value of its other qualities is largely dependent. Exactitude of weight and uniformity of preparation have little significance if the medicament be impure, while indifferent drugs are liable to chemical changes which affect their stability and activity.

SAFE AND CERTAIN RESULTS are only to be obtained with pure remedies. The methodical treatment of disease calls for therapeutic agents which are as nearly absolute in quality as they can be made by the combined resources of chemistry and pharmacy under competent and conscientious direction.

IN THE W. H. S. & CO. pill these conditions are fully realized. Only the purest materials are employed; no component is substituted, either for economy's sake or for any other reason; and the formula is exactly followed. We believe that the W. H. S. & Co. pill fully meets the requirements of modern therapeutics.

SOME OF THESE PREPARATIONS are specified below, and they are offered as being especially useful at this time.

Pil. Phenacetine (Bayer), "W. H. S. & Co."

For All Forms of Fever, Pain, Rheumatism and Neuralgia; for Pertussis, and for conditions in which pain or fever, or both, are to be combated. (Pills of 2, 3, 4 and 5 grs.)

Pil. Phenacetine et Salol, 5 grs., "W. H. S. & Co."

For Influenza, (La Grippe), Acute Articular Rheumatism, Neuralgia, Migraine, Whooping Cough, and all painful febrile conditions. (Pills containing 2½ grains each of Phenacetine-Bayer and Salol. Half strength also prepared.)

Pil. Terpin Hydrat., "W. H. S. & Co."

For Coughs, Colds, Catarrh, Bronchitis and all Acute and Chronic Respiratory Maladies. No unpleasant symptoms follow its continuous use. (Pills of 2 and 5 grains.)

Pil. Quiniæ, Ferri et Zinci Valerianat., "W. H. S. & Co."

For Nervous Tension, Melancholia, Epilepsy, Hysteria, Delirium Tremens, Dysmenorrhœa, and all Neuroses dependent upon the cares of life. (Pills of 3 grains.)

IN PRESCRIBING BE PARTICULAR TO SPECIFY "W. H. S. & CO."

W. H. Schieffelin & Co., New York.

It is Important

For the Physician to watch the character and quality of the remedies used in his prescriptions. Responsibility *does not cease* when the patient leaves the office; for impure stale, or inferior preparations may be used without his knowledge. Personal examination of remedies prescribed is the best check upon substitution.

FERRO-SALICYLATA
LIQUID.

MERRELL.

An eligible combination of Methyl Salicylate and Tinct. Citro-Chloride Iron, in a pleasant and permanent form.

EACH FLUID DRACHM CONTAINS

True Salicylic Acid—from oil Wintergreen (Methyl Salicylate), - - - - 5 grs.
Tinct. Citro-Chloride Iron, 5 min.

Not Sold in Bulk.

ELIXIR
Pinus Compositus.

MERRELL.

Each Fluid Drachm Contains

White Pine—fresh Bark,	2½ grs.
Balm Gilead Buds,	2 grs.
Spikenard,	2, grs.
Cherry Bark,	1¾ grs.
Ipecac,	1-4 gr.
Sanguinarina Nitrate,	1-64 gr.
Morphine Acetate,	1-16 gr
Ammonium Chloride,	1-2 gr.
Chloroform,	1-2 minim.

Not Sold in Bulk.

FERRO-SALICYLATA.---*Merrell.*

Ferro-Salicylata is especially valuable in that shade of disease peculiar in anæmic, delicate, poorly nourished or broken-down patients—usually aged people—children or youth—but met with in all ages. In adults, and often in children when the disease is not plainly chronic, there will be a long series of recurrences with intervals of doubtful health. It may also be employed in acute articular rheumatism, and in some cases of acute tonsillitis, especially where the diagnosis is at first in doubt between rheumatic angina and diphtheria; also, in acute rheumatism and rheumatic affections generally.

Ferro-Salicylata may be used in combination with the Iodides and Bromides of Potassium and Sodium. Associated with the former, it will prove an admirable alterative and tonic in second syphilis attended by a debilitated condition of the general system. It also combines well with Chlorate Potassium, the Hypophosphites, with Fowler's Solution, the vegetable bitter tonics, either in Fluid Extract or Tincture Form.

Ferro-Salicylata and all other preparations of this Company reach the laity through professional channels only. We therefore avoid entering into the minute details of their application, leaving the physician to make such practical use of our therapeutic notes as in his judgment may be best suited to individual cases.

Ferro-Salicylata may be obtained of wholesale druggists throughout the United States, of our Eastern Office, 96 Maiden Lane, New York City, or direct from the Laboratory.

Please designate "Ferro-Salicylata—*Merrell.*"

ELIXIR PINUS COMPOSITUS---*Merrell.*

An admirable combination of well known and highly approved medicinal agents; recommended in acute, chronic, and capillary bronchitis—in ordinary coughs and colds, and wherever a "routine" expectorant is suggested. In the troublesome cough following the recent epidemic "La Grippe," it proved invaluable—many of our correspondents looking upon it as a "specific" in this stage of the disease.

CAUTION.—Physicians are reminded that the Elixir Pinus-Compositus of this manufacturer is wholly unlike the many syrups, etc., under similar names, and the difference will be readily appreciated when tried. In testing the physical properties of the Elixir Pinus, note especially its delicate taste and perfect freedom from the odor of rank syrup, the drastic, harsh and repulsive characteristics of the crude blood-root, and other coarser ingredients characteristic of competing preparations.

"Merrell Co.'s" "Green Drug," Fluid Extracts, True Salicylic Acid, Salts of Hydrastis, Fluid Hydrastis, and Specialties may be obtained of wholesale druggists throughout the United States, at the Home Office at Cincinnati, or the New York Office, 96 Maiden Lane, New York City; Richards Drug Co., San Francisco, Agents for the Pacific Coast. Prices-current and printed matter cheerfully supplied.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{60}$ gr.), Atropiæ Sulph. ($\frac{1}{600}$ gr.), Codeia ($\frac{1}{60}$ gr.), Antimony Tart. $\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{60}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

How Physicians Make Reputations!

THE successful doctors are those who are ever on the lookout for the best information upon the application of their remedies. They have no time to experiment, and consequently have no time to follow any but the most concise, and, at the same time, the most reliable writers. In this way they succeed, while others, who follow every rainbow simply because irresponsible people tell them there is a bag of gold on the end thereof, fail in their professions.

During the time the **Londonderry** has been before the profession it has been in constant use by the most eminent physicians. They write about it in Medical Books and Journals, report cases in Medical Societies and praise it in the Lecture Room. It has become known as a **Standard Remedy** for all forms of Lithæmia. The wise successful doctors are flocking to the standard of **Londonderry**, and when they once prove its striking power they do not forsake it. For the benefit of physicians who have not yet tried and tested this matchless gift of nature we have collected in a neat little pamphlet some of the opinions referred to above. They are from the most eminent clinicians and writers in the United States, and are well worth the perusal of live physicians who wish to know the latest thought on the subject of Gout, Rheumatism, Gravel and General Lithæmia.

$9.00

Nervous Diseases and Their Diagnosis

By H. C. WOOD, M. D., LL. D..

Professor of Therapeutics and Nervous Diseases, University of Pennsylvania.

8vo., pp. 501, Cloth, $4.

It is invaluable as a work of diagnosis.—*Virginia Medical Monthly.*

It is at once a substantive contribution to neurology and a trustworthy guide to what has already been done in the subject.—*Practitioner.*

As a whole, the work is one which cannot fail to be of great service to the practicing physician.—*Medical and Surgical Reporter.*

The volume is a distinct help to the student, and is a necessary supplement to the systematic works on diseases of the nervous system.—*Boston Med. Surg. Jour.*

The author's originality is evident to every reader of his work; and we trust, for the advancement of knowledge, his readers will be many.—*New England Med. Gaz.*

This work fills a long-felt need in this department.—*Buffalo Med. Surg. Jour.*

Dr. Wood is an able clinician, and this makes his book valuable. His observations are practical and to the point and show careful study of a large number of cases which have fallen under his care.—*N. Y. Med. Jour.*

The honest effort of one who never writes without teaching and who always writes and teaches well.—*Journal of Insanity.*

To students and practitioners who have read other works this production will prove extremely valuable in time of need, to the former just before examination; to the latter in everyday practice.—*London Lancet.*

Not a compilation, but rather the record of independent opinions and investigations.—*Canadian Practitioner.*

The book is written in the characteristic vigorous style of its able and versatile author.—*American Practitioner.*

Lucid language, clear type, a full index, and, above all, the presentation of the late advances in this department of science, constitute the truly great attractions of this book.—*Albany Med Annals.*

It is not until the volume has been carefully read, and perhaps re-read, that its true excellence begins to dawn upon the reader.—*Maryland Med. Jour.*

THE BEST FRENCH TONIC

Vin de Bugeaud

A TONIC AND NUTRITIVE WINE WITH CINCHONA AND COCOA

VIN DE BUGEAUD is prepared with the greatest care, with active substances of the very best quality, and chiefly with wild Bolivian Cinchona, the cultivated species being strictly discarded, and the proportions being precisely in accordance with the French pharmacopœa.

It is perfectly tolerated by the most delicate stomachs, owing to the emollient action of the Cocoa it contains, which favourably corrects the over exciting properties and the bitter taste of the Cinchona.

In preparing it, a full-bodied Spanish wine is employed, this wine being more than any other capable of dissolving the medicinal ingredients.

VIN DE BUGEAUD commends itself to the medical profession oth by its tonic and antiperiodic properties, and by the certainty nd continuity of its action in cases of

Anæmia, Chlorosis, Intermittent Fever, Chronic Diarrhœa, Gastralgia, Convalescences,

in a word to combat

Constitutional or Accidental Debility

no matter from what cause arising.

It is specially suitable for convalescents, debilitated children, delicate women and old persons enfeebled by age and infirmities.

VIN DE BUGEAUD has enjoyed since 1858 the high approbation of the New-York Academy of Medicine. Thousands of practitioners of all countries have spontaneously borne testimony to its efficacy.

Professionnal gentlemen are invited to apply for a copy of the pamphlet (sent free on demand) which contains, along with a few remarks on **VIN DE BUGEAUD** and the opinions of the French medical press on the subject, a number of the most recent testimonials.

VIN DE BUGEAUD may be obtained of all good Chemists and Druggists.

P. LEBEAULT & Cie

PARIS : 5, Rue Bourg-l'Abbé.

NEW-YORK : 6, Harrison Street.

CH. TERTRAIS manager.

Sold by HENRY C. BLAIR'S SONS, Philadelphia.

The only prominent Emulsion of Cod-Liver Oil introduced directly to the medical profession. It is advertised exclusively in medical journals.

HYDROLEINE.

(HYDRATED OIL.)

Produces rapid increase in Flesh and Strength.

FORMULA.—Each Dose contains:			
Pure Cod Liver Oil.....80 m. (drops)	Soda.....1-3 Grains.	Recommended and Prescribed by EMINENT PHYSICIANS Everywhere. It is pleasant to the Taste and acceptable to the most delicate Stomach.
Distilled Water.....35 "	Salicylic Acid.....1-4 "	
Soluble Pancreatin..... 5 Grains.	Hyocholic Acid.....1-20 "	

IT IS ECONOMICAL IN USE AND CERTAIN IN RESULTS.

HYDROLEINE (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhuæ, but a hydro-pancreated preparation, containing acids and a small percentage of soda. Pancreatin is the digestive principle of fatty foods, and in the soluble form here used, readily converts the oleaginous material into assimilable matter, a change so necessary to the reparative process in all wasting diseases.

The following are some of the diseases in which HYDROLEINE is indicated:

Phthisis, Tuberculosis, Catarrh, Cough, Scrofula, Chlorosis, General Debility, etc.

TO BRAIN WORKERS of all classes, **HYDROLEINE** is invaluable, supplying as it does, the true brain-food, and being more easily assimilated by the digestive organs than any other emulsion.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," and "Consumption and Wasting Diseases," by two distinguished London physicians, which will be sent free on application.

SOLD BY DRUGGISTS GENERALLY.

C. N. CRITTENTON,

SOLE AGENT FOR THE UNITED STATES. 115 FULTON STREET, N. Y.

A Sample of Hydroleine will be sent free upon application, to any physician (enclosing business card) in the U. S.

"What a boon it would be to the Medical Profession if some reliable Chemist would bring out an Extract of Malt in combination with a well-digested or Peptonized Beef, giving us the elements of Beef and the stimulating and nutritious portions of Ale.—J. MILNER FOTHERGILL, M. D."

ALE & BEEF

"PEPTONIZED"

EXTRACT—BOVIS CUM MALTO

IS THE IDENTICAL COMBINATION SUGGESTED BY THE LATE EMINENT FOTHERGILL.

Each Bottle Represents 1-4 Pound of Lean Beef Thoroughly Peptonized.

PREPARED BY

THE ALE & BEEF COMPANY,

DAYTON, OHIO, U. S. A.

Two full-sized bottles will be sent FREE to any physician who will pay express charges.

"Orders from all parts of the Dominion of Canada, supplied by The Canadian Peptonized Beef & Ale Co., Limited, 153 Hollis Street, Halifax, N. S."

THE BUTLER PUBLISHING CO.,

P. O. BOX 843. PHILADELPHIA, PA.

OXYGEN IN LIFE PROCESSES.

At this season of the year the practitioner is called upon to treat patients who have spent a large portion of their time in the house during the winter. They have been breathing the confined house-air which, besides being rendered deficient in oxygen by the necessary combustion going on in stoves, lamps and gas-jets, is, in addition, more or less vitiated by the poisonous emanations of organic life.

During most of this time there has been imperfect physiological action because there has been incomplete oxidation. The intercellular spaces of the tissues have become clogged up with products of incomplete combustion—imperfect waste and repair.

In consequence of these facts we notice a preponderance of those diseases usually attributed to that indefinite cause—impure blood.

Hence we observe the tendency to scrofulous manifestations—eruptions, glandular swellings, abscesses and ulcerations; also the tendency to a breaking down of the nervous system, with its varied pheuomena; the tendency, again, to a lack of prompt response to treatment in acute diseases and slow convalescence from them; and finally, the tendency on the part of inflammatory conditions of the air passages at this time, unless specially guarded, to become chronic or to develop active degenerative and destructive processes.

To correct this condition we need a remedy that promotes oxidation within the tissues, themselves.

Such a remedy is found in the hypophosphites of lime and soda. However, not only does it thus promote active oxidation, but it also is itself deposited, in its changed or oxidized condition, within the tissues as direct reconstructive material, indispensable to healthy cells and sound tissue-walls.

Thus it proves to be the true alterative agent, inasmuch as it at the same time renovates and nourishes.

Under this remedy we observe an awakened organic action throughout the system and an improvement in every tissue. We soon observe better muscles, bones, nerves, hair, nails, skin, and mucous and serous membranes. The entire system awakens to a more vigorous life and performs its various functions with renewed activity.

In these facts may be seen indications for the use of this remedy, especially at this season of the year, in cases which show consumptive, scrofulous or nervous tendencies.

It is quite important, however, to obtain these delicate and unstable salts in an absolutely pure condition and put up in a form to secure the permanence of their composition. This can be accomplished by prescribing McArthur's Syrup, in which the chemically pure hypophosphites of lime and soda are incorporated in a wholesome syrup. Good results are uniformly reported from its use.

You will receive a full bottle of the syrup for test in your practice by writing to the McArthur Hypophosphite Co., Boston, Mass., and agreeing to pay express charges.

VIN MARIANI

"The Standard Preparation of Erythoxylon Coca."

CAREFUL, continued testing by upwards of seven thousand practitioners in America, whose written opinions over their signatures (in our possession) are fully in accord and clearly prove the efficacy and merits of "VIN MARIANI," may be thus summarized:

"Diffusible stimulant and tonic in anæmia, nervous depression, sequelæ of childbirth, lymphatism, tardy convalescence, general 'Malaise,' and after wasting fevers.

"Special reference to the nervous system, in all morbid states, melancholia, etc.

"Tonic in laryngeal and gastric complications, stomach troubles.

"All cases where a general toning or strengthening of the system is needed.

"The only tonic stimulant without any unpleasant reaction, and may be given indefinitely, never causing constipation."

N. B.—This Wine has been found always uniform and reliable, owing to the selection of the finest ingredients and the greatest accuracy in its manipulation. When prescribing, therefore, the Medical Profession are strongly advised to specify "VIN MARIANI," in order to avoid the substitution of imitations, often worthless and consequently disappointing in effect.

Please Specify VIN MARIANI.

Elixir Chloralamid-Schering.

CHLORALAMID-SCHERING, the new hypnotic introduced a little over two years ago, has now assumed a permanent position in materia medica, and is highly esteemed and largely employed by the medical profession. Reports on the therapeutics of Chloralamid-Schering have been overwhelmingly favorable, in text books, special treatises, society reports, lectures, editorials, etc.; when occasionably failure to produce sleep has been reported, we have investigated the facts and usually substantiated that the remedy was not properly administered. To preclude failure on this account once for all, we have concluded to introduce a preparation in permanent solution, elegant in appearance, palatable,—**perfect**

Elixir Chloralamid-Schering

is put up in 8 oz. prescription vials, ready for dispensing without change, except that the pharmacist must write the directions on the label and impress his stamp on same. The package is unique, and will, no doubt, meet with the approval of physicians and pharmacists.

There is no better form for administering Chloralamid-Schering, and physicians will surely give it their preference.

It is desired that this bottle be delivered on physician's prescription complete and unopened,—first writing the necessary facts on label on opposite side.

ELIXIR

Chloralamid

(SCHERING)

Each tablespoonful contains one gramme (15 grains) of Chloralamid-Schering.

HYPNOTIC.

Chloralamid-SCHERING is a superior hypnotic; an efficient and safe sleep-producing agent; its use is not attended by unpleasant and untoward side or after-effects, nor will continued use develop a habit or necessitate increasing doses. Eminent medical authorities have endorsed Chloralamid, and full clinical reports with chemical and therapeutical data will be furnished to physicians and pharmacists on request.

Directions:—A tablespoonful at a dose, taken one-half hour before sleep is desired; if effect is not prompt and satisfactory the dose may be repeated at intervals of 15 minutes—not more than twice.

PUT UP ONLY BY THE
Sole Agents & Licensees for America:

LEHN & FINK,

IMPORTERS, WHOLESALE DRUGGISTS AND MANUFACTURING CHEMISTS,

NEW YORK.

(This descriptive label is attached to every bottle, and may be removed before dispensing.)

To be obtained from all Leading Pharmacists, and supplied by all Wholesale Druggists in the United States.

A full descriptive treatise (52 pages) on Chloralamid-Schering will be mailed to physicians on request.

SOLE AGENTS AND LICENSEES:

LEHN & FINK, 128 William Street, NEW YORK.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK:)

Each fluid drachm represents 15 grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium and Lithium.

USES: EPILEPSY, UTERINE CONGESTION, HEADACHE, AND ALL CONGESTIVE, CONVULSIVE AND REFLEX NEUROSES.

This preparation produces results, which can not be obtained from the use of commercial Bromide substitutes.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK.)

From Sea Weed. **Uses: Malaria, Phthisis, Etc.**

An ALLY of quinine—quinine CHECKS the Malarial Chill; Fucus Marina ELIMINATES the Malarial CAUSE; and thus prevents the recurrence of the Chill *after* it has been *checked* by quinine.

An INVALUABLE REMEDY in the treatment of Phthisis—it arrests the decay of lung tissue, diminishes the fever, lessens the cough, abates the soreness in the lungs, improves the appetite, and impedes the progressive emaciation.

DOSE.—One Teaspoonful IN WATER, four times a day.

CHIONIA FROM CHIONANTHUS.

Uses: Biliousness, Jaundice, Dyspepsia, Constipation, and all Diseases Caused by Hepatic Torpor.

CHIONIA stimulates the Liver and restores it to a healthy condition, without debilitating the system by Catharsis; does not purge, per se, but under its use the Liver and Bowels gradually resume their normal functions.

DOSE.—One Fluid Drachm three times a day.

PEACOCK CHEMICAL CO., ST. LOUIS.

CARDIAC AND RENAL AFFECTIONS TREATED BY DIURETIN-KNOLL.

BY PROFESSOR M SIUS.

Sir James Paget.

CASE I.—N. S., æt. 53. Arterio-sclerosis; aortic insufficiency. Excentric hypertrophy of the heart. Bronchitis. Pulmonary hypostasis. Œdema of the inferior members reaching to the hips.

DATE.	DIURETIN. GRAMMES.	PULSE.	URINE. CCM.	
March 26,	0	100	2000	
27,	5	100	3000	
28,	6	96	6100	Œdema diminished.
29,	6	100	6·00	
30,	7	104	5000	
31,	7	100	4050	
April 1,	7	94	7550	
2,	7	100	4300	Œdema almost gone.
3,	7	102	4950	
4,	7	100	2500	No traces of œdema.
5,	7	100	2700	
6,	7	100	2500	

This case demonstrates the powerful action of the diuretin. On March 26, the day on which the treatment was instituted, the quantity of urine was about 2 quarts in the 24 hours; the administration of diuretin brought it up to more than 6 quarts a day. The pulse was not modified in frequency, but it became regular and stronger. The pains complained of by the patient, the malaise, oppression, and very marked dyspnœa became less in proportion to the augmentation of the urinary secretion.

CASE II.—Van H., aged 53. Arterio-sclerosis. Aortic insufficiency. Hypertrophy of the heart with dilatation. Bronchitis. Notable œdema of the inferior members.

DATE.	DIURETIN. GRAMMES.	PULSE.	URINE. CCM.	
March 28,	0	60	2400	
29,	5	—	2500	Œdema diminished.
30,	5	—	3500	
31,	5	74	3500	
April 1,	5	—	4000	
2,	6	80	3300	Still some traces of œdema.
3,	6	—	4300	
4,	7	—	3500	No more œdema.
5,	7	—	3000	General condition good.
6,	7	—	3000	

In this patient, doses of five grammes (75 grs.) a day were sufficient, after some days, to cause the disappearance of the compensatory troubles by keeping up the activity of the diuresis.

CASE III.—John S., aged 44. Aortic Insufficiency. Considerable hypertrophy with dilatation of the heart. Pulmonary hypertrophy with dilatation of the heart. Considerable œdema of the inferior members and the scrotum.

DATE.	DIURETIN. GRAMMES.	PULSE.	URINE. CCM.	
April 1,	5	88	500	
2,	5	84	1900	
4,	7	86	1700	Diminution of the œdema.
4,	7	74	3400	
5,	7	80	3500	Still some trace of œdema.
6,	8	82	4000	
7,	0	100	4300	
8,	Tr. stroph'thus (1-20) 30 gtt.	100	3300	
9,	Strophanthus 30 gtt.	108	900	
10,	id.	96	700	The œdema reappears.
11,	(Diuretin 8 grammes.)	92	2100	
12,	6	94	3200	
13,	8	100	3000	
14,	6	96	3600	Œdema diminished.
15,	8	100	4500	S. g. urine 1029.
16,	8	96	3100	
17,	6	96	2600	No more œdema.
18,	8	100	3200	
19,	0	100	3000	

The diuretin here shows itself to be superior to strophanthus; during the administration of the latter, the œdema which had almost entirely disappeared, and with it all the painful symptoms, reappeared rapidly, at the same time the diuresis fell to 900 and to 700 grammes.

In this same patient the diuretin proved itself equally superior to digitalis in a new trouble of compensation in the cardiac lesion.

DATE.	DIGITALIS IN POWDER. GRAMMES.	PULSE.	URINE. CCM.	
May 12,	0.50	104	800	Considerable œdema in the legs.
13,	0.50	88	1000	S. g. urine 1028.
14,	0.50	68	800	
15,	0	72	1500	No appreciable modification of œdema.
16,	0	84	1300	
17,	0	104	1000	
18,	Diuretin 6 grammes.	100	900	
19,	7	100	1300	
20,	8	88	2300	Œdema diminished.
21,	8	92	1300	
22,	8	84	3800	
23,	8	100	2000	
24,	8	100	3200	No more traces of œdema.
25,	8	100	3500	

The pulse was not influeneed in its frequency; but the diuretic effect was certainly pronounced.

Conclusions.—Diuretin is an energetic diuretic; it augments not alone the quantity of water eliminated, but it increases also the solid constituents of the urine.

The diuretic effects are ordinarily manifested at the end of 24 hours, and continue under the influence of the same doses. The diuresis becomes less active after the disappearance of the œdema.

Diuretin gives the best results in general dropsy due to insufficient cardiac action. It frequently produces considerable effect where digitalis and other diuretics fail. The unsuccessful cases may be due to individual peculiarity or to some alteration in the kidneys.—*Bul de l'Académie Royale de Médecine de Belgique*, No. 10, 1891.

METHODS OF USE.

Diuretin, which is readily soluble in warm water, is best given in the form of mixture, either simply in aqueous solution (5-100) or with the addition of correctives. Addition of acid or acid-vegetable juices should be strictly avoided. The drug should not be exposed to the air.

FORMULÆ.

℞ Diuretin Knoll.....75-105 grains.
Aq. distill.....4 fl. ounces.
M. D. S.—To be given throughout the day in tablespoonfuls.

℞ Diuretin-Knoll.....75-105 grains.
Aq. destill .....3ounces.
Aq. Menth. pip.....3 ouuces.
M. D. S.—To be given throughout the day in tablespoonfuls.

On account of the increased demand, we are able to reduce the price the DIURETIN-KNOLL more than 25 per cent., which is important, as the necessary doses are large.

McKesson & Robbins' Gelatin-Coated Pills of Diuretic-Knoll, 5 Grains.

CAUTION.—As there are imitations in the market, physicians should see that the genuine is supplied. It is put up only in original vials of one ounce, and in McK. & R. 5-grain pills In bottles of 100 and 500 each, and is plainly labeled DIURETIN-KNOLL.

Full notes on the use of DIURETIN-KNOLL sent FREE on request by

Lapactic Pills.

A combination introduced by us and found in practice to possess superior advantages over other similar formulas. The well known mild action of Aloin on the lower portion of the intestinal canal, and its power of stimulating the hepatic functions, is supplemented by the action of Ipecac as a stomachic tonic and by increasing the gastric secretions; the Belladonna acts specially upon the involuntary muscular fibres of the bowels, increasing peristalsis, diminishing the harshness, and at the same time increasing the effectiveness of the laxative. The general tonic effect of Strychnine upon the stomach and bowels and its direct action upon the sympathetic, make it a valuable addition in the permanent cure of **habitual constipation and atonic dyspepsia.**

Since we first called attention to our Lapactic Pills, some four years ago—publishing the composition of the same—a number of manufacturers have adopted the formula and have furnished these pills under the same name. Should Physicians fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints from physicians by letter), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term "LAPACTIC PILLS, S. & D.'S." when prescribing these pills.

SAMPLES WILL BE MAILED ON APPLICATION.

SPECIAL FORMULAS MADE TO ORDER.

WHEN PURCHASING, PLEASE SPECIFY S. & D's.

SCOTT'S EMULSION

VERSUS

PLAIN COD LIVER OIL.

Plain Cod Liver Oil *is indigestible, deranges the stomach, destroys the appetite is not assimilated,* and in a majority of cases is detrimental to the patient.

SCOTT'S EMULSION

Can be *digested in nearly all cases, is assimilated, does not derange the stomach, nor overtax the digestive functions,* and can be taken for an indefinite period when the plain cod liver oil cannot be tolerated at all, and with most marked results in *Anæmia, Consumption* and all wasting conditions. It also contains the *Hypophosphites of Lime and Soda with Glycerine,* which are most desirable adjuncts.

WHEN PHYSICIANS TRY IT THEY INVARIABLY USE IT

in preference to the plain cod liver oil or other *so-called Emulsions* that invariably separate, and hence their integrity and value is destroyed. *Scott's Emulsion is palatable and absolutely permanent* hence its integrity is always preserved.

The formula for SCOTT'S EMULSION is 50 per cent. of the finest Norwegian Cod Liver Oil, 6 grains Hypophosphite of Lime and 3 grains Hypophosphite of Soda to the fluid ounce, Emulsified, or digested to the condition of assimilation with chemically pure Glycerine and Mucilage.

We also wish to call your attention to the following preparations:

CHERRY MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain aud nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula).

Prepared from carefully selected German Buckthorn Bark, Juglans Bark and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

SCOTT & BOWNE, 132 South Fifth Avenue, NEW YORK.

ABOUT GAS TREATMENT.

We make and sell oxygen and nitrogen monoxide for therapeutic use, and we guarantee them pure They are put up in compact form. (A cylinder containing 100 gallons of nitrogen monoxide or 40 gallons of oxygen measures 12 inches in length, has a diameter of 3½ inches, and weighs 10½ lbs. A cylinder containing 450 gallons of nitrogen monoxide or 100 gallons of oxygen measures 25 inches in length, has a diameter of 4½ inches, and weighs 34 lbs.)

INSOMNIA. Dr. Allan McLane Hamilton states that nitrogen monoxide, N_2O (nitrous oxide of the old nomenclature) has no equal in the treatment of this difficulty.

MELANCHOLIA. A short course of nitrogen monoxide is said to change the face of nature for such patients.

ANÆMIA. Where iron is not tolerated or proves inefficient, the addition of oxygen or a combination of oxygen and nitrogen monoxide has proven very beneficial.

For those who should, but cannot, go from home for rest or a change of air, or for those who, from any cause fail to get air enough into their lungs, the inhalation of one or other of these gases, or both in combination, promises great benefit. The testimony is that in cases of

ASTHMA, more than fifty per cent. of the cases yield to oxygen treatment, others are very greatly relieved, and a very small per cent. are not improved.

INDIGESTION and CONSTIPATION are said to be greatly relieved and very often conquered by continued treatment.

A highly esteemed New York physician has used more than twenty thousand gallons of nitrogen monoxide in his private practice. The letters received from his patients, largely from those who were afflicted with nervous disorders, are enthusiastic in their testimony as to the benefit received.

Regular practitioners who are using gas treatment testify that when *pure* oxygen and *pure* nitrogen monoxide, or a mixture of these, is used, no therapeutic agents are more uniformly successful when intelligently prescribed.

To whom all orders for samples must be addressed.

SVAPNIA IS FOR SALE BY DRUGGISTS GENERALLY.

JAROS HYGIENIC UNDERWEAR

WOOL FLEECE KNIT

FORMULA.—Unspun Wool, knitted into meshes of a cotton thread Basis, the theories of Profs. Von Pettenkofer, Parkes, Kreiger, Buck and others.

ADVANTAGES.—Capillary action of unspun wool upon the body. Greatest hydroscopic qualities and non-irritating. Interstices naturally formed, stores body temperature. Prevents rapid radiation during climatic changes, aids transportation of moisture. Porosity, elasticity, perfect fit and non-shrinkability are regarded.

INDICATIONS.—Rheumatism, Kidney Disease (Nephrites), Pulmonary Consumption, Catarrhal Troubles, La Grippe, etc., as well as a general prophylactic.

NOTE.—Features accomplished have been recognized by the medical profession since 1884, also endorsed by U. S. Army, U. S. Navy, Police and Fire Departments.

80-Page Treatise containing reports of results in special practice as well as from U. S. Government, mailed post-paid on application

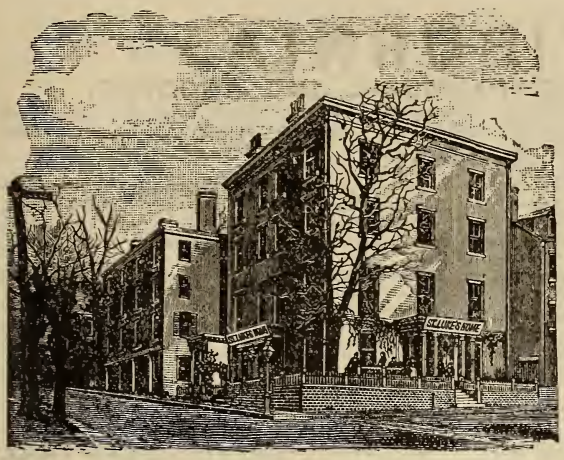
831 BROADWAY, NEW YORK

For letters no street address is necessary

PARTURITION.

Aletris Cordial (Rio), given in Teaspoonful doses every hour or two AFTER PARTURITION, is the best agent to prevent after-pains and hemorrhage. By its DIRECT tonic action on the uterus, it expels blood clots, closes the uterine sinuses, causes the womb to contract, and prevents subinvolution. In severe cases, it can be combined with ergot in the proportion of one ounce of fluid Ext. Ergot to three ounces Aletris Cordial. It is the experience of eminent practitioners, in all cases where ergot is indicated, that its action is rendered much more efficacious by combining it with Aletris Cordial in the proportions above stated.



ST. LUKE'S HOME FOR THE SICK
DR. HUNTER McGUIRE'S PRIVATE HOSPITAL
RICHMOND, VIRGINIA.

DR. HUNTER McGUIRE,

Formerly Professor of Surgery in the Virginia Medical College, says:

"Whatever may be the published analysis of Spring No. 2, I know from the constant use of it personally, and in my practice during many years past, that the results obtained from the use of

BUFFALO LITHIA WATER

are far beyond those which would be warranted from the analysis given. I am of the opinion that it either contains some powerful remedial agent, as yet undiscovered by medical science, or

Its Elements are so Delicately Combined

in Nature's laboratory, that they defy the utmost skill of the chemist to solve the secret of their power."

"It has never failed me as a powerful Nerve Tonic. I sometimes think it must contain Hypophosphites of Lime and Soda."

Water in cases of one dozen half-gallon bottles, $5.00, f. o. b. here. For sale by all first-class druggists.

THOMAS F. GOODE, PROPRIETOR

BUFFALO LITHIA SPRINGS, VA.

DIOVIBURNIA

UTERINE TONIC, ANTISPASMODIC AND ANODYNE.

A reliable and trustworthy remedy for the relief of Dysmenorrhœa, Amenorrhœa, Menorrhagia Leucorrhœa, Subinvolution, THREATENED ABORTION, Vomiting in Pregnancy and Chlorosis; directing its action to the entire uterine system as a general tonic and antispasmodic.

FORMULA.

Every ounce contains 3-4 dram each of the fluid extracts: Viburnum Prunifolium, Viburnum Opulus, Dioscorea Villosa, Aletris Farinosa, Helonias Dioica, Mitchella Repens, Caulophyllum Thalictroides, Scutellaria Lateriflora.

DOSE.—For adults, a desertspoonful to a tablespoonful three times a day, after meals. In urgent cases, where there is much pain, dose may be given every hour or two, ALWAYS IN HOT WATER.

Jno. B. Johnson, M. D., Professor of the Principles and Practice of Medicine, St. Louis Medical College.

ST. LOUIS, June 20, '88.

I very cheerfully give my testimony to the virtues of a combination of vegetable remedies prepared by a well-known and able pharmacist of this city, and known as DIOVIBURNIA, the component parts of which are well known to any and all physicians who desire to know the same, and therefore have no relation to proprietary or quack remedies. I have employed this medicine in cases of dysmonorrhœa, suppression of the catemania and in excessive leucorrhœa, and have been much pleased with its use. I do not think its claims (as set forth in the circular accompanying it) to be at all excessive. I recommend its trial to all who are willing to trust to its efficacy, believing it will give satisfaction. Respectfully,

Geo. B. Johnson

L. Ch. Boisliniere, M. D., Prof. of Obstetrics, St. Louis Medical College. ST. LOUIS, June 18, 1888.

I have given DIOVIBURNIA a fair trial and found it useful as an uterine tonic and antispasmodic, relieving the pains of dysmenorrhœa, and regulator of the uterine functions. I feel authorized to give this recommendation of DIOVIBURNIA, as it is neither a patented nor a secret medicine, the formula of which have been communicated freely to the medical profession.

L. Ch. Boisliniere M.D.

H. Tuholske, M. D., Professor Clinical Surgery and Surgical Pathology, Missouri Medical College; also Post-Graduate School of St. Louis. ST. LOUIS, June 23, 1888.

I have used DIOVIBURNIA quite a number of times—sufficiently frequently to satisfy myself of its merits. It is of unquestionable benefit in painful dysmenorrhœa; it possesses antispasmodic properties which seem especially to be exerted on the uterus.

H. Tuholske

To any physician, unacquainted with the medicinal effect of DIOVIBURNIA, we will mail pamphlet containing full information, suggestions, commendations of some of our most prominent professors and various methods of treatment; also a variety of valuable prescriptions that have been thoroughly tested in an active practice, or to physicians desiring to try our preparation, and who will pay express charges, we will send on application a sample bottle free.

DIOS CHEMICAL CO., ST. LOUIS, MO., U. S. A.

VACCINE MATTER.

Scherff's Syrup of Hydriodic Acid.

A PERMANENT UNALTERABLE PREPARATION.

NON-IRRITANT. PALATABLE. EFFICIENT

Each fluid ounce of this Syrup represents the equivalent of 6.72 grains of absolute Hydriodic Acid. Particular stress is laid on the one great superiority; this Syrup will not decompose, and the danger (so common to other like preparations) of administering a preparation of free iodine, is absolutely avoided.

Descriptive Pamphlets and Clinical Reports mailed on request.

WESTERN PENNSYLVANIA MEDICAL COLLEGE
CITY OF PITTSBURGH.

SESSIONS OF 1892.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. MCKENNAN, 810 Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Ave., Pittsburg.

WALNUT LODGE HOSPITAL,
HARTFORD, CONNECTICUT.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish Bath, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefitted from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M. D.,
Sup't Walnut Lodge, Hartford, Conn.

The Baltimore Medical College.

PRELIMINARY FALL COURSE begins Sept. 1, 1891.
REGULAR WINTER COURSE begins October 1, 1891.

Excellent Teaching Facilities, Capacious Hospital, Large Clinics.

Prickly Heat, Chafing, Dandruff,

Odors from Perspiration, etc. Speedy Relief by Using

Packer's Tar Soap.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

BROMO (WARNER & CO.) SODA.

Caffein 1 Grain, Bromide Soda 30 Grains in each heaping teaspoonful.

USEFUL IN

Nervous Headache, Sleeplessness, Excessive Study, Migraine, Nervous Debility, Mania, as a Remedy in Sea-sickness, and Epilepsy.

Dose and Composition.—A heaping teaspoonful, containing Bromide Soda 30 grains, and Caffein 1 grain, in half a glass of water, to be repeated once after an interval of 30 minutes, if necessary.

ANTI-RHEUMATIC. SEDATIVE.

EFFERVESCENT.

BROMO (WARNER & CO.) LITHIA.

EACH DESSERTSPOONFUL CONTAINS:

℞ Salicylate Lith a 10 grains, and Bromide Soda 10 grains.

A REMEDY IN THE TREATMENT OF

RHEUMATISM, GOUTY DIATHESIS, ETC.

Dr. A. Garrod, the well-known English authority on Gout, who was the first physician to introduce the Lithia Salts in the treatment of Gouty Diathesis, states that their action is materially increased by being administered in a *freely diluted form.*

This effervescing salt of Lithia furnishes an easy and elegant way of applying Dr. Garrod's methods.

INGLÚVIN

A SPECIFIC FOR VOMITING IN PREGNANCY.

A POWDER:—PRESCRIBED IN THE SAME MANNER, DOSES & COMBINATION AS PEPSIN

In Doses of from 10 to 20 Grains,

AND A POTENT AND RELIABLE REMEDY FOR THE CURE OF

Marasmus, Cholera Infantum, Indigestion, Dyspepsia and Sick Stomach,

caused from debility of that organ. It is superior to the Pepsin preparations, since it acts with more certainty, and effects cures where they fail.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

—*Landois and Sterling.*

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

—*Materia Medica and Therapeutics, Dr. Mitchell Bruce.*

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

—*Eustace Smith, M.D., F.R.C.S.*

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{60}$ gr.), Atropiæ Sulph. ($\frac{1}{250}$ gr.), Codeia ($\frac{1}{60}$ gr.), Antimony Tart. ($\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{60}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

How Physicians Make Reputations!

THE successful doctors are those who are ever on the lookout for the best information upon the application of their remedies. They have no time to experiment, and consequently have no time to follow any but the most concise, and, at the same time, the most reliable writers. In this way they succeed, while others, who follow every rainbow simply because irresponsible people tell them there is a bag of gold on the end thereof, fail in their professions.

During the time the **Londonderry** has been before the profession it has been in constant use by the most eminent physicians. They write about it in Medical Books and Journals, report cases in Medical Societies and praise it in the Lecture Room. It has become known as a **Standard Remedy** for all forms of Lithæmia. The wise successful doctors are flocking to the standard of **Londonderry**, and when they once prove its striking power they do not forsake it. For the benefit of physicians who have not yet tried and tested this matchless gift of nature we have collected in a neat little pamphlet some of the opinions referred to above. They are from the most eminent clinicians and writers in the United States, and are well worth the perusal of live physicians who wish to know the latest thought on the subject of Gout, Rheumatism, Gravel and General Lithæmia.

Nervous Diseases and Their Diagnosis

By H. C. WOOD, M. D., LL. D..

Professor of Therapeutics and Nervous Diseases, University of Pennsylvania.

8vo., pp. 501, Cloth, $4.

It is invaluable as a work of diagnosis.—*Virginia Medical Monthly.*

It is at once a substantive contribution to neurology and a trustworthy guide to what has already been done in the subject.—*Practitioner.*

As a whole, the work is one which cannot fail to be of great service to the practicing physician.—*Medical and Surgical Reporter.*

The volume is a distinct help to the student, and is a necessary supplement to the systematic works on diseases of the nervous system.—*Boston Med. Surg. Jour.*

The author's originality is evident to every reader of his work; and we trust, for the advancement of knowledge, his readers will be many.—*New England Med. Gaz.*

This work fills a long-felt need in this department.—*Buffalo Med. Surg. Jour.*

Dr. Wood is an able clinician, and this makes his book valuable. His observations are practical and to the point and show careful study of a large number of cases which have fallen under his care.—*N. Y. Med. Jour.*

The honest effort of one who never writes without teaching and who always writes and teaches well.—*Journal of Insanity.*

To students and practitioners who have read other works this production will prove extremely valuable in time of need, to the former just before examination; to the latter in everyday practice.—*London Lancet.*

Not a compilation, but rather the record of independent opinions and investigations.—*Canadian Practitioner.*

The book is written in the characteristic vigorous style of its able and versatile author.—*American Practitioner.*

Lucid language, clear type, a full index, and, above all, the presentation of the late advances in this department of science, constitute the truly great attractions of this book.—*Albany Med Annals.*

It is not until the volume has been carefully read, and perhaps re-read, that its true excellence begins to dawn upon the reader.—*Maryland Med. Jour.*

or Carnrick's Kumyss Tablets.

A PRODUCT OF PURE SWEET MILK.
PALATABLE, NUTRITIOUS,
EASILY DIGESTED.
AND WHEN DISSOLVED IN WATER
FORMS A DELICIOUS EFFER-
VESCENT KUMYSS.

(*Put up in air-tight bottles, in two sizes; the larger holding sufficient Tablets for seven twelve-ounce bottles, and the smaller sufficient for three twelve-ounce bottles of Kumyss.*)

THIS PREPARATION is presented to the Medical Profession in the convenient form of Tablets, and will be found superior in every respect to ordinary *Kumyss, Wine of Milk, Fermented Milk*, or any similar preparation.

Kumysgen when prepared for use contains every constituent of a perfect Kumyss.

Kumysgen is made from fresh, sweet milk, and contains fully thirty per cent. of soluble casein, which is double the amount found in ordinary Kumyss preparations.

Kumysgen being in Tablet form, will keep indefinitely, is easily and readily prepared, less expensive than the ordinary variable and perishable Kumyss, and its *fermentative action* may be regulated at will, thus rendering it available at all times and under all circumstances.

Clinical tests gathered from every quarter of the globe attest its special value in all cases of *Gastric* and *Intestinal Indigestion* or *Dyspepsia, Pulmonary Consumption, Constipation, Gastric and Intestinal Catarrh, Fevers, Anæmia, Chlorosis, Rickets, Scrofula, Vomiting in Pregnancy, Bright's Disease, Intestinal Ailments of Infants, Cholera Infantum; for young children and for convalescents from all diseases.*

The casein being finely subdivided, it is especially valuable for all who require an easily digested or a partially digested Food.

Kumysgen is a delicious effervescent Food-Beverage, relished alike by the sick or well.

Kumysgen is tonic, stimulant, diuretic, highly nutritious, easily digested, perfectly palatable, and always *permanent* and *uniform* in strength.

A WEEKLY JOURNAL.

ESTABLISHED IN 1853 BY S. W. BUTLER, M. D.

THE Medical and Surgical Reporter.

EDWARD T. REICHERT, M. D., Editor.
(Prof. Physiology, University of Penna.)

CHAS. K. MOUNT, Advertising Manager.

PROSPECTUS.

For nearly forty years ***The Medical and Surgical Reporter*** has held a position of influence and popularity second to that of no other publication in medicine. Last May the Editorial and Business Management was changed, the journal was enlarged from twenty-eight to forty pages, and the publication in almost every way was radically improved. That these changes have been appreciated by the profession is evident in the phenomenal increase of our subscription list and in the number of new advertisements.

The enlarged ***Reporter*** now enables us to offer more pages of reading matter each year than are given by any other medical periodical in America, and more material of direct practical value to the practising physician than is furnished in any other journal in the English language. We now publish during the year over 3500 separate articles, representing the best thought in the profession. These include about as follows:—

75 ***Clinical Lectures*** by leading clinicians in this country and abroad.
200 ***Original Communications.***
60 ***Society Reports.***
25 ***Letters by Special Correspondents.***
800 ***Selected Prescriptions.***
75 ***Editorials on Timely Topics.***
150 ***Letters from our Subscribers.***
150 ***Book Reviews.***
2000 ***Periscope Articles,*** carefully selected and condensed, and representing all important progress in medicine in all branches and languages.

The ***Reporter*** is truly a magazine of medical progress, it is thoroughly practical, and is especially adapted to the wants of the busy practitioner. There is no State or Country in America that it does not reach, and no civilized Country that does not regularly receive it.

The ***Reporter*** is published every Saturday, and is mailed to subscribers in the United States and Canada for $5.00 a year in advance, and to those in foreign countries for $6.00 in advance. It will be sent for three months on trial for $1.00.

VIN MARIANI

"The Standard Preparation of Erythoxylon Coca."

CAREFUL, continued testing by upwards of seven thousand practitioners in America, whose written opinions over their signatures (in our possession) are fully in accord and clearly prove the efficacy and merits of "VIN MARIANI," may be thus summarized:

"Diffusible stimulant and tonic in anæmia, nervous depression, sequelæ of childbirth, lymphatism, tardy convalescence, general 'Malaise,' and after wasting fevers.

"Special reference to the nervous system, in all morbid states, melancholia, etc.

"Tonic in laryngeal and gastric complications, stomach troubles.

"All cases where a general toning or strengthening of the system is needed.

"The only tonic stimulant without any unpleasant reaction, and may be given indefinitely, never causing constipation."

N. B.—This Wine has been found always uniform and reliable, owing to the selection of the finest ingredients and the greatest accuracy in its manipulation. When prescribing, therefore, the Medical Profession are strongly advised to specify "VIN MARIANI," in order to avoid the substitution of imitations, often worthless and consequently disappointing in effect.

Please Specify VIN MARIANI.

Elixir Chloralamid-Schering.

CHLORALAMID-SCHERING, the new hypnotic introduced a little over two years ago, has now assumed a permanent position in materia medica, and is highly esteemed and largely employed by the medical profession. Reports on the therapeutics of Chloralamid-Schering have been overwhelmingly favorable, in text books, special treatises, society reports, lectures, editorials, etc.; when occasionably failure to produce sleep has been reported, we have investigated the facts and usually substantiated that the remedy was not properly administered. To preclude failure on this account once for all, we have concluded to introduce a preparation in permanent solution, elegant in appearance, palatable,—**perfect**

Elixir Chloralamid-Schering

is put up in 8 oz. prescription vials, ready for dispensing without change, except that the pharmacist must write the directions on the label and impress his stamp on same. The package is unique, and will, no doubt, meet with the approval of physicians and pharmacists.

There is no better form for administering Chloralamid-Schering, and physicians will surely give it their preference.

It is desired that this bottle be delivered on physician's prescription complete and unopened,—first writing the necessary facts on label on opposite side.

ELIXIR

Chloralamid

(SCHERING)

Each tablespoonful contains one gramme (15 grains) of Chloralamid-Schering.

HYPNOTIC.

Chloralamid-SCHERING is a superior hypnotic; an efficient and safe sleep-producing agent; its use is not attended by unpleasant and untoward side or after-effects, nor will continued use develop a habit or necessitate increasing doses. Eminent medical authorities have endorsed Chloralamid, and full clinical reports with chemical and therapeutical data will be furnished to physicians and pharmacists on request.

Directions:—A tablespoonful at a dose, taken one-half hour before sleep is desired; if effect is not prompt and satisfactory the dose may be repeated at intervals of 15 minutes—not more than twice.

PUT UP ONLY BY THE
Sole Agents & Licensees for America:

LEHN & FINK,

IMPORTERS, WHOLESALE DRUGGISTS AND MANUFACTURING CHEMISTS,

NEW YORK.

(This descriptive label is attached to every bottle, and may be removed before dispensing.)

To be obtained from all Leading Pharmacists, and supplied by all Wholesale Druggists in the United States.

A full descriptive treatise (52 pages) on Chloralamid-Schering will be mailed to physicians on request.

SOLE AGENTS AND LICENSEES:

LEHN & FINK, 128 William Street, NEW YORK.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK:)

Each fluid drachm represents 15 grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium and Lithium.

USES: EPILEPSY, UTERINE CONGESTION, HEADACHE, AND ALL CONGESTIVE, CONVULSIVE AND REFLEX NEUROSES.

This preparation produces results, which can not be obtained from the use of commercial Bromide substitutes.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK.)

From Sea Weed. **Uses: Malaria, Phthisis, Etc.**

An ALLY of quinine—quinine CHECKS the Malarial Chill; Fucus Marina ELIMINATES the Malarial CAUSE; and thus prevents the recurrence of the Chill *after* it has been *checked* by quinine.

An INVALUABLE REMEDY in the treatment of Phthisis—it arrests the decay of lung tissue, diminishes the fever, lessens the cough, abates the soreness in the lungs, improves the appetite, and impedes the progressive emaciation.

DOSE.—One Teaspoonful IN WATER, four times a day.

CHIONIA FROM CHIONANTHUS.

Uses: Biliousness, Jaundice, Dyspepsia, Constipation, and all Diseases Caused by Hepatic Torpor.

CHIONIA stimulates the Liver and restores it to a healthy condition, without debilitating the system by Catharsis; does not purge, per se, but under its use the Liver and Bowels gradually resume their normal functions.

DOSE.—One Fluid Drachm three times a day.

PEACOCK CHEMICAL CO., ST. LOUIS.

CARDIAC AND RENAL AFFECTIONS TREATED BY DIURETIN-KNOLL.

BY PROFESSOR MASIUS.

Dr. B. W. Richardson.

CASE I.—N. S., æt. 53. Arterio-sclerosis; aortic insufficiency. Excentric hypertrophy of the heart. Bronchitis. Pulmonary hypostasis. Œdema of the inferior members reaching to the hips.

DATE.	DIURETIN. GRAMMES.	PULSE.	URINE. CCM.	
March 26,	0	100	2000	
27,	5	100	3000	
28,	6	96	6100	Œdema diminished.
29,	6	100	6000	
30,	7	104	5000	
31,	7	100	4050	
April 1,	7	94	5550	
2,	7	100	4300	Œdema almost gone.
3,	7	102	4950	
4,	7	100	2500	No traces of œdema.
5,	7	100	2700	
6,	7	100	2500	

This case demonstrates the powerful action of the diuretin. On March 26, the day on which the treatment was instituted, the quantity of urine was about 2 quarts in the 24 hours; the administration of diuretin brought it up to more than 6 quarts a day. The pulse was not modified in frequency, but it became regular and stronger. The pains complained of by the patient, the malaise, oppression, and very marked dyspnœa became less in proportion to the augmentation of the urinary secretion.

CASE II.—Van H., aged 53. Arterio-sclerosis. Aortic insufficiency. Hypertrophy of the heart with dilatation. Bronchitis. Notable œdema of the inferior members.

DATE.	DIURETIN. GRAMMES.	PULSE.	URINE. CCM.	
March 28,	0	60	2400	
29,	5	—	2500	Œdema diminished.
30,	5	—	3500	
31,	5	74	3500	
April 1,	5	—	4000	
2,	6	80	3300	Still some traces of œdema.
3,	6	—	4300	
4,	7	—	3500	No more œdema.
5,	7	—	3000	General condition good.
6,	7	—	3000	

In this patient, doses of five grammes (75 grs.) a day were sufficient, after some days, to cause the disappearance of the compensatory troubles by keeping up the activity of the diuresis.

CASE III.—John S., aged 44. Aortic Insufficiency. Considerable hypertrophy with dilatation of the heart. Pulmonary hypertrophy with dilatation of the heart. Considerable œdema of the inferior members and the scrotum.

DATE.	DIURETIN. GRAMMES.	PULSE.	URINE. CCM.	
April 1,	5	88	500	
2,	5	84	1900	
4,	7	86	1700	Diminution of the œdema.
4,	7	74	3400	
5,	7	80	3500	Still some trace of œdema.
6,	8	82	4000	
7,	0	100	4300	
8,	Tr. stroph'thus (1-20) 30 gtt.	100	3300	
9,	Strophanthus 30 gtt.	108	900	
10,	id.	96	700	The œdema reappears.
11,	(Diuretin 8 grammes.)	92	2100	
12,	6	94	3200	
13,	8	100	3000	
14,	6	96	3600	Œdema diminished.
15,	8	100	4500	S. g. urine 1029.
16,	8	96	3100	
17,	6	96	2600	No more œdema.
18,	8	100	3200	
19,	0	100	3000	

The diuretin here shows itself to be superior to strophanthus; during the administration of the latter, the œdema which had almost entirely disappeared, and with it all the painful symptoms, reappeared rapidly, at the same time the diuresis fell to 900 and to 700 grammes.

In this same patient the diuretin proved itself equally superior to digitalis in a new trouble of compensation in the cardiac lesion.

DATE.	DIGITALIS IN POWDER. GRAMMES.	PULSE.	URINE. CCM.	
May 12,	0.50	104	800	Considerable œdema in the legs.
13,	0.50	88	1000	S. g. urine 1028.
14,	0.50	68	800	
15,	0	72	1500	No appreciable modification of œdema.
16,	0	84	1300	
17,	0	104	1000	
18,	Diuretin 6 grammes.	100	900	
19,	7	100	1300	
20,	8	88	2300	Œdema diminished.
21,	8	92	1300	
22,	8	84	3800	
23,	8	100	2000	
24,	8	100	3200	No more traces of œdema.
25,	8	100	3500	

The pulse was not influeneed in its frequency; but the diuretic effect was certainly pronounced.

Conclusions.—Diuretin is an energetic diuretic; it augments not alone the quantity of water eliminated, but it increases also the solid constituents of the urine.

The diuretic effects are ordinarily manifested at the end of 24 hours, and continue under the influence of the same doses. The diuresis becomes less active after the disappearance of the œdema.

Diuretin gives the best results in general dropsy due to insufficient cardiac action. It frequently produces considerable effect where digitalis and other diuretics fail. The unsuccessful cases may be due to individual peculiarity or to some alteration in the kidneys.—*Bul de l'Académie Royale de Médecine de Belgique*, No. 10, 1891.

METHODS OF USE.

Diuretin, which is readily soluble in warm water, is best given in the form of mixture, either simply in aqueous solution (5-100) or with the addition of correctives. Addition of acid or acid-vegetable juices should be strictly avoided. The drug should not be exposed to the air.

FORMULÆ.

℞ Diuretin Knoll.....75-105 grains.
Aq. distill.....4 fl. ounces.
M. D. S.—To be given throughout the day in tablespoonfuls.

℞ Diuretin-Knoll.....75-105 grains.
Aq. destill .....3 ounces.
Aq. Menth. pip.....3 ouuces.
M. D. S.—To be given throughout the day in tablespoonfuls.

On account of the increased demand, we are able to reduce the price the DIURETIN-KNOLL more than 25 per cent., which is important, as the necessary doses are large.

McKesson & Robbins' Gelatin-Coated Pills of Diuretic-Knoll, 5 Grains.

CAUTION.—As there are imitations in the market, physicians should see that the genuine is supplied. It is put up only in original vials of one ounce, and in McK. & R. 5-grain pills In bottles of 100 and 500 each, and is plainly labeled DIURETIN-KNOLL.

Full notes on the use of DIURETIN-KNOLL sent FREE on request by

Lapactic Pills.

A combination introduced by us and found in practice to possess superior advantages over other similar formulas. The well known mild action of Aloin on the lower portion of the intestinal canal, and its power of stimulating the hepatic functions, is supplemented by the action of Ipecac as a stomachic tonic and by increasing the gastric secretions; the Belladonna acts specially upon the involuntary muscular fibres of the bowels, increasing peristalsis, diminishing the harshness, and at the same time increasing the effectiveness of the laxative. The general tonic effect of Strychnine upon the stomach and bowels and its direct action upon the sympathetic, make it a valuable addition in the permanent cure of **habitual constipation and atonic dyspepsia.**

Since we first called attention to our Lapactic Pills, some four years ago—publishing the composition of the same—a number of manufacturers have adopted the formula and have furnished these pills under the same name. Should Physicians fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints from physicians by letter), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term "LAPACTIC PILLS, S. & D.'S." when prescribing these pills.

SAMPLES WILL BE MAILED ON APPLICATION.

SPECIAL FORMULAS MADE TO ORDER.

WHEN PURCHASING, PLEASE SPECIFY S. & D's.

SCOTT'S EMULSION

VERSUS

PLAIN COD LIVER OIL.

Plain Cod Liver Oil ***is indigestible, deranges the stomach, destroys the appetite is not assimilated,*** and in a majority of cases is detrimental to the patient.

SCOTT'S EMULSION

Can be ***digested in nearly all cases, is assimilated, does not derange the stomach, nor overtax the digestive functions,*** and can be taken for an indefinite period when the plain cod liver oil cannot be tolerated at all, and with most marked results in ***Anæmia, Consumption*** and all wasting conditions. It also contains the ***Hypophosphites of Lime and Soda with Glycerine,*** which are most desirable adjuncts.

WHEN PHYSICIANS TRY IT THEY INVARIABLY USE IT

in preference to the plain cod liver oil or other ***so-called Emulsions*** that invariably separate, and hence their integrity and value is destroyed. ***Scott's Emulsion is palatable and absolutely permanent*** hence its integrity is always preserved.

The formula for SCOTT'S EMULSION is 50 per cent. of the finest Norwegian Cod Liver Oil, 6 grains Hypophosphite of Lime and 3 grains Hypophosphite of Soda to the fluid ounce, Emulsified, or digested to the condition of assimilation with chemically pure Glycerine and Mucilage.

We also wish to call your attention to the following preparations:

CHERRY MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain aud nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula).

Prepared from carefully selected German Buckthorn Bark, Juglans Bark and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

SCOTT & BOWNE, 132 South Fifth Avenue, NEW YORK.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

— Landois and Sterling.

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

— Materia Medica and Therapeutics, Dr. Mitchell Bruce.

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

— Eustace Smith, M.D., F.R.C.S.

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

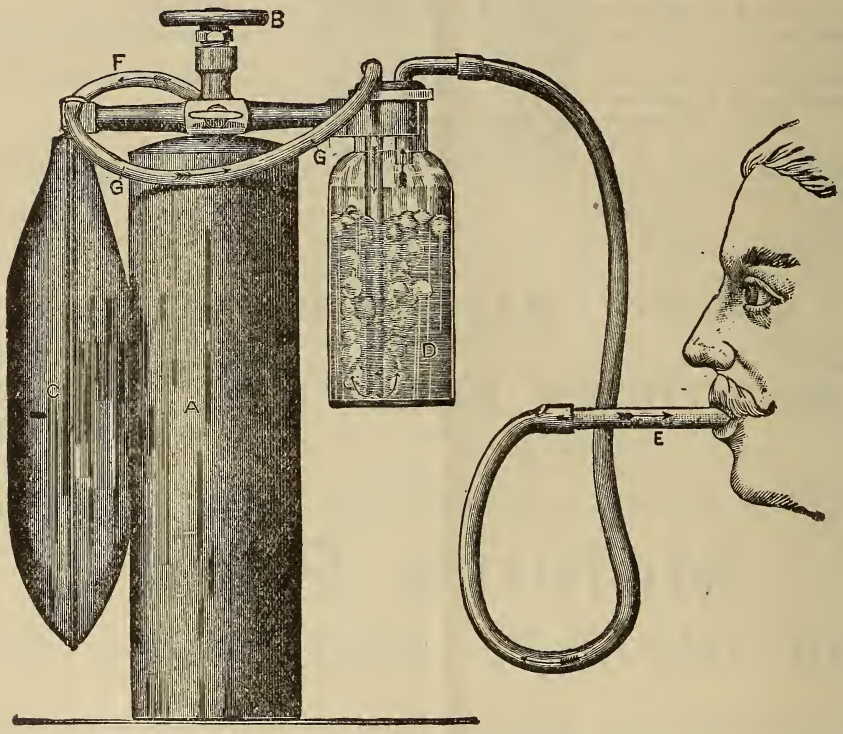
BOSTON, MASS.

INHALATION APPARATUS

FOR

THE THERAPEUTIC ADMINISTRATION OF OXYGEN.



In the treatment of lung troubles by Oxygen its exhibition by inhalation is preferred. The apparatus herewith shown is a modification of the Nitrous Oxide apparatus which we have supplied for many years. It is made in the best manner throughout, and is the outcome of years of experience in the manufacture of gas apparatus. It will be found to meet all the requirements.

We supply the gas in two sizes of cylinders, containing respectively forty and one hundred gallons, either pure Oxygen or a mixture of Oxygen and Nitrous Oxide in definite proportions of 20 per cent., and forty per cent. of Nitrous Oxide.

Whether pure or mixed the gas is sold at the uniform price of 5 cents a gallon. The cost of the cylinders will be refunded on their return empty with the valves in good condition. Full description of Inhalation and Enema apparatuses with directions for use accompany each apparatus, or will be supplied on application.

PRICES.

Inhalation Apparatus	$5.00
Cylinder, 40 gallons' capacity	6.00
40 gallons Gas, either pure Oxygen or mixed Oxygen and Nitrous Oxide	2.00
Complete Apparatus, Cylinder, and 40 gallons Gas	$13.00
Inhalation Apparatus	$5.00
Cylinder, 100 gallons' capacity	15.00
100 gallons Gas, either pure or mixed	5.00
Complete Apparatus, Cylinder, and 100 gallons Gas	$25.00

NERVES.

Suppose we find the patient a little giddy upon rising in the morning. This means that the nerves do not have perfect control of the muscular system. As a test for this, direct the patient to stand with his feet close together, shut his eyes, and if the tendency is to reel, it is another evidence of lowered nerve tone. Or, stand with the arms extended, shut the eyes, and then try to bring the tips of his forefingers together in front of him. If they pass by or meet imperfectly, it shows the same thing.

Or, the person may not be able to think as quickly as he should. To test this, ask the patient three simple questions in rapid succession, as, Where were you just before you came into this room? What were you doing? How long did you remain? The rapidity with which the answers are given indicate the rapidity of brain action.

All these things show that it is of the utmost importance that the nervous system should be kept in tone. Otherwise, every part of the body languishes.

This condition indicates the use of Celerina (Rio) in teaspoonful doses four times a day, *to increase the nerve capital of your patient.*

PREFERABLE TO CORROSIVE SUBLIMATE

Because it is not poisonous
Because it possesses superior antiseptic properties
Because it forms no insoluble compounds with the animal fluids
Because it produces no pain or irritation even of abraded surfaces

For use in all cases and under all circumstances where CORROSIVE SUBLIMATE has hitherto been employed

APPLICABLE WHEREVER AN ANTISEPTIC IRRIGATION or Lotion is indicated and as a Prophylactic and Disinfectant under any and all circumstances

CHLORO PHENIQUE

PERFECTLY MISCIBLE WITH WATER

For washing out the cavities, or THE BLADDER IN CHRONIC CYSTITIS it has no equal

A Non-Irritant Non-Poisonous Antiseptic and Parasiticide of Great Energy

In FOUL WOUNDS, ABSCESSES, SUPPURATING SINUSES, BUBOES, etc., CHLORO-PHÉNIQUE is used to cleanse and to prepare the way for "Campho-Phénique," which latter as a permanent dressing, subdues pain, prevents the formation of pus, and hastens healing in a remarkable manner

PHENIQUE CHEMICAL COMPANY
2715 CASS AVENUE - - - ST. LOUIS, MO.

Dr. J. FEHR'S
"COMPOUND TALCUM" * *
* * "BABY POWDER,"
THE
"HYGIENIC DERMAL POWDER"
FOR
INFANTS AND ADULTS.

Introduced to the Medical and the Pharmaceutical professions by J. FEHR, in the year 1873.

COMPOSITION:—Silicate of Magnesia with Carbolic and Salicylic Acids.

PROPERTIES:—Antiseptic, Antizymotic, and Disinfectant.

Useful as a **GENERAL SPRINKLING POWDER,** with positive Hygienic, Prophylactic, and Therapeutic properties.

GOOD IN ALL AFFECTIONS OF THE SKIN.

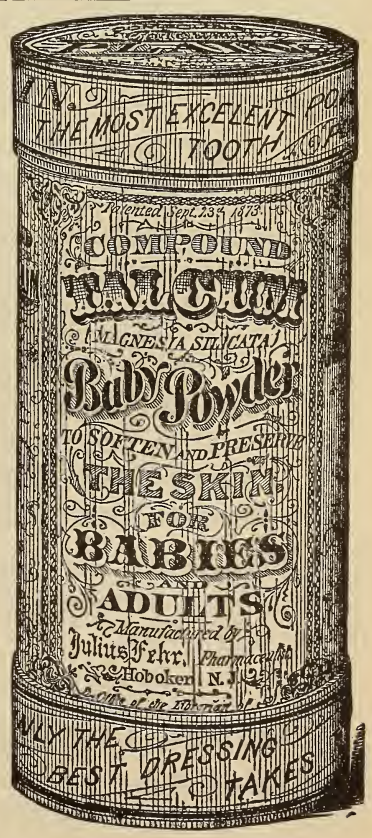
PER BOX, PLAIN, 25 Cents; PERFUMED, 50 Cents.
PER DOZ., PLAIN, $1.75; PERFUMED, $3.50.

SOLD BY THE DRUG TRADE GENERALLY.

MANUFACTURER:

JULIUS FEHR, M.D.,
Ancient Pharmacist, HOBOKEN, N. J.

Only advertised in Medical and Pharmaceutical prints.



NEUROSINE

THE MOST POWERFUL NEUROTIC ATTAINABLE.

ANODYNE AND HYPNOTIC.

A most efficient and permanent preparation, **REMARKABLE** for its efficacy and **THERAPEUTIC EFFECTS** in the treatment of those **NERVOUS AFFECTIONS** and morbid conditions of the System which so often tax the skill of the Physician.

A RELIABLE AND TRUSTWORTHY REMEDY FOR THE RELIEF OF

HYSTERIA, EPILEPSY, NEURASTHENIA, MANIA, CHOREA, UTERINE CONGESTION, MAGRAINE, NEURALGIA, ALL CONVULSIVE AND REFLEX NEUROSES.
THE REMEDY PAR EXCELLENCE IN DELIRIUM AND RESTLESSNESS OF FEVERS.

FORMULA:—Each fluid-drachm contains 5 grains each, C. P. Bromides of Potassium, Sodium and Ammonium 1-8 gr. Bromide Zinc, 1-64 gr. each of Ext. Belladonna and Cannabis Indica, 4 grains Ext. Lupuli and 5 minims fluid Ext. Cascara Sagrada, with Aromatic Elixirs.

DOSE:—From one teaspoonful to a tablespoonful, in water, three or more times daily as may be directed by the Physician.

To any physician, unacquainted with the medicinal effect of Neurosine, we will mail pamphlet contain full information, suggestions, and various methods of treatment; also a variety of valuable prescriptions that have been thoroughly tested in active practice, or to physicians desiring to try our preparation, and who will pay express charges, we will send on application a sample bottle free.

DIOS CHEMICAL CO.,
ST. LOUIS MO., U. S. A.

VACCINE MATTER.

For the accommodation of our Subscribers, we will supply both Bovine and Humanized Vaccine Virus.

Guaranteed to be fresh and in every respect first class.

PRICES:

Bovine Crusts, - - -	$1 50 each
Bovine Points or Quills, -	1.00 a dozen.
Humanized Crusts, - -	1.00, small.
Humanized Crusts, - -	2.00, large.

The Humanized Crusts are warranted to be from typical cases, and in every instance from healthy children, with unquestionable family histories.

PLEASE ACCOMPANY THE ORDER WITH THE MONEY.

Scherff's Syrup of Hydriodic Acid.

A PERMANENT UNALTERABLE PREPARATION.

NON-IRRITANT. PALATABLE. EFFICIENT.

Each fluid ounce of this Syrup represents the equivalent of 6.72 grains of absolute Hydriodic Acid. Particular stress is laid on the one great superiority; this Syrup will not decompose, and the danger (so common to other like preparations) of administering a preparation of free iodine, is absolutely avoided.

Descriptive Pamphlets and Clinical Reports mailed on request.

WESTERN PENNSYLVANIA MEDICAL COLLEGE
CITY OF PITTSBURGH.

SESSIONS OF 1892.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. MCKENNAN, 810 Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Ave., Pittsburg.

WALNUT LODGE HOSPITAL,
HARTFORD, CONNECTICUT.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish Bath, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefitted from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

Terrace Bank Sanitorium,
DR. R. S. SUTTON'S PRIVATE
INSTITUTION FOR THE TREATMENT OF
DISEASES OF WOMEN.
Address, 170 Ridge Ave., Allegheny, Pa.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. Imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.--

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

BARGAINS FOR SUBSCRIBERS.

WE offer a number of first-class and very valuable books (latest editions), together with a year's subscription to the REPORTER, at the following very low rates:

For $10.00 we will send

	The REPORTER for one year,	price alone,	$5.00
	Pocket Record,	" "	1.00
	Thomas—Medical Dictionary,	" "	5.00
And one of the following:			
(1)	Mills—The Nursing and Care of the Insane,	" "	1.00
(2)	Keating—Maternity, Infancy, Childhood,	" "	1.00
(3)	Bruen—Outlines for the Management of Diet,	" "	1.00
(4)	Wilson—Fever Nursing,	" "	1.00
(5)	Powell—Pocket Medical Formulary,	" "	1.50

For $9.00 we will send

	The REPORTER for one year,	price alone,	$5.00
And one of the following:			
(1)	Heath—Dictionary of Practical Surgery,	" "	7.50
(2)	Wood—Therapeutics: Its Principles and Practice,	" "	6.00
(3)	DaCosta—Medical Diagnosis,	" "	6.00
(4)	Leidy—Human Anatomy,	" "	6.00

For $8.00 we will send

	The REPORTER for one year,	price alone,	$5.00
(1)	Thomas—Medical Dictionary,	" "	5.00
Or, (2)	The Physician's Model Ledger,	" "	5.00
Or, (3)	Vierordt—Medical Diagnosis, and Pocket Record,	" "	5.00

For $7.00 we will send

	The REPORTER for one year,	price alone,	$5.00
And any three of the following:			
(1)	Mills—The Nursing and Care of the Insane,	" "	1.00
(2)	Keating—Maternity, Infancy, Childhood,	" "	1.00
(3)	Bruen—Outlines for the Management of Diet,	" "	1.00

REVOLUTION

—IN—

IRON ADMINISTRATION

A HIGHLY PALATABLE PREPARATION OF IRON CHLORIDE.

IRON is easily chief among Hæmatinics. According to T. Lauder Brunton, M.D., D.Sc., F.R.S., it increases the number of blood corpuscles; the percentage of hæmaglobin in them, and functional activity of all the vital organs; as a vascular tonic classes with digitalis and strychnine, and in its alterative qualities with arsenic. .

The tincture of Chloride of Iron has long been recognized as the most efficient of iron preparations, the objections to its continued administration, its highly astringent taste, its corrosive action on the teeth, and constipating action have, however, been hitherto insurmountable.

We have succeeded in preparing an entirely palatable syrup of officinal Tincture iron Chloride combining all its virtues with none of its drawbacks. It is prepared after the formula of Dr. G. W. Weld, and is entitled:

"WELD'S SYRUP OF IRON CHLORIDE."

(P., D. & CO.'S)

We earnestly recommend its trial to all the profession, believing it to be the most acceptable preparation of Iron ever devised.

Samples will be sent on receipt of request to physicians who indicate their willingness to pay express charges.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{60}$ gr.), Atropiæ Sulph. ($\frac{1}{500}$ gr.), Codeia ($\frac{1}{60}$ gr.), Antimony Tart. $\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{60}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

MANUFACTURERS OF PHYSICIANS' SPECIALTIES,

86 Maiden Lane, New York City.

How Physicians Make Reputations!

THE successful doctors are those who are ever on the lookout for the best information upon the application of their remedies. They have no time to experiment, and consequently have no time to follow any but the most concise, and, at the same time, the most reliable writers. In this way they succeed, while others, who follow every rainbow simply because irresponsible people tell them there is a bag of gold on the end thereof, fail in their professions.

During the time the **Londonderry** has been before the profession it has been in constant use by the most eminent physicians. They write about it in Medical Books and Journals, report cases in Medical Societies and praise it in the Lecture Room. It has become known as a **Standard Remedy** for all forms of Lithæmia. The wise successful doctors are flocking to the standard of **Londonderry**, and when they once prove its striking power they do not forsake it. For the benefit of physicians who have not yet tried and tested this matchless gift of nature we have collected in a neat little pamphlet some of the opinions referred to above. They are from the most eminent clinicians and writers in the United States, and are well worth the perusal of live physicians who wish to know the latest thought on the subject of Gout, Rheumatism, Gravel and General Lithæmia.

REPORTER for one year, . . . $5.00
Wood's Nervous Diseases and Their Diagnosis, ... 4.00
$9.00

Nervous Diseases and Their Diagnosis

By H. C. WOOD, M. D., LL. D..

Professor of Therapeutics and Nervous Diseases, University of Pennsylvania.

8vo., pp. 501, Cloth, $4.

It is invaluable as a work of diagnosis.—*Virginia Medical Monthly.*

It is at once a substantive contribution to neurology and a trustworthy guide to what has already been done in the subject.—*Practitioner.*

As a whole, the work is one which cannot fail to be of great service to the practicing physician.—*Medical and Surgical Reporter.*

The volume is a distinct help to the student, and is a necessary supplement to the systematic works on diseases of the nervous system.—*Boston Med. Surg. Jour.*

The author's originality is evident to every reader of his work; and we trust, for the advancement of knowledge, his readers will be many.—*New England Med. Gaz.*

This work fills a long-felt need in this department.—*Buffalo Med. Surg. Jour.*

Dr. Wood is an able clinician, and this makes his book valuable. His observations are practical and to the point and show careful study of a large number of cases which have fallen under his care.—*N. Y. Med. Jour.*

The honest effort of one who never writes without teaching and who always writes and teaches well.—*Journal of Insanity.*

To students and practitioners who have read other works this production will prove extremely valuable in time of need, to the former just before examination; to the latter in everyday practice.—*London Lancet.*

Not a compilation, but rather the record of independent opinions and investigations.—*Canadian Practitioner.*

The book is written in the characteristic vigorous style of its able and versatile author.—*American Practitioner.*

Lucid language, clear type, a full index, and, above all, the presentation of the late advances in this department of science, constitute the truly great attractions of this book.—*Albany Med Annals.*

It is not until the volume has been carefully read, and perhaps re-read, that its true excellence begins to dawn upon the reader.—*Maryland Med. Jour.*

"What a boon it would be to the Medical Profession if some reliable Chemist would bring out an Extract of Malt in combination with a well-digested or Peptonized Beef, giving us the elements of Beef and the stimulating and nutritious portions of Ale.—J. MILNER FOTHERGILL, M. D."

ALE & BEEF

"PEPTONIZED"

EXTRACT—BOVIS CUM MALTO.

IS THE IDENTICAL COMBINATION SUGGESTED BY THE LATE EMINENT FOTHERGILL.

Each Bottle Represents 1-4 Pound of Lean Beef Thoroughly Peptonized.

PREPARED BY

THE ALE & BEEF COMPANY,

DAYTON, OHIO, U. S. A.

Two full-sized bottles will be sent FREE to any physician who will pay express charges.

"Orders from all parts of the Dominion of Canada supplied by The Canadian Peptonized Beef & Ale Co., Limited, 153 Hollis Street, Halifax, N. S."

SYR. HYPOPHOS. CO., FELLOWS

Contains the Essential Elements of the Animal Organization—Potash and Lime;

The Oxidizing Agents—Iron and Manganese;

The Tonics—Quinine and Strychnine;

And the Vitalizing Constituent—Phosphorus; the whole combined in the form of a Syrup with a **Slightly Alkaline Reaction.**

It Differs in its Effects from all Analogous Preparations; and it possesses the important properties of being pleasant to the taste, easily borne by the stomach, and harmless under prolonged use.

It has Gained a Wide Reputation, particularly in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs. It has also been employed with much success in various nervous and debilitating diseases.

Its Curative Power is largely attributable to its stimulant, tonic, and nutritive properties, by means of which the energy of the system is recruited.

Its Action is Prompt; it stimulates the appetite and the digestion, it promotes assimilation, and it enters directly into the circulation with the food products.

The prescribed dose produces a feeling of buoyancy, and removes depression and melancholy; *hence the preparation is of great value in the treatment of mental and nervous affections.* From the fact, also, that it exerts a double tonic influence, and induces a healthy flow of the secretions, its use is indicated in a wide range of diseases.

NOTICE—CAUTION.

The success of Fellows' Syrup of Hypophosphites has tempted certain persons to offer imitations of it for sale. Mr. Fellows, who has examined samples of several of these, ***finds that no two of them are identical,*** and that all of them differ from the original in composition, in freedom from acid reaction, in susceptibility to the effects of oxygen when exposed to light or heat, ***in the property of retaining the strychnine in solution,*** and in the medicinal effects.

As these cheap and inefficient substitutes are frequently dispensed instead of the genuine preparation, physicians are earnestly requested, when prescribing the Syrup, to write "Syr. Hypophos. ***Fellows.***"

As a further precaution, it is advisable that the Syrup should be ordered in the original bottles; the distinguishing marks which the bottles (and the wrappers surrounding them) bear, can then be examined, and the genuineness—or otherwise—of the contents thereby proved.

Medical Letters may be addressed to:

Mr. FELLOWS, 48 Vesey Street, New York.

PHILLIPS' COD LIVER OIL

EMULSION.

A TRUE EMULSION WITHOUT SAPONIFICATION.

In all essential features, it represents the highest degree of perfection in the Emulsionizing of Cod Liver Oil.

This preparation is not advertised to the public, and enjoys Professional popularity because of its high standard of excellence, uniformity and reliability.

(*A pamphlet, with formula, Photo-Micrographic illustrations, etc., mailed upon application.*)

PHILLIPS' DIGESTIBLE COCOA.

A Peptonized Cocoa in which the fat of the bean is wholly retained and pre-digested by means of Pancreatine. It is a **delicious food beverage** rendered **assimilable,** and is **nourishing to a high degree.**

Besides its adaptability as a **substitute for tea and coffee** in daily use, and as a **convenient and reliable article of diet** in the sick room, it is **particularly recommended in many conditions of debility** where a supply of carbonaceous food is indicated, but where there is difficulty attending the digestion of ordinary fatty foods.

Laboratory, 28 Prince Street, New York.

Elixir Chloralamid-Schering.

CHLORALAMID-SCHERING, the new hypnotic introduced a little over two years ago, has now assumed a permanent position in materia medica, and is highly esteemed and largely employed by the medical profession. Reports on the therapeutics of Chloralamid-Schering have been overwhelmingly favorable, in text books, special treatises, society reports, lectures, editorials, etc.; when occasionably failure to produce sleep has been reported, we have investigated the facts and usually substantiated that the remedy was not properly administered. To preclude failure on this account once for all, we have concluded to introduce a preparation in permanent solution, elegant in appearance, palatable,—**perfect**

It is desired that this bottle be delivered on physician's prescription complete and unopened,—first writing the necessary facts on label on opposite side.

ELIXIR

Chloralamid

(SCHERING)

Each tablespoonful contains one gramme (15 grains) of Chloralamid-Schering.

HYPNOTIC.

Chloralamid-SCHERING is a superior hypnotic; an efficient and safe sleep-producing agent; its use is not attended by unpleasant and untoward side or after-effects, nor will continued use develop a habit or necessitate increasing doses. Eminent medical authorities have endorsed Chloralamid, and full clinical reports with chemical and therapeutical data will be furnished to physicians and pharmacists on request.

Directions:—A tablespoonful at a dose, taken one-half hour before sleep is desired; if effect is not prompt and satisfactory the dose may be repeated at intervals of 15 minutes—not more than twice.

PUT UP ONLY BY THE
Sole Agents & Licensees for America:

LEHN & FINK,

IMPORTERS, WHOLESALE DRUGGISTS AND MANUFACTURING CHEMISTS,

NEW YORK.

(This descriptive label is attached to every bottle, and may be removed before dispensing.)

Elixir Chloralamid-Schering

is put up in 8 oz. prescription vials, ready for dispensing without change, except that the pharmacist must write the directions on the label and impress his stamp on same. The package is unique, and will, no doubt, meet with the approval of physicians and pharmacists.

There is no better form for administering Chloralamid-Schering, and physicians will surely give it their preference.

To be obtained from all Leading Pharmacists, and supplied by all Wholesale Druggists in the United States.

A full descriptive treatise (52 pages) on Chloralamid-Schering will be mailed to physicians on request.

SOLE AGENTS AND LICENSEES:

LEHN & FINK, 128 William Street, NEW YORK.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK:)

Each fluid drachm represents 15 grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium and Lithium.

USES: EPILEPSY, UTERINE CONGESTION, HEADACHE, AND ALL CONGESTIVE, CONVULSIVE AND REFLEX NEUROSES.

This preparation produces results, which can not be obtained from the use of commercial Bromide substitutes.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK.)

From Sea Weed. **Uses: Malaria, Phthisis, Etc.**

An ALLY of quinine—quinine CHECKS the Malarial Chill; Fucus Marina ELIMINATES the Malarial CAUSE; and thus prevents the recurrence of the Chill *after* it has been *checked* by quinine.

An INVALUABLE REMEDY in the treatment of Phthisis—it arrests the decay of lung tissue, diminishes the fever, lessens the cough, abates the soreness in the lungs, improves the appetite, and impedes the progressive emaciation.

DOSE.—One Teaspoonful IN WATER, four times a day.

CHIONIA FROM CHIONANTHUS.

Uses: Biliousness, Jaundice, Dyspepsia, Constipation, and all Diseases Caused by Hepatic Torpor.

CHIONIA stimulates the Liver and restores it to a healthy condition, without debilitating the system by Catharsis; does not purge, per se, but under its use the Liver and Bowels gradually resume their normal functions.

DOSE.—One Fluid Drachm three times a day.

PEACOCK CHEMICAL CO., ST. LOUIS.

CARDIAC AND RENAL AFFECTIONS TREATED BY DIURETIN-KNOLL.

BY PROFESSOR MASIUS.

Sir William Gull.

CASE I.—N. S., æt. 53. Arterio-sclerosis; aortic insufficiency. Eccentric hypertrophy of the heart. Bronchitis. Pulmonary hypostasis. Œdema of the inferior members reaching to the hips.

DATE.	DIURETIN. GRAMMES.	PULSE.	URINE. CCM.	
March 26,	0	100	2000	
27,	5	100	3000	
28,	6	96	6100	Œdema diminished.
29,	6	100	6:00	
30,	7	104	5000	
31,	7	100	4050	
April 1,	7	94	7550	
2,	7	100	4300	Œdema almost gone.
3,	7	102	4950	
4,	7	100	2500	No traces of œdema.
5,	7	100	2700	
6,	7	100	2500	

This case demonstrates the powerful action of the diuretin. On March 26, the day on which the treatment was instituted, the quantity of urine was about 2 quarts in the 24 hours; the administration of diuretin brought it up to more than 6 quarts a day. The pulse was not modified in frequency, but it became regular and stronger. The pains complained of by the patient, the malaise, oppression, and very marked dyspnœa became less in proportion to the augmentation of the urinary secretion.

CASE II.—Van H., aged 53. Arterio-sclerosis. Aortic insufficiency. Hypertrophy of the heart with dilatation. Bronchitis. Notable œdema of the inferior members.

DATE.	DIURETIN. GRAMMES.	PULSE.	URINE. CCM.	
March 28,	0	60	2400	
29,	5	—	2500	Œdema diminished.
30,	5	—	3500	
31,	5	74	3500	
April 1,	5	—	4000	
2,	6	80	3300	Still some traces of œdema.
3,	6	—	4300	
4,	7	—	3500	No more œdema.
5,	7	—	3000	General condition good.
6,	7	—	3000	

In this patient, doses of five grammes (75 grs.) a day were sufficient, after some days, to cause the disappearance of the compensatory troubles by keeping up the activity of the diuresis.

CASE III.—John S., aged 44. Aortic insufficiency. Considerable hypertrophy with dilatation of the heart. Pulmonary hypertrophy with dilatation of the heart. Considerable œdema of the inferior members and the scrotum.

DATE.	DIURETIN. GRAMMES.	PULSE.	URINE. CCM.	
April 1,	5	88	500	
2,	5	84	1900	
4,	7	86	1700	Diminution of the œdema.
4,	7	74	3400	
5,	7	80	3500	Still some trace of œdema.
6,	8	82	4000	
7,	0	100	4300	
8,	Tr. stroph'thus (1-20) 30 gtt.	100	3300	
9,	Strophanthus 30 gtt.	108	900	
10,	id.	96	700	The œdema reappears.
11,	(Diuretin 8 grammes.)	92	2100	
12,	6	94	3200	
13,	8	100	3000	
14,	6	96	3600	Œdema diminished.
15,	8	100	4500	S. g. urine 1029.
16,	8	96	3100	
17,	6	96	2600	No more œdema.
18,	8	100	3200	
19,	0	100	3000	

The diuretin here shows itself to be superior to strophanthus; during the administration of the latter, the œdema which had almost entirely disappeared, and with it all the painful symptoms, reappeared rapidly, at the same time the diuresis fell to 900 and to 700 grammes.

In this same patient the diuretin proved itself equally superior to digitalis in a new trouble of compensation in the cardiac lesion.

DATE.	DIGITALIS IN POWDER. GRAMMES.	PULSE.	URINE. CCM.	
May 12,	0.50	104	800	Considerable œdema in the legs.
13,	0.50	88	1000	S. g. urine 1028.
14,	0.50	68	800	
15,	0	72	1500	No appreciable modification of œdema.
16,	0	84	1300	
17,	0	104	1000	
18,	Diuretin 6 grammes.	100	900	
19,	7	100	1300	
20,	8	88	2300	Œdema diminished.
21,	8	92	1300	
22,	8	84	3800	
23,	8	100	2000	
24,	8	100	3200	No more traces of œdema.
25,	8	100	3500	

The pulse was not influenced in its frequency; but the diuretic effect was certainly pronounced.

Conclusions.—Diuretin is an energetic diuretic; it augments not alone the quantity of water eliminated, but it increases also the solid constituents of the urine.

The diuretic effects are ordinarily manifested at the end of 24 hours, and continue under the influence of the same doses. The diuresis becomes less active after the disappearance of the œdema.

Diuretin gives the best results in general dropsy due to insufficient cardiac action. It frequently produces considerable effect where digitalis and other diuretics fail. The unsuccessful cases may be due to individual peculiarity or to some alteration in the kidneys.—*Bul de l'Académie Royale de Médecine de Belgique*, No. 10, 1891.

METHODS OF USE.

Diuretin, which is readily soluble in warm water, is best given in the form of mixture, either simply in aqueous solution (5-100) or with the addition of correctives. Addition of acid or acid-vegetable juices should be strictly avoided. The drug should not be exposed to the air.

FORMULÆ.

℞ Diuretin-Knoll.....75-105 grains.
Aq. distill.....4 fl. ounces.

M. D. S.—To be given throughout the day in tablespoonfuls.

℞ Diuretin-Knoll.....75-105 grains.
Aq. destill.....3 ounces.
Aq. Menth. pip.....3 ouuces.

M. D. S.—To be given throughout the day in tablespoonfuls.

On account of the increased demand, we are able to reduce the price of the DIURETIN-KNOLL more than 25 per cent., which is important, as the necessary doses are large.

McKesson & Robbins' Gelatin-Coated Pills of Diuretic-Knoll, 5 Grains.

CAUTION.—As there are imitations in the market, physicians should see that the genuine is supplied. It is put up only in original vials of one ounce, and in McK. & R. 5-grain pills in bottles of 100 and 500 each, and is plainly labeled DIURETIN-KNOLL.

Full notes on the use of DIURETIN-KNOLL sent FREE on request by

Lapactic Pills.

A combination introduced by us and found in practice to possess superior advantages over other similar formulas. The well known mild action of Aloin on the lower portion of the intestinal canal, and its power of stimulating the hepatic functions, is supplemented by the action of Ipecac as a stomachic tonic and by increasing the gastric secretions; the Belladonna acts specially upon the involuntary muscular fibres of the bowels, increasing peristalsis, diminishing the harshness, and at the same time increasing the effectiveness of the laxative. The general tonic effect of Strychnine upon the stomach and bowels and its direct action upon the sympathetic, make it a valuable addition in the permanent cure of **habitual constipation and atonic dyspepsia.**

Since we first called attention to our Lapactic Pills, some four years ago—publishing the composition of the same—a number of manufacturers have adopted the formula and have furnished these pills under the same name. Should Physicians fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints from physicians by letter), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term "LAPACTIC PILLS, S. & D.'S." when prescribing these pills.

SAMPLES WILL BE MAILED ON APPLICATION.

SPECIAL FORMULAS MADE TO ORDER.

WHEN PURCHASING, PLEASE SPECIFY S. & D's.

SCOTT'S EMULSION

VERSUS

PLAIN COD LIVER OIL.

Plain Cod Liver Oil *is indigestible, deranges the stomach, destroys the appetite is not assimilated,* and in a majority of cases is detrimental to the patient.

SCOTT'S EMULSION

Can be *digested in nearly all cases, is assimilated, does not derange the stomach, nor overtax the digestive functions,* and can be taken for an indefinite period when the plain cod liver oil cannot be tolerated at all, and with most marked results in *Anæmia, Consumption* and all wasting conditions. It also contains the *Hypophosphites of Lime and Soda with Glycerine,* which are most desirable adjuncts.

WHEN PHYSICIANS TRY IT THEY INVARIABLY USE IT

in preference to the plain cod liver oil or other *so-called Emulsions* that invariably separate, and hence their integrity and value is destroyed. *Scott's Emulsion is palatable and absolutely permanent* hence its integrity is always preserved.

The formula for SCOTT'S EMULSION is 50 per cent. of the finest Norwegian Cod Liver Oil, 6 grains Hypophosphite of Lime and 3 grains Hypophosphite of Soda to the fluid ounce, Emulsified, or digested to the condition of assimilation with chemically pure Glycerine and Mucilage.

We also wish to call your attention to the following preparations:

CHERRY MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain aud nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula).

Prepared from carefully selected German Buckthorn Bark, Juglans Bark and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

SCOTT & BOWNE, 132 South Fifth Avenue, NEW YORK.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

— Landois and Sterling.

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

— Materia Medica and Therapeutics, Dr. Mitchell Bruce.

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

— Eustace Smith, M.D., F.R.C.S.

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

ABOUT GAS TREATMENT.

We make and sell oxygen and nitrogen monoxide for therapeutic use, and we guarantee them pure They are put up in compact form. (A cylinder containing 100 gallons of nitrogen monoxide or 40 gallons of oxygen measures 12 inches in length, has a diameter of 3½ inches, and weighs 10½ lbs. A cylinder containing 450 gallons of nitrogen monoxide or 100 gallons of oxygen measures 25 inches in length, has a diameter of 4½ inches, and weighs 34 lbs.)

INSOMNIA. Dr. Allan McLane Hamilton states that nitrogen monoxide, N_2O (nitrous oxide of the old nomenclature) has no equal in the treatment of this difficulty.

MELANCHOLIA. A short course of nitrogen monoxide is said to change the face of nature for such patients.

ANÆMIA. Where iron is not tolerated or proves inefficient, the addition of oxygen or a combination of oxygen and nitrogen monoxide has proven very beneficial.

For those who should, but cannot, go from home for rest or a change of air, or for those who, from any cause fail to get air enough into their lungs, the inhalation of one or other of these gases, or both in combination, promises great benefit. The testimony is that in cases of

ASTHMA, more than fifty per cent. of the cases yield to oxygen treatment, others are very greatly relieved, and a very small per cent. are not improved.

INDIGESTION and CONSTIPATION are said to be greatly relieved and very often conquered by continued treatment.

A highly esteemed New York physician has used more than twenty thousand gallons of nitrogen monoxide in his private practice. The letters received from his patients, largely from those who were afflicted with nervous disorders, are enthusiastic in their testimony as to the benefit received.

Regular practitioners who are using gas treatment testify that when *pure* oxygen and *pure* nitrogen monoxide, or a mixture of these, is used, no therapeutic agents are more uniformly successful when intelligently prescribed.

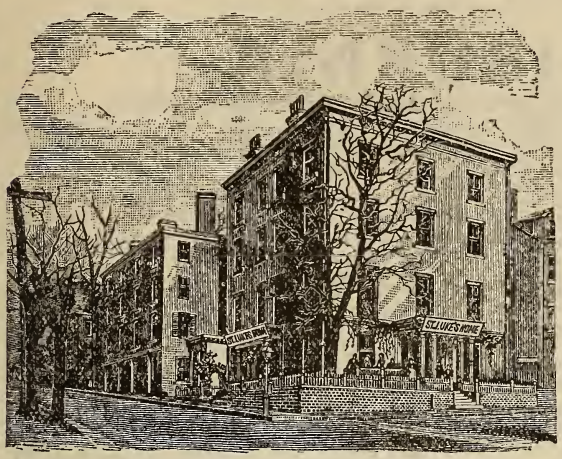
DÉVIATION DES RÈGLES.

ALETRIS CORDIAL (Rio) is, perhaps, the most important remedial agent yet known. It is *the* remedy for the wrongs of menstruation, by restoring normal functional activity to the uterine apparatus. Prolapsus, Menorrhagia, Leucorrhea, Amenorrhea, Dysmenorrhea, Subinvolution, Metritis, Ovarian Neuralgia, etc., all yield to its beneficial influence. Physicians find a certainty in its action as a uterine tonic, that is peculiar to no other remedy. A special indication for its use

IS THE DRAGGING SENSATION

in the lower bowels. It quickly restores the strength and waning vitality of the chlorotic girls and pregnant women. Habitual miscarriage and the excessive nausea of early pregnancy are effectually prevented by its timely and continued use. In a word, it restores tone to the uterine system, and thus relieves all abnormal conditions.



ST. LUKE'S HOME FOR THE SICK
DR. HUNTER MCGUIRE'S PRIVATE HOSPITAL
RICHMOND, VIRGINIA.

DR. HUNTER McGUIRE,

Richmond, Virginia, says:

"Whatever may be the published analysis of Spring No. 2, I know from the constant use of it personally, and in my practice during many years past, that the results obtained from the use of

BUFFALO LITHIA WATER

are far beyond those which would be warranted from the analysis given. I am of the opinion that it either contains some powerful remedial agent, as yet undiscovered by medical science, or

Its Elements are so Delicately Combined

in Nature's laboratory, that they defy the utmost skill of the chemist to solve the secret of their power."

"It has never failed me as a powerful Nerve Tonic. I sometimes think it must contain Hypophosphites of Lime and Soda."

Water in cases of one dozen half-gallon bottles, $5.00, f. o. b. here. For sale by all first-class druggists.

THOMAS F. GOODE, PROPRIETOR

BUFFALO LITHIA SPRINGS, VA.

Introduced to the Medical and the Pharmaceutical professions by J. FEHR, in the year 1873.

COMPOSITION:—Silicate of Magnesia with Carbolic and Salicylic Acids.

PROPERTIES:—Antiseptic, Antizymotic, and Disinfectant.

Useful as a **GENERAL SPRINKLING POWDER,** with positive Hygienic, Prophylactic, and Therapeutic properties.

GOOD IN ALL AFFECTIONS OF THE SKIN.

PER BOX, PLAIN, 25 Cents; PERFUMED, 50 Cents.
PER DOZ., PLAIN, $1.75; PERFUMED, $3.50.

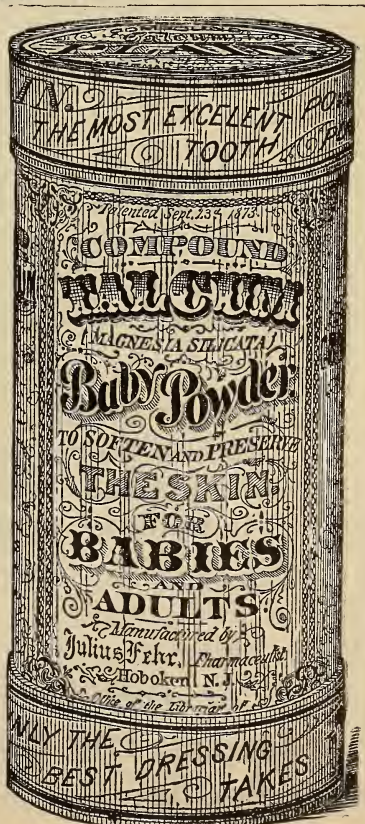
SOLD BY THE DRUG TRADE GENERALLY.

MANUFACTURER:

JULIUS FEHR, M.D..

Ancient Pharmacist, HOBOKEN, N. J.

Only advertised in Medical and Pharmaceutical prints.



DIOVIBURNIA

UTERINE TONIC, ANTISPASMODIC AND ANODYNE.

A reliable and trustworthy remedy for the relief of Dysmenorrhœa, Amenorrhœa, Menorrhagia Leucorrhœa, Subinvolution, THREATENED ABORTION, Vomiting in Pregnancy and Chlorosis; directing its action to the entire uterine system as a general tonic and antispasmodic.

FORMULA.

Every ounce contains 3-4 dram each of the fluid extracts: Viburnum Prunifolium, Viburnum Opulus, Dioscorea Villosa, Aletris Farinosa, Helonias Dioica, Mitchella Repens, Caulophyllum Thalictroides, Scutellaria Lateriflora.

DOSE.—For adults, a desertspoonful to a tablespoonful three times a day, after meals. In urgent cases, where there is much pain, dose may be given every hour or two, ALWAYS IN HOT WATER.

Jno. B. Johnson, M. D., Professor of the Principles and Practice of Medicine, St. Louis Medical College.

ST. LOUIS, June 20, '88.

I very cheerfully give my testimony to the virtues of a combination of vegetable remedies prepared by a well-known and able pharmacist of this city, and known as DIOVIBURNIA, the component parts of which are well known to any and all physicians who desire to know the same, and therefore have no relation to proprietary or quack remedies. I have employed this medicine in cases of dysmonorrhœa, suppression of the catemania and in excessive leucorrhœa, and have been much pleased with its use. I do not think its claims (as set forth in the circular accompanying it) to be at all excessive. I recommend its trial to all who are willing to trust to its efficacy, believing it will give satisfaction. Respectfully,

Jno. B. Johnson

L. Ch. Boisliniere, M. D., Prof. of Obstetrics, St. Louis Medical College. ST. LOUIS, June 18, 1888.

I have given DIOVIBURNIA a fair trial and found it useful as an uterine tonic and antispasmodic, relieving the pains of dysmenorrhœa, and regulator of the uterine functions. I feel authorized to give this recommendation of DIOVIBURNIA, as it is neither a patented nor a secret medicine, the formula of which have been communicated freely to the medical profession.

L Ch. Boisliniere M.D.

H. Tuholske, M. D., Professor Clinical Surgery and Surgical Pathology, Missouri Medical College; also Post-Graduate School of St. Louis. ST. LOUIS, June 23, 1888.

I have used DIOVIBURNIA quite a number of times—sufficiently frequently to satisfy myself of its merits. It is of unquestionable benefit in painful dysmenorrhœa; it possesses antispasmodic properties which seem especially to be exerted on the uterus.

H. Tuholske

To any physician, unacquainted with the medicinal effect of DIOVIBURNIA, we will mail pamphlet containing full information, suggestions, commendations of some of our most prominent professors and various methods of treatment; also a variety of valuable prescriptions that have been thoroughly tested in an active practice, or to physicians desiring to try our preparation, and who will pay express charges, we will send on application a sample bottle free.

DIOS CHEMICAL CO., ST. LOUIS, MO., U. S. A.

VACCINE MATTER.

For the accommodation of our Subscribers, we will supply both Bovine and Humanized Vaccine Virus.

Guaranteed to be fresh and in every respect first class.

PRICES:

Bovine Crusts, - - -	$1 50 each
Bovine Points or Quills, -	1.00 a dozen.
Humanized Crusts, - -	1.00, small.
Humanized Crusts, - -	2.00, large.

The Humanized Crusts are warranted to be from typical cases, and in every instance from healthy children, with unquestionable family histories.

PLEASE ACCOMPANY THE ORDER WITH THE MONEY.

Scherff's Syrup of Hydriodic Acid.

A PERMANENT UNALTERABLE PREPARATION.

NON-IRRITANT. PALATABLE. EFFICIENT

Each fluid ounce of this Syrup represents the equivalent of 6.72 grains of absolute Hydriodic Acid. Particular stress is laid on the one great superiority; this Syrup will not decompose, and the danger (so common to other like preparations) of administering a preparation of free iodine, is absolutely avoided.

Descriptive Pamphlets and Clinical Reports mailed on request.

WESTERN PENNSYLVANIA MEDICAL COLLEGE
CITY OF PITTSBURGH.
SESSIONS OF 1892.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. MCKENNAN, 810 Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Ave., Pittsburg.

The Baltimore Medical College.

PRELIMINARY FALL COURSE begins Sept. 1, 1891.
REGULAR WINTER COURSE begins October 1, 1891.

Excellent Teaching Facilities, Capacious Hospital, Large Clinics.

Send for catalogue, and address

WALNUT LODGE HOSPITAL,
HARTFORD, CONNECTICUT.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish Bath, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefitted from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed
T. D. CROTHERS, M. D.,
Sup't Walnut Lodge, Hartford, Conn.

DR. MASSEY'S
PRIVATE SANATORIUM.

Presenting the comforts of an elegant private residence, this institution is specially equipped for the use of electricity and allied remedial measures in the diseases of women and in diseases of the nervous system. For particulars address

212 S. Fifteenth St., Philadelphia.

Prickly Heat, Chafing, Dandruff,

Odors from Perspiration, etc. Speedy Relief by Using

Packer's Tar Soap.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{60}$ gr.), Atropiæ Sulph. ($\frac{1}{600}$ gr.), Codeia ($\frac{1}{10}$ gr.), Antimony Tart. $\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis. fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{60}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

How Physicians Make Reputations!

THE successful doctors are those who are ever on the lookout for the best information upon the application of their remedies. They have no time to experiment, and consequently have no time to follow any but the most concise, and, at the same time, the most reliable writers. In this way they succeed, while others, who follow every rainbow simply because irresponsible people tell them there is a bag of gold on the end thereof, fail in their professions.

During the time the **Londonderry** has been before the profession it has been in constant use by the most eminent physicians. They write about it in Medical Books and Journals, report cases in Medical Societies and praise it in the Lecture Room. It has become known as a **Standard Remedy** for all forms of Lithæmia. The wise successful doctors are flocking to the standard of **Londonderry**, and when they once prove its striking power they do not forsake it. For the benefit of physicians who have not yet tried and tested this matchless gift of nature we have collected in a neat little pamphlet some of the opinions referred to above. They are from the most eminent clinicians and writers in the United States, and are well worth the perusal of live physicians who wish to know the latest thought on the subject of Gout, Rheumatism, Gravel and General Lithæmia.

REPORTER for one year, . . . $5.00
Wood's Nervous Diseases and Their Diagnosis, ... 4.00
$9.00

Nervous Diseases and Their Diagnosis

By H. C. WOOD, M. D., LL. D..

Professor of Therapeutics and Nervous Diseases, University of Pennsylvania.

8vo., pp. 501, Cloth, $4.

It is invaluable as a work of diagnosis.—*Virginia Medical Monthly.*

It is at once a substantive contribution to neurology and a trustworthy guide to what has already been done in the subject.—*Practitioner.*

As a whole, the work is one which cannot fail to be of great service to the practicing physician.—*Medical and Surgical Reporter.*

The volume is a distinct help to the student, and is a necessary supplement to the systematic works on diseases of the nervous system.—*Boston Med. Surg. Jour.*

The author's originality is evident to every reader of his work; and we trust, for the advancement of knowledge, his readers will be many.—*New England Med. Gaz.*

This work fills a long-felt need in this department.—*Buffalo Med. Surg. Jour.*

Dr. Wood is an able clinician, and this makes his book valuable. His observations are practical and to the point and show careful study of a large number of cases which have fallen under his care.—*N. Y. Med. Jour.*

The honest effort of one who never writes without teaching and who always writes and teaches well.—*Journal of Insanity.*

To students and practitioners who have read other works this production will prove extremely valuable in time of need, to the former just before examination; to the latter in everyday practice.—*London Lancet.*

Not a compilation, but rather the record of independent opinions and investigations.—*Canadian Practitioner.*

The book is written in the characteristic vigorous style of its able and versatile author.—*American Practitioner.*

Lucid language, clear type, a full index, and, above all, the presentation of the late advances in this department of science, constitute the truly great attractions of this book.—*Albany Med Annals.*

It is not until the volume has been carefully read, and perhaps re-read, that its true excellence begins to dawn upon the reader.—*Maryland Med. Jour.*

PLEASE SEND MONEY WITH THE ORDER.

P. O. Box 843, PHILADELPHIA, PA.

or Carnrick's Kumyss Tablets.

A PRODUCT OF PURE SWEET MILK.
PALATABLE, NUTRITIOUS,
EASILY DIGESTED.
AND WHEN DISSOLVED IN WATER
FORMS A DELICIOUS EFFER-
VESCENT KUMYSS.

(*Put up in air-tight bottles, in two sizes; the larger holding sufficient Tablets for seven twelve-ounce bottles, and the smaller sufficient for three twelve-ounce bottles of Kumyss.*)

THIS PREPARATION is presented to the Medical Profession in the convenient form of Tablets, and will be found superior in every respect to ordinary *Kumyss, Wine of Milk, Fermented Milk,* or any similar preparation.

Kumysgen when prepared for use contains every constituent of a perfect Kumyss.

Kumysgen is made from fresh, sweet milk, and contains fully thirty per cent. of soluble casein, which is double the amount found in ordinary Kumyss preparations.

Kumysgen being in Tablet form, will keep indefinitely, is easily and readily prepared, less expensive than the ordinary variable and perishable Kumyss, and its *fermentative action* may be regulated at will, thus rendering it available at all times and under all circumstances.

Clinical tests gathered from every quarter of the globe attest its special value in all cases of *Gastric* and *Intestinal Indigestion* or *Dyspepsia, Pulmonary Consumption, Constipation, Gastric and Intestinal Catarrh, Fevers, Anæmia, Chlorosis, Rickets, Scrofula, Vomiting in Pregnancy, Bright's Disease, Intestinal Ailments of Infants, Cholera Infantum; for young children and for convalescents from all diseases.*

The casein being finely subdivided, it is especially valuable for all who require an easily digested or a partially digested Food.

Kumysgen is a delicious effervescent Food-Beverage, relished alike by the sick or well.

Kumysgen is tonic, stimulant, diuretic, highly nutritious, easily digested, perfectly palatable, and always *permanent* and *uniform* in strength.

CHAS. K. MOUNT, Advertising Manager.

PROSPECTUS.

For nearly forty years ***The Medical and Surgical Reporter*** has held a position of influence and popularity second to that of no other publication in medicine. Last May the Editorial and Business Management was changed, the journal was enlarged from twenty-eight to forty pages, and the publication in almost every way was radically improved. That these changes have been appreciated by the profession is evident in the phenomenal increase of our subscription list and in the number of new advertisements.

The enlarged ***Reporter*** now enables us to offer more pages of reading matter each year than are given by any other medical periodical in America, and more material of direct practical value to the practising physician than is furnished in any other journal in the English language. We now publish during the year over 3500 separate articles, representing the best thought in the profession. These include about as follows:—

75 Clinical Lectures by leading clinicians in this country and abroad.
200 Original Communications.
60 Society Reports.
25 Letters by Special Correspondents.
800 Selected Prescriptions.
75 Editorials on Timely Topics.
150 Letters from our Subscribers.
150 Book Reviews.
2000 Periscope Articles, carefully selected and condensed, and representing all important progress in medicine in all branches and languages.

The ***Reporter*** is truly a magazine of medical progress, it is thoroughly practical, and is especially adapted to the wants of the busy practitioner. There is no State or Country in America that it does not reach, and no civilized Country that does not regularly receive it.

The ***Reporter*** is published every Saturday, and is mailed to subscribers in the United States and Canada for $5.00 a year in advance, and to those in foreign countries for $6.00 in advance. It will be sent for three months on trial for $1.00.

Each issue contains about 70 pages of reading matter by the leading members of the profession.

These two periodicals combined offer annually about 3000 pages of the choicest reading matter, and constitute a complete library of all important medical progress.

At $5.50 they constitute the cheapest Medical literature ever offered.

ADDRESS,

THE BUTLER PUBLISHING CO.,

P. O. BOX 843. PHILADELPHIA, PA

OXYGEN IN LIFE PROCESSES.

At this season of the year the practitioner is called upon to treat patients who have spent a large portion of their time in the house during the winter. They have been breathing the confined house-air which, besides being rendered deficient in oxygen by the necessary combustion going on in stoves, lamps and gas-jets, is, in addition, more or less vitiated by the poisonous emanations of organic life.

During most of this time there has been imperfect physiological action because there has been incomplete oxidation. The intercellular spaces of the tissues have become clogged up with products of incomplete combustion—imperfect waste and repair.

In consequence of these facts we notice a preponderance of those diseases usually attributed to that indefinite cause—impure blood.

Hence we observe the tendency to scrofulous manifestations—eruptions, glandular swellings, abscesses and ulcerations; also the tendency to a breaking down of the nervous system, with its varied phenomena; the tendency, again, to a lack of prompt response to treatment in acute diseases and slow convalescence from them; and finally, the tendency on the part of inflammatory conditions of the air passages at this time, unless specially guarded, to become chronic or to develop active degenerative and destructive processes.

To correct this condition we need a remedy that promotes oxidation within the tissues themselves.

Such a remedy is found in the hypophosphites of lime and soda. However, not only does it thus promote active oxidation, but it also is itself deposited, in its changed or oxidized condition, within the tissues as direct reconstructive material, indispensable to healthy cells and sound tissue-walls.

Thus it proves to be the true alterative agent, inasmuch as it at the same time renovates and nourishes.

Under this remedy we observe an awakened organic action throughout the system and an improvement in every tissue. We soon observe better muscles, bones, nerves, hair, nails, skin, and mucous and serous membranes. The entire system awakens to a more vigorous life and performs its various functions with renewed activity.

In these facts may be seen indications for the use of this remedy, especially at this season of the year, in cases which show consumptive, scrofulous or nervous tendencies.

It is quite important, however, to obtain these delicate and unstable salts in an absolutely pure condition and put up in a form to secure the permanence of their composition. This can be accomplished by prescribing McArthur's Syrup, in which the chemically pure hypophosphites of lime and soda are incorporated in a wholesome syrup. Good results are uniformly reported from its use.

You will receive a full bottle of the syrup for test in your practice by writing to the McArthur Hypophosphite Co., Boston, Mass., and agreeing to pay express charges.

VIN MARIANI

"The Standard Preparation of Erythoxylon Coca."

CAREFUL, continued testing by upwards of seven thousand practitioners in America, whose written opinions over their signatures (in our possession) are fully in accord and clearly prove the efficacy and merits of "VIN MARIANI," may be thus summarized:

"Diffusible stimulant and tonic in anæmia, nervous depression, sequelæ of childbirth, lymphatism, tardy convalescence, general 'Malaise,' and after wasting fevers.

"Special reference to the nervous system, in all morbid states, melancholia, etc.

"Tonic in laryngeal and gastric complications, stomach troubles.

"All cases where a general toning or strengthening of the system is needed.

"The only tonic stimulant without any unpleasant reaction, and may be given indefinitely, never causing constipation."

N. B.—This Wine has been found always uniform and reliable, owing to the selection of the finest ingredients and the greatest accuracy in its manipulation. When prescribing, therefore, the Medical Profession are strongly advised to specify "VIN MARIANI," in order to avoid the substitution of imitations, often worthless and consequently disappointing in effect.

Please Specify VIN MARIANI.

Elixir Chloralamid-Schering.

CHLORALAMID-SCHERING, the new hypnotic introduced a little over two years ago, has now assumed a permanent position in materia medica, and is highly esteemed and largely employed by the medical profession. Reports on the therapeutics of Chloralamid-Schering have been overwhelmingly favorable, in text books, special treatises, society reports, lectures, editorials, etc.; when occasionably failure to produce sleep has been reported, we have investigated the facts and usually substantiated that the remedy was not properly administered. To preclude failure on this account once for all, we have concluded to introduce a preparation in permanent solution, elegant in appearance, palatable,—**perfect**

Elixir Chloralamid-Schering

is put up in 8 oz. prescription vials, ready for dispensing without change, except that the pharmacist must write the directions on the label and impress his stamp on same. The package is unique, and will, no doubt, meet with the approval of physicians and pharmacists.

There is no better form for administering Chloralamid-Schering, and physicians will surely give it their preference.

It is desired that this bottle be delivered on physician's prescription complete and unopened,—first writing the necessary facts on label on opposite side.

ELIXIR

Chloralamid

(SCHERING)

Each tablespoonful contains one gramme (15 grains) of Chloralamid-Schering.

HYPNOTIC.

Chloralamid-Schering is a superior hypnotic; an efficient and safe sleep-producing agent; its use is not attended by unpleasant and untoward side or after-effects, nor will continued use develop a habit or necessitate increasing doses. Eminent medical authorities have endorsed Chloralamid, and full clinical reports with chemical and therapeutical data will be furnished to physicians and pharmacists on request.

Directions:—A tablespoonful at a dose, taken one-half hour before sleep is desired; if effect is not prompt and satisfactory the dose may be repeated at intervals of 15 minutes—not more than twice.

PUT UP ONLY BY THE
Sole Agents & Licensees for America:

LEHN & FINK,

IMPORTERS, WHOLESALE DRUGGISTS AND MANUFACTURING CHEMISTS,

NEW YORK.

(This descriptive label is attached to every bottle, and may be removed before dispensing.)

To be obtained from all Leading Pharmacists, and supplied by all Wholesale Druggists in the United States.

A full descriptive treatise (52 pages) on Chloralamid-Schering will be mailed to physicians on request.

SOLE AGENTS AND LICENSEES:

LEHN & FINK, 128 William Street, NEW YORK.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK:)

Each fluid drachm represents 15 grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium and Lithium.

USES: EPILEPSY, UTERINE CONGESTION, HEADACHE, AND ALL CONGESTIVE, CONVULSIVE AND REFLEX NEUROSES.

This preparation produces results, which can not be obtained from the use of commercial Bromide substitutes.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK.)

From Sea Weed. **Uses: Malaria, Phthisis, Etc.**

An ALLY of quinine—quinine CHECKS the Malarial Chill; Fucus Marina ELIMINATES the Malarial CAUSE; and thus prevents the recurrence of the Chill *after* it has been *checked* by quinine.

An INVALUABLE REMEDY in the treatment of Phthisis—it arrests the decay of lung tissue, diminishes the fever, lessens the cough, abates the soreness in the lungs, improves the appetite, and impedes the progressive emaciation.

DOSE.—One Teaspoonful IN WATER, four times a day.

CHIONIA FROM CHIONANTHUS.

Uses: Biliousness, Jaundice, Dyspepsia, Constipation, and all Diseases Caused by Hepatic Torpor.

CHIONIA stimulates the Liver and restores it to a healthy condition, without debilitating the system by Catharsis; does not purge, per se, but under its use the Liver and Bowels gradually resume their normal functions.

DOSE.—One Fluid Drachm three times a day.

PEACOCK CHEMICAL CO., ST. LOUIS.

THE NEW REMEDY

STRONTIUM, McK. & R.

Indicated in

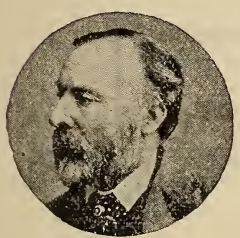
Rheumatism, Epilepsy, Indigestion, Bright's Disease, Etc.,

And in the place of the

BROMIDE OF POTASSIUM,

Than which it is better tolerated even in high Doses.

THE LACTATE AND BROMIDE OF STRONTIUM McK. & R., IN SYRUP OR SOLUTION IN ORIGINAL POUND BOTTLES.



Sir Andrew Clark.

Last July, M. LABORDE reported to the *Société de Biologie*, July 4, 1891, that he had found, contrary to the general opinion, that the salts of strontium might be safely employed, were beneficial to the animal economy and that weight was increased under their use.

Some time after this report, July 28, MM. G. SÉE and CONSTANTIN PAUL stated before the *Académie de Médecine* that they had employed the bromide and lactate of strontium in rheumatism and Bright's disease, respectively and could confirm the results of M. LABORDE in regard to the innocuousness and beneficial effects of the drug.

Oct. 28, M. DUJARDIN-BEAUMETZ, before the *Société de Thérapeutique* stated that he had obtained very good results in Bright's disease by the use of the lactate of strontium; that its action on the digestive functions was very favorable.

Nov. 11, MM. CONSTANTIN PAUL and DUJARDIN-BEAUMETZ made a further communication to the same society and stated that they had still further used the lactate and bromide salts and found them perfectly tolerated even in high doses.

M. FÉRÉ found the bromide of strontium of efficacy in the treatment of epilepsy in the place of the potassium salt. He also found by numerous experiments that the toxicity of bromide of strontium, when given by intravenous injection, was far below that of the bromide of potassium.

All the authors insist on the necessity for a perfectly pure salt, one absolutely free from the presence of barium, such as those now offered to the medical profession, in the form of syrup and solution, by McKesson & Robbins.

THE TREATMENT OF BRIGHT'S DISEASE BY STRONTIUM.

BY M. CONSTANTIN PAUL.

Since the beginning of June I have used outside about two pounds, and in the hospitals over four pounds of the lactate of strontium.

In opposition to barium which is toxic and to potassium the toleration for which is limited, the salts of strontium are quite innocuous. Guinea pigs support without disturbance a dose of three grains, rabbits one of six grains, and dogs of 30 to 40 pounds support as high as 45 grains of the chloride given by intravenous injections. By the mouth the dose seems to be almost unlimited.

The author gives details of 12 cases, some of which were unsuccessfully treated but in none was there the slightest intolerance for strontium. He concludes as follows:

Strontium is not toxic; it is not a diuretic; it diminishes the albumen well and rapidly in epithelial and parenchymatous nephritis, but it does not suppress it entirely; if the administration of the drug is stopped too soon the albumin increases at once.

This medicament may be called upon to render service in the albuminuria of: rheumatismal, scrofulous and gouty nephritis.

In the albuminuria of pregnancy and of those newly delivered.

There are other forms of albuminuria in which I have, as yet, had no experience with the drug.

The diminution of the albuminuria is followed by a very notable amelioration of the other symptoms and the patient, exhibits much improvement. The presence of fever, even intense, does not prevent the action o the lactate of strontia in parenchymatous nephritis.

I have had no personal experience in the use of the drug in maladies of the stomach, or of the bromide in epilepsy, but I administered the latter salt to a young woman the subject of hystero-epileptic attacks recurring at the menstrual period. These attacks had resisted the use of bromide of potassium in doses of 60 grains a day; the bromide of strontium given for two months in doses of 90 grains a day appears to have succeeded as she has not had any attacks during that time.—*Les Nouveaux Remèdies.*

McK. & R. SYRUP LACTATE OF STRONTIUM, C. P.

McK. & R. SYRUP BROMIDE OF STRONTIUM, C. P.

Each fluid ounce contains 60 grains of the salt. DOSE: One or two teaspoonfuls four to eight times a day

Where sugar is an objection, McKesson & Robbins' solution of the above salts, of the same strength, may be prescribed.

Lapactic Pills.

A combination introduced by us and found in practice to possess superior advantages over other similar formulas. The well known mild action of Aloin on the lower portion of the intestinal canal, and its power of stimulating the hepatic functions, is supplemented by the action of Ipecac as a stomachic tonic and by increasing the gastric secretions; the Belladonna acts specially upon the involuntary muscular fibres of the bowels, increasing peristalsis, diminishing the harshness, and at the same time increasing the effectiveness of the laxative. The general tonic effect of Strychnine upon the stomach and bowels and its direct action upon the sympathetic, make it a valuable addition in the permanent cure of **habitual constipation and atonic dyspepsia.**

Since we first called attention to our Lapactic Pills, some four years ago—publishing the composition of the same—a number of manufacturers have adopted the formula and have furnished these pills under the same name. Should Physicians fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints from physicians by letter), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term "LAPACTIC PILLS, S. & D.'S." when prescribing these pills.

SAMPLES WILL BE MAILED ON APPLICATION.

SPECIAL FORMULAS MADE TO ORDER.

WHEN PURCHASING, PLEASE SPECIFY S. & D's.

Sharp & Dohme,

MANUFACTURING CHEMISTS,

Established 1860. Baltimore, Md.

"As a disinfectant for all the sanitary needs of the sick-room, Platt's Chlorides is especially recommended."

Endorsed by thousands of Physicians, and having commanded a large sale for many years, Platt's Chlorides can readily be procured from almost any druggist in any city, town or village in the United States. It is an odorless liquid, and is sold in quart bottles only.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

— *Landois and Sterling.*

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

— *Materia Medica and Therapeutics, Dr. Mitchell Bruce.*

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

— *Eustace Smith, M.D., F.R.C.S.*

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

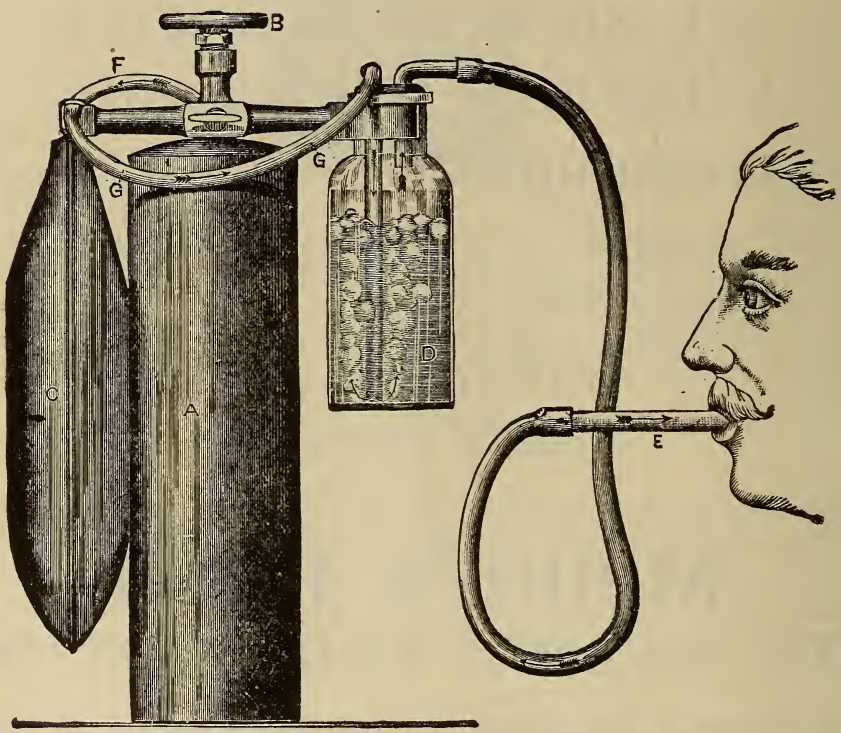
THE DOLIBER-GOODALE CO.,

BOSTON, MASS.

INHALATION APPARATUS

FOR

THE THERAPEUTIC ADMINISTRATION OF OXYGEN



In the treatment of lung troubles by Oxygen its exhibition by inhalation is preferred. The apparatus herewith shown is a modification of the Nitrous Oxide apparatus which we have supplied for many years. It is made in the best manner throughout, and is the outcome of years of experience in the manufacture of gas apparatus. It will be found to meet all the requirements.

We supply the gas in two sizes of cylinders, containing respectively forty and one hundred gallons, either pure Oxygen or a mixture of Oxygen and Nitrous Oxide in definite proportions of 20 per cent., and forty per cent. of Nitrous Oxide.

Whether pure or mixed the gas is sold at the uniform price of 5 cents a gallon. The cost of the cylinders will be refunded on their return empty with the valves in good condition. Full description of Inhalation and Enema apparatuses with directions for use accompany each apparatus, or will be supplied on application.

PRICES.

Inhalation Apparatus	$5.00
Cylinder, 40 gallons' capacity	6.00
40 gallons Gas, either pure Oxygen or mixed Oxygen and Nitrous Oxide	2.00
Complete Apparatus, Cylinder, and 40 gallons Gas	$13.00
Inhalation Apparatus	$5.00
Cylinder, 100 gallons' capacity	15.00
100 gallons Gas, either pure or mixed	5.00
Complete Apparatus, Cylinder, and 100 gallons Gas	$25.00

THE S. S. WHITE DENTAL MFG. CO.

PHILADELPHIA, NEW YORK BOSTON CHICAGO, BROOKLYN, ATLANTA

ESTABLISHED 1855.

DR. STRONG'S SANITARIUM,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for TREATMENT, CHANGE, REST, OR RECREATION.

And places them under well-regulated hygienic conditions so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it has a Sun Parlor and Promenade on the roof. Turkish, Roman, Sulphur, Electro-Thermal, the French Douche, and all Hydropathic Baths; Vacuum Treatment, Swedish Movements, Massage, Pneumatic Cabinet Inhalations of Medicated, Compressed, and Rarefied Air, Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, with elevator, electric bells, open fire-places, steam, and thorough ventilation. With cheering influences and avoiding the pressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in winter tobogganing, elegant sleighing, etc.; in Summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience.

A liberal discount to physicians and their families for board or treatment. For illustrated Circular, Address:

DR. S. E. STRONG, THE SANITARIUM, 90 CIRCULAR ST.

CELERINA

NERVE TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Loss of Nerve Power (so usual with Lawyers, Preachers, Writers and Business Men), Impotency, Spermatorrhea, Nervous Headache, Neuralgia, Paralysis, Hysteria, Opium Habit, Inebriety, Dyspepsia, and ALL LANGUID conditions of the System.

Indispensable to restore a patient after alcoholic excess.

DOSE.—One or two Teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One Teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation.

It Restores Normal Action to the Uterus, and Imparts Vigor to the Entire Uterine System.

Where Women have miscarried during previous pregnancies, or in any case where miscarriage is feared, ALETRIS CORDIAL is Indicated, and should be continuously administered during entire gestation.

S. H. KENNEDY'S

CONCENTRATED EXTRACT OF

PINUS CANADENSIS

DARK. A NON-ALCOHOLIC LIQUID. WHITE.

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be used,

RECOMMENDED BY PROMINENT EUROPEAN AND AMERICAN PHYSICIANS.

The above preparations are prepared exclusively for Physicians' Prescriptions, and a sample of each or all of them will be sent to any Physician who wishes to test them, if he will pay the Express Charges.

WESTERN PENNSYLVANIA MEDICAL COLLEGE
CITY OF PITTSBURGH.

SESSIONS OF 1892.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. MCKENNAN, 810 Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Ave., Pittsburg.

WALNUT LODGE HOSPITAL,
HARTFORD, CONNECTICUT.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish Bath, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefitted from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

REVOLUTION

—IN—

IRON ADMINISTRATION

A HIGHLY PALATABLE PREPARATION OF IRON CHLORIDE.

IRON is easily chief among Hæmatinics. According to T. Lauder Brunton, M.D., D.Sc., F.R.S., it increases the number of blood corpuscles; the percentage of hæmaglobin in them, and functional activity of all the vital organs; as a vascular tonic classes with digitalis and strychnine, and in its alterative qualities with arsenic.

The tincture of Chloride of Iron has long been recognized as the most efficient of iron preparations, the objections to its continued administration, its highly astringent taste, its corrosive action on the teeth, and constipating action have, however, been hitherto insurmountable.

We have succeeded in preparing an entirely palatable syrup of officinal Tincture iron Chloride combining all its virtues with none of its drawbacks. It is prepared after the formula of Dr. G. W. Weld, and is entitled:

"WELD'S SYRUP OF IRON CHLORIDE."

(P., D. & CO.'S)

We earnestly recommend its trial to all the profession, believing it to be the most acceptable preparation of Iron ever devised.

Samples will be sent on receipt of request to physicians who indicate their willingness to pay express charges.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{20}$ gr.), Atropiæ Sulph. ($\frac{1}{500}$ gr.), Codeia ($\frac{1}{10}$ gr.), Antimony Tart. $\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{50}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

How Physicians Make Reputations!

THE successful doctors are those who are ever on the lookout for the best information upon the application of their remedies. They have no time to experiment, and consequently have no time to follow any but the most concise, and, at the same time, the most reliable writers. In this way they succeed, while others, who follow every rainbow simply because irresponsible people tell them there is a bag of gold on the end thereof, fail in their professions.

During the time the **Londonderry** has been before the profession it has been in constant use by the most eminent physicians. They write about it in Medical Books and Journals, report cases in Medical Societies and praise it in the Lecture Room. It has become known as a **Standard Remedy** for all forms of Lithæmia. The wise successful doctors are flocking to the standard of **Londonderry**, and when they once prove its striking power they do not forsake it. For the benefit of physicians who have not yet tried and tested this matchless gift of nature we have collected in a neat little pamphlet some of the opinions referred to above. They are from the most eminent clinicians and writers in the United States, and are well worth the perusal of live physicians who wish to know the latest thought on the subject of Gout, Rheumatism, Gravel and General Lithæmia.

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 67th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 21st of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Anatomy, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M. D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin October 1st, and continue until May. PRELIMINARY SESSION begins September 7th.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required. Practical laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Bacteriology, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology is a part of the regular course. Special clinical facilities.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For announcement or information apply to

ERNEST LAPLACE, M. D.,
1617 Arch Street, Philadelphia, Pa.

MEDICAL DEPARTMENT OF COLUMBIAN UNIVERSITY,
WASHINGTON, D. C.

The Seventieth Winter Session will begin October 1st, 1891 and end March 1st, 1892. Spring Course from April 1st to May 30th. Graded three year course required. Women admitted. Clinical facilities.

FACULTY.

J. F. THOMPSON, Surgery.

Wood's Nervous Diseases and Their Diagnosis, ...	4.00
	$9.00

Nervous Diseases and Their Diagnosis

By H. C. WOOD, M. D., LL. D..

Professor of Therapeutics and Nervous Diseases, University of Pennsylvania.

8vo., pp. 501, Cloth, $4.

It is invaluable as a work of diagnosis.—*Virginia Medical Monthly.*

It is at once a substantive contribution to neurology and a trustworthy guide to what has already been done in the subject.—*Practitioner.*

As a whole, the work is one which cannot fail to be of great service to the practicing physician.—*Medical and Surgical Reporter.*

The volume is a distinct help to the student, and is a necessary supplement to the systematic works on diseases of the nervous system.—*Boston Med. Surg. Jour.*

The author's originality is evident to every reader of his work; and we trust, for the advancement of knowledge, his readers will be many.—*New England Med. Gaz.*

This work fills a long-felt need in this department.—*Buffalo Med. Surg. Jour.*

Dr. Wood is an able clinician, and this makes his book valuable. His observations are practical and to the point and show careful study of a large number of cases which have fallen under his care.—*N. Y. Med. Jour.*

The honest effort of one who never writes without teaching and who always writes and teaches well.—*Journal of Insanity.*

To students and practitioners who have read other works this production will prove extremely valuable in time of need, to the former just before examination; to the latter in everyday practice.—*London Lancet.*

Not a compilation, but rather the record of independent opinions and investigations.—*Canadian Practitioner.*

The book is written in the characteristic vigorous style of its able and versatile author.—*American Practitioner.*

Lucid language, clear type, a full index, and, above all, the presentation of the late advances in this department of science, constitute the truly great attractions of this book.—*Albany Med Annals.*

It is not until the volume has been carefully read, and perhaps re-read, that its true excellence begins to dawn upon the reader.—*Maryland Med. Jour.*

THE BEST FRENCH TONIC

Vin de Bugeaud

A TONIC AND NUTRITIVE WINE WITH CINCHONA AND COCOA

VIN DE BUGEAUD is prepared with the greatest care, with active substances of the very best quality, and chiefly with wild Bolivian Cinchona, the cultivated species being strictly discarded, and the proportions being precisely in accordance with the French pharmacopœa.

It is perfectly tolerated by the most delicate stomachs, owing to the emollient action of the Cocoa it contains, which favourably corrects the over exciting properties and the bitter taste of the Cinchona.

In preparing it, a full-bodied Spanish wine is employed, this wine being more than any other capable of dissolving the medicinal ingredients.

VIN DE BUGEAUD commends itself to the medical profession oth by its tonic and antiperiodic properties, and by the certainty nd continuity of its action in cases of

Anæmia, Chlorosis, Intermittent Fever, Chronic Diarrhœa, Gastralgia, Convalescences,

in a word to combat

Constitutional or Accidental Debility

no matter from what cause arising.

It is specially suitable for convalescents, debilitated children, delicate women and old persons enfeebled by age and infirmities.

VIN DE BUGEAUD has enjoyed since 1858 the high approbation of the New-York Academy of Medicine. Thousands of practitioners of all countries have spontaneously borne testimony to its efficacy.

Professionnal gentlemen are invited to apply for a copy of the pamphlet (sent free on demand) which contains, along with a few remarks on **VIN DE BUGEAUD** and the opinions of the French medical press on the subject, a number of the most recent testimonials.

VIN DE BUGEAUD may be obtained of all good Chemists and Druggists.

"What a boon it would be to the Medical Profession if some reliable Chemist would bring out an Extract of Malt in combination with a well-digested or Peptonized Beef, giving us the elements of Beef and the stimulating and nutritious portions of Ale.—J. MILNER FOTHERGILL, M. D."

ALE & BEEF

"PEPTONIZED"

EXTRACT—BOVIS CUM MALTO.

IS THE IDENTICAL COMBINATION SUGGESTED BY THE LATE EMINENT FOTHERGILL.

Each Bottle Represents 1-4 Pound of Lean Beef Thoroughly Peptonized.

PREPARED BY

THE ALE & BEEF COMPANY,

DAYTON, OHIO, U. S. A.

Two full-sized bottles will be sent FREE to any physician who will pay express charges.

"Orders from all parts of the Dominion of Canada supplied by The Canadian Peptonized Beef & Ale Co., Limited, 153 Hollis Street, Halifax, N. S."

The Perfectly Prepared Pill

As an "Arm of Precision."

In a Recent Note we described, as follows, the characteristics of a perfect pill, adding some remarks as to the absolute necessity of using pure medicaments:

PURITY of medicaments and excipients.
PRECISION as to weight and division.
PERFECT UNIFORMITY as to activity and identity.
PROMPT SOLUBILITY of mass and coating.
PERMANENCE as to conservation.
PALATABILITY; and ELEGANCE of appearance.

We Will now Consider the second requisite—PRECISION.

The Weapons With Which Disease is Fought must be Accurately Prepared or they will give uncertain, unlooked-for, or otherwise undesirable results. From a therapeutic point of view, the exactitude of a preparation is essential to its precise effect. Disease is not overcome by giving uncertain quantities of indifferent medicaments in the hope that enough active substance will finally have been ingested to effect a cure. The condition must be "treated," that is, followed up step by step until the desired result is obtained. This desideratum can be realized only with medicaments mathematically mixed and divided, and in all respects thoroughly prepared. These conditions are fully supplied in

The W. H. S. & Co. Pill. We append the formulæ of a few of these preparations, which are presented as being seasonable, as well as of the best quality. On a future occasion we will say a few words as to uniformity.

PIL. CREASOTI "W. H. S. & Co." (From Pure Beech Tar.)

Prescribed for Pulmonary Tuberculosis, Pulmonary Phthisis, and Diseases of the Bronchia. It increases Appetite, Weight and Strength. (Pills of ½ and 1 grain each.)

PIL. PHENACETINE ET SALOL, 5 grs., "W. H. S. & Co."

Valuable in Influenza ("la grippe"); in all forms of Rheumatism; in Neuralgia, Migraine and Pertussis; and in all painful febrile conditions. (Pills containing 2½ grains each of Phenacetine-Bayer and Salol. Half strength also prepared.)

PIL. HYDRARGYRI TANNICI OXYDULAT., (Mercury Tannate), "W. H. S. & Co."

Available for all the Forms and Stages of Syphilis, and in all cases in which Mercury is indicated. It does not irritate or salivate. (Pills of 1 grain each.)

PIL. TONICÆ LAXATIVÆ, (or "Tonic Laxative Pill—Skene") "W. H. S. & Co."

Adapted to the treatment of Obstinate Constipation in Weak or Broken Down Constitutions. (Quiniæ Sulph., 1 gr.; Ext. Belladonnæ, 1-10 gr.; Ext. Colocynth Co., ½ gr.)

PIL. TERPIN HYDRAT., "W. H. S. & Co."

Employed in Coughs, Colds, Catarrh, Bronchitis, Asthma, and all Respiratory Maladies. Unlike terebinthina and some of its derivatives, no unpleasant symptoms follow its use. (Pills of 2 and 5 grains each.)

IN PRESCRIBING BE PARTICULAR TO SPECIFY "W. H. S. & CO."

W. H. Schieffelin & Co., New York.

It is Important

For the Physician to watch the character and quality of the remedies used in his prescriptions. Responsibility *does not cease* when the patient leaves the office; for impure, stale, or inferior preparations may be used without his knowledge. Personal examination of remedies prescribed is the best check upon substitution.

FERRO-SALICYLATA
LIQUID.

MERRELL.

An eligible combination of Methyl Salicylate and Tinct. Citro-Chloride Iron, in a pleasant and permanent form.

EACH FLUID DRACHM CONTAINS

True Salicylic Acid—from oil Wintergreen (Methyl Salicylate), - - - - 5 grs.
Tinct. Citro-Chloride Iron, 5 min.

Not Sold in Bulk.

ELIXIR
Pinus Compositus.

MERRELL.

Each Fluid Drachm Contains

White Pine—fresh Bark,	2½ grs.
Balm Gilead Buds,	2 grs.
Spikenard,	2 grs.
Cherry Bark,	1¾ grs.
Ipecac,	1-4 gr.
Sanguinarina Nitrate,	1-64 gr.
Morphine Acetate,	1-16 gr.
Ammonium Chloride,	1-2 gr
Chloroform,	1-2 minim.

Not Sold in Bulk.

FERRO-SALICYLATA.---*Merrell.*

Ferro-Salicylata is especially valuable in that shade of disease peculiar in anæmic, delicate, poorly nourished or broken down patients—usually aged people—children or youth—but met with in all ages. In adults, and often in children when the disease is not plainly chronic, there will be a long series of recurrences with intervals of doubtful health. It may also be employed in acute articular rheumatism, and in some cases of acute tonsillitis, especially where the diagnosis is at first in doubt between rheumatic angina and diphtheria; also, in acute rheumatism and rheumatic affections generally.

Ferro-Salicylata may be used in combination with the Iodides and Bromides of Potassium and Sodium. Associated with the former, it will prove an admirable alterative and tonic in second syphilis attended by a debilitated condition of the general system. It also combines well with Chlorate Potassium, the Hypophosphites, with Fowler's Solution, the vegetable bitter tonics, either in Fluid Extract or Tincture Form.

Ferro-Salicylata and all other preparations of this Company reach the laity through professional channels only. We therefore avoid entering into the minute details of their application, leaving the physician to make such practical use of our therapeutic notes as in his judgment may be best suited to individual cases.

Ferro-Salicylata may be obtained of wholesale druggist, throughout the United States, of our Eastern Office, 96 Maiden Lane, New York City, or direct from the Laboratory.

Please designate "Ferro-Salicylata—*Merrell.*"

ELIXIR PINUS COMPOSITUS---*Merrell.*

An admirable combination of well known and highly approved medicinal agents; recommended in acute, chronic, and capillary bronchitis—in ordinary coughs and colds, and wherever a "routine" expectorant is suggested. In the troublesome cough following the recent epidemic "La Grippe," it proved invaluable—many of our correspondents looking upon it as a "specific" in this stage of the disease.

CAUTION.—Physicians are reminded that the Elixir Pinus-Compositus of this manufacturer is wholly unlike the many syrups, etc., under similar names, and the difference will be readily appreciated when tried. In testing the physical properties of the Elixir Pinus, note especially its delicate taste and perfect freedom from the odor of rank syrup, the drastic, harsh and repulsive characteristics of the crude blood-root, and other coarser ingredients characteristic of competing preparations.

"Merrell Co.'s" "Green Drug," Fluid Extracts, True Salicylic Acid, Salts of Hydrastis, Fluid Hydrastis, and Specialties may be obtained of wholesale druggists throughout the United States, at the Home Office at Cincinnati, or the New York Office, 96 Maiden Lane, New York City; Richards Drug Co., San Francisco, Agents for the Pacific Coast. Prices-current and printed matter cheerfully supplied.

The WM. S. MERRELL CHEMICAL CO.

CINCINNATI. NEW YORK

VIN MARIANI

"The Standard Preparation of Erythoxylon Coca."

CAREFUL, continued testing by upwards of seven thousand practitioners in America, whose written opinions over their signatures (in our possession) are fully in accord and clearly prove the efficacy and merits of "VIN MARIANI," may be thus summarized:

"Diffusible stimulant and tonic in anæmia, nervous depression, sequelæ of childbirth, lymphatism, tardy convalescence, general 'Malaise,' and after wasting fevers.

"Special reference to the nervous system, in all morbid states, melancholia, etc.

"Tonic in laryngeal and gastric complications, stomach troubles.

"All cases where a general toning or strengthening of the system is needed.

"The only tonic stimulant without any unpleasant reaction, and may be given indefinitely, never causing constipation."

N. B.—This Wine has been found always uniform and reliable, owing to the selection of the finest ingredients and the greatest accuracy in its manipulation. When prescribing, therefore, the Medical Profession are strongly advised to specify "VIN MARIANI," in order to avoid the substitution of imitations, often worthless and consequently disappointing in effect.

Please Specify VIN MARIANI.

Elixir Chloralamid-Schering.

CHLORALAMID-SCHERING, the new hypnotic introduced a little over two years ago, has now assumed a permanent position in materia medica, and is highly esteemed and largely employed by the medical profession. Reports on the therapeutics of Chloralamid-Schering have been overwhelmingly favorable, in text books, special treatises, society reports, lectures, editorials, etc.; when occasionably failure to produce sleep has been reported, we have investigated the facts and usually substantiated that the remedy was not properly administered. To preclude failure on this account once for all, we have concluded to introduce a preparation in permanent solution, elegant in appearance, palatable,—**perfect**

It is desired that this bottle be delivered on physician's prescription complete and unopened,—first writing the necessary facts on label on opposite side.

ELIXIR
Chloralamid
(SCHERING)
Each tablespoonful contains one gramme (15 grains) of Chloralamid-Schering.

HYPNOTIC.

Chloralamid-SCHERING is a superior hypnotic; an efficient and safe sleep-producing agent; its use is not attended by unpleasant and untoward side or after-effects, nor will continued use develop a habit or necessitate increasing doses. Eminent medical authorities have endorsed Chloralamid, and full clinical reports with chemical and therapeutical data will be furnished to physicians and pharmacists on request.

Directions:—A tablespoonful at a dose, taken one-half hour before sleep is desired; if effect is not prompt and satisfactory the dose may be repeated at intervals of 15 minutes—not more than twice.

PUT UP ONLY BY THE
Sole Agents & Licensees for America:
LEHN & FINK,
IMPORTERS, WHOLESALE DRUGGISTS AND MANUFACTURING CHEMISTS,
NEW YORK.

(This descriptive label is attached to every bottle, and may be removed before dispensing.)

Elixir Chloralamid-Schering

is put up in 8 oz. prescription vials, ready for dispensing without change, except that the pharmacist must write the directions on the label and impress his stamp on same. The package is unique, and will, no doubt, meet with the approval of physicians and pharmacists.

There is no better form for administering Chloralamid-Schering, and physicians will surely give it their preference.

To be obtained from all Leading Pharmacists, and supplied by all Wholesale Druggists in the United States.

A full descriptive treatise (52 pages) on Chloralamid-Schering will be mailed to physicians on request.

SOLE AGENTS AND LICENSEES:

LEHN & FINK, 128 William Street, NEW YORK.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK:)

Each fluid drachm represents 15 grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium and Lithium.

USES: EPILEPSY, UTERINE CONGESTION, HEADACHE, AND ALL CONGESTIVE, CONVULSIVE AND REFLEX NEUROSES.

This preparation produces results, which can not be obtained from the use of commercial Bromide substitutes.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK.)

From Sea Weed. **Uses: Malaria, Phthisis, Etc.**

An ALLY of quinine—quinine CHECKS the Malarial Chill; Fucus Marina ELIMINATES the Malarial CAUSE; and thus prevents the recurrence of the Chill *after* it has been *checked* by quinine.

An INVALUABLE REMEDY in the treatment of Phthisis—it arrests the decay of lung tissue, diminishes the fever, lessens the cough, abates the soreness in the lungs, improves the appetite, and impedes the progressive emaciation.

DOSE.—One Teaspoonful IN WATER, four times a day.

CHIONIA FROM CHIONANTHUS.

Uses: Biliousness, Jaundice, Dyspepsia, Constipation, and all Diseases Caused by Hepatic Torpor.

CHIONIA stimulates the Liver and restores it to a healthy condition, without debilitating the system by Catharsis; does not purge, per se, but under its use the Liver and Bowels gradually resume their normal functions.

DOSE.—One Fluid Drachm three times a day.

PEACOCK CHEMICAL CO., ST. LOUIS.

THE NEW REMEDY
STRONTIUM, McK. & R.

Indicated in

Rheumatism, Epilepsy, Indigestion, Bright's Disease, Etc.,

And in the place of the

BROMIDE OF POTASSIUM,

Than which it is better tolerated even in high Doses.

THE LACTATE AND BROMIDE OF STRONTIUM McK. & R., IN SYRUP OR SOLUTION IN ORIGINAL POUND BOTTLES.

Charles Bell Taylor

Last July, M. LABORDE reported to the *Société de Biologie*, July 4, 1891, that he had found, contrary to the general opinion, that the salts of strontium might be safely employed, were beneficial to the animal economy and that weight was increased under their use.

Some time after this report, July 28, MM. G. SÉE and CONSTANTIN PAUL stated before the *Académie de Médecine* that they had employed the bromide and lactate of strontium in rheumatism and Bright's disease, respectively and could confirm the results of M. LABORDE in regard to the innocuousness and beneficial effects of the drug.

Oct. 28, M. DUJARDIN-BEAUMETZ, before the *Société de Thérapeutique* stated that he had obtained very good results in Bright's disease by the use of the lactate of strontium; that its action on the digestive functions was very favorable.

Nov. 11, MM. CONSTANTIN PAUL and DUJARDIN-BEAUMETZ made a further communication to the same society and stated that they had still further used the lactate and bromide salts and found them perfectly tolerated even in high doses.

M. FÉRÉ found the bromide of strontium of efficacy in the treatment of epilepsy in the place of the potassium salt. He also found by numerous experiments that the toxicity of bromide of strontium, when given by intravenous injection, was far below that of the bromide of potassium.

All the authors insist on the necessity for a perfectly pure salt, one absolutely free from the presence of barium, such as those now offered to the medical profession, in the form of syrup and solution, by McKesson & Robbins.

THE TREATMENT OF BRIGHT'S DISEASE BY STRONTIUM.

BY M. CONSTANTIN PAUL.

Since the beginning of June I have used outside about two pounds, and in the hospitals over four pounds of the lactate of strontium.

In opposition to barium which is toxic and to potassium the toleration for which is limited, the salts of strontium are quite innocuous. Guinea pigs support without disturbance a dose of three grains, rabbits one of six grains, and dogs of 30 to 40 pounds support as high as 45 grains of the chloride given by intravenous injections. By the mouth the dose seems to be almost unlimited.

The author gives details of 12 cases, some of which were unsuccessfully treated but in none was there the slightest intolerance for strontium. He concludes as follows:

Strontium is not toxic; it is not a diuretic; it diminishes the albumen well and rapidly in epithelial and parenchymatous nephritis, but it does not suppress it entirely; if the administration of the drug is stopped too soon the albumin increases at once.

This medicament may be called upon to render service in the albuminuria of: rheumatismal, scrofulous and gouty nephritis.

In the albuminuria of pregnancy and of those newly delivered.

There are other forms of albuminuria in which I have, as yet, had no experience with the drug.

The diminution of the albuminuria is followed by a very notable amelioration of the other symptoms and the patient, exhibits much improvement. The presence of fever, even intense, does not prevent the action o the lactate of strontia in parenchymatous nephritis.

I have had no personal experience in the use of the drug in maladies of the stomach, or of the bromide in epilepsy, but I administered the latter salt to a young woman the subject of hystero-epileptic attacks recurring at the menstrual period. These attacks had resisted the use of bromide of potassium in doses of 60 grains a day; the bromide of strontium given for two months in doses of 90 grains a day appears to have succeeded as she has not had any attacks during that time.—*Les Nouveaux Remèdies.*

McK. & R. SYRUP LACTATE OF STRONTIUM, C. P.

McK. & R. SYRUP BROMIDE OF STRONTIUM, C. P.

Each fluid ounce contains 60 grains of the salt. DOSE: One or two teaspoonfuls four to eight times a day

Where sugar is an objection, McKesson & Robbins' solution of the above salts, of the same strength, may be prescribed.

Baltimore, Md.

Lapactic Pills.

A combination introduced by us and found in practice to possess superior advantages over other similar formulas. The well known mild action of Aloin on the lower portion of the intestinal canal, and its power of stimulating the hepatic functions, is supplemented by the action of Ipecac as a stomachic tonic and by increasing the gastric secretions; the Belladonna acts specially upon the involuntary muscular fibres of the bowels, increasing peristalsis, diminishing the harshness, and at the same time increasing the effectiveness of the laxative. The general tonic effect of Strychnine upon the stomach and bowels and its direct action upon the sympathetic, make it a valuable addition in the permanent cure of **habitual constipation and atonic dyspepsia.**

Since we first called attention to our Lapactic Pills, some four years ago—publishing the composition of the same—a number of manufacturers have adopted the formula and have furnished these pills under the same name. Should Physicians fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints from physicians by letter), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term "LAPACTIC PILLS, S. & D.'S." when prescribing these pills.

SAMPLES WILL BE MAILED ON APPLICATION.

SPECIAL FORMULAS MADE TO ORDER.

WHEN PURCHASING, PLEASE SPECIFY S. & D's.

Sharp & Dohme,

MANUFACTURING CHEMISTS,

Established 1860. Baltimore, Md.

"As a disinfectant for all the sanitary needs of the sick-room, Platt's Chlorides is especially recommended."

Endorsed by thousands of Physicians, and having commanded a large sale for many years, Platt's Chlorides can readily be procured from almost any druggist in any city, town or village in the United States. It is an odorless liquid, and is sold in quart bottles only.

ABOUT GAS TREATMENT.

We make and sell oxygen and nitrogen monoxide for therapeutic use, and we guarantee them pure They are put up in compact form. (A cylinder containing 100 gallons of nitrogen monoxide or 40 gallons of oxygen measures 12 inches in length, has a diameter of 3½ inches, and weighs 10½ lbs. A cylinder containing 450 gallons of nitrogen monoxide or 100 gallons of oxygen measures 25 inches in length, has a diameter of 4½ inches, and weighs 34 lbs.)

INSOMNIA. Dr. Allan McLane Hamilton states that nitrogen monoxide, N_2O (nitrous oxide of the old nomenclature) has no equal in the treatment of this difficulty.

MELANCHOLIA. A short course of nitrogen monoxide is said to change the face of nature for such patients.

ANÆMIA. Where iron is not tolerated or proves inefficient, the addition of oxygen or a combination of oxygen and nitrogen monoxide has proven very beneficial.

For those who should, but cannot, go from home for rest or a change of air, or for those who, from any cause fail to get air enough into their lungs, the inhalation of one or other of these gases, or both in combination, promises great benefit. The testimony is that in cases of

ASTHMA, more than fifty per cent. of the cases yield to oxygen treatment, others are very greatly relieved, and a very small per cent. are not improved.

INDIGESTION and CONSTIPATION are said to be greatly relieved and very often conquered by continued treatment.

A highly esteemed New York physician has used more than twenty thousand gallons of nitrogen monoxide in his private practice. The letters received from his patients, largely from those who were afflicted with nervous disorders, are enthusiastic in their testimony as to the benefit received.

Regular practitioners who are using gas treatment testify that when *pure* oxygen and *pure* nitrogen monoxide, or a mixture of these, is used, no therapeutic agents are more uniformly successful when intelligently prescribed.

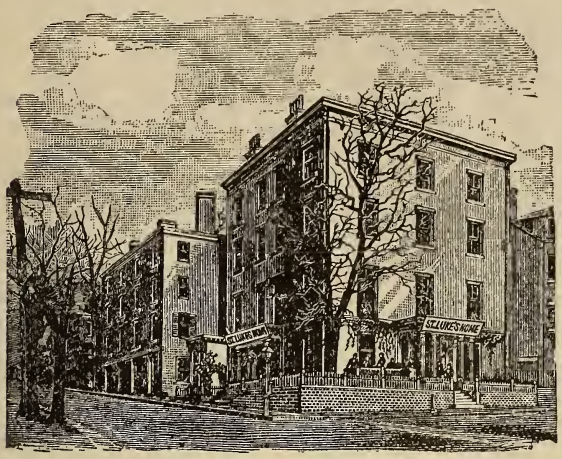
DYSPEPSIA.

Deranged digestion is the most common of all human ailments. It is a truism that no organ of the body can preserve its normal integrity **when** its supplying nerve is disordered **by lowered tones.** But this fact is largely ignored in these modern pepsin days—the **cause** being lost sight of whilst trying to remedy the effect. It is well known that any unusual worry or anxiety will upset the digestion of **the neurotic** patient. Hence, in treating dyspepsia, particularly atonic dyspepsia, that form met with in persons of low vitality and poor appetite, there are **two distinct INDICATIONS.** One is to subserve the needs of general nutrition, the other is to subserve the needs of the nervous system. This can be done by giving the patient good nutritious food and a good nerve tonic. This explains why such remarkable results follow the daily use of **CELERINA** in all dyspeptic troubles.



ST. LUKE'S HOME FOR THE SICK
DR. HUNTER MCGUIRE'S PRIVATE HOSPITAL.
RICHMOND, VIRGINIA.

DR. HUNTER McGUIRE,

Richmond, Virginia, says:

"Whatever may be the published analysis of Spring No. 2, I know from the constant use of it personally, and in my practice during many years past, that the results obtained from the use of

BUFFALO LITHIA WATER

are far beyond those which would be warranted from the analysis given. I am of the opinion that it either contains some powerful remedial agent, as yet undiscovered by medical science, or

Its Elements are so Delicately Combined

in Nature's laboratory, that they defy the utmost skill of the chemist to solve the secret of their power."

"It has never failed me as a powerful Nerve Tonic. I sometimes think it must contain Hypophosphites of Lime and Soda."

DIOVIBURNIA

UTERINE TONIC, ANTISPASMODIC AND ANODYNE.

A reliable and trustworthy remedy for the relief of Dysmenorrhœa, Amenorrhœa, Menorrhagia Leucorrhœa, Subinvolution, THREATENED ABORTION, Vomiting in Pregnancy and Chlorosis; directing its action to the entire uterine system as a general tonic and antispasmodic.

FORMULA.

Every ounce contains 3-4 dram each of the fluid extracts: Viburnum Prunifolium, Viburnum Opulus, Dioscorea Villosa, Aletris Farinosa, Helonias Dioica, Mitchella Repens, Caulophyllum Thalictroides, Scutellaria Lateriflora. DOSE.—For adults, a desertspoonful to a tablespoonful three times a day, after meals. In urgent cases, where there is much pain, dose may be given every hour or two, ALWAYS IN HOT WATER.

Jno. B. Johnson, M. D., Professor of the Principles and Practice of Medicine, St. Louis Medical College.

ST. LOUIS, June 20, '88.

I very cheerfully give my testimony to the virtues of a combination of vegetable remedies prepared by a well-known and able pharmacist of this city, and known as DIOVIBURNIA, the component parts of which are well known to any and all physicians who desire to know the same, and therefore have no relation to proprietary or quack remedies. I have employed this medicine in cases of dysmonorrhœa, suppression of the catemania and in excessive leucorrhœa, and have been much pleased with its use. I do not think its claims (as set forth in the circular accompanying it) to be at all excessive. I recommend its trial to all who are willing to trust to its efficacy, believing it will give satisfaction. Respectfully,

Jno. B. Johnson

L. Ch. Boisliniere, M. D., Prof. of Obstetrics, St. Louis Medical College. ST. LOUIS, June 18, 1888.

I have given DIOVIBURNIA a fair trial and found it useful as an uterine tonic and antispasmodic, relieving the pains of dysmenorrhœa, and regulator of the uterine functions. I feel authorized to give this recommendation of DIOVIBURNIA, as it is neither a patented nor a secret medicine, the formula of which have been communicated freely to the medical profession.

L Ch. Boisliniere M.D.

H. Tuholske, M. D., Professor Clinical Surgery and Surgical Pathology, Missouri Medical College; also Post-Graduate School of St. Louis. ST. LOUIS, June 23, 1888.

I have used DIOVIBURNIA quite a number of times—sufficiently frequently to satisfy myself of its merits. It is of unquestionable benefit in painful dysmenorrhœa; it possesses antispasmodic properties which seem especially to be exerted on the uterus.

Wm. H. Tuholske

To any physician, unacquainted with the medicinal effect of DIOVIBURNIA, we will mail pamphlet containing full information, suggestions, commendations of some of our most prominent professors and various methods of treatment; also a variety of valuable prescriptions that have been thoroughly tested in an active practice, or to physicians desiring to try our preparation, and who will pay express charges, we will send on application a sample bottle free.

DIOS CHEMICAL CO., ST. LOUIS, MO., U. S. A.

WESTERN PENNSYLVANIA MEDICAL COLLEGE
CITY OF PITTSBURGH.
SESSIONS OF 1892.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. MCKENNAN, 810 Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Ave., Pittsburg.

Prickly Heat, Chafing, Dandruff,

Odors from Perspiration, etc. Speedy Relief by Using

Packer's Tar Soap.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

USEFUL IN

Nervous Headache, Sleeplessness, Excessive Study, Migraine, Nervous Debility, Mania, as a Remedy in Sea-sickness, and Epilepsy.

Dose and Composition.—A heaping teaspoonful, containing Bromide Soda 30 grains, and Caffein 1 grain, in half a glass of water, to be repeated once after an interval of 30 minutes, if necessary.

ANTI-RHEUMATIC. SEDATIVE.

EFFERVESCENT.

BROMO
(WARNER & CO.)
LITHIA.

EACH DESSERTSPOONFUL CONTAINS:

℞ Salicylate Lith'a 10 grains, and Bromide Soda 10 grains.

A REMEDY IN THE TREATMENT OF

RHEUMATISM, GOUTY DIATHESIS, ETC.

Dr. A. Garrod, the well-known English authority on Gout, who was the first physician to introduce the Lithia Salts in the treatment of Gouty Diathesis, states that their action is materially increased by being administered in a *freely diluted form*.

This effervescing salt of Lithia furnishes an easy and elegant way of applying Dr. Garrod's methods.

INGLÚVIN

A SPECIFIC FOR VOMITING IN PREGNANCY.

A POWDER:—PRESCRIBED IN THE SAME MANNER, DOSES & COMBINATION AS PEPSIN

In Doses of from 10 to 20 Grains,

AND A POTENT AND RELIABLE REMEDY FOR THE CURE OF

Marasmus, Cholera Infantum, Indigestion, Dyspepsia and Sick Stomach,

caused from debility of that organ. It is superior to the Pepsin preparations, since it acts with more certainty, and effects cures where they fail.

Mellin's Food
FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

—*Landois and Sterling.*

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

—*Materia Medica and Therapeutics, Dr. Mitchell Bruce.*

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

—*Eustace Smith, M.D., F.R.C.S.*

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

FRELIGH'S TABLETS,
(Cough and Constituent),
FOR THE PREVENTION AND CURE OF
PULMONARY PHTHISIS.
FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{60}$ gr.), Atropiæ Sulph. ($\frac{1}{6000}$ gr.), Codeia ($\frac{1}{10}$ gr.), Antimony Tart. $\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{60}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.
Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.
As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

I. O. WOODRUFF & CO.,
MANUFACTURERS OF PHYSICIANS' SPECIALTIES,
86 Maiden Lane, New York City.

DECLINED WITH THANKS!

The following correspondence explains itself:

LONDONDERRY LITHIA SPRING WATER CO., March 17, 1892.

GENTLEMEN:—Having used the LONDONDERRY quite extensively, and seeing *you advertise in lay journals which we cannot do, the code of ethics prohibiting it,* we thought to write you to inquire if a *favorable mention* from us might not be *used* by you in *connection* with a *small cut of our "Home,"* mentioning in connection our location and class of cases received. Fraternally yours.

(Signed) ——— ——— ———

OUR REPLY!

DRS. ——— ———. NASHUA, N. H., March 19, 1892.

GENTLEMEN:—Your esteemed favor of the 17th inst. duly received and contents noted. We are happy to receive the confidence and compliments of all the medical fraternity, but fail to see how any good end can be served by publishing a cut of your well-known resort. As a question of "ethics," it would deceive no intelligent physician or layman. A testimonial carrying such *prima facie* evidence of the consideration for which it is given would be of no benefit to us and might injure you by demonstrating that your opinions, which are now counted very valuable, are not after all held so highly by yourselves.

We have never paid one penny for a professional or lay opinion of LONDONDERRY, nor, judging from the almost daily endorsements that we see in the medical and lay journals, and our enormous and rapidly increasing business, shall we be obliged to do so in the future. Trusting you will receive this in the spirit in which it is given, we are, Yours very truly,

LONDONDERRY LITHIA SPRING WATER CO.

N. B.—We refuse to publish the name of the above well-known Sanitarium, but will give $1000.00 to any charity if we cannot prove the genuineness of this correspondence. L. L. S. W. CO.

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 67th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 21st of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Anatomy, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M. D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin October 1st, and continue until May. PRELIMINARY SESSION begins September 7th.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required Practical laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Bacteriology, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology is a part of the regular course. Special clinical facilities.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For announcement or information apply to

ERNEST LAPLACE, M. D.,
1617 Arch Street, Philadelphia, Pa.

MEDICAL DEPARTMENT OF COLUMBIAN UNIVERSITY,
WASHINGTON, D. C.

The Seventieth Winter Session will begin October 1st, 1891 and end March 1st, 1892. Spring Course from April 1st to May 30th. Graded three year course required. Women admitted. Clinical facilities.

$9.00

Nervous Diseases and Their Diagnosis

By H. C. WOOD, M. D., LL. D..

Professor of Therapeutics and Nervous Diseases, University of Pennsylvania.

8vo., pp. 501, Cloth, $4.

It is invaluable as a work of diagnosis.—*Virginia Medical Monthly.*

It is at once a substantive contribution to neurology and a trustworthy guide to what has already been done in the subject.—*Practitioner.*

As a whole, the work is one which cannot fail to be of great service to the practicing physician.—*Medical and Surgical Reporter.*

The volume is a distinct help to the student, and is a necessary supplement to the systematic works on diseases of the nervous system.—*Boston Med. Surg. Jour.*

The author's originality is evident to every reader of his work; and we trust, for the advancement of knowledge, his readers will be many.—*New England Med. Gaz.*

This work fills a long-felt need in this department.—*Buffalo Med. Surg. Jour.*

Dr. Wood is an able clinician, and this makes his book valuable. His observations are practical and to the point and show careful study of a large number of cases which have fallen under his care.—*N. Y. Med. Jour.*

The honest effort of one who never writes without teaching and who always writes and teaches well.—*Journal of Insanity.*

To students and practitioners who have read other works this production will prove extremely valuable in time of need, to the former just before examination; to the latter in everyday practice.—*London Lancet.*

Not a compilation, but rather the record of independent opinions and investigations.—*Canadian Practitioner.*

The book is written in the characteristic vigorous style of its able and versatile author.—*American Practitioner.*

Lucid language, clear type, a full index, and, above all, the presentation of the late advances in this department of science, constitute the truly great attractions of this book.—*Albany Med Annals.*

It is not until the volume has been carefully read, and perhaps re-read, that its true excellence begins to dawn upon the reader.—*Maryland Med. Jour.*

or

Carnrick's Kumyss Tablets.

A PRODUCT OF PURE SWEET MILK.
PALATABLE, NUTRITIOUS,
EASILY DIGESTED,
AND WHEN DISSOLVED IN WATER
FORMS A DELICIOUS EFFER-
VESCENT KUMYSS.

(*Put up in air-tight bottles, in two sizes; the larger holding sufficient Tablets for seven twelve-ounce bottles, and the smaller sufficient for three twelve-ounce bottles of Kumyss.*)

THIS PREPARATION is presented to the Medical Profession in the convenient form of Tablets, and will be found superior in every respect to ordinary *Kumyss, Wine of Milk, Fermented Milk* or any similar preparation.

Kumysgen when prepared for use contains every constituent of a perfect Kumyss.

Kumysgen is made from fresh, sweet milk, and contains fully thirty per cent. of soluble casein, which is double the amount found in ordinary Kumyss preparations.

Kumysgen being in Tablet form, will keep indefinitely, is easily and readily prepared, less expensive than the ordinary variable and perishable Kumyss, and its *fermentative action* may be regulated at will, thus rendering it available at all times and under all circumstances.

Clinical tests gathered from every quarter of the globe attest its special value in all cases of *Gastric* and *Intestinal Indigstion* or *Dyspepsia, Pulmonary Consumption, Constipation, Gastric and Intestinal Catarrh, Fevers, Anœmia, Chlorosis, Rickets, Scrofula, Vomiting in Pregnancy, Bright's Disease, Intestinal Ailments of Infants, Cholera Infantum; for young children and for convalescents from all diseases.*

The casein being finely subdivided, it is especially valuable for all who require an easily digested or a partially digested Food.

Kumysgen is a delicious effervescent Food-Beverage, relished alike by the sick or well.

Kumysgen is tonic, stimulant, diuretic, highly nutritious, easily digested, perfectly palatable, and always *permanent* and *uniform* in strength.

A WEEKLY JOURNAL.

ESTABLISHED IN 1853 BY
S. W. BUTLER, M. D.

—THE—
Medical and Surgical Reporter.

EDWARD T. REICHERT, M. D., Editor.
(Prof. Physiology, University of Penna.)

CHAS. K. MOUNT, Advertising Manager.

PROSPECTUS.

For nearly forty years ***The Medical and Surgical Reporter*** has held a position of influence and popularity second to that of no other publication in medicine. Last May the Editorial and Business Management was changed, the journal was enlarged from twenty-eight to forty pages, and the publication in almost every way was radically improved. That these changes have been appreciated by the profession is evident in the phenomenal increase of our subscription list and in the number of new advertisements.

The enlarged ***Reporter*** now enables us to offer more pages of reading matter each year than are given by any other medical periodical in America, and more material of direct practical value to the practising physician than is furnished in any other journal in the English language. We now publish during the year over 3500 separate articles, representing the best thought in the profession. These include about as follows:—

75 ***Clinical Lectures*** by leading clinicians in this country and abroad.
200 ***Original Communications.***
60 ***Society Reports.***
25 ***Letters by Special Correspondents.***
800 ***Selected Prescriptions.***
75 ***Editorials on Timely Topics.***
150 ***Letters from our Subscribers.***
150 ***Book Reviews.***
2000 ***Periscope Articles,*** carefully selected and condensed, and representing all important progress in medicine in all branches and languages.

The ***Reporter*** is truly a magazine of medical progress, it is thoroughly practical, and is especially adapted to the wants of the busy practitioner. There is no State or Country in America that it does not reach, and no civilized Country that does not regularly receive it.

The ***Reporter*** is published every Saturday, and is mailed to subscribers in the United States and Canada for $5.00 a year in advance, and to those in foreign countries for $6.00 in advance. It will be sent for three months on trial for $1.00.

AFTER THE GRIP, WHAT?

Few diseases are marked by such tedious and unsatisfactory convalescence as is the one known as epidemic influenza. After the acute symptoms have passed away extreme weakness and prostration remain, persisting for a long time in spite of the ordinary modes of treatment. The patient is left in a condition of general debility altogether disproportionate to the apparent gravity of the affection. Vague neuralgias and mental hallucinations occur, together with an unaccustomed liability to contract other diseases with very slight exposure or to suffer relapses of this disease. If the patient be a brainworker he finds it especially difficult to apply himself to his usual tasks. Either physical or mental exertion is followed by profound exhaustion.

Let us now look into the actual condition present, and then we can more intelligently seek an appropriate remedy—not merely a temporary palliative.

The patient has just passed through a serious and violent disease which, although of comparatively brief duration, has profoundly affected the great nerve centres and from which they naturally can recover but slowly. Through excessive weakness of the nervous supply of the vital organs their functions are but feebly and imperfectly carried on. How many there are who date the beginning of a permanent state of decline to their attack of La Grippe.

The ordinary tonics—iron, quinine, strychnine, &c.—seem utterly unable to cope with this condition. In fact, it is not stimulation that the patient needs, as by it he is only led to overtask his strength, and finally finds himself completely broken down. He needs a reconstruction of the worn out tissues.

The remedy which will be effective, then, must be one that will convey to the tissues the revivifying and vitalizing agent, phosphorus, in its oxidizable and assimilable form. Thus the true vitality of the nerve structure is restored and with it the healthy function is reestablished. The process is not that of stimulation or whipping up the exhausted powers, but is one of renewing the nutrition of the tissues themselves; hence it is steady and sure in its progress and permanent in its results. The patient feels that he is gradually recovering his accustomed strength of mind and body.

The one form in which the compounds of phosphorus, as they exist in normal animal cells can be conveyed to the tissues and there utilized is in the oxidizable form of the hypophosphites of lime and soda, chemically pure. It should be given early, and continued at appropriate intervals until the condition has been entirely overcome. Its favorable action in convalescence from acute diseases in general is especially marked in the disease under consideration. By its use many cases of chronic invalidism can be averted, and the susceptibility to intercurrent diseases corrected.

As it is essential to have the agent in an absolutely chemically pure form, McArthur's syrup should be prescribed. This is an agreeable, wholesome syrup, containing only the pure hypophosphites of lime and soda. If you are not already acquainted with it, a full sized bottle will be sent you, if you will agree to pay express charges. Address The McArthur Hypophosphite Company, Boston, Mass.

VIN MARIANI

"The Standard Preparation of Erythoxylon Coca."

CAREFUL, continued testing by upwards of seven thousand practitioners in America, whose written opinions over their signatures (in our possession) are fully in accord and clearly prove the efficacy and merits of "VIN MARIANI," may be thus summarized:

"Diffusible stimulant and tonic in anæmia, nervous depression, sequelæ of childbirth, lymphatism, tardy convalescence, general 'Malaise,' and after wasting fevers.

"Special reference to the nervous system, in all morbid states, melancholia, etc.

"Tonic in laryngeal and gastric complications, stomach troubles.

"All cases where a general toning or strengthening of the system is needed.

"The only tonic stimulant without any unpleasant reaction, and may be given indefinitely, never causing constipation."

N. B.—This Wine has been found always uniform and reliable, owing to the selection of the finest ingredients and the greatest accuracy in its manipulation. When prescribing, therefore, the Medical Profession are strongly advised to specify "VIN MARIANI," in order to avoid the substitution of imitations, often worthless and consequently disappointing in effect.

Please Specify VIN MARIANI.

Elixir Chloralamid-Schering.

CHLORALAMID-SCHERING, the new hypnotic introduced a little over two years ago, has now assumed a permanent position in materia medica, and is highly esteemed and largely employed by the medical profession. Reports on the therapeutics of Chloralamid-Schering have been overwhelmingly favorable, in text books, special treatises, society reports, lectures, editorials, etc.; when occasionably failure to produce sleep has been reported, we have investigated the facts and usually substantiated that the remedy was not properly administered. To preclude failure on this account once for all, we have concluded to introduce a preparation in permanent solution, elegant in appearance, palatable,—**perfect**

Elixir Chloralamid-Schering

is put up in 8 oz. prescription vials, ready for dispensing without change, except that the pharmacist must write the directions on the label and impress his stamp on same. The package is unique, and will, no doubt, meet with the approval of physicians and pharmacists.

There is no better form for administering Chloralamid-Schering, and physicians will surely give it their preference.

It is desired that this bottle be delivered on physician's prescription complete and unopened,—first writing the necessary facts on label on opposite side.

ELIXIR
Chloralamid
(SCHERING)
Each tablespoonful contains one gramme (15 grains) of Chloralamid-Schering.

HYPNOTIC.

Chloralamid-SCHERING is a superior hypnotic; an efficient and safe sleep-producing agent; its use is not attended by unpleasant and untoward side or after-effects, nor will continued use develop a habit or necessitate increasing doses. Eminent medical authorities have endorsed Chloralamid, and full clinical reports with chemical and therapeutical data will be furnished to physicians and pharmacists on request.

Directions:—A tablespoonful at a dose, taken one-half hour before sleep is desired; if effect is not prompt and satisfactory the dose may be repeated at intervals of 15 minutes—not more than twice.

PUT UP ONLY BY THE
Sole Agents & Licensees for America:
LEHN & FINK,
IMPORTERS, WHOLESALE DRUGGISTS AND MANUFACTURING CHEMISTS,
NEW YORK.

(This descriptive label is attached to every bottle, and may be removed before dispensing.)

To be obtained from all Leading Pharmacists, and supplied by all Wholesale Druggists in the United States.

A full descriptive treatise (52 pages) on Chloralamid-Schering will be mailed to physicians on request.

SOLE AGENTS AND LICENSEES:

LEHN & FINK, 128 William Street, NEW YORK.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK:)

Each fluid drachm represents 15 grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium and Lithium.

USES: EPILEPSY, UTERINE CONGESTION, HEADACHE, AND ALL CONGESTIVE, CONVULSIVE AND REFLEX NEUROSES.

This preparation produces results, which can not be obtained from the use of commercial Bromide substitutes.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK.)

From Sea Weed. **Uses: Malaria, Phthisis, Etc.**

An ALLY of quinine—quinine CHECKS the Malarial Chill; Fucus Marina ELIMINATES the Malarial CAUSE; and thus prevents the recurrence of the Chill *after* it has been *checked* by quinine.

An INVALUABLE REMEDY in the treatment of Phthisis—it arrests the decay of lung tissue, diminishes the fever, lessens the cough, abates the soreness in the lungs, improves the appetite, and impedes the progressive emaciation.

DOSE.—One Teaspoonful IN WATER, four times a day.

CHIONIA FROM CHIONANTHUS.

Uses: Biliousness, Jaundice, Dyspepsia, Constipation, and all Diseases Caused by Hepatic Torpor.

CHIONIA stimulates the Liver and restores it to a healthy condition, without debilitating the system by Catharsis; does not purge, per se, but under its use the Liver and Bowels gradually resume their normal functions.

DOSE.—One Fluid Drachm three times a day.

PEACOCK CHEMICAL CO., ST. LOUIS.

THE NEW REMEDY

STRONTIUM, McK. & R.

Indicated in

Rheumatism, Epilepsy, Indigestion, Bright's Disease, Etc.,

And in the place of the

BROMIDE OF POTASSIUM,

Than which it is better tolerated even in high Doses.

THE LACTATE AND BROMIDE OF STRONTIUM McK. & R., IN SYRUP OR SOLUTION IN ORIGINAL POUND BOTTLES.

Dioscorides.

Last July, M. LABORDE reported to the *Société de Biologie*, July 4, 1891, that he had found, contrary to the general opinion, that the salts of strontium might be safely employed, were beneficial to the animal economy and that weight was increased under their use.

Some time after this report, July 28, MM. G. SÉE and CONSTANTIN PAUL stated before the *Académie de Médecine* that they had employed the bromide and lactate of strontium in rheumatism and Bright's disease, respectively and could confirm the results of M. LABORDE in regard to the innocuousness and beneficial effects of the drug.

Oct. 28, M. DUJARDIN-BEAUMETZ, before the *Société de Thérapeutique* stated that he had obtained very good results in Bright's disease by the use of the lactate of strontium; that its action on the digestive functions was very favorable.

Nov. 11, MM. CONSTANTIN PAUL and DUJARDIN-BEAUMETZ made a further communication to the same society and stated that they had still further used the lactate and bromide salts and found them perfectly tolerated even in high doses.

M. FÉRÉ found the bromide of strontium of efficacy in the treatment of epilepsy in the place of the potassium salt. He also found by numerous experiments that the toxicity of bromide of strontium, when given by intravenous injection, was far below that of the bromide of potassium.

All the authors insist on the necessity for a perfectly pure salt, one absolutely free from the presence of barium, such as those now offered to the medical profession, in the form of syrup and solution, by McKesson & Robbins.

THE TREATMENT OF BRIGHT'S DISEASE BY STRONTIUM.

BY M. CONSTANTIN PAUL.

Since the beginning of June I have used outside about two pounds, and in the hospitals over four pounds of the lactate of strontium.

In opposition to barium which is toxic and to potassium the toleration for which is limited, the salts of strontium are quite innocuous. Guinea pigs support without disturbance a dose of three grains, rabbits one of six grains, and dogs of 30 to 40 pounds support as high as 45 grains of the chloride given by intravenous injections. By the mouth the dose seems to be almost unlimited.

The author gives details of 12 cases, some of which were unsuccessfully treated but in none was there the slightest intolerance for strontium. He concludes as follows:

Strontium is not toxic; it is not a diuretic; it diminishes the albumen well and rapidly in epithelial and parenchymatous nephritis, but it does not suppress it entirely; if the administration of the drug is stopped too soon the albumin increases at once.

This medicament may be called upon to render service in the albuminuria of: rheumatismal, scrofulous and gouty nephritis.

In the albuminuria of pregnancy and of those newly delivered.

There are other forms of albuminuria in which I have, as yet, had no experience with the drug.

The diminution of the albuminuria is followed by a very notable amelioration of the other symptoms and the patient, exhibits much improvement. The presence of fever, even intense, does not prevent the action o the lactate of strontia in parenchymatous nephritis.

I have had no personal experience in the use of the drug in maladies of the stomach, or of the bromide in epilepsy, but I administered the latter salt to a young woman the subject of hystero-epileptic attacks recurring at the menstrual period. These attacks had resisted the use of bromide of potassium in doses of 60 grains a day; the bromide of strontium given for two months in doses of 90 grains a day appears to have succeeded as she has not had any attacks during that time.—*Les Nouveaux Remèdes.*

McK. & R. SYRUP LACTATE OF STRONTIUM, C. P.

McK. & R. SYRUP BROMIDE OF STRONTIUM, C. P.

Each fluid ounce contains 60 grains of the salt. DOSE: One or two teaspoonfuls four to eight times a day

Where sugar is an objection, McKesson & Robbins' solution of the above salts, of the same strength, may be prescribed.

Lapactic Pills.

A combination introduced by us and found in practice to possess superior advantages over other similar formulas. The well known mild action of Aloin on the lower portion of the intestinal canal, and its power of stimulating the hepatic functions, is supplemented by the action of Ipecac as a stomachic tonic and by increasing the gastric secretions; the Belladonna acts specially upon the involuntary muscular fibres of the bowels, increasing peristalsis, diminishing the harshness, and at the same time increasing the effectiveness of the laxative. The general tonic effect of Strychnine upon the stomach and bowels and its direct action upon the sympathetic, make it a valuable addition in the permanent cure of **habitual constipation and atonic dyspepsia.**

Since we first called attention to our Lapactic Pills, some four years ago—publishing the composition of the same—a number of manufacturers have adopted the formula and have furnished these pills under the same name. Should Physicians fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints from physicians by letter), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term "LAPACTIC PILLS, S. & D.'S." when prescribing these pills.

SAMPLES WILL BE MAILED ON APPLICATION.

SPECIAL FORMULAS MADE TO ORDER.

WHEN PURCHASING, PLEASE SPECIFY S. & D's.

Sharp & Dohme,

MANUFACTURING CHEMISTS,

Established 1860. Baltimore, Md.

"As a disinfectant for all the sanitary needs of the sick-room, Platt's Chlorides is especially recommended."

Endorsed by thousands of Physicians, and having commanded a large sale for many years, Platt's Chlorides can readily be procured from almost any druggist in any city, town or village in the United States. It is an odorless liquid, and is sold in quart bottles only.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

— *Landois and Sterling.*

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

— *Materia Medica and Therapeutics, Dr. Mitchell Bruce.*

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

— *Eustace Smith, M.D., F.R.C.S.*

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

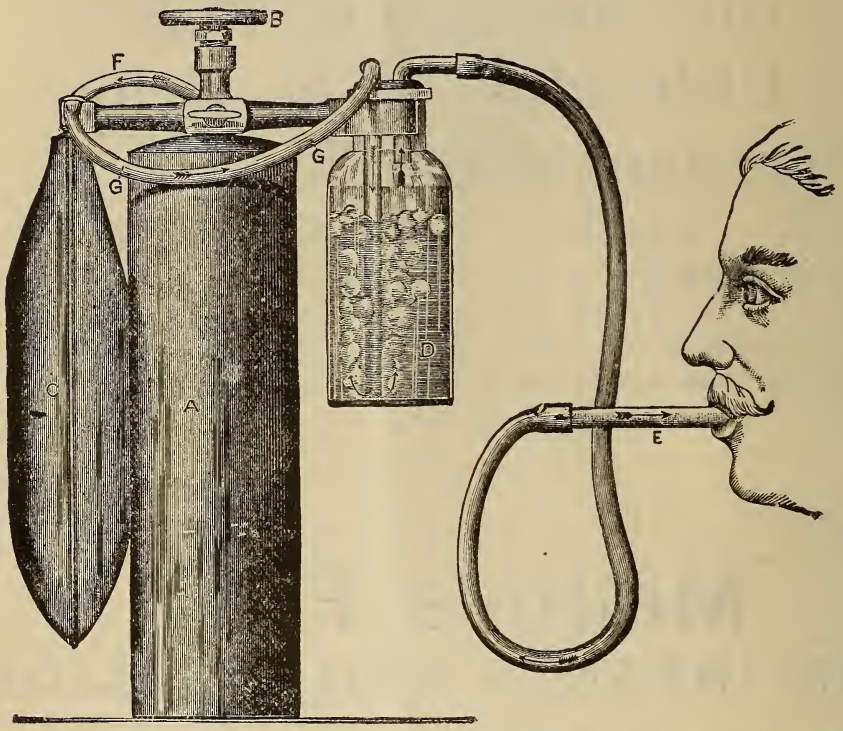
THE DOLIBER-GOODALE CO.,

BOSTON, MASS.

INHALATION APPARATUS

FOR

THE THERAPEUTIC ADMINISTRATION OF OXYGEN



In the treatment of lung troubles by Oxygen its exhibition by inhalation is preferred. The apparatus herewith shown is a modification of the Nitrous Oxide apparatus which we have supplied for many years. It is made in the best manner throughout, and is the outcome of years of experience in the manufacture of gas apparatus. It will be found to meet all the requirements.

We supply the gas in two sizes of cylinders, containing respectively forty and one hundred gallons, either pure Oxygen, or a mixture of Oxygen and Nitrous Oxide in definite proportions of 20 per cent., and forty per cent. of Nitrous Oxide.

Whether pure or mixed the gas is sold at the uniform price of 5 cents a gallon. The cost of the cylinders will be refunded on their return empty with the valves in good condition. Full description of Inhalation and Enema apparatuses with directions for use accompany each apparatus, or will be supplied on application.

PRICES.

Inhalation Apparatus	$5.00
Cylinder, 40 gallons' capacity	6.00
40 gallons Gas, either pure Oxygen or mixed Oxygen and Nitrous Oxide	2.00
Complete Apparatus, Cylinder, and 40 gallons Gas	$13.00
Inhalation Apparatus	$5.00
Cylinder, 100 gallons' capacity	15.00
100 gallons Gas, either pure or mixed	5.00
Complete Apparatus, Cylinder, and 100 gallons Gas	$25.00

THE S. S. WHITE DENTAL MFG. CO.

PHILADELPHIA, NEW YORK BOSTON CHICAGO, BROOKLYN, ATLANTA

ESTABLISHED 1855.

DR. STRONG'S SANITARIUM,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for TREATMENT, CHANGE, REST, OR RECREATION.

And places them under well-regulated hygienic conditions so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it has a Sun Parlor and Promenade on the roof. Turkish, Roman, Sulphur, Electro-Thermal, the French Douche, and all Hydropathic Baths; Vacuum Treatment, Swedish Movements, Massage, Pneumatic Cabinet Inhalations of Medicated, Compressed, and Rarefied Air, Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, with elevator, electric bells, open fire-places, steam, and thorough ventilation. With cheering influences and avoiding the pressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in winter tobogganing, elegant sleighing, etc.; in Summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience.

A liberal discount to physicians and their families for board or treatment. For illustrated Circular, Address:

DR. S. E. STRONG, THE SANITARIUM, 90 CIRCULAR ST.

Vin de Bugeaud

prepared with **CINCHONA** and **COCOA**

BUGEAUD'S WINE is highly recommended to the medical profession for its active principles and the superior quality of the wine in which they are dissolved.

It is especially ordered to convalescents, weak children, delicate women and old persons enfeebled by age and infirmities.

P. LEBEAULT & Cie | PARIS: 5, Rue Bourg-l'Abbé NEW-YORK: 6, Harrison Street (CH. TERTRAIS manager.)

SOLD BY HENRY C. BLAIR'S SONS, PHILADELPHIA.

PARTURITION.

Aletris Cordial (Rio), given in Teaspoonful doses every hour or two AFTER PARTURITION, is the best agent to prevent after-pains and hemorrhage. By its DIRECT tonic action on the uterus, it expels blood clots, closes the uterine sinuses, causes the womb to contract, and prevents subinvolution. In severe cases, it can be combined with ergot in the proportion of one ounce of fluid Ext. Ergot to three ounces Aletris Cordial. It is the experience of eminent practitioners, in all cases where ergot is indicated, that its action is rendered much more efficacious by combining it with Aletris Cordial in the proportions above stated.

PREFERABLE TO CORROSIVE SUBLIMATE

Because it is not poisonous

Because it possesses superior antiseptic properties

Because it forms no insoluble compounds with the animal fluids

Because it produces no pain or irritation even of abraded surfaces

For use in all cases and under all circumstances where CORROSIVE SUBLIMATE has hitherto been employed

APPLICABLE WHEREVER AN ANTISEPTIC IRRIGATION or Lotion is indicated and as a Prophylactic and Disinfectant under any and all circumstances

CHLORO PHENIQUE

PERFECTLY MISCIBLE WITH WATER

For washing out the cavities, or THE BLADDER IN CHRONIC CYSTITIS it has no equal

A Non-Irritant Non-Poisonous Antiseptic and Parasiticide of Great Energy

In FOUL WOUNDS, ABSCESSES, SUPPURATING SINUSES, BUBOES, etc., CHLORO-PHÉNIQUE is used to cleanse and to prepare the way for "Campho-Phénique," which latter as a permanent dressing, subdues pain, prevents the formation of pus, and hastens healing in a remarkable manner

WESTERN PENNSYLVANIA MEDICAL COLLEGE
CITY OF PITTSBURGH.
SESSIONS OF 1892.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. MCKENNAN, 810 Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Ave., Pittsburg.

WALNUT LODGE HOSPITAL,
HARTFORD, CONNECTICUT.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish Bath, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefitted from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M. D.,
Sup't Walnut Lodge, Hartford, Conn.

DR. MASSEY'S

Packer's Tar Soap.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

REVOLUTION

—IN—

IRON ADMINISTRATION

A HIGHLY PALATABLE PREPARATION OF IRON CHLORIDE.

IRON is easily chief among Hæmatinics. According to T. Lauder Brunton, M.D., D.Sc., F.R.S., it increases the number of blood corpuscles; the percentage of hæmaglobin in them, and functional activity of all the vital organs; as a vascular tonic classes with digitalis and strychnine, and in its alterative qualities with arsenic.

The tincture of Chloride of Iron has long been recognized as the most efficient of iron preparations, the objections to its continued administration, its highly astringent taste, its corrosive action on the teeth, and constipating action have, however, been hitherto insurmountable.

We have succeeded in preparing an entirely palatable syrup of officinal Tincture iron Chloride combining all its virtues with none of its drawbacks. It is prepared after the formula of Dr. G. W. Weld, and is entitled:

"WELD'S SYRUP OF IRON CHLORIDE."

(P., D. & CO.'S)

We earnestly recommend its trial to all the profession, believing it to be the most acceptable preparation of Iron ever devised.

Samples will be sent on receipt of request to physicians who indicate their willingness to pay express charges.

PARKE, DAVIS & CO.,

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{30}$ gr.), Atropiæ Sulph. ($\frac{1}{500}$ gr.), Codeia ($\frac{1}{10}$ gr.), Antimony Tart. $\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{10}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

I. O. WOODRUFF & CO.,

MANUFACTURERS OF PHYSICIANS' SPECIALTIES,

38 Maiden Lane, New York City.

DECLINED WITH THANKS!

The following correspondence explains itself:

LONDONDERRY LITHIA SPRING WATER CO., March 17, 1892.

GENTLEMEN:—Having used the LONDONDERRY quite extensively, and seeing *you advertise in lay journals which we cannot do, the code of ethics prohibiting it*, we thought to write you to inquire if a *favorable mention* from us might not be *used* by you in *connection* with a *small cut of our "Home,"* mentioning in connection our location and class of cases received. Fraternally yours.

(Signed) ——— ——— ———

OUR REPLY!

DRS. ——— ———. NASHUA, N. H., March 19, 1892.

GENTLEMEN:—Your esteemed favor of the 17th inst. duly received and contents noted. We are happy to receive the confidence and compliments of all the medical fraternity, but fail to see how any good end can be served by publishing a cut of your well-known resort. As a question of "ethics," it would deceive no intelligent physician or layman. A testimonial carrying such *prima facie* evidence of the consideration for which it is given would be of no benefit to us and might injure you by demonstrating that your opinions, which are now counted very valuable, are not after all held so highly by yourselves.

We have never paid one penny for a professional or lay opinion of LONDONDERRY, nor, judging from the almost daily endorsements that we see in the medical and lay journals, and our enormous and rapidly increasing business, shall we be obliged to do so in the future. Trusting you will receive this in the spirit in which it is given, we are, Yours very truly,

LONDONDERRY LITHIA SPRING WATER CO.

N. B.—We refuse to publish the name of the above well-known Sanitarium, but will give $1000.00 to any charity if we cannot prove the genuineness of this correspondence. L. L. S. W. CO.

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 67th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 21st of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Anatomy, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M. D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin October 1st, and continue until May. PRELIMINARY SESSION begins September 7th.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required Practical laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Bacteriology, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology is a part of the regular course. Special clinical facilities.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For announcement or information apply to

ERNEST LAPLACE, M. D.,
1617 Arch Street, Philadelphia, Pa.

MEDICAL DEPARTMENT OF COLUMBIAN UNIVERSITY,
WASHINGTON, D. C.

The Seventieth Winter Session will begin October 1st, 1891 and end March 1st, 1892. Spring Course from April 1st to May 30th. Graded three year course required. Women admitted. Clinical facilities.

FACULTY.

J. F. THOMPSON, Surgery.
W. W. JOHNSTON, Practice.
A. F. A. KING, Obstetrics.
E. T. FRISTOE, Chemistry.
WILLIAM LEE, Physiology.
D. W. PRENTISS, Therapeutics.
D. K. Shute, Anatomy.
W. K. BUTLER, Ophthalmology.
W. W. GODDING, Mental Disease.
H. C. YARROW, Dermatology.
GEORGE B. HARRISON, Pediatrics.
J. H. BRYAN, Laryngology.
THEO. SMITH, Bacteriology.
T. E. McARDLE, Minor Surgery.
R. T. EDGES, Neurology.
H. L. E. JOHNSON, Gynæcology.
W. J. CARR, Visceral Anatomy.
G. N. ACKER, Pathological Histology.
WM. M. GRAY, Normal Histology.

For circulars, address
A. F. A. KING, M. D., DEAN,
1315 Massachusetts Avenue, Washington, D. C.

UNIVERSITY OF MARYLAND.—School of Medicine.

The Eighty-Fifth Annual Session will begin October 1st, 1891, and will end in April, 1892. Didactic lectures are illustrated by daily clinical instruction in general medicine and surgery, and the various special branches. Laboratory instruction in chemistry and normal and pathological histology. All candidates for graduation have personal experience in practical obstetrics.

For further information and circular apply to

I. E. ATKINSON, M D., Dean,
605 Cathedral Street, Baltimore.

UNIVERSITY OF PENNSYLVANIA.—Medical Department

THE PRELIMINARY SESSION has been discontinued; the Spring Term begins early in May, 1892.

The curriculum is graded and three annual winter sessions are required. Practical instruction, including laboratory work in Chemistry, Histology, Osteology and Pathology; with bedside instruction in Medicine, Surgery, Gynæcology and Obstetrics, are a part of the regular course and without additional expense.

FACULTY.

D. HAYS AGNEW, M.D., LL.D., Honorary Professor of Clinical Surgery.
WILLIAM PEPPER, M.D., LL.D., Professor of Theory and Practice of Medicine, and of Clinical Medicine.
WILLIAM GOODELL, M.D., Professor of Gynecology.
JAMES TYSON, M.D., Professor of Clinical Medicine.
HORATIO C. WOOD, M.D., LL.D., Professor of Materia Medica, Pharmacy and General Therapeutics.
THEODORE G. WORMLEY, M.D., LL.D., Professor of Chemistry and Toxicology.
JOHN ASHURST, JR., M.D., Professor of Surgery and of Clinical Surgery.
EDWARD T. REICHERT M.D., Professor of Physiology.
WILLIAM F. NORRIS, M.D., Professor of Ophthalmology.
BARTON COOKE HIRST, M.D., Professor of Obstetrics.
J. WILLIAM WHITE, M.D., Professor of Clinical Surgery.
JOHN GUITERAS, M.D., Professor of General Pathology and Morbid Anatomy.
GEORGE A. PIERSOL, M.D., Professor of Anatomy.
LEWIS A. DUHRING, M.D., Professor of Diseases of the Skin.

For Catalogue and announcement containing particulars, apply to DR. JAMES TYSON, Dean
36th and Woodland Avenue, Philadelphia.

Wood's Nervous Diseases and Their Diagnosis, ... 4.00
$9.00

Nervous Diseases and Their Diagnosis

By H. C. WOOD, M. D., LL. D..

Professor of Therapeutics and Nervous Diseases, University of Pennsylvania.

8vo., pp. 501, Cloth, $4.

It is invaluable as a work of diagnosis.—*Virginia Medical Monthly.*

It is at once a substantive contribution to neurology and a trustworthy guide to what has already been done in the subject.—*Practitioner.*

As a whole, the work is one which cannot fail to be of great service to the practicing physician.—*Medical and Surgical Reporter.*

The volume is a distinct help to the student, and is a necessary supplement to the systematic works on diseases of the nervous system.—*Boston Med. Surg. Jour.*

The author's originality is evident to every reader of his work; and we trust, for the advancement of knowledge, his readers will be many.—*New England Med. Gaz.*

This work fills a long-felt need in this department.—*Buffalo Med. Surg. Jour.*

Dr. Wood is an able clinician, and this makes his book valuable. His observations are practical and to the point and show careful study of a large number of cases which have fallen under his care.—*N. Y. Med. Jour.*

The honest effort of one who never writes without teaching and who always writes and teaches well.—*Journal of Insanity.*

To students and practitioners who have read other works this production will prove extremely valuable in time of need, to the former just before examination; to the latter in everyday practice.—*London Lancet.*

Not a compilation, but rather the record of independent opinions and investigations.—*Canadian Practitioner.*

The book is written in the characteristic vigorous style of its able and versatile author.—*American Practitioner.*

Lucid language, clear type, a full index, and, above all, the presentation of the late advances in this department of science, constitute the truly great attractions of this book.—*Albany Med Annals.*

It is not until the volume has been carefully read, and perhaps re-read, that its true excellence begins to dawn upon the reader.—*Maryland Med. Jour.*

THE MEDICAL AND SURGICAL REPORTER, - - - - $5.00

AND THE

UNIVERSITY MEDICAL MAGAZINE, - - - - - 2.00

The REPORTER is published every Saturday, and furnishes during the year over 3500 separate articles, representing the best thought in the profession. They include about as follows—

75 Clinical Lectures by leading clinicians in this country and abroad.
200 Original Communications.
60 Society Reports.
25 Letters by Special Correspondents.
800 Selected Prescriptions.
75 Editorials on Timely Topics.
150 Letters from our Subscribers.
150 Book Reviews.
2000 Periscope Articles, carefully selected and condensed, and representing all important progress in medicine in all branches and languages.

The UNIVERSITY MEDICAL MAGAZINE is published on the 1st day of each month. It is edited under the auspices of the Alumni and Faculty of Medicine of the University of Pennsylvania.

"What a boon it would be to the Medical Profession if some reliable Chemist would bring out an Extract of Malt in combination with a well-digested or Peptonized Beef, giving us the elements of Beef and the stimulating and nutritious portions of Ale.—J. MILNER FOTHERGILL, M. D."

ALE & BEEF

"PEPTONIZED"

EXTRACT—BOVIS CUM MALTO.

IS THE IDENTICAL COMBINATION SUGGESTED BY THE LATE EMINENT FOTHERGILL.

Each Bottle Represents 1-4 Pound of Lean Beef Thoroughly Peptonized.

PREPARED BY

THE ALE & BEEF COMPANY,

DAYTON, OHIO, U. S. A.

Two full-sized bottles will be sent FREE to any physician who will pay express charges.

"Orders from all parts of the Dominion of Canada supplied by The Canadian Peptonized Beef & Ale Co., Limited, 153 Hollis Street, Halifax, N. S."

SYR. HYPOPHOS. CO., FELLOWS

Contains the Essential Elements of the Animal Organization—Potash and Lime;

The Oxidizing Agents—Iron and Manganese;

The Tonics—Quinine and Strychnine;

And the Vitalizing Constituent—Phosphorus; the whole combined in the form of a Syrup with a **Slightly Alkaline Reaction.**

It Differs in its Effects from all Analogous Preparations; and it possesses the important properties of being pleasant to the taste, easily borne by the stomach, and harmless under prolonged use.

It has Gained a Wide Reputation, particularly in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs. It has also been employed with much success in various nervous and debilitating diseases.

Its Curative Power is largely attributable to its stimulant, tonic, and nutritive properties, by means of which the energy of the system is recruited.

Its Action is Prompt; it stimulates the appetite and the digestion, it promotes assimilation, and it enters directly into the circulation with the food products.

The prescribed dose produces a feeling of buoyancy, and removes depression and melancholy; *hence the preparation is of great value in the treatment of mental and nervous affections.* From the fact, also, that it exerts a double tonic influence, and induces a healthy flow of the secretions, its use is indicated in a wide range of diseases.

NOTICE—CAUTION.

The success of Fellows' Syrup of Hypophosphites has tempted certain persons to offer imitations of it for sale. Mr. Fellows, who has examined samples of several of these, ***finds that no two of them are identical,*** and that all of them differ from the original in composition, in freedom from acid reaction, in susceptibility to the effects of oxygen when exposed to light or heat, ***in the property of retaining the strychnine in solution,*** and in the medicinal effects.

As these cheap and inefficient substitutes are frequently dispensed instead of the genuine preparation, physicians are earnestly requested, when prescribing the Syrup, to write "Syr. Hypophos. ***Fellows.***"

As a further precaution, it is advisable that the Syrup should be ordered in the original bottles; the distinguishing marks which the bottles (and the wrappers surrounding them) bear, can then be examined, and the genuineness—or otherwise—of the contents thereby proved.

Medical Letters may be addressed to:

Mr. FELLOWS, 48 Vesey Street, New York.

PHILLIPS' COD LIVER OIL

EMULSION.

A TRUE EMULSION WITHOUT SAPONIFICATION.

In all essential features, it represents the highest degree of perfection in the Emulsionizing of Cod Liver Oil.

This preparation is not advertised to the public, and enjoys Professional popularity because of its high standard of excellence, uniformity and reliability.

(A pamphlet, with formula, Photo-Micrographic illustrations, etc., mailed upon application.)

PHOSPHO-MURIATE OF QUININE,

COMPOUND.

A RELIABLE ALTERATO-CONSTRUCTIVE,

Particularly indicated in conditions of **disturbed nutrition** and **tissue retrograde.**
An easily appropriated general tonic, promoting digestion, and safe under prolonged use.
A permanent combination of the soluble Wheat Phosphates, with Muriate of Quinine, Iron and Strychnia Of greater strength than the various Hypophosphite compounds.

DIGESTIBLE COCOA.
WHEAT PHOSPHATES.

VIN MARIANI

"The Standard Preparation of Erythoxylon Coca."

CAREFUL, continued testing by upwards of seven thousand practitioners in America, whose written opinions over their signatures (in our possession) are fully in accord and clearly prove the efficacy and merits of "VIN MARIANI," may be thus summarized:

"Diffusible stimulant and tonic in anæmia, nervous depression, sequelæ of childbirth, lymphatism, tardy convalescence, general 'Malaise,' and after wasting fevers.

"Special reference to the nervous system, in all morbid states, melancholia, etc.

"Tonic in laryngeal and gastric complications, stomach troubles.

"All cases where a general toning or strengthening of the system is needed.

"The only tonic stimulant without any unpleasant reaction, and may be given indefinitely, never causing constipation."

N. B—This Wine has been found always uniform and reliable, owing to the selection of the finest ingredients and the greatest accuracy in its manipulation. When prescribing, therefore, the Medical Profession are strongly advised to specify "VIN MARIANI," in order to avoid the substitution of imitations, often worthless and consequently disappointing in effect.

Please Specify VIN MARIANI.

Elixir Chloralamid-Schering.

CHLORALAMID-SCHERING, the new hypnotic introduced a little over two years ago, has now assumed a permanent position in materia medica, and is highly esteemed and largely employed by the medical profession. Reports on the therapeutics of Chloralamid-Schering have been overwhelmingly favorable, in text books, special treatises, society reports, lectures, editorials, etc.; when occasionably failure to produce sleep has been reported, we have investigated the facts and usually substantiated that the remedy was not properly administered. To preclude failure on this account once for all, we have concluded to introduce a preparation in permanent solution, elegant in appearance, palatable,—**perfect**

Elixir Chloralamid-Schering

is put up in 8 oz. prescription vials, ready for dispensing without change, except that the pharmacist must write the directions on the label and impress his stamp on same. The package is unique, and will, no doubt, meet with the approval of physicians and pharmacists.

There is no better form for administering Chloralamid-Schering, and physicians will surely give it their preference.

It is desired that this bottle be delivered on physician's prescription complete and unopened,—first writing the necessary facts on label on opposite side.

ELIXIR
Chloralamid
(SCHERING)
Each tablespoonful contains one gramme (15 grains) of Chloralamid-Schering.

HYPNOTIC.

Chloralamid-SCHERING is a superior hypnotic; an efficient and safe sleep-producing agent; its use is not attended by unpleasant and untoward side or after-effects, nor will continued use develop a habit or necessitate increasing doses. Eminent medical authorities have endorsed Chloralamid, and full clinical reports with chemical and therapeutical data will be furnished to physicians and pharmacists on request.

Directions:—A tablespoonful at a dose, taken one-half hour before sleep is desired; if effect is not prompt and satisfactory the dose may be repeated at intervals of 15 minutes—not more than twice.

PUT UP ONLY BY THE
Sole Agents & Licensees for America:
LEHN & FINK,
IMPORTERS, WHOLESALE DRUGGISTS AND MANUFACTURING CHEMISTS,
NEW YORK.

(This descriptive label is attached to every bottle, and may be removed before dispensing.)

To be obtained from all Leading Pharmacists, and supplied by all Wholesale Druggists in the United States.

A full descriptive treatise (52 pages) on Chloralamid-Schering will be mailed to physicians on request.

SOLE AGENTS AND LICENSEES:

LEHN & FINK, 128 William Street, NEW YORK.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK:)

Each fluid drachm represents 15 grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium and Lithium.

USES: EPILEPSY, UTERINE CONGESTION, HEADACHE, AND ALL CONGESTIVE, CONVULSIVE AND REFLEX NEUROSES.

This preparation produces results, which can not be obtained from the use of commercial Bromide substitutes.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK.)

From Sea Weed. **Uses: Malaria, Phthisis, Etc.**

An ALLY of quinine—quinine CHECKS the Malarial Chill; Fucus Marina ELIMINATES the Malarial CAUSE; and thus prevents the recurrence of the Chill *after* it has been *checked* by quinine.

An INVALUABLE REMEDY in the treatment of Phthisis—it arrests the decay of lung tissue, diminishes the fever, lessens the cough, abates the soreness in the lungs, improves the appetite, and impedes the progressive emaciation.

DOSE.—One Teaspoonful IN WATER, four times a day.

CHIONIA FROM CHIONANTHUS.

Uses: Biliousness, Jaundice, Dyspepsia, Constipation, and all Diseases Caused by Hepatic Torpor.

CHIONIA stimulates the Liver and restores it to a healthy condition, without debilitating the system by Catharsis; does not purge, per se, but under its use the Liver and Bowels gradually resume their normal functions.

DOSE.—One Fluid Drachm three times a day.

PEACOCK CHEMICAL CO., ST. LOUIS.

THE NEW REMEDY

STRONTIUM, McK. & R.

Indicated in

Rheumatism, Epilepsy, Indigestion, Bright's Disease, Etc.,

And in the place of the

BROMIDE OF POTASSIUM,

Than which it is better tolerated even in high Doses.

THE LACTATE AND BROMIDE OF STRONTIUM McK. & R., IN SYRUP OR SOLUTION IN ORIGINAL POUND BOTTLES.

Prof. Virchow.

Last July, M. LABORDE reported to the *Société de Biologie*, July 4, 1891, that he had found, contrary to the general opinion, that the salts of strontium might be safely employed, were beneficial to the animal economy and that weight was increased under their use.

Some time after this report, July 28, MM. G. SÉE and CONSTANTIN PAUL stated before the *Académie de Médecine* that they had employed the bromide and lactate of strontium in rheumatism and Bright's disease, respectively and could confirm the results of M. LABORDE in regard to the innocuousness and beneficial effects of the drug.

Oct. 28, M. DUJARDIN-BEAUMETZ, before the *Société de Thérapeutique* stated that he had obtained very good results in Bright's disease by the use of the lactate of strontium; that its action on the digestive functions was very favorable.

Nov. 11, MM. CONSTANTIN PAUL and DUJARDIN-BEAUMETZ made a further communication to the same society and stated that they had still further used the lactate and bromide salts and found them perfectly tolerated even in high doses.

M. FÉRÉ found the bromide of strontium of efficacy in the treatment of epilepsy in the place of the potassium salt. He also found by numerous experiments that the toxicity of bromide of strontium, when given by intravenous injection, was far below that of the bromide of potassium.

All the authors insist on the necessity for a perfectly pure salt, one absolutely free from the presence of barium, such as those now offered to the medical profession, in the form of syrup and solution, by McKesson & Robbins.

THE TREATMENT OF BRIGHT'S DISEASE BY STRONTIUM.

BY M. CONSTANTIN PAUL.

Since the beginning of June I have used outside about two pounds, and in the hospitals over four pounds of the lactate of strontium.

In opposition to barium which is toxic and to potassium the toleration for which is limited, the salts of strontium are quite innocuous. Guinea pigs support without disturbance a dose of three grains, rabbits one of six grains, and dogs of 30 to 40 pounds support as high as 45 grains of the chloride given by intravenous injections. By the mouth the dose seems to be almost unlimited.

The author gives details of 12 cases, some of which were unsuccessfully treated but in none was there the slightest intolerance for strontium. He concludes as follows:

Strontium is not toxic; it is not a diuretic; it diminishes the albumen well and rapidly in epithelial and parenchymatous nephritis, but it does not suppress it entirely; if the administration of the drug is stopped too soon the albumin increases at once.

This medicament may be called upon to render service in the albuminuria of: rheumatismal, scrofulous and gouty nephritis.

In the albuminuria of pregnancy and of those newly delivered.

There are other forms of albuminuria in which I have, as yet, had no experience with the drug.

The diminution of the albuminuria is followed by a very notable amelioration of the other symptoms and the patient, exhibits much improvement. The presence of fever, even intense, does not prevent the action o the lactate of strontia in parenchymatous nephritis.

I have had no personal experience in the use of the drug in maladies of the stomach, or of the bromide in epilepsy, but I administered the latter salt to a young woman the subject of hystero-epileptic attacks recurring at the menstrual period. These attacks had resisted the use of bromide of potassium in doses of 60 grains a day; the bromide of strontium given for two months in doses of 90 grains a day appears to have succeeded as she has not had any attacks during that time.—*Les Nouveaux Remèdes.*

McK. & R. SYRUP LACTATE OF STRONTIUM, C. P.

McK. & R. SYRUP BROMIDE OF STRONTIUM, C. P.

Each fluid ounce contains 60 grains of the salt. DOSE: One or two teaspoonfuls four to eight times a day

Where sugar is an objection, McKesson & Robbins' solution of the above salts, of the same strength, may be prescribed.

Lapactic Pills.

A combination introduced by us and found in practice to possess superior advantages over other similar formulas. The well known mild action of Aloin on the lower portion of the intestinal canal, and its power of stimulating the hepatic functions, is supplemented by the action of Ipecac as a stomachic tonic and by increasing the gastric secretions; the Belladonna acts specially upon the involuntary muscular fibres of the bowels, increasing peristalsis, diminishing the harshness, and at the same time increasing the effectiveness of the laxative. The general tonic effect of Strychnine upon the stomach and bowels and its direct action upon the sympathetic, make it a valuable addition in the permanent cure of **habitual constipation and atonic dyspepsia.**

Since we first called attention to our Lapactic Pills, some four years ago—publishing the composition of the same—a number of manufacturers have adopted the formula and have furnished these pills under the same name. Should Physicians fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints from physicians by letter), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term "LAPACTIC PILLS, S. & D.'S." when prescribing these pills.

SAMPLES WILL BE MAILED ON APPLICATION.

SPECIAL FORMULAS MADE TO ORDER.

WHEN PURCHASING, PLEASE SPECIFY S. & D's.

Established 1860. **Baltimore, Md.**

"As a disinfectant for all the sanitary needs of the sick-room, Platt's Chlorides is especially recommended."

Endorsed by thousands of Physicians, and having commanded a large sale for many years, Platt's Chlorides can readily be procured from almost any druggist in any city, town or village in the United States. It is an odorless liquid, and is sold in quart bottles only.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

—*Landois and Sterling.*

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

—*Materia Medica and Therapeutics, Dr. Mitchell Bruce.*

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

—*Eustace Smith, M.D., F.R.C.S.*

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

THE DOLIBER-GOODALE CO.,

ABOUT GAS TREATMENT.

We make and sell oxygen and nitrogen monoxide for therapeutic use, and we guarantee them pure They are put up in compact form. (A cylinder containing 100 gallons of nitrogen monoxide or 40 gallons of oxygen measures 12 inches in length, has a diameter of 3½ inches, and weighs 10½ lbs. A cylinder containing 450 gallons of nitrogen monoxide or 100 gallons of oxygen measures 25 inches in length, has a diameter of 4½ inches, and weighs 34 lbs.)

INSOMNIA. Dr. Allan McLane Hamilton states that nitrogen monoxide, N_2O (nitrous oxide of the old nomenclature) has no equal in the treatment of this difficulty.

MELANCHOLIA. A short course of nitrogen monoxide is said to change the face of nature for such patients.

ANÆMIA. Where iron is not tolerated or proves inefficient, the addition of oxygen or a combination of oxygen and nitrogen monoxide has proven very beneficial.

For those who should, but cannot, go from home for rest or a change of air, or for those who, from any cause fail to get air enough into their lungs, the inhalation of one or other of these gases, or both in combination, promises great benefit. The testimony is that in cases of

ASTHMA, more than fifty per cent. of the cases yield to oxygen treatment, others are very greatly relieved, and a very small per cent. are not improved.

INDIGESTION and CONSTIPATION are said to be greatly relieved and very often conquered by continued treatment.

A highly esteemed New York physician has used more than twenty thousand gallons of nitrogen monoxide in his private practice. The letters received from his patients, largely from those who were afflicted with nervous disorders, are enthusiastic in their testimony as to the benefit received.

Regular practitioners who are using gas treatment testify that when *pure* oxygen and *pure* nitrogen monoxide, or a mixture of these, is used, no therapeutic agents are more uniformly successful when intelligently prescribed.

SVAPNIA
OR
PURIFIED OPIUM

FOR PHYSICIANS USE ONLY.

Contains the Anodyne and Soporific Alkaloids, Codeia, Narceia and Morphia.
Excludes the Poisonous and Convulsive Alkaloids, Thebaine, Narcotine and Papaverine.

SVAPNIA has been in steadily increasing use for over twenty years, and whenever used has given great satisfaction.

To PHYSICIANS OF REPUTE, not already acquainted with its merits, samples will be mailed on application.

SVAPNIA is made to conform to a uniform standard of Opium of Ten per cent. Morphia strength.

JOHN FARR, Manufacturing Chemist, New York.
C. N. CRITTENTON, Gen'l Agent, 115 Fulton St., N. Y.
To whom all orders for samples must be addressed.
SVAPNIA IS FOR SALE BY DRUGGISTS GENERALLY.

PHYSICIAN WANTED.

A Chief Resident Physician for the Jewish Hospital of Philadelphia, which office will be vacant September 1st. Salary, $1200 per year and living at the Hospital. No private practice allowed. Must be able to speak English and German. Election will take place early in June.

Applications, stating age, married or single, from what college, and when graduated, with all other particulars, must be presented in writing to

WM. B. HACKENBURG,
President,
25 North Third St., Philadelphia.

Vin de Bugeaud

prepared with **CINCHONA** and **COCOA**

BUGEAUD'S WINE is highly recommended to the medical profession for its active principles and the superior quality of the wine in which they are dissolved.

It is especially ordered to **convalescents, weak children, delicate women** and **old persons enfeebled** by age and infirmities.

P. LEBEAULT & Cie | PARIS : 5, Rue Bourg-l'Abbé
NEW-YORK : 6, Harrison Street (CH. TERTRAIS manager.)

SOLD BY HENRY C. BLAIR'S SONS, PHILADELPHIA.

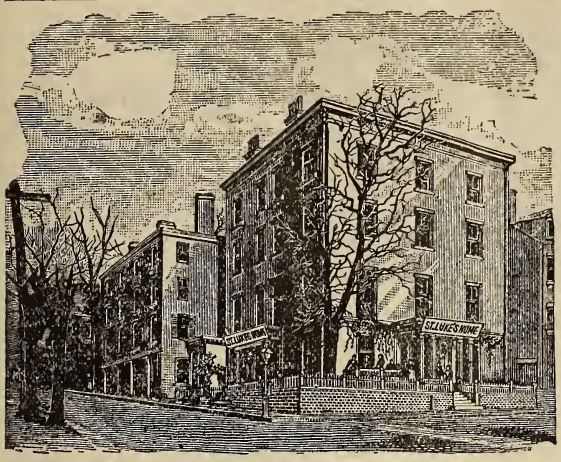
NERVES.

Suppose we find the patient a little giddy upon rising in the morning. This means that the nerves do not have perfect control of the muscular system. As a test for this, direct the patient to stand with his feet close together, shut his eyes, and if the tendency is to reel, it is another evidence of lowered nerve tone. Or, stand with the arms extended, shut the eyes, and then try to bring the tips of his forefingers together in front of him. If they pass by or meet imperfectly, it shows the same thing.

Or, the person may not be able to think as quickly as he should. To test this, ask the patient three simple questions in rapid succession, as, Where were you just before you came into this room? What were you doing? How long did you remain? The rapidity with which the answers are given indicate the rapidity of brain action.

All these things show that it is of the utmost importance that the nervous system should be kept in tone. Otherwise, every part of the body languishes.

This condition indicates the use of Celerina (Rio) in teaspoonful doses four times a day, *to increase the nerve capital of your patient.*



ST. LUKE'S HOME FOR THE SICK
DR. HUNTER McGUIRE'S PRIVATE HOSPITAL
RICHMOND, VIRGINIA.

DR. HUNTER McGUIRE,

Richmond, Virginia, says:

"Whatever may be the published analysis of Spring No. 2, I know from the constant use of it personally, and in my practice during many years past, that the results obtained from the use of

BUFFALO LITHIA WATER

are far beyond those which would be warranted from the analysis given. I am of the opinion that it either contains some powerful remedial agent, as yet undiscovered by medical science, or

Its Elements are so Delicately Combined

in Nature's laboratory, that they defy the utmost skill of the chemist to solve the secret of their power."

"It has never failed me as a powerful Nerve Tonic. I sometimes think it must contain Hypophosphites of Lime and Soda."

Water in cases of one dozen half-gallon bottles, $5.00, f. o. b. here. For sale by all first-class druggists.

THOMAS F. GOODE, PROPRIETOR

BUFFALO LITHIA SPRINGS, VA.

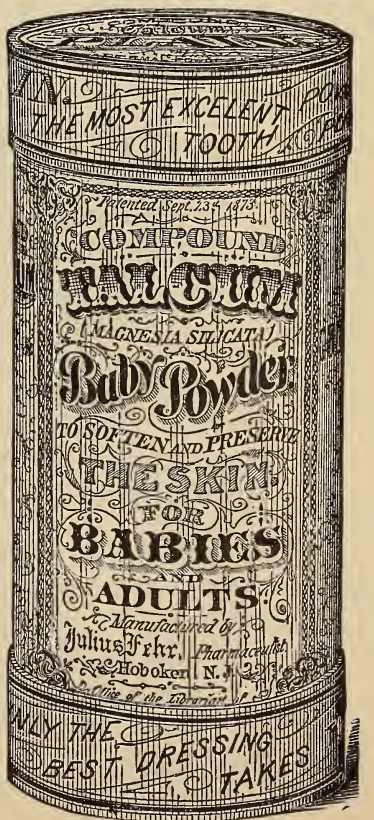
Only advertised in Medical and Pharmaceutical prints.



DIOVIBURNIA

UTERINE TONIC, ANTISPASMODIC AND ANODYNE.

A reliable and trustworthy remedy for the relief of Dysmenorrhœa, Amenorrhœa, Menorrhagia Leucorrhœa, Subinvolution, THREATENED ABORTION, Vomiting in Pregnancy and Chlorosis; directing its action to the entire uterine system as a general tonic and antispasmodic.

FORMULA.

Every ounce contains 3-4 dram each of the fluid extracts: Viburnum Prunifolium, Viburnum Opulus, Dioscorea Villosa, Aletris Farinosa, Helonias Dioica, Mitchella Repens, Caulophyllum Thalictroides, Scutellaria Lateriflora.

DOSE.—For adults, a desertspoonful to a tablespoonful three times a day, after meals. In urgent cases, where there is much pain, dose may be given every hour or two, ALWAYS IN HOT WATER.

Jno. B. Johnson, M. D., Professor of the Principles and Practice of Medicine, St. Louis Medical College.

ST. LOUIS, June 20, '88.

I very cheerfully give my testimony to the virtues of a combination of vegetable remedies prepared by a well-known and able pharmacist of this city, and known as DIOVIBURNIA, the component parts of which are well known to any and all physicians who desire to know the same, and therefore have no relation to proprietary or quack remedies. I have employed this medicine in cases of dysmonorrhœa, suppression of the catemania and in excessive leucorrhœa, and have been much pleased with its use. I do not think its claims (as set forth in the circular accompanying it) to be at all excessive. I recommend its trial to all who are willing to trust to its efficacy, believing it will give satisfaction. Respectfully,

Jno. B. Johnson

L. Ch. Boisliniere, M. D., Prof. of Obstetrics, St. Louis Medical College. ST. LOUIS, June 18, 1888.

I have given DIOVIBURNIA a fair trial and found it useful as an uterine tonic and antispasmodic, relieving the pains of dysmenorrhœa, and regulator of the uterine functions. I feel authorized to give this recommendation of DIOVIBURNIA, as it is neither a patented nor a secret medicine, the formula of which have been communicated freely to the medical profession.

L Ch. Boisliniere M.D.

H. Tuholske, M. D., Professor Clinical Surgery and Surgical Pathology, Missouri Medical College; also Post-Graduate School of St. Louis. ST. LOUIS, June 23, 1888.

I have used DIOVIBURNIA quite a number of times—sufficiently frequently to satisfy myself of its merits. It is of unquestionable benefit in painful dysmenorrhœa; it possesses antispasmodic properties which seem especially to be exerted on the uterus.

Wm. H. Tuholske

To any physician, unacquainted with the medicinal effect of DIOVIBURNIA, we will mail pamphlet containing full information, suggestions, commendations of some of our most prominent professors and various methods of treatment; also a variety of valuable prescriptions that have been thoroughly tested in an active practice, or to physicians desiring to try our preparation, and who will pay express charges, we will send on application a sample bottle free.

DIOS CHEMICAL CO., ST. LOUIS, MO., U. S. A.

WESTERN PENNSYLVANIA MEDICAL COLLEGE
CITY OF PITTSBURGH.
SESSIONS OF 1892.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. MCKENNAN, 810 Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Ave., Pittsburg.

The Baltimore Medical College.

PRELIMINARY FALL COURSE begins Sept. 1, 1891.
REGULAR WINTER COURSE begins October 1, 1891.

WALNUT LODGE HOSPITAL,
HARTFORD, CONNECTICUT.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish Bath, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefitted from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M. D.,
Sup't Walnut Lodge, Hartford, Conn.

DR. MASSEY'S
PRIVATE SANATORIUM.

Presenting the comforts of an elegant private residence, this institution is specially equipped for the use of electricity and allied remedial measures in the diseases of women and in diseases of the nervous system. For particulars address

G. BETTON MASSEY, M. D.,
212 S. Fifteenth St., Philadelphia.

Prickly Heat, Chafing, Dandruff,

Odors from Perspiration, etc. Speedy Relief by Using

Packer's Tar Soap.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

NERVOUS EXHAUSTION.

HORSFORD'S ACID PHOSPHATE.

Recommended as a restorative in all cases where the nervous system has been reduced below the normal standard, by overwork, as found in brain-workers, professional men, teachers, students, etc., in debility from seminal losses, dyspepsia of nervous origin, insomnia where the nervous system suffers.

It is readily assimilated and promotes digestion.

DR. B. H. BOYD, Lafayette, Ind., says: "I have used it in several cases of nervous exhaustion, with uniformly good results.

Send for descriptive circular. Physicians who wish to test it will be furnished a bottle on application, without expense, except express charges.

Prepared under the direction of Prof. E. N. HORSFORD, by the

RUMFORD CHEMICAL WORKS, Providence, R. I.

Beware of Substitutes and Imitations.

Caution :—Be sure the word "Horsford's" is printed on the label. All others are spurious. Never sold in Bulk.

The Complete MEDICAL Pocket Formulary

AND PHYSICIAN'S VADE-MECUM. Collated for the use of Practitioners by J. C. Wilson, A.M., M.D., Physician to the German Hospital, Philadelphia, etc. Two hundred and sixty-two pages. Bound in leather, pocket-book form (size, 3¾ x 8 inches), $2.00.

"We can heartily commend this vade-mecum to all those in need of such a companion. It is especially valuable on account of the large scope of subjects embraced within its pages, and it is in nowise cumbersome, despite the fact that it is liberally interleaved with blank pages for the purpose of making additions to an already full list of prescriptions which number altogether about twenty-six hundred, exclusive of special formulæ which are given separately; and we would be in no way surprised to see a second edition appear in a short time. Such a reliable and serviceable guide is necessarily appreciated, and a lively demand for it is a natural result. —*St. Louis Medical Review.*

For sale by all Booksellers, or will be sent by the Publishers, free of expense, on receipt of the price.

J. B. LIPPINCOTT COMPANY,

FRELIGH'S TABLETS,
(Cough and Constituent),
FOR THE PREVENTION AND CURE OF
PULMONARY PHTHISIS.
FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{60}$ gr.), Atropiæ Sulph. ($\frac{1}{600}$ gr.), Codeia ($\frac{1}{10}$ gr.), Antimony Tart. $\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis. fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{60}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.
Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address.

DECLINED WITH THANKS!

The following correspondence explains itself:

LONDONDERRY LITHIA SPRING WATER CO., March 17, 1892.

GENTLEMEN:—Having used the LONDONDERRY quite extensively, and seeing *you advertise in lay journals which we cannot do, the code of ethics prohibiting it,* we thought to write you to inquire if a *favorable mention* from us might not be *used* by you in *connection* with a *small cut of our "Home,"* mentioning in connection our location and class of cases received. Fraternally yours.

(Signed) ——— ——— ———

OUR REPLY!

DRS. ——— ———. NASHUA, N. H., March 19, 1892.

GENTLEMEN:—Your esteemed favor of the 17th inst. duly received and contents noted. We are happy to receive the confidence and compliments of all the medical fraternity, but fail to see how any good end can be served by publishing a cut of your well-known resort. As a question of "ethics," it would deceive no intelligent physician or layman. A testimonial carrying such *prima facie* evidence of the consideration for which it is given would be of no benefit to us and might injure you by demonstrating that your opinions, which are now counted very valuable, are not after all held so highly by yourselves.

We have never paid one penny for a professional or lay opinion of LONDONDERRY, nor, judging from the almost daily endorsements that we see in the medical and lay journals, and our enormous and rapidly increasing business, shall we be obliged to do so in the future. Trusting you will receive this in the spirit in which it is given, we are, Yours very truly,

LONDONDERRY LITHIA SPRING WATER CO.

N. B.—We refuse to publish the name of the above well-known Sanitarium, but will give $1000.00 to any charity if we cannot prove the genuineness of this correspondence. L. L. S. W. CO.

MEDICAL DEPARTMENT OF COLUMBIAN UNIVERSITY,
WASHINGTON, D. C.

The Seventieth Winter Session will begin October 1st, 1891 and end March 1st, 1892. Spring Course from April 1st to May 30th. Graded three year course required. Women admitted. Clinical facilities.

FACULTY.

J. F. THOMPSON, Surgery.
W. W. JOHNSTON, Practice.
A. F. A. KING, Obstetrics.
E. T. FRISTOE, Chemistry.
WILLIAM LEE, Physiology.
D. W. PRENTISS, Therapeutics.
D. K. Shute, Anatomy.
W. K. BUTLER, Ophthalmology.
W. W. GODDING, Mental Disease.
H. C. YARROW, Dermatology.
GEORGE B. HARRISON, Pediatrics.
J. H. BRYAN, Laryngology.
THEO. SMITH, Bacteriology.
T. E. McARDLE, Minor Surgery.
R. T. EDGES, Neurology.
H. L. E. JOHNSON, Gynæcology.
W. J. CARR, Visceral Anatomy.
G. N. ACKER, Pathological Histology.
WM. M. GRAY, Normal Histology.

For circulars, address
A. F. A. KING, M. D., DEAN,
1315 Massachusetts Avenue, Washington, D. C.

UNIVERSITY OF MARYLAND.—School of Medicine.

The Eighty-Fifth Annual Session will begin October 1st, 1891, and will end in April, 1892. Didactic lectures are illustrated by daily clinical instruction in general medicine and surgery, and the various special branches. Laboratory instruction in chemistry and normal and pathological histology. All candidates for graduation have personal experience in practical obstetrics.

For further information and circular apply to

I. E. ATKINSON, M D., Dean,
605 Cathedral Street, Baltimore.

UNIVERSITY OF PENNSYLVANIA.—Medical Department

THE PRELIMINARY SESSION has been discontinued; the Spring Term begins early in May, 1892.

The curriculum is graded and three annual winter sessions are required. Practical instruction, including laboratory work in Chemistry, Histology, Osteology and Pathology; with bedside instruction in Medicine, Surgery, Gynæcology and Obstetrics, are a part of the regular course and without additional expense.

FACULTY.

D. HAYS AGNEW, M.D., LL.D., Honorary Professor of Clinical Surgery.
WILLIAM PEPPER, M.D., LL.D., Professor of Theory and Practice of Medicine, and of Clinical Medicine.
WILLIAM GOODELL, M.D., Professor of Gynecology.
JAMES TYSON, M.D., Professor of Clinical Medicine.
HORATIO C. WOOD, M.D., LL.D., Professor of Materia Medica, Pharmacy and General Therapeutics.
THEODORE G. WORMLEY, M.D., LL.D., Professor of Chemistry and Toxicology.
JOHN ASHURST, JR., M.D., Professor of Surgery and of Clinical Surgery
EDWARD T. REICHERT M.D., Professor of Physiology.
WILLIAM F. NORRIS, M.D., Professor of Ophthalmology.
BARTON COOKE HIRST, M.D., Professor of Obstetrics.
J. WILLIAM WHITE, M.D., Professor of Clinical Surgery.
JOHN GUITERAS, M.D., Professor of General Pathology and Morbid Anatomy.
GEORGE A. PIERSOL, M.D., Professor of Anatomy.
LEWIS A. DUHRING, M.D., Professor of Diseases of the Skin.

For Catalogue and announcement containing particulars, apply to DR. JAMES TYSON, Dean
36th and Woodland Avenue, Philadelphia.

DERMATOL

ODORLESS SUBSTITUTE FOR IODOFORM.

DERMATOL.	IODOFORM.
1 It is not Poisonous.	1 It is Distinctly Poisonous.
2 It is without Odor.	2 It's Odor is Exceedingly Disagreeable.
3 It is Absolutely Non-irritating. it allays Irritation.	3 It Produces in many Instances a troublesome Dermatitis of the Surrounding Skin.

BENZOSOL **ANTIPYRINE** THE LEADING ANTIPYRETIC **IODOPYRINE**

SCHULZE-BERGE, KOECHL & MOVIUS, 79 Murray St., N.Y.

Sole Licensees for the United States of America.

PHILADELPHIA POLYCLINIC.

Post-Graduate Teaching in Six Weeks' and Three Months' Courses.

Actual Clinical Work with Abundant Material and Small Classes.

FACULTY.

SURGERY—John B. Roberts, L. W. Steinbach, T. S. K. Morton, John B. Deaver, H. Augustus Wilson, Thomas H. Morton, S. K. Wharton.

GYNÆCOLOGY—B. F. Baer, J. M. Baldy, H. A. Slocum, C. P. Noble,

MEDICINE—Thomas J. Mays, S. Solis-Cohen, J. P. Crozer Griffith.

DISEASES OF THE MIND AND NERVOUS SYSTEM—S. Weir Mitchell, Charles K. Mills.

OBSTETRICS AND DISEASES OF CHILDREN—E. P. Davis, J. Madison Taylor.

GENITO-URINARY AND VENEREAL DISEASES—J. Henry C. Simes, Thomas R. Nelson.

DISEASES OF THE EAR—B. Alex. Randall, R. W. Seiss.

DISEASES OF THE SKIN—Arthur Van Harlingen, J. Abbott Cantrell.

DISEASES OF THE EYE—Edward Jackson, S. D. Risley, Geo. E. de Schweinitz.

DISEASES OF THE THROAT AND NOSE—Alex. W. McCoy, A. W. Watson.

CLINICAL CHEMISTRY AND HYGIENE—Henry Leffmann.

PATHOLOGY, CLINICAL MICROSCOPY AND BACTERIOLOGY—W. M. Late Coplin.

For announcement, address Secretary,

ARTHUR W. WATSON. M. D.,

Polyclinic, Lombard Street, above Eighteenth.

CH. MARCHAND'S

PEROXIDE OF HYDROGEN.

(MEDICINAL) H_2O_2 (ABSOLUTELY HARMLESS.)

THE MOST POWERFUL BACTERICIDE AND PUS DESTROYER.
ENDORSED BY THE MEDICAL PROFESSION.
UNIFORM IN STRENGTH, PURITY, STABILITY.
RETAINS GERMICIDAL POWER FOR ANY LENGTH OF TIME.
TAKEN INTERNALLY OR APPLIED EXTERNALLY WITH PERFECT SAFETY.

Send for free book of 72 pages giving articles by the following contributors:

DR. JOHN AULDE, of Philadelphia, Pa. "Hydrogen Peroxide—Résumé." *New York Medical Journal.*

DR. E. CHAREST, of St. Cloud, Minn. "Peroxide of Hydrogen for Gonorrhœa." *Medical World* of Philadelphia, Pa.

NOTE.—Avoid substitutes—in shape of the commercial article bottled—unfit and unsafe to use as a medicine.

Ch. Marchand's Peroxide of Hydrogen (Medicinal) sold only in 4-oz., 8-oz. and 16-oz. bottles, bearing a blue label, white letters, red and gold border, with his signature. Never sold in bulk.

PHYSICIANS WILLING TO PAY EXPRESS CHARGES WILL RECEIVE FREE SAMPLE ON APPLICATION.

PREPARED ONLY BY

Nervous Diseases and Their Diagnosis

By H. C. WOOD, M. D., LL. D.,

Professor of Therapeutics and Nervous Diseases, University of Pennsylvania.

8vo., pp. 501, Cloth, $4.

It is invaluable as a work of diagnosis.—*Virginia Medical Monthly.*

It is at once a substantive contribution to neurology and a trustworthy guide to what has already been done in the subject.—*Practitioner.*

As a whole, the work is one which cannot fail to be of great service to the practicing physician.—*Medical and Surgical Reporter.*

The volume is a distinct help to the student, and is a necessary supplement to the systematic works on diseases of the nervous system.—*Boston Med. Surg. Jour.*

The author's originality is evident to every reader of his work; and we trust, for the advancement of knowledge, his readers will be many.—*New England Med. Gaz.*

This work fills a long-felt need in this department.—*Buffalo Med. Surg. Jour.*

Dr. Wood is an able clinician, and this makes his book valuable. His observations are practical and to the point and show careful study of a large number of cases which have fallen under his care.—*N. Y. Med. Jour.*

The honest effort of one who never writes without teaching and who always writes and teaches well.—*Journal of Insanity.*

To students and practitioners who have read other works this production will prove extremely valuable in time of need, to the former just before examination; to the latter in everyday practice.—*London Lancet.*

Not a compilation, but rather the record of independent opinions and investigations.—*Canadian Practitioner.*

The book is written in the characteristic vigorous style of its able and versatile author.—*American Practitioner.*

Lucid language, clear type, a full index, and, above all, the presentation of the late advances in this department of science, constitute the truly great attractions of this book.—*Albany Med Annals.*

It is not until the volume has been carefully read, and perhaps re-read, that its true excellence begins to dawn upon the reader.—*Maryland Med. Jour.*

or

Carnrick's Kumyss Tablets.

A PRODUCT OF PURE SWEET MILK.
PALATABLE, NUTRITIOUS,
EASILY DIGESTED.
AND WHEN DISSOLVED IN WATER
FORMS A DELICIOUS EFFER-
VESCENT KUMYSS.

(*Put up in air-tight bottles, in two sizes; the larger holding sufficient Tablets for seven twelve-ounce bottles, and the smaller sufficient for three twelve-ounce bottles of Kumyss.*)

THIS PREPARATION is presented to the Medical Profession in the convenient form of Tablets, and will be found superior in every respect to ordinary *Kumyss*, *Wine of Milk*, *Fermented Milk* or any similar preparation.

Kumysgen when prepared for use contains every constituent of a perfect Kumyss.

Kumysgen is made from fresh, sweet milk, and contains fully thirty per cent. of soluble casein, which is double the amount found in ordinary Kumyss preparations.

Kumysgen being in Tablet form, will keep indefinitely, is easily and readily prepared, less expensive than the ordinary variable and perishable Kumyss, and its *fermentative action* may be regulated at will, thus rendering it available at all times and under all circumstances.

Clinical tests gathered from every quarter of the globe attest its special value in all cases of *Gastric* and *Intestinal Indigstion* or *Dyspepsia, Pulmonary Consumption, Constipation, Gastric and Intestinal Catarrh, Fevers, Anæmia, Chlorosis, Rickets, Scrofula, Vomiting in Pregnancy, Bright's Disease, Intestinal Ailments of Infants, Cholera Infantum; for young children and for convalescents from all diseases.*

The casein being finely subdivided, it is especially valuable for all who require an easily digested or a partially digested Food.

Kumysgen is a delicious effervescent Food-Beverage, relished alike by the sick or well.

Kumysgen is tonic, stimulant, diuretic, highly nutritious, easily digested, perfectly palatable, and always *permanent* and *uniform* in strength.

SAMPLE SENT ON REQUEST.

A WEEKLY JOURNAL.

ESTABLISHED IN 1853 BY
S. W. BUTLER, M. D.

THE Medical and Surgical Reporter.

EDWARD T. REICHERT, M. D., Editor.
(Prof. Physiology, University of Penna.)
CHAS. K. MQUNT, Advertising Manager.

PROSPECTUS.

For nearly forty years ***The Medical and Surgical Reporter*** has held a position of influence and popularity second to that of no other publication in medicine. Last May the Editorial and Business Management was changed, the journal was enlarged from twenty-eight to forty pages, and the publication in almost every way was radically improved. That these changes have been appreciated by the profession is evident in the phenomenal increase of our subscription list and in the number of new advertisements.

The enlarged ***Reporter*** now enables us to offer more pages of reading matter each year than are given by any other medical periodical in America, and more material of direct practical value to the practising physician than is furnished in any other journal in the English language. We now publish during the year over 3500 separate articles, representing the best thought in the profession. These include about as follows:—

75 Clinical Lectures by leading clinicians in this country and abroad.
200 Original Communications.
60 Society Reports.
25 Letters by Special Correspondents.
800 Selected Prescriptions.
75 Editorials on Timely Topics.
150 Letters from our Subscribers.
150 Book Reviews.
2000 Periscope Articles, carefully selected and condensed, and representing all important progress in medicine in all branches and languages.

The ***Reporter*** is truly a magazine of medical progress, it is thoroughly practical, and is especially adapted to the wants of the busy practitioner. There is no State or Country in America that it does not reach, and no civilized Country that does not regularly receive it.

The ***Reporter*** is published every Saturday, and is mailed to subscribers in the United States and Canada for $5.00 a year in advance, and to those in foreign countries for $6.00 in advance. It will be sent for three months on trial for $1.00.

AFTER THE GRIP, WHAT?

Few diseases are marked by such tedious and unsatisfactory convalescence as is the one known as epidemic influenza. After the acute symptoms have passed away extreme weakness and prostration remain, persisting for a long time in spite of the ordinary modes of treatment. The patient is left in a condition of general debility altogether disproportionate to the apparent gravity of the affection. Vague neuralgias and mental hallucinations occur, together with an unaccustomed liability to contract other diseases with very slight exposure or to suffer relapses of this disease. If the patient be a brainworker he finds it especially difficult to apply himself to his usual tasks. Either physical or mental exertion is followed by profound exhaustion.

Let us now look into the actual condition present, and then we can more intelligently seek an appropriate remedy—not merely a temporary palliative.

The patient has just passed through a serious and violent disease which, although of comparatively brief duration, has profoundly affected the great nerve centres and from which they naturally can recover but slowly. Through excessive weakness of the nervous supply of the vital organs their functions are but feebly and imperfectly carried on. How many there are who date the beginning of a permanent state of decline to their attack of La Grippe.

The ordinary tonics—iron, quinine, strychnine, &c.—seem utterly unable to cope with this condition. In fact, it is not stimulation that the patient needs, as by it he is only led to overtask his strength, and finally finds himself completely broken down. He needs a reconstruction of the worn out tissues.

The remedy which will be effective, then, must be one that will convey to the tissues the revivifying and vitalizing agent, phosphorus, in its oxidizable and assimilable form. Thus the true vitality of the nerve structure is restored and with it the healthy function is reestablished. The process is not that of stimulation or whipping up the exhausted powers, but is one of renewing the nutrition of the tissues themselves; hence it is steady and sure in its progress and permanent in its results. The patient feels that he is gradually recovering his accustomed strength of mind and body.

The one form in which the compounds of phosphorus, as they exist in normal animal cells can be conveyed to the tissues and there utilized is in the oxidizable form of the hypophosphites of lime and soda, chemically pure. It should be given early, and continued at appropriate intervals until the condition has been entirely overcome. Its favorable action in convalescence from acute diseases in general is especially marked in the disease under consideration. By its use many cases of chronic invalidism can be averted, and the susceptibility to intercurrent diseases corrected.

As it is essential to have the agent in an absolutely chemically pure form, McArthur's syrup should be prescribed. This is an agreeable, wholesome syrup, containing only the pure hypophosphites of lime and soda. If you are not already acquainted with it, a full sized bottle will be sent you, if you will agree to pay express charges. Address The McArthur Hypophosphite Company, Boston, Mass.

VIN MARIANI

"The Standard Preparation of Erythoxylon Coca."

CAREFUL, continued testing by upwards of seven thousand practitioners in America, whose written opinions over their signatures (in our possession) are fully in accord and clearly prove the efficacy and merits of "VIN MARIANI," may be thus summarized:

"Diffusible stimulant and tonic in anæmia, nervous depression, sequelæ of childbirth, lymphatism, tardy convalescence, general 'Malaise,' and after wasting fevers.

"Special reference to the nervous system, in all morbid states, melancholia, etc.

"Tonic in laryngeal and gastric complications, stomach troubles.

"All cases where a general toning or strengthening of the system is needed.

"The only tonic stimulant without any unpleasant reaction, and may be given indefinitely, never causing constipation."

N. B.—This Wine has been found always uniform and reliable, owing to the selection of the finest ingredients and the greatest accuracy in its manipulation. When prescribing, therefore, the Medical Profession are strongly advised to specify "VIN MARIANI," in order to avoid the substitution of imitations, often worthless and consequently disappointing in effect.

Please Specify VIN MARIANI.

Elixir Chloralamid-Schering.

CHLORALAMID-SCHERING, the new hypnotic introduced a little over two years ago, has now assumed a permanent position in materia medica, and is highly esteemed and largely employed by the medical profession. Reports on the therapeutics of Chloralamid-Schering have been overwhelmingly favorable, in text books, special treatises, society reports, lectures, editorials, etc.; when occasionably failure to produce sleep has been reported, we have investigated the facts and usually substantiated that the remedy was not properly administered. To preclude failure on this account once for all, we have concluded to introduce a preparation in permanent solution, elegant in appearance, palatable,—**perfect**

Elixir Chloralamid-Schering

is put up in 8 oz. prescription vials, ready for dispensing without change, except that the pharmacist must write the directions on the label and impress his stamp on same. The package is unique, and will, no doubt, meet with the approval of physicians and pharmacists.

There is no better form for administering Chloralamid-Schering, and physicians will surely give it their preference.

It is desired that this bottle be delivered on physician's prescription complete and unopened,—first writing the necessary facts on label on opposite side.

ELIXIR

Chloralamid

(SCHERING)

Each tablespoonful contains one gramme (15 grains) of Chloralamid-Schering.

HYPNOTIC.

Chloralamid-SCHERING is a superior hypnotic; an efficient and safe sleep-producing agent; its use is not attended by unpleasant and untoward side or after-effects, nor will continued use develop a habit or necessitate increasing doses. Eminent medical authorities have endorsed Chloralamid, and full clinical reports with chemical and therapeutical data will be furnished to physicians and pharmacists on request.

Directions:—A tablespoonful at a dose, taken one-half hour before sleep is desired; if effect is not prompt and satisfactory the dose may be repeated at intervals of 15 minutes—not more than twice.

PUT UP ONLY BY THE
Sole Agents & Licensees for America:

LEHN & FINK,

IMPORTERS, WHOLESALE DRUGGISTS AND MANUFACTURING CHEMISTS,

NEW YORK.

(This descriptive label is attached to every bottle, and may be removed before dispensing.)

To be obtained from all Leading Pharmacists, and supplied by all Wholesale Druggists in the United States.

A full descriptive treatise (52 pages) on Chloralamid-Schering will be mailed to physicians on request.

SOLE AGENTS AND LICENSEES:

LEHN & FINK, 128 William Street, NEW YORK.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK:)

Each fluid drachm represents 15 grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium and Lithium.

USES: EPILEPSY, UTERINE CONGESTION, HEADACHE, AND ALL CONGESTIVE, CONVULSIVE AND REFLEX NEUROSES.

This preparation produces results, which can not be obtained from the use of commercial Bromide substitutes.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK.)

From Sea Weed. **Uses: Malaria, Phthisis, Etc.**

An ALLY of quinine—quinine CHECKS the Malarial Chill, Fucus Marina ELIMINATES the Malarial CAUSE; and thus prevents the recurrence of the Chill *after* it has been *checked* by quinine.

An INVALUABLE REMEDY in the treatment of Phthisis—it arrests the decay of lung tissue, diminishes the fever, lessens the cough, abates the soreness in the lungs, improves the appetite, and impedes the progressive emaciation.

DOSE.—One Teaspoonful IN WATER, four times a day.

CHIONIA FROM CHIONANTHUS.

Uses: Biliousness, Jaundice, Dyspepsia, Constipation, and all Diseases Caused by Hepatic Torpor.

CHIONIA stimulates the Liver and restores it to a healthy condition, without debilitating the system by Catharsis; does not purge, per se, but under its use the Liver and Bowels gradually resume their normal functions.

DOSE.—One Fluid Drachm three times a day.

PEACOCK CHEMICAL CO., ST. LOUIS.

STRONTIUM, McK. & R.

Absolutely Free from Barium.

INDICATED IN

Rheumatism, Epilepsy, Indigestion, Bright's Disease,

AND IN THE PLACE OF THE

BROMIDE OF POTASSIUM,

THAN WHICH IT IS BETTER TOLERATED EVEN IN HIGH DOSES.

Dr. Robert Koch.

Last July, M. LABORDE reported to the *Societe de Biologie*, July 4, 1891, that he had found, contrary to the general opinion, that the salts of strontium might be safely employed, were beneficial to the animal economy, and that weight was increased under their use.

Some time after this report, July 28th, MM. G. SEE and CONSTANTIN PAUL stated before the *Académie de Médecine* that they had employed the bromide and lactate of strontium in rheumatism and Bright's disease, respectively, and could confirm the results of M. LABORDE in regard to the innocuousness and beneficial effects of the drug.

October 28th, M. DUJARDIN-BEAUMETZ, before the *Société de Thérapeutique* stated that he had obtained very good results in Bright's disease by the use of the lactate of strontium; that its action on the digestive functions was very favorable.

November 11th, MM. CONSTANTIN PAUL and DUJARDIN-BEAUMETZ made a further communication to the same society, and stated that they had still further used the lactate and bromide salts, and found them perfectly tolerated even in high doses.

M. FERÉ found the bromide of strontium of efficacy in the treatment of epilepsy in the place of the potassium salt. He also found by numerous experiments that the toxicity of bromide of strontium, when given by intravenous injection, was far below that of the bromide of potassium.

All the authors insist on the necessity for a perfectly pure salt, one absolutely free from the presence of barium, such as those now offered to the medical profession, in the form of syrup and solution by McKesson & Robbins.

McK. & R. SYRUP OR SOLUTION OF LACTATE OF STRONTIUM, C. P.

McK. & R. SYRUP OR SOLUTION OF BROMIDE OF STRONTIUM, C. P.

In Original Pound Bottles,

CONTAINING 60 GRAINS TO THE OUNCE—7½ GRAINS TO THE TEASPOONFUL.

DOSE: One to two teaspoonfuls four to eight times a day.

LITERATURE SENT ON REQUEST.

Diuretin-Knoll in Infantile Practice.

BY DR. R. DEMME.

ACCORDING to the observations of Dr. R. Demme, Professor of Pædiatrics to the Faculty of Medicine of Berne, diuretin may be administered in the daily dose of ·50 to 1·50 grammes (7½ to 22 grains) to children of from two to five years old, and in daily doses of 22 to 45 grains in children of six to ten years. In infants less than a year old the drug is contra-indicated, as it easily provokes gastro-intestinal irritation in these young patients.

Care should be taken in prescribing diuretin, as it is liable to be decomposed by certain substances M. Demme recommends the following:

Diuretin	gr. xxij
Distilled water	ʒ iij
Brandy	gtt. x
Sugar	grs. xl

M. Sig. To be taken in the course of the twenty-four hours in doses of one tablespoonful.

Dr. Demme's observations have convinced him that diuretin is a good diuretic for children, exempt for the most part of all unpleasant influence, and probably acting on the renal epithelium.

Under the influence of diuretin, the dropsy of scarlatinal nephritis disappeared more quickly than by the action of any other medicament. It suppresses very rapidly the anasarca and serous effusions in cases of mitral disease, when the compensation has been previously established by means of digitalis.

The diuretin was generally well supported, and it had no cumulative action. However, in one case of generalized dropsy in a child of ten years, suffering from amyloid degeneration of the liver, spleen, and kidney, Dr. Demme has seen a morbilliform eruption with abundant diarrhœa, after the injection of 90 grains of diuretin in the space of four days.—*La Semaine Médicale*, Feb. 24, 1892.

SEND FOR COMPLETE NOTES.

The Compound Stearates, McK. & R.

THE Compound Stearates, introduced recently by MCKESSON & ROBBINS, are now presented to the Medical Profession at large with confidence, as powders which are remarkable for their mollescence when applied to anoint or protect diseased conditions of the skin and mucous membranes.

They are adhesive, and act as grateful vehicles in which drugs may be administered locally.

Desirable as adjuvants in insufflations and antipruritic as dusting powders, they can be used to cover and protect the surface of the skin without soiling the clothing, and offer a very profitable field for therapeutic investigation, where the frequently rancid oleates and ointments, or the ordinary soluble and non-adhesive dusting and other powders for the skin and mucous membrane are not desirable.

McK. & R. Compound Stearate Insufflations.

McK. & R. COMPOUND STEARATE OF ZINC WITH BORIC ACID. (Zinci Stearas Co. cum Acid. Boric.—McK. & R.)
Employed in catarrhal rhinitis with hypersecretion.

McK. & R. COMPOUND STEARATE OF ZINC WITH ARISTOL. (Zinci Stearas Co. cum Aristol.—McK. & R.)
In atrophic rhinitis and ozæna

McK. & R. COMPOUND STERATE OF ZINC AND BISMUTH SUBGALLATE. (Zinci Stearas Co. cum Bismuth. Subgall.—McK. & R.)
Especially after operations, and instead of iodoform.

McK. & R. COMPOUND STERATE OF ZINC WITH BALSAM PERU. (Zinci Stearas Co. cum Balsam. Peruv.—McK. & R.)
In ulcerative tubercular laryngitis.

Lapactic Pills.

A combination introduced by us and found in practice to possess superior advantages over other similar formulas. The well known mild action of Aloin on the lower portion of the intestinal canal, and its power of stimulating the hepatic functions, is supplemented by the action of Ipecac as a stomachic tonic and by increasing the gastric secretions; the Belladonna acts specially upon the involuntary muscular fibres of the bowels, increasing peristalsis, diminishing the harshness, and at the same time increasing the effectiveness of the laxative. The general tonic effect of Strychnine upon the stomach and bowels and its direct action upon the sympathetic, make it a valuable addition in the permanent cure of **habitual constipation and atonic dyspepsia.**

Since we first called attention to our Lapactic Pills, some four years ago—publishing the composition of the same—a number of manufacturers have adopted the formula and have furnished these pills under the same name. Should Physicians fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints from physicians by letter), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term "LAPACTIC PILLS, S. & D.'S." when prescribing these pills.

SAMPLES WILL BE MAILED ON APPLICATION.

SPECIAL FORMULAS MADE TO ORDER.

WHEN PURCHASING, PLEASE SPECIFY S. & D's.

MANUFACTURING CHEMISTS,

Established 1860. **Baltimore, Md.**

"As a disinfectant for all the sanitary needs of the sick-room, Platt's Chlorides is especially recommended."

Endorsed by thousands of Physicians, and having commanded a large sale for many years, Platt's Chlorides can readily be procured from almost any druggist in any city, town or village in the United States. It is an odorless liquid, and is sold in quart bottles only.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

— Landois and Sterling.

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

— Materia Medica and Therapeutics, Dr. Mitchell Bruce.

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

— Eustace Smith, M.D., F.R.C.S.

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

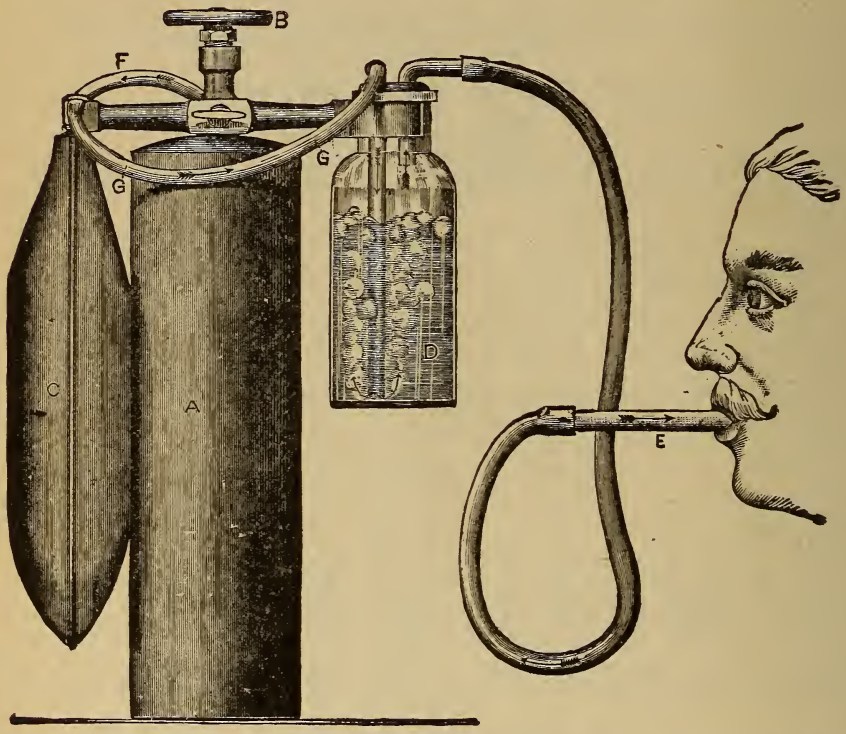
THE DOLIBER-GOODALE CO.,

BOSTON, MASS.

INHALATION APPARATUS

FOR

THE THERAPEUTIC ADMINISTRATION OF OXYGEN



In the treatment of lung troubles by Oxygen its exhibition by inhalation is preferred. The apparatus herewith shown is a modification of the Nitrous Oxide apparatus which we have supplied for many years. It is made in the best manner throughout, and is the outcome of years of experience in the manufacture of gas apparatus. It will be found to meet all the requirements.

We supply the gas in two sizes of cylinders, containing respectively forty and one hundred gallons, either pure Oxygen, or a mixture of Oxygen and Nitrous Oxide in definite proportions of 20 per cent., and forty per cent. of Nitrous Oxide.

Whether pure or mixed the gas is sold at the uniform price of 5 cents a gallon. The cost of the cylinders will be refunded on their return empty with the valves in good condition. Full description of Inhalation and Enema apparatuses with directions for use accompany each apparatus, or will be supplied on application.

PRICES.

Inhalation Apparatus	$5.00
Cylinder, 40 gallons' capacity	6.00
40 gallons Gas, either pure Oxygen or mixed Oxygen and Nitrous Oxide	2.00
Complete Apparatus, Cylinder, and 40 gallons Gas	$13.00
Inhalation Apparatus	$5.00
Cylinder, 100 gallons' capacity	15.00
100 gallons Gas, either pure or mixed	5.00
Complete Apparatus, Cylinder, and 100 gallons Gas	$25.00

THE S. S. WHITE DENTAL MFG. CO.

PHILADELPHIA, NEW YORK BOSTON CHICAGO, BROOKLYN, ATLANTA

ESTABLISHED 1855.

DR. STRONG'S SANITARIUM,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for TREATMENT, CHANGE, REST, OR RECREATION.

And places them under well-regulated hygienic conditions so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it has a Sun Parlor and Promenade on the roof. Turkish, Roman, Sulphur, Electro-Thermal, the French Douche, and all Hydropathic Baths; Vacuum Treatment, Swedish Movements, Massage, Pneumatic Cabinet Inhalations of Medicated, Compressed, and Rarefied Air, Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, with elevator, electric bells, open fire-places, steam, and thorough ventilation. With cheering influences and avoiding the pressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in winter tobogganing, elegant sleighing, etc.; in Summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience.

A liberal discount to physicians and their families for board or treatment. For illustrated Circular, Address:

DR. S. E. STRONG, THE SANITARIUM, 90 CIRCULAR ST.

PHYSICIAN WANTED.

A Chief Resident Physician for the Jewish Hospital of Philadelphia, which office will be vacant September 1st. Salary, $1200 per year and living at the Hospital. No private practice allowed. Must be able to speak English and German. Election will take place early in June.

Applications, stating age, married or single, from what college, and when graduated, with all other particulars, must be presented in writing to

WM. B. HACKENBURG,
President,
25 North Third St., Philadelphia.

DÉVIATION DES RÈGLES.

ALETRIS CORDIAL (Rio) is, perhaps, the most important remedial agent yet known. It is *the* remedy for the wrongs of menstruation, by restoring normal functional activity to the uterine apparatus. Prolapsus, Menorrhagia, Leucorrhea, Amenorrhea, Dysmenorrhea, Subinvolution, Metritis, Ovarian Neuralgia, etc., all yield to its beneficial influence. Physicians find a certainty in its action as a uterine tonic, that is peculiar to no other remedy. A special indication for its use

IS THE DRAGGING SENSATION

in the lower bowels. It quickly restores the strength and waning vitality of the chlorotic girls and pregnant women. Habitual miscarriage and the excessive nausea of early pregnancy are effectually prevented by its timely and continued use. In a word, it restores tone to the uterine system, and thus relieves all abnormal conditions.

Non-Poisonous
Non-Irritant

PLEASANTER THAN
IODOFORM

"COMPOUND TALCUM" * *
* * "BABY POWDER,"

THE

"HYGIENIC DERMAL POWDER"

FOR

INFANTS AND ADULTS.

Introduced to the Medical and the Pharmaceutical professions by J. FEHR, in the year 1873.

COMPOSITION:—Silicate of Magnesia with Carbolic and Salicylic Acids.

PROPERTIES:—Antiseptic, Antizymotic, and Disinfectant.

Useful as a **GENERAL SPRINKLING POWDER,** with positive Hygienic, Prophylactic, and Therapeutic properties.

GOOD IN ALL AFFECTIONS OF THE SKIN.

PER BOX, PLAIN, 25 Cents; PERFUMED, 50 Cents.
PER DOZ., PLAIN, $1.75; PERFUMED, $3.50.

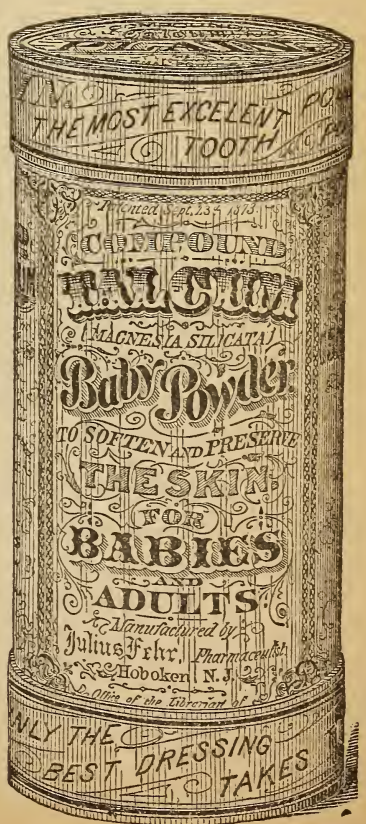
SOLD BY THE DRUG TRADE GENERALLY.

MANUFACTURER:

JULIUS FEHR, M.D.,

Ancient Pharmacist, HOBOKEN, N. J.

Only advertised in Medical and Pharmaceutical prints.



NEUROSINE

THE MOST POWERFUL NEUROTIC ATTAINABLE.

ANODYNE AND HYPNOTIC.

A most efficient and permanent preparation, **REMARKABLE** for its efficacy and **THERAPEUTIC EFFECTS** in the treatment of those **NERVOUS AFFECTIONS** and morbid conditions of the System which so often tax the skill of the Physician.

A RELIABLE AND TRUSTWORTHY REMEDY FOR THE RELIEF OF

HYSTERIA, EPILEPSY, NEURASTHENIA, MANIA, CHOREA, UTERINE CONGESTION, MAGRAINE, NEURALGIA, ALL CONVULSIVE AND REFLEX NEUROSES.
THE REMEDY PAR EXCELLENCE IN DELIRIUM AND RESTLESSNESS OF FEVERS.

FORMULA.—Each fluid-drachm contains 5 grains each, C. P. Bromides of Potassium, Sodium and Ammonium 1-8 gr. Bromide Zinc, 1-64 gr. each of Ext. Belladonna and Cannabis Indica, 4 grains Ext. Lupuli and 5 minims fluid Ext. Cascara Sagrada, with Aromatic Elixirs.

DOSE:—From one teaspoonful to a tablespoonful, in water, three or more times daily as may be directed by the Physician.

To any physician, unacquainted with the medicinal effect of Neurosine, we will mail pamphlet contain full information, suggestions, and various methods of treatment; also a variety of valuable prescriptions that have been thoroughly tested in active practice, or to physicians desiring to try our preparation, and who will pay express charges, we will send on application a sample bottle free.

Scherff's Syrup of Hydriodic Acid.

A PERMANENT UNALTERABLE PREPARATION.

NON-IRRITANT. PALATABLE. EFFICIENT

Each fluid ounce of this Syrup represents the equivalent of 6.72 grains of absolute Hydriodic Acid. Particular stress is laid on the one great superiority; this Syrup **will not decompose**, and the danger (so common to other like preparations) of administering a preparation of **free iodine**, is absolutely avoided.

Descriptive Pamphlets and Clinical Reports mailed on request.

WESTERN PENNSYLVANIA MEDICAL COLLEGE
CITY OF PITTSBURGH.
SESSIONS OF 1892.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. MCKENNAN, 810 Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Ave., Pittsburg.

The Baltimore Medical College.

PRELIMINARY FALL COURSE begins Sept. 1, 1891.
REGULAR WINTER COURSE begins October 1, 1891.

WALNUT LODGE HOSPITAL,
HARTFORD, CONNECTICUT.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish Bath, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefitted from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M. D.,
Sup't Walnut Lodge, Hartford, Conn.

DR. MASSEY'S
PRIVATE SANATORIUM.

Presenting the comforts of an elegant private residence, this institution is specially equipped for the use of electricity and allied remedial measures in the diseases of women and in diseases of the nervous system. For particulars address

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.--

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

REVOLUTION

—IN—

IRON ADMINISTRATION

A HIGHLY PALATABLE PREPARATION OF IRON CHLORIDE.

IRON is easily chief among Hæmatinics. According to T. Lauder Brunton, M.D., D.Sc., F.R.S., it increases the number of blood corpuscles; the percentage of hæmaglobin in them, and functional activity of all the vital organs; as a vascular tonic classes with digitalis and strychnine, and in its alterative qualities with arsenic.

The tincture of Chloride of Iron has long been recognized as the most efficient of iron preparations, the objections to its continued administration, its highly astringent taste, its corrosive action on the teeth, and constipating action have, however, been hitherto insurmountable.

We have succeeded in preparing an entirely palatable syrup of officinal Tincture iron Chloride combining all its virtues with none of its drawbacks. It is prepared after the formula of Dr. G. W. Weld, and is entitled:

"WELD'S SYRUP OF IRON CHLORIDE."

(P., D. & CO.'S)

We earnestly recommend its trial to all the profession, believing it to be the most acceptable preparation of Iron ever devised.

Samples will be sent on receipt of request to physicians who indicate their willingness to pay express charges.

PARKE, DAVIS & CO.,

Detroit, New York and Kansas City.

Papoid costs less than Pepsin

because

A much smaller quantity produces A much better result in A much shorter time.

Johnson & Johnson. New York.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{60}$ gr.), Atropiæ Sulph. ($\frac{1}{1000}$ gr.), Codeia ($\frac{1}{30}$ gr.), Antimony Tart. $\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{60}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

I. O. WOODRUFF & CO.,

MANUFACTURERS OF PHYSICIANS' SPECIALTIES,

38 Maiden Lane, New York City.

DECLINED WITH THANKS!

The following correspondence explains itself:

LONDONDERRY LITHIA SPRING WATER CO., March 17, 1892.

GENTLEMEN:—Having used the LONDONDERRY quite extensively, and seeing *you advertise in lay journals which we cannot do, the code of ethics prohibiting it,* we thought to write you to inquire if a *favorable mention* from us might not be *used* by you in *connection* with a *small cut of our "Home,"* mentioning in connection our location and class of cases received. Fraternally yours.

(Signed) ——— ——— ———

OUR REPLY!

DRS. ——— ———. NASHUA, N. H., March 19, 1892.

GENTLEMEN:—Your esteemed favor of the 17th inst. duly received and contents noted. We are happy to receive the confidence and compliments of all the medical fraternity, but fail to see how any good end can be served by publishing a cut of your well-known resort. As a question of "ethics," it would deceive no intelligent physician or layman. A testimonial carrying such *prima facie* evidence of the consideration for which it is given would be of no benefit to us and might injure you by demonstrating that your opinions, which are now counted very valuable, are not after all held so highly by yourselves.

We have never paid one penny for a professional or lay opinion of LONDONDERRY, nor, judging from the almost daily endorsements that we see in the medical and lay journals, and our enormous and rapidly increasing business, shall we be obliged to do so in the future. Trusting you will receive this in the spirit in which it is given, we are, Yours very truly,

LONDONDERRY LITHIA SPRING WATER CO.

N. B.—We refuse to publish the name of the above well-known Sanitarium, but will give $1000.00 to any charity if we cannot prove the genuineness of this correspondence. L. L. S. W. CO.

$9.00

Nervous Diseases and Their Diagnosis

By H. C. WOOD, M. D., LL. D..

Professor of Therapeutics and Nervous Diseases, University of Pennsylvania.

8vo., pp. 501, Cloth, $4.

It is invaluable as a work of diagnosis.—*Virginia Medical Monthly.*

It is at once a substantive contribution to neurology and a trustworthy guide to what has already been done in the subject.—*Practitioner.*

As a whole, the work is one which cannot fail to be of great service to the practicing physician.—*Medical and Surgical Reporter.*

The volume is a distinct help to the student, and is a necessary supplement to the systematic works on diseases of the nervous system.—*Boston Med. Surg. Jour.*

The author's originality is evident to every reader of his work; and we trust, for the advancement of knowledge, his readers will be many.—*New England Med. Gaz.*

This work fills a long-felt need in this department.—*Buffalo Med. Surg. Jour.*

Dr. Wood is an able clinician, and this makes his book valuable. His observations are practical and to the point and show careful study of a large number of cases which have fallen under his care.—*N. Y. Med. Jour.*

The honest effort of one who never writes without teaching and who always writes and teaches well.—*Journal of Insanity.*

To students and practitioners who have read other works this production will prove extremely valuable in time of need, to the former just before examination; to the latter in everyday practice.—*London Lancet.*

Not a compilation, but rather the record of independent opinions and investigations.—*Canadian Practitioner.*

The book is written in the characteristic vigorous style of its able and versatile author.—*American Practitioner.*

Lucid language, clear type, a full index, and, above all, the presentation of the late advances in this department of science, constitute the truly great attractions of this book.—*Albany Med Annals.*

It is not until the volume has been carefully read, and perhaps re-read, that its true excellence begins to dawn upon the reader.—*Maryland Med. Jour.*

THE BEST FRENCH TONIC

Vin de Bugeaud

A TONIC AND NUTRITIVE WINE WITH CINCHONA AND COCOA

VIN DE BUGEAUD is prepared with the greatest care, with active substances of the very best quality, and chiefly with wild Bolivian Cinchona, the cultivated species being strictly discarded, and the proportions being precisely in accordance with the French pharmacopœa.

It is perfectly tolerated by the most delicate stomachs, owing to the emollient action of the Cocoa it contains, which favourably corrects the over exciting properties and the bitter taste of the Cinchona.

In preparing it, a full-bodied Spanish wine is employed, this wine being more than any other capable of dissolving the medicinal ingredients.

VIN DE BUGEAUD commends itself to the medical profession oth by its tonic and antiperiodic properties, and by the certainty nd continuity of its action in cases of

Anæmia, Chlorosis, Intermittent Fever, Chronic Diarrhœa, Gastralgia, Convalescences,

in a word to combat

Constitutional or Accidental Debility

no matter from what cause arising.

It is specially suitable for convalescents, debilitated children, delicate women and old persons enfeebled by age and infirmities.

VIN DE BUGEAUD has enjoyed since 1858 the high approbation of the New-York Academy of Medicine. Thousands of practitioners of all countries have spontaneously borne testimony to its efficacy.

Professionnal gentlemen are invited to apply for a copy of the pamphlet (sent free on demand) which contains, along with a few remarks on **VIN DE BUGEAUD** and the opinions of the French medical press on the subject, a number of the most recent testimonials.

VIN DE BUGEAUD may be obtained of all good Chemists and Druggists.

"What a boon it would be to the Medical Profession if some reliable Chemist would bring out an Extract of Malt in combination with a well-digested or Peptonized Beef, giving us the elements of Beef and the stimulating and nutritious portions of Ale.—J. MILNER FOTHERGILL, M. D."

ALE & BEEF

"PEPTONIZED"

EXTRACT—BOVIS CUM MALTO.

IS THE IDENTICAL COMBINATION SUGGESTED BY THE LATE EMINENT FOTHERGILL.

Each Bottle Represents 1-4 Pound of Lean Beef Thoroughly Peptonized.

PREPARED BY

THE ALE & BEEF COMPANY,

DAYTON, OHIO, U. S. A.

Two full-sized bottles will be sent FREE to any physician who will pay express charges.

"Orders from all parts of the Dominion of Canada supplied by The Canadian Peptonized Beef & Ale Co., Limited, 153 Hollis Street, Halifax, N. S."

The Perfectly Prepared Pill

As an "Arm of Precision."

In a Recent Note we described, as follows, the characteristics of a perfect pill, adding some remarks as to the absolute necessity of using pure medicaments:

PURITY of medicaments and excipients.
PRECISION as to weight and division.
PERFECT UNIFORMITY as to activity and identity.
PROMPT SOLUBILITY of mass and coating.
PERMANENCE as to conservation.
PALATABILITY; and ELEGANCE of appearance.

We Will now Consider the second requisite—PRECISION.

The Weapons With Which Disease is Fought must be Accurately Prepared or they will give uncertain, unlooked-for, or otherwise undesirable results. From a therapeutic point of view, the exactitude of a preparation is essential to its precise effect. Disease is not overcome by giving uncertain quantities of indifferent medicaments in the hope that enough active substance will finally have been ingested to effect a cure. The condition must be "treated," that is, followed up step by step until the desired result is obtained. This desideratum can be realized only with medicaments mathematically mixed and divided, and in all respects thoroughly prepared. These conditions are fully supplied in

The W. H. S. & Co. Pill. We append the formulæ of a few of these preparations, which are presented as being seasonable, as well as of the best quality. On a future occasion we will say a few words as to uniformity.

Pil. Creasoti "W. H. S. & Co." (From Pure Beech Tar.)

Prescribed for Pulmonary Tuberculosis, Pulmonary Phthisis, and Diseases of the Bronchia. It increases Appetite, Weight and Strength. (Pills of ½ and 1 grain each.)

Pil. Phenacetine et Salol, 5 grs., "W. H. S. & Co."

Valuable in Influenza ("la grippe"); in all forms of Rheumatism; in Neuralgia, Migraine and Pertussis; and in all painful febrile conditions. (Pills containing 2½ grains each of Phenacetine-Bayer and Salol. Half strength also prepared.)

Pil. Hydrargyri Tannici Oxydulat., (Mercury Tannate), "W. H. S. & Co."

Available for all the Forms and Stages of Syphilis, and in all cases in which Mercury is indicated. It does not irritate or salivate. (Pills of 1 grain each.)

Pil. Tonicæ Laxativæ, (or "Tonic Laxative Pill—Skene") "W. H. S. & Co."

Adapted to the treatment of Obstinate Constipation in Weak or Broken Down Constitutions. (Quiniæ Sulph., 1 gr.; Ext. Belladonnæ, 1-10 gr.; Ext. Colocynth Co., ½ gr.)

Pil. Terpin Hydrat., "W. H. S. & Co."

Employed in Coughs, Colds, Catarrh, Bronchitis, Asthma, and all Respiratory Maladies. Unlike terebinthina and some of its derivatives, no unpleasant symptoms follow its use. (Pills of 2 and 5 grains each.)

IN PRESCRIBING BE PARTICULAR TO SPECIFY "W. H. S. & CO."

W. H. Schieffelin & Co., New York.

It is Important

For the Physician to watch the character and quality of the remedies used in his prescriptions. Responsibility *does not cease* when the patient leaves the office; for impure, stale, or inferior preparations may be used without his knowledge. Personal examination of remedies prescribed is the best check upon substitution.

FERRO-SALICYLATA
LIQUID.

MERRELL.

An eligible combination of Methyl Salicylate and Tinct. Citro-Chloride Iron, in a pleasant and permanent form.

EACH FLUID DRACHM CONTAINS

True Salicylic Acid—from oil Wintergreen (Methyl Salicylate), - - - - 5 grs.
Tinct. Citro-Chloride Iron, 5 min.

Not Sold in Bulk.

ELIXIR
Pinus Compositus.

MERRELL.

Each Fluid Drachm Contains

White Pine—fresh Bark,	2½ grs.
Balm Gilead Buds,	2 grs.
Spikenard,	2 grs.
Cherry Bark,	1¾ grs.
Ipecac,	1-4 gr.
Sanguinarina Nitrate,	1-64 gr.
Morphine Acetate,	1-16 gr.
Ammonium Chloride,	1-2 gr
Chloroform,	1-2 minim.

Not Sold in Bulk.

FERRO-SALICYLATA.---*Merrell.*

Ferro-Salicylata is especially valuable in that shade of disease peculiar in anæmic, delicate, poorly nourished or broken down patients—usually aged people—children or youth—but met with in all ages. In adults, and often in children when the disease is not plainly chronic, there will be a long series of recurrences with intervals of doubtful health. It may also be employed in acute articular rheumatism, and in some cases of acute tonsillitis, especially where the diagnosis is at first in doubt between rheumatic angina and diphtheria; also, in acute rheumatism and rheumatic affections generally.

Ferro-Salicylata may be used in combination with the Iodides and Bromides of Potassium and Sodium. Associated with the former, it will prove an admirable alterative and tonic in second syphilis attended by a debilitated condition of the general system. It also combines well with Chlorate Potassium, the Hypophosphites, with Fowler's Solution, the vegetable bitter tonics, either in Fluid Extract or Tincture Form.

Ferro-Salicylata and all other preparations of this Company reach the laity through professional channels only. We therefore avoid entering into the minute details of their application, leaving the physician to make such practical use of our therapeutic notes as in his judgment may be best suited to individual cases.

Ferro-Salicylata may be obtained of wholesale druggist, throughout the United States, of our Eastern Office, 96 Maiden Lane, New York City, or direct from the Laboratory.

Please designate "Ferro-Salicylata—*Merrell.*"

ELIXIR PINUS COMPOSITUS---*Merrell.*

An admirable combination of well known and highly approved medicinal agents; recommended in acute, chronic, and capillary bronchitis—in ordinary coughs and colds, and wherever a "routine" expectorant is suggested. In the troublesome cough following the recent epidemic "La Grippe," it proved invaluable—many of our correspondents looking upon it as a "specific" in this stage of the disease.

CAUTION.—Physicians are reminded that the Elixir Pinus-Compositus of this manufacturer is wholly unlike the many syrups, etc., under similar names, and the difference will be readily appreciated when tried. In testing the physical properties of the Elixir Pinus, note especially its delicate taste and perfect freedom from the odor of rank syrup, the drastic, harsh and repulsive characteristics of the crude blood-root, and other coarser ingredients characteristic of competing preparations.

"Merrell Co.'s" "Green Drug," Fluid Extracts, True Salicylic Acid, Salts of Hydrastis, Fluid Hydrastis, and Specialties may be obtained of wholesale druggists throughout the United States, at the Home Office at Cincinnati, or the New York Office, 96 Maiden Lane, New York City; Richards Drug Co., San Francisco, Agents for the Pacific Coast. Prices-current and printed matter cheerfully supplied.

The WM. S. MERRELL CHEMICAL CO.

CINCINNATI. NEW YORK.

Before the Medical Profession almost 30 years, and invariably gives uniform satisfaction.

We respectfully ask thorough testing, strictly UPON ITS OWN MERITS, to prove the exceptionally high reputation it holds

Owing to correspondence on the subject, we regret being compelled to caution that inferior Coca preparations are frequently substituted upon patients, and, as we do not advertise to the public, physicians will kindly be particular to insist on

VIN MARIANI

FORMULA: "VIN MARIANI" is the concentrated extractive of the fresh leaf Erythroxylon Coca, blended with a special quality of Bordeaux Wine. Each half-litre bottle contains the medicinal properties of two ounces of selected leaves.

DOSE: Usually a wine-glassful three times a day, half an hour before meals or immediately after. Increased or diminished, at discretion of the Physician.

INDICATED: As a pleasant, mild stimulant, without unpleasant reaction; a diffusible tonic; a strengthener of the Nervous system, with especial good effect on the digestive and respiratory organs; convalescence and enfeebled conditions. Effect is immediate and lasting.

NOTE: Extensively used in Hospitals, Cliniques and private practice, its merits are recorded by the medical press of Europe and America. Uniform excellence and recognized efficacy won the absolute confidence and esteem of every physician who subjected it to test, and it may be affirmed that wherever Coca is indicated "Vin Mariani" invariably receives the preference.

The continual increasing demand is a clear proof of the reliance placed in "Vin Mariani" by the Medical Profession, through whom it has been popularized.

WE WILL BE HAPPY TO FORWARD, POST-PAID, TO ANY PHYSICIAN MENTIONING THIS JOURNAL, A HANDSOMELY BOUND BOOK, DETAILING FORMULÆ, DOSE, PHYSIOLOGICAL EFFECTS AND THERAPEUTIC INDICATIONS OF COCA, AS ALSO OTHER INTERESTING READING MATTER CONNECTED WITH THE SUBJECT BY EUROPEAN AND AMERICAN OBSERVERS.

Elixir Chloralamid-Schering.

CHLORALAMID-SCHERING, the new hypnotic introduced a little over two years ago, has now assumed a permanent position in materia medica, and is highly esteemed and largely employed by the medical profession. Reports on the therapeutics of Chloralamid-Schering have been overwhelmingly favorable, in text books, special treatises, society reports, lectures, editorials, etc.; when occasionably failure to produce sleep has been reported, we have investigated the facts and usually substantiated that the remedy was not properly administered. To preclude failure on this account once for all, we have concluded to introduce a preparation in permanent solution, elegant in appearance, palatable,—**perfect**

Elixir Chloralamid-Schering

is put up in 8 oz. prescription vials, ready for dispensing without change, except that the pharmacist must write the directions on the label and impress his stamp on same. The package is unique, and will, no doubt, meet with the approval of physicians and pharmacists.

There is no better form for administering Chloralamid-Schering, and physicians will surely give it their preference.

It is desired that this bottle be delivered on physician's prescription complete and unopened,—first writing the necessary facts on label on opposite side.

ELIXIR
Chloralamid
(SCHERING)
Each tablespoonful contains one gramme (15 grains) of Chloralamid-Schering.

HYPNOTIC.

Chloralamid-SCHERING is a superior hypnotic; an efficient and safe sleep-producing agent; its use is not attended by unpleasant and untoward side or after-effects, nor will continued use develop a habit or necessitate increasing doses. Eminent medical authorities have endorsed Chloralamid, and full clinical reports with chemical and therapeutical data will be furnished to physicians and pharmacists on request.

Directions:—A tablespoonful at a dose, taken one-half hour before sleep is desired; if effect is not prompt and satisfactory the dose may be repeated at intervals of 15 minutes—not more than twice.

PUT UP ONLY BY THE
Sole Agents & Licensees for America:
LEHN & FINK,
IMPORTERS, WHOLESALE DRUGGISTS AND MANUFACTURING CHEMISTS,
NEW YORK.

(This descriptive label is attached to every bottle, and may be removed before dispensing.)

To be obtained from all Leading Pharmacists, and supplied by all Wholesale Druggists in the United States.

A full descriptive treatise (52 pages) on Chloralamid-Schering will be mailed to physicians on request.

SOLE AGENTS AND LICENSEES:

LEHN & FINK, 128 William Street, NEW YORK.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK:)

Each fluid drachm represents 15 grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium and Lithium.

USES: EPILEPSY, UTERINE CONGESTION, HEADACHE, AND ALL CONGESTIVE, CONVULSIVE AND REFLEX NEUROSES.

This preparation produces results, which can not be obtained from the use of commercial Bromide substitutes.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK.)

From Sea Weed. **Uses: Malaria, Phthisis, Etc.**

An ALLY of quinine—quinine CHECKS the Malarial Chill, Fucus Marina ELIMINATES the Malarial CAUSE; and thus prevents the recurrence of the Chill *after* it has been *checked* by quinine.

An INVALUABLE REMEDY in the treatment of Phthisis—it arrests the decay of lung tissue, diminishes the fever, lessens the cough, abates the soreness in the lungs, improves the appetite, and impedes the progressive emaciation.

DOSE.—One Teaspoonful IN WATER, four times a day.

CHIONIA FROM CHIONANTHUS.

Uses: Biliousness, Jaundice, Dyspepsia, Constipation, and all Diseases Caused by Hepatic Torpor.

CHIONIA stimulates the Liver and restores it to a healthy condition, without debilitating the system by Catharsis; does not purge, per se, but under its use the Liver and Bowels gradually resume their normal functions.

DOSE.—One Fluid Drachm three times a day.

PEACOCK CHEMICAL CO., ST. LOUIS.

STRONTIUM, McK. & R.

Absolutely Free from Barium.

INDICATED IN

Rheumatism, Epilepsy, Indigestion, Bright's Disease,

AND IN THE PLACE OF THE

BROMIDE OF POTASSIUM,

THAN WHICH IT IS BETTER TOLERATED EVEN IN HIGH DOSES.

Charles Bell Taylor

Last July, M. LABORDE reported to the *Societe de Biologie*, July 4, 1891, that he had found, contrary to the general opinion, that the salts of strontium might be safely employed, were beneficial to the animal economy, and that weight was increased under their use.

Some time after this report, July 28th, MM. G. SEE and CONSTANTIN PAUL stated before the *Académie de Médecine* that they had employed the bromide and lactate of strontium in rheumatism and Bright's disease, respectively, and could confirm the results of M. LABORDE in regard to the innocuousness and beneficial effects of the drug.

October 28th, M. DUJARDIN-BEAUMETZ, before the *Société de Thérapeutique* stated that he had obtained very good results in Bright's disease by the use of the lactate of strontium; that its action on the digestive functions was very favorable.

November 11th, MM. CONSTANTIN PAUL and DUJARDIN-BEAUMETZ made a further communication to the same society, and stated that they had still further used the lactate and bromide salts, and found them perfectly tolerated even in high doses.

M. FERE found the bromide of strontium of efficacy in the treatment of epilepsy in the place of the potassium salt. He also found by numerous experiments that the toxicity of bromide of strontium, when given by intravenous injection, was far below that of the bromide of potassium.

All the authors insist on the necessity for a perfectly pure salt, one absolutely free from the presence of barium, such as those now offered to the medical profession, in the form of syrup and solution by McKesson & Robbins.

McK. & R. SYRUP OR SOLUTION OF LACTATE OF STRONTIUM, C. P.

McK. & R. SYRUP OR SOLUTION OF BROMIDE OF STRONTIUM, C. P.

In Original Pound Bottles,

CONTAINING 60 GRAINS TO THE OUNCE—7½ GRAINS TO THE TEASPOONFUL.

DOSE: One to two teaspoonfuls four to eight times a day.

LITERATURE SENT ON REQUEST.

Diuretin-Knoll in Infantile Practice.

By DR. R. DEMME.

ACCORDING to the observations of Dr. R. Demme, Professor of Pædiatrics to the Faculty of Medicine of Berne, diuretin may be administered in the daily dose of ·50 to 1·50 grammes (7½ to 22 grains) to children of from two to five years old, and in daily doses of 22 to 45 grains in children of six to ten years. In infants less than a year old the drug is contra-indicated, as it easily provokes gastro-intestinal irritation in these young patients.

Care should be taken in prescribing diuretin, as it is liable to be decomposed by certain substances M. Demme recommends the following:

Diuretin	gr. xxij
Distilled water	ʒ iij
Brandy	gtt. x
Sugar	grs. xl

M. Sig. To be taken in the course of the twenty-four hours in doses of one tablespoonful.

Dr. Demme's observations have convinced him that diuretin is a good diuretic for children, exempt for the most part of all unpleasant influence, and probably acting on the renal epithelium.

Under the influence of diuretin, the dropsy of scarlatinal nephritis disappeared more quickly than by the action of any other medicament. It suppresses very rapidly the anasarca and serous effusions in cases of mitral disease, when the compensation has been previously established by means of digitalis.

The diuretin was generally well supported, and it had no cumulative action. However, in one case of generalized dropsy in a child of ten years, suffering from amyloid degeneration of the liver, spleen, and kidney, Dr. Demme has seen a morbilliform eruption with abundant diarrhœa, after the injection of 90 grains of diuretin in the space of four days.—*La Semaine Médicale*, Feb. 24, 1892.

SEND FOR COMPLETE NOTES.

The Compound Stearates, McK. & R.

THE Compound Stearates, introduced recently by MCKESSON & ROBBINS, are now presented to the Medical Profession at large with confidence, as powders which are remarkable for their mollescence when applied to anoint or protect diseased conditions of the skin and mucous membranes.

They are adhesive, and act as grateful vehicles in which drugs may be administered locally.

Desirable as adjuvants in insufflations and antipruritic as dusting powders, they can be used to cover and protect the surface of the skin without soiling the clothing, and offer a very profitable field for therapeutic investigation, where the frequently rancid oleates and ointments, or the ordinary soluble and non-adhesive dusting and other powders for the skin and mucous membrane are not desirable.

McK. & R. Compound Stearate Insufflations.

McK. & R. COMPOUND STEARATE OF ZINC WITH BORIC ACID. (Zinci Stearas Co. cum Acid. Boric.—McK. & R.)
Employed in catarrhal rhinitis with hypersecretion.

McK. & R. COMPOUND STEARATE OF ZINC WITH ARISTOL. (Zinci Stearas Co. cum Aristol.—McK. & R.)
In atrophic rhinitis and ozæna

McK. & R. COMPOUND STERATE OF ZINC AND BISMUTH SUBGALLATE. (Zinci Stearas Co. cum Bismuth. Subgall.—McK. & R.)
Especially after operations, and instead of iodoform.

McK. & R. COMPOUND STERATE OF ZINC WITH BALSAM PERU. (Zinci Stearas Co. cum Balsam. Peruv.—McK. & R.)
In ulcerative tubercular laryngitis.

Lapactic Pills.

A combination introduced by us and found in practice to possess superior advantages over other similar formulas. The well known mild action of Aloin on the lower portion of the intestinal canal, and its power of stimulating the hepatic functions, is supplemented by the action of Ipecac as a stomachic tonic and by increasing the gastric secretions; the Belladonna acts specially upon the involuntary muscular fibres of the bowels, increasing peristalsis, diminishing the harshness, and at the same time increasing the effectiveness of the laxative. The general tonic effect of Strychnine upon the stomach and bowels and its direct action upon the sympathetic, make it a valuable addition in the permanent cure of **habitual constipation and atonic dyspepsia.**

Since we first called attention to our Lapactic Pills, some four years ago—publishing the composition of the same—a number of manufacturers have adopted the formula and have furnished these pills under the same name. Should Physicians fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints from physicians by letter), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term "LAPACTIC PILLS, S. & D.'S." when prescribing these pills.

SAMPLES WILL BE MAILED ON APPLICATION.

ABOUT GAS TREATMENT.

We make and sell oxygen and nitrogen monoxide for therapeutic use, and we guarantee them pure They are put up in compact form. (A cylinder containing 100 gallons of nitrogen monoxide or 40 gallons of oxygen measures 12 inches in length, has a diameter of 3½ inches, and weighs 10½ lbs. A cylinder containing 450 gallons of nitrogen monoxide or 100 gallons of oxygen measures 25 inches in length, has a diameter of 4½ inches, and weighs 34 lbs.)

INSOMNIA. Dr. Allan McLane Hamilton states that nitrogen monoxide, N_2O (nitrous oxide of the old nomenclature) has no equal in the treatment of this difficulty.

MELANCHOLIA. A short course of nitrogen monoxide is said to change the face of nature for such patients.

ANÆMIA. Where iron is not tolerated or proves inefficient, the addition of oxygen or a combination of oxygen and nitrogen monoxide has proven very beneficial.

For those who should, but cannot, go from home for rest or a change of air, or for those who, from any cause fail to get air enough into their lungs, the inhalation of one or other of these gases, or both in combination, promises great benefit. The testimony is that in cases of

ASTHMA, more than fifty per cent. of the cases yield to oxygen treatment, others are very greatly relieved, and a very small per cent. are not improved.

INDIGESTION and CONSTIPATION are said to be greatly relieved and very often conquered by continued treatment.

A highly esteemed New York physician has used more than twenty thousand gallons of nitrogen monoxide in his private practice. The letters received from his patients, largely from those who were afflicted with nervous disorders, are enthusiastic in their testimony as to the benefit received.

Regular practitioners who are using gas treatment testify that when *pure* oxygen and *pure* nitrogen monoxide, or a mixture of these, is used, no therapeutic agents are more uniformly successful when intelligently prescribed.

Vin de Bugeaud

prepared with **CINCHONA** and **COCOA**

BUGEAUD'S WINE is highly recommended to the medical profession for its active principles and the superior quality of the wine in which they are dissolved.

It is especially ordered to convalescents, weak children, delicate women and old persons enfeebled by age and infirmities.

P. LEBEAULT & Cie { PARIS: 5, Rue Bourg-l'Abbé / NEW-YORK: 6, Harrison Street (CH. TERTRAIS manager.)

SOLD BY HENRY C. BLAIR'S SONS, PHILADELPHIA.

CELERINA

NERVE TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Loss of Nerve Power (so usual with Lawyers, Preachers, Writers and Business Men), Impotency, Spermatorrhea, Nervous Headache, Neuralgia, Paralysis, Hysteria, Opium Habit, Inebriety, Dyspepsia, and ALL LANGUID conditions of the System.

Indispensable to restore a patient after alcoholic excess.

DOSE.—One or two Teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One Teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation.

It Restores Normal Action to the Uterus, and Imparts Vigor to the Entire Uterine System.

Where Women have miscarried during previous pregnancies, or in any case where miscarriage is feared, ALETRIS CORDIAL is indicated, and should be continuously administered during entire gestation.

S. H. KENNEDY'S

CONCENTRATED EXTRACT OF

PINUS CANADENSIS

DARK. **A NON-ALCOHOLIC LIQUID.** WHITE.

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be used,

RECOMMENDED BY PROMINENT EUROPEAN AND AMERICAN PHYSICIANS.

The above preparations are prepared exclusively for Physicians' Prescriptions, and a sample of each or all of them will be sent to any Physician who wishes to test them, if he will pay the Express Charges.

DIOVIBURNIA

UTERINE TONIC, ANTISPASMODIC AND ANODYNE.

A reliable and trustworthy remedy for the relief of Dysmenorrhœa, Amenorrhœa, Menorrhagia Leucorrhœa, Subinvolution, THREATENED ABORTION, Vomiting in Pregnancy and Chlorosis; directing its action to the entire uterine system as a general tonic and antispasmodic.

FORMULA.

Every ounce contains 3-4 dram each of the fluid extracts: Viburnum Prunifolium, Viburnum Opulus, Dioscorea Villosa, Aletris Farinosa, Helonias Dioica, Mitchella Repens, Caulophyllum Thalictroides, Scutellaria Lateriflora.

DOSE.—For adults, a desertspoonful to a tablespoonful three times a day, after meals. In urgent cases, where there is much pain, dose may be given every hour or two, ALWAYS IN HOT WATER.

Jno. B. Johnson, M. D., Professor of the Principles and Practice of Medicine, St. Louis Medical College.

ST. LOUIS, June 20, '88.

I very cheerfully give my testimony to the virtues of a combination of vegetable remedies prepared by a well-known and able pharmacist of this city, and known as DIOVIBURNIA, the component parts of which are well known to any and all physicians who desire to know the same, and therefore have no relation to proprietary or quack remedies. I have employed this medicine in cases of dysmonorrhœa, suppression of the catemania and in excessive leucorrhœa, and have been much pleased with its use. I do not think its claims (as set forth in the circular accompanying it) to be at all excessive. I recommend its trial to all who are willing to trust to its efficacy, believing it will give satisfaction. Respectfully,

Jno. B. Johnson

L. Ch. Boisliniere, M. D., Prof. of Obstetrics, St. Louis Medical College. ST. LOUIS, June 18, 1888.

I have given DIOVIBURNIA a fair trial and found it useful as an uterine tonic and antispasmodic, relieving the pains of dysmenorrhœa, and regulator of the uterine functions. I feel authorized to give this recommendation of DIOVIBURNIA, as it is neither a patented nor a secret medicine, the formula of which have been communicated freely to the medical profession.

L Ch. Boisliniere M.D.

H. Tuholske, M. D., Professor Clinical Surgery and Surgical Pathology, Missouri Medical College; also Post-Graduate School of St. Louis. ST. LOUIS, June 23, 1888.

I have used DIOVIBURNIA quite a number of times—sufficiently frequently to satisfy myself of its merits. It is of unquestionable benefit in painful dysmenorrhœa; it possesses antispasmodic properties which seem especially to be exerted on the uterus.

Wm. H. Tuholske

To any physician, unacquainted with the medicinal effect of DIOVIBURNIA, we will mail pamphlet containing full information, suggestions, commendations of some of our most prominent professors and various methods of treatment; also a variety of valuable prescriptions that have been thoroughly tested in an active practice, or to physicians desiring to try our preparation, and who will pay express charges, we will send on application a sample bottle free.

WESTERN PENNSYLVANIA MEDICAL COLLEGE
CITY OF PITTSBURGH.
SESSIONS OF 1892.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. MCKENNAN, 810 Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Ave., Pittsburg.

The Baltimore Medical College.

PRELIMINARY FALL COURSE begins Sept. 1, 1891.
REGULAR WINTER COURSE begins October 1, 1891.

WALNUT LODGE HOSPITAL,
HARTFORD, CONNECTICUT.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish Bath, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefitted from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M. D.,
Sup't Walnut Lodge, Hartford, Conn.

DR. MASSEY'S
PRIVATE SANATORIUM.

Presenting the comforts of an elegant private residence, this institution is specially equipped for the use of electricity and allied remedial measures in the diseases of women and in diseases of the nervous system. For particulars address

Prickly Heat, Chafing, Dandruff,

Odors from Perspiration, etc. Speedy Relief by Using

Packer's Tar Soap.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.--

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

SEDATIVE. ANODYNE.

EFFERVESCENT

BROMO
(WARNER & CO.)
SODA.

Caffein 1 Grain, Bromide Soda 30 Grains in each heaping teaspoonful.

USEFUL IN

Nervous Headache, Sleeplessness, Excessive Study, Migraine, Nervous Debility, Mania, as a Remedy in Sea-sickness, and Epilepsy.

Dose and Composition.—A heaping teaspoonful, containing Bromide Soda 30 grains, and Caffein 1 grain, in half a glass of water, to be repeated once after an interval of 30 minutes, if necessary.

ANTI-RHEUMATIC. SEDATIVE.

EFFERVESCENT.

BROMO
(WARNER & CO.)
LITHIA.

EACH DESSERTSPOONFUL CONTAINS:
℞ Salicylate Lithia 10 grains, and Bromide Soda 10 grains.

A REMEDY IN THE TREATMENT OF

RHEUMATISM, GOUTY DIATHESIS, ETC.

Dr. A. Garrod, the well-known English authority on Gout, who was the first physician to introduce the Lithia Salts in the treatment of Gouty Diathesis, states that their action is materially increased by being administered in a *freely diluted form.*

This effervescing salt of Lithia furnishes an easy and elegant way of applying Dr. Garrod's methods.

INGLUVIN

A SPECIFIC FOR VOMITING IN PREGNANCY.

A POWDER:—PRESCRIBED IN THE SAME MANNER, DOSES & COMBINATION AS PEPSIN

In Doses of from 10 to 20 Grains,

AND A POTENT AND RELIABLE REMEDY FOR THE CURE OF

Marasmus, Cholera Infantum, Indigestion, Dyspepsia and Sick Stomach,

caused from debility of that organ. It is superior to the Pepsin preparations, since it acts with more certainty, and effects cures where they fail.

Mellin's Food
FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

—*Landois and Sterling.*

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

—*Materia Medica and Therapeutics, Dr. Mitchell Bruce.*

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

—*Eustace Smith, M.D., F.R.C.S.*

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

FRELIGH'S TABLETS,
(Cough and Constituent),
FOR THE PREVENTION AND CURE OF
PULMONARY PHTHISIS.
FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{50}$ gr.), Atropiæ Sulph. ($\frac{1}{100}$ gr.), Codeia ($\frac{1}{50}$ gr.), Antimony Tart. $\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{50}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.
Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

I. O. WOODRUFF & CO.,
MANUFACTURERS OF PHYSICIANS' SPECIALTIES,
88 Maiden Lane, New York City.

DECLINED WITH THANKS!

The following correspondence explains itself:

LONDONDERRY LITHIA SPRING WATER CO., March 17, 1892.

GENTLEMEN:—Having used the LONDONDERRY quite extensively, and seeing *you advertise in lay journals which we cannot do, the code of ethics prohibiting it*, we thought to write you to inquire if a *favorable mention* from us might not be *used* by you in *connection* with a *small cut of our "Home,"* mentioning in connection our location and class of cases received. Fraternally yours.

(Signed) ——— ——— ———

OUR REPLY!

DRS. ——— ———. NASHUA, N. H., March 19, 1892.

GENTLEMEN:—Your esteemed favor of the 17th inst. duly received and contents noted. We are happy to receive the confidence and compliments of all the medical fraternity, but fail to see how any good end can be served by publishing a cut of your well-known resort. As a question of "ethics," it would deceive no intelligent physician or layman. A testimonial carrying such *prima facie* evidence of the consideration for which it is given would be of no benefit to us and might injure you by demonstrating that your opinions, which are now counted very valuable, are not after all held so highly by yourselves.

We have never paid one penny for a professional or lay opinion of LONDONDERRY, nor, judging from the almost daily endorsements that we see in the medical and lay journals, and our enormous and rapidly increasing business, shall we be obliged to do so in the future. Trusting you will receive this in the spirit in which it is given, we are, Yours very truly,

LONDONDERRY LITHIA SPRING WATER CO.

N. B.—We refuse to publish the name of the above well-known Sanitarium, but will give $1000.00 to any charity if we cannot prove the genuineness of this correspondence. L. L. S. W. CO.

1315 Massachusetts Avenue, Washington, D. C.

UNIVERSITY OF MARYLAND.—School of Medicine.

The Eighty-Fifth Annual Session will begin October 1st, 1891, and will end in April, 1892. Didactic lectures are illustrated by daily clinical instruction in general medicine and surgery, and the various special branches. Laboratory instruction in chemistry and normal and pathological histology. All candidates for graduation have personal experience in practical obstetrics.

For further information and circular apply to

I. E. ATKINSON, M D., Dean,
605 Cathedral Street, Baltimore.

UNIVERSITY OF PENNSYLVANIA.—Medical Department

THE PRELIMINARY SESSION has been discontinued; the Spring Term begins early in May, 1892.

The curriculum is graded and three annual winter sessions are required. Practical instruction, including laboratory work in Chemistry, Histology, Osteology and Pathology; with bedside instruction in Medicine, Surgery, Gynæcology and Obstetrics, are a part of the regular course and without additional expense.

FACULTY.

D. HAYS AGNEW, M.D., LL.D., Honorary Professor of Clinical Surgery.
WILLIAM PEPPER, M.D., LL.D., Professor of Theory and Practice of Medicine, and of Clinical Medicine.
WILLIAM GOODELL, M.D., Professor of Gynecology.
JAMES TYSON, M.D., Professor of Clinical Medicine.
HORATIO C. WOOD, M.D., LL.D., Professor of Materia Medica, Pharmacy and General Therapeutics.
THEODORE G. WORMLEY, M.D., LL.D., Professor of Chemistry and Toxicology.
JOHN ASHURST, JR., M.D., Professor of Surgery and of Clinical Surgery.
EDWARD T. REICHERT M.D., Professor of Physiology.
WILLIAM F. NORRIS, M.D., Professor of Ophthalmology.
BARTON COOKE HIRST, M.D., Professor of Obstetrics.
J. WILLIAM WHITE, M.D., Professor of Clinical Surgery.
JOHN GUITERAS, M.D., Professor of General Pathology and Morbid Anatomy.
GEORGE A. PIERSOL, M.D., Professor of Anatomy.
LEWIS A. DUHRING, M.D., Professor of Diseases of the Skin.

For Catalogue and announcement containing particulars, apply to DR. JAMES TYSON, Dean

THE SANITARIUM, BATTLE CREEK, MICHIGAN.

INCORPORATED, 1867.

The largest, most thoroughly equipped and one of the most favorably located in the United States. It is under strictly regular management. Eight physicians, well-trained and of large experience. A quiet, home-like place, where "trained nurses," "rest cure," "massage," "faradization," "galvanization," "static electrization," "Swedish movements," "dieting," "baths," "physical training," and all that pertains to modern rational medical treatment can be had in perfection at reasonable prices. **A special Hospital Building (150 Beds) for surgical cases with finest hospital facilities and appliances.**

Large Fan for Winter and Summer Ventilation. Absolutely Devoid of Usual Hospital Odors. Delightful Surroundings. Lake-side Resort. Pleasure Grounds. Steamers, Sail-boats, etc.

J. H. KELLOGG, M. D., Sup't, Battle Creek, Mich.

PURE GLUTEN BISCUIT

The undersigned have for several years been manufacturing a pure gluten for a few physicians. We are now prepared to furnish to the medical profession **the only pure gluten biscuit manufactured in America.** For samples and prices address

SANITARIUM FOOD CO., Battle Creek, Mich.

Nervous Diseases and Their Diagnosis

By H. C. WOOD, M. D., LL. D..

Professor of Therapeutics and Nervous Diseases, University of Pennsylvania.

8vo., pp. 501, Cloth, $4.

It is invaluable as a work of diagnosis.—*Virginia Medical Monthly.*

It is at once a substantive contribution to neurology and a trustworthy guide to what has already been done in the subject.—*Practitioner.*

As a whole, the work is one which cannot fail to be of great service to the practicing physician.—*Medical and Surgical Reporter.*

The volume is a distinct help to the student, and is a necessary supplement to the systematic works on diseases of the nervous system.—*Boston Med. Surg. Jour.*

The author's originality is evident to every reader of his work; and we trust, for the advancement of knowledge, his readers will be many.—*New England Med. Gaz.*

This work fills a long-felt need in this department.—*Buffalo Med. Surg. Jour.*

Dr. Wood is an able clinician, and this makes his book valuable. His observations are practical and to the point and show careful study of a large number of cases which have fallen under his care.—*N. Y. Med. Jour.*

The honest effort of one who never writes without teaching and who always writes and teaches well.—*Journal of Insanity.*

To students and practitioners who have read other works this production will prove extremely valuable in time of need, to the former just before examination; to the latter in everyday practice.—*London Lancet.*

Not a compilation, but rather the record of independent opinions and investigations.—*Canadian Practitioner.*

The book is written in the characteristic vigorous style of its able and versatile author.—*American Practitioner.*

Lucid language, clear type, a full index, and, above all, the presentation of the late advances in this department of science, constitute the truly great attractions of this book.—*Albany Med Annals.*

It is not until the volume has been carefully read, and perhaps re-read, that its true excellence begins to dawn upon the reader.—*Maryland Med. Jour.*

The Butler Publishing Co.,

P. O. Box 843, PHILADELPHIA, PA.

To the Medical Profession.

During the past seven years we have been laboring assiduously to produce *Infant Foods* eady for use that would closely resemble healthy human milk. It has not been any easy task, as every physician knows who has taken a special interest in the subject. We have spared neither labor or expense to accomplish this object, which will be demonstrated to any Physician who will visit our factory. We have met the more recent demand for a *sterilized Food for Infants* by an expensive change in our machinery, under the supervision of the most eminent Bacteriologists in the country. This sterilization has been accomplished without rendering the casein of the milk less digestible, as is invariably done with the patented sterilizers in use.

We do not think it possible that any *Infant Food* will ever be prepared that will excel **LACTO-PREPARATA** (an all milk food) for the feeding of young infants, and **CARNRICK'S FOOD** for their nourishment during the latter part of the nursing period. All other *Infant Foods* in the market are composed entirely of cereals; or they contain so little milk (about 8 per cent.) that it is a misnomer to call them Milk Foods. If such foods are used alone, the child will not be properly nourished, its flesh will be flabby, and it will quickly succumb to disease, because they are deficient in albuminoid constituents.

Send for circulars and samples.

KUMYSGEN

Make Your Own KUMYSS in one Minute.

A Product of Pure, Sweet Milk.

What is Kumysgen?

It is *Kumyss* in a dry form, containing all the constituents of the best *Kumyss*, and requires only the addition of water to produce an article superior in digestibility and palatability to the old form of *Kumyss*.

It is the *Ideal Food* in all cases where nutrition is an important factor, and digestion is feeble

When all other Foods fail try **Kumysgen,** but it is better to try it in the beginning and save time and strength.

Kumysgen is the only preparation of *Kumyss* that will keep. All liquid preparations of *Kumyss* will keep but a short time, and are constantly changing in the bottle, unless some deleterious preservative is used.

Kumyss made from **Kumysgen** is far more palatable, easier digested and 35 per cent. less expensive than the old Style **Kumyss.**

Our **Syphon Kumysgen Bottles** allow *Kumyss* to be drawn without loss of contents. One in every three bottles are *siphons*, containing same quantity of KUMYSGEN as the others. Send for samples and descriptive circulars.

Manufactured Only by

REED & CARNRICK, New York.

A WEEKLY JOURNAL.

ESTABLISHED IN 1853 BY
S. W. BUTLER, M. D.

THE Medical and Surgical Reporter.

EDWARD T. REICHERT, M. D., Editor.
(Prof. Physiology, University of Penna.)

CHAS. K. MOUNT, Advertising Manager.

PROSPECTUS.

For nearly forty years ***The Medical and Surgical Reporter*** has held a position of influence and popularity second to that of no other publication in medicine. Last May the Editorial and Business Management was changed, the journal was enlarged from twenty-eight to forty pages, and the publication in almost every way was radically improved. That these changes have been appreciated by the profession is evident in the phenomenal increase of our subscription list and in the number of new advertisements.

The enlarged ***Reporter*** now enables us to offer more pages of reading matter each year than are given by any other medical periodical in America, and more material of direct practical value to the practising physician than is furnished in any other journal in the English language. We now publish during the year over 3500 separate articles, representing the best thought in the profession. These include about as follows:—

75 ***Clinical Lectures*** by leading clinicians in this country and abroad.
200 ***Original Communications.***
60 ***Society Reports.***
25 ***Letters by Special Correspondents.***
800 ***Selected Prescriptions.***
75 ***Editorials on Timely Topics.***
150 ***Letters from our Subscribers.***
150 ***Book Reviews.***
2000 ***Periscope Articles,*** carefully selected and condensed, and representing all important progress in medicine in all branches and languages.

The ***Reporter*** is truly a magazine of medical progress, it is thoroughly practical, and is especially adapted to the wants of the busy practitioner. There is no State or Country in America that it does not reach, and no civilized Country that does not regularly receive it.

The ***Reporter*** is published every Saturday, and is mailed to subscribers in the United States and Canada for $5.00 a year in advance, and to those in foreign countries for $6.00 in advance. It will be sent for three months on trial for $1.00.

AFTER THE GRIP, WHAT?

Few diseases are marked by such tedious and unsatisfactory convalescence as is the one known as epidemic influenza. After the acute symptoms have passed away extreme weakness and prostration remain, persisting for a long time in spite of the ordinary modes of treatment. The patient is left in a condition of general debility altogether disproportionate to the apparent gravity of the affection. Vague neuralgias and mental hallucinations occur, together with an unaccustomed liability to contract other diseases with very slight exposure or to suffer relapses of this disease. If the patient be a brainworker he finds it especially difficult to apply himself to his usual tasks. Either physical or mental exertion is followed by profound exhaustion.

Let us now look into the actual condition present, and then we can more intelligently seek an appropriate remedy—not merely a temporary palliative.

The patient has just passed through a serious and violent disease which, although of comparatively brief duration, has profoundly affected the great nerve centres and from which they naturally can recover but slowly Through excessive weakness of the nervous supply of the vital organs their functions are but feebly and imperfectly carried on. How many there are who date the beginning of a permanent state of decline to their attack of La Grippe.

The ordinary tonics—iron, quinine, strychnine, &c.—seem utterly unable to cope with this condition. In fact, it is not stimulation that the patient needs, as by it he is only led to overtask his strength, and finally finds himself completely broken down. He needs a reconstruction of the worn out tissues.

The remedy which will be effective, then, must be one that will convey to the tissues the revivifying and vitalizing agent, phosphorus, in its oxidizable and assimilable form. Thus the true vitality of the nerve structure is restored and with it the healthy function is reestablished. The process is not that of stimulation or whipping up the exhausted powers, but is one of renewing the nutrition of the tissues themselves; hence it is steady and sure in its progress and permanent in its results. The patient feels that he is gradually recovering his accustomed strength of mind and body.

The one form in which the compounds of phosphorus, as they exist in normal animal cells can be conveyed to the tissues and there utilized is in the oxidizable form of the hypophosphites of lime and soda, chemically pure. It should be given early, and continued at appropriate intervals until the condition has been entirely overcome. Its favorable action in convalescence from acute diseases in general is especially marked in the disease under consideration. By its use many cases of chronic invalidism can be averted, and the susceptibility to intercurrent diseases corrected.

As it is essential to have the agent in an absolutely chemically pure form, McArthur's syrup should be prescribed. This is an agreeable, wholesome syrup, containing only the pure hypophosphites of lime and soda. If you are not already acquainted with it, a full sized bottle will be sent you, if you will agree to pay express charges. Address The McArthur Hypophosphite Company, Boston, Mass.

Before the Medical Profession almost 30 years, and invariably gives uniform satisfaction.

We respectfully ask thorough testing, strictly UPON ITS OWN MERITS, to prove the exceptionally high reputation it holds.

Owing to correspondence on the subject, we regret being compelled to caution that inferior Coca preparations are frequently substituted upon patients, and as we do not advertise to the public, physicians will kindly be particular to insist on

VIN MARIANI

FORMULA: "VIN MARIANI" is the concentrated extractive of the fresh leaf Erythroxylon Coca, blended with a special quality of Bordeaux Wine. Each half-litre bottle contains the medicinal properties of two ounces of selected leaves.

DOSE: Usually a wine-glassful three times a day, half an hour before meals or immediately after. Increased or diminished, at discretion of the Physician.

INDICATED: As a pleasant, mild stimulant, without unpleasant reaction; a diffusible tonic; a strengthener of the Nervous system, with especial good effect on the digestive and respiratory organs; convalescence and enfeebled conditions. Effect is immediate and lasting.

NOTE: Extensively used in Hospitals, Cliniques and private practice, its merits are recorded by the medical press of Europe and America. Uniform excellence and recognized efficacy won the absolute confidence and esteem of every physician who subjected it to test, and it may be affirmed that wherever Coca is indicated "Vin Mariani" invariably receives the preference.

The continual increasing demand is a clear proof of the reliance placed in "Vin Mariani" by the Medical Profession, through whom it has been popularized.

WE WILL BE HAPPY TO FORWARD, POST-PAID, TO ANY PHYSICIAN MENTIONING THIS JOURNAL, A HANDSOMELY BOUND BOOK, DETAILING FORMLAE, DOSE, PHYSIOLOGICAL EFFECTS AND THERAPEUTIC INDICATIONS OF COCA, AS ALSO OTHER INTERESTING READING MATTER CONNECTED WITH THE SUBJECT BY EUROPEAN AND AMERICAN OBSERVERS.

Definite Chemical Products

OF SUPERIOR THERAPEUTIC VALUE.

CHLORALAMID (Schering).

HYPNOTIC.—Dose, 15 to 45 Grains. A full descriptive pamphlet (64 pages) supplied on request.

PIPERAZIN (Schering).

URIC ACID SOLVENT. Will dissolve at least twelve times more uric acid than lithia. Dose, 15 Grains per day, with continuous treatment. Pamphlet (32 pages) sent on request.

PHENOCOLL (Schering).

ANTIPYRETIC, ANTI-RHEUMATIC, ANALGESIC, NERVINE. "The superior of all coal-tar antipyretics previously introduced." Dose, 7½ to 15 grains. Descriptive pamphlet (40 pages) supplied on request.

THIOL (Riedel).)

A synthetically produced body, chemically and therapeutically identical with ICHTHYOL, and superior in being odorless and non-toxic. Supplied in powder and liquid form. Circular reprint of clinical reports sent on request.

LYSOL.

"THE IDEAL DISINFECTANT." The latest and most perfect of the cresol-derivative antiseptic and disinfectant agents. A 16-page monograph mailed on request.

Our motto "DEFINITE CHEMICAL PRODUCTS" has proved a happy hit, and it bids fair to become at once a catch phrase and the standard by which new remedies will be gauged.

Physicians are invited to write us whenever desirous of obtaining information regarding any new remedies. We will promptly answer all such inquiries.

A Sample Copy of "NOTES ON NEW REMEDIES" mailed on request.

LEHN & FINK,

IMPORTERS, WHOLESALE DRUGGISTS AND MANUFACTURING CHEMISTS,

ADDRESS: P. O. BOX 3114. **NEW YORK.** OFFICE: 128 WILLIAM STREET.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK:)

Each fluid drachm represents 15 grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium and Lithium.

USES: EPILEPSY, UTERINE CONGESTION, HEADACHE, AND ALL CONGESTIVE, CONVULSIVE AND REFLEX NEUROSES.

This preparation produces results, which can not be obtained from the use of commercial Bromide substitutes.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK.)

From Sea Weed. **Uses: Malaria, Phthisis, Etc.**

An ALLY of quinine—quinine CHECKS the Malarial Chill, Fucus Marina ELIMINATES the Malarial CAUSE; and thus prevents the recurrence of the Chill *after* it has been *checked* by quinine.

An INVALUABLE REMEDY in the treatment of Phthisis—it arrests the decay of lung tissue, diminishes the fever, lessens the cough, abates the soreness in the lungs, improves the appetite, and impedes the progressive emaciation.

DOSE.—One Teaspoonful IN WATER, four times a day.

CHIONIA FROM CHIONANTHUS.

Uses: Biliousness, Jaundice, Dyspepsia, Constipation, and all Diseases Caused by Hepatic Torpor.

CHIONIA stimulates the Liver and restores it to a healthy condition, without debilitating the system by Catharsis; does not purge, per se, but under its use the Liver and Bowels gradually resume their normal functions.

DOSE.—One Fluid Drachm three times a day.

PEACOCK CHEMICAL CO., ST. LOUIS.

STRONTIUM, McK. & R.

Absolutely Free from Barium.

INDICATED IN

RHEUMATISM, EPILEPSY, INDIGESTION, BRIGHT'S DISEASE

AND IN THE PLACE OF THE

BROMIDE OF POTASSIUM,

THAN WHICH IT IS BETTER TOLERATED EVEN IN HIGH DOSES.

Last July, M. LABORDE reported to *Societe de Biologie*, July 4, 1891, that he had found, contrary to the general opinion, that the salts of strontium might be safely employed, were beneficial to the animal economy, and that weight was increased under their use.

Some time after this report, July 28th, MM. G. SEE and CONSTANTIN PAUL stated before the *Academie de Medecine* that they had employed the bromide and lactate of strontium in rheumatism and Bright's disease, respectively, and could confirm the results of M. LABORDE in regard to the innocuousness and beneficial effects of the drug.

October 28th, M. DUJARDIN-BEAUMETZ, before the *Soci te de Therapeutique* stated that he had obtained very good results in Bright's disease by the use of the lactate of strontium; that its action on the digestive functions was very favorable.

November 11th, MM. CONSTANTIN PAUL and DUJARDIN-BEAUMETZ made a further communication to the same society, and stated that they had still further used the lactate and bromide salts, and found them perfectly tolerated even in high doses.

M. FERE found the bromide of strontium of efficacy in in the treatment of epilepsy in the place of the potassium salt. He also found by numerous experiments that the toxicity of bromide of strontium, when given by intravenous injection, was far below that of the bromide of potassium.

All the authors insist on the necessity for a perfectly pure salt, one absolutely free from the presence of barium, such as those now offered to the medical profession, in the form of syrup and solution by McKesson & Robbins.

McK. & R. SYRUP OR SOLUTION OF LACTATE OF STRONTIUM, C. P.

McK. & R. SYRUP OR SOLUTION OF BROMIDE OF STRONTIUM, C. P.

In Original Pound Bottles,

Containing 60 grains to the ounce—7½ grains to the teaspoonful.

DOSE: One to two teaspoonfuls four to eight times a day.

LITERATURE SENT ON REQUEST.

DIURETIN-KNOLL IN INFANTILE PRACTICE.

BY DR. R. DEMME.

ACCORDING to the observations of Dr. R. Demme, Professor of Pædiatrics to the Faculty of Medicine of Berne, diuretin may be administered in the daily dose of ·50 to 1.50 grammes (7½ to 22 grains) to children of from two to five years old, and in daily doses of 22 to 45 grains in children of six to ten years. In infants less than a year old the drug is contra-indicated, as it easily provokes gastro-intestinal irritation in these young patients.

Care should be taken in prescribing diuretin, as it is liable to be decomposed by certain substances. M. Demme recommends the following:

Diuretin	gr. xxij
Distilled water	oz. iij
Brandy	gtt. x
Sugar	grs. xl

M. Sig. To be taken in the course of the twenty-four hours in doses of one tablespoonful.

Dr. Demme's observations have convinced him that diuretin is a good diuretic for children, exempt for the most part of all unpleasant influence, and probably acting on the renal epithelium.

Under the influence of diuretin, the dropsy of scarlatinal nephritis disappeared more quickly than by the action of any other medicament. It suppresses very rapidly the anasarca and serous effusions in cases of mitral disease, when the compensation has been previously established by means of digitalis:

The diuretin was generally well supported, and it had no cumulative action. However, in one case of generalized dropsy in a child of ten years, suffering from amyloid degeneration of the liver, spleen, and kidneys, Dr. Demme has seen a morbilliform eruption with abundant diarrhœa, after the injection of 90 grains of diuretin in the space of four days.—*La Semaine Medicale*, Feb. 24, 1892.

SEND FOR COMPLETE NOTES.

THE COMPOUND STEARATES, McK. & R.

THE Compound Stearates, introduced recently by McKESSON & ROBBINS, are now presented to the Medical Profession at large with confidence, as powders which are remarkable for their mollescence when applied to anoint or protect diseased conditions of the skin and mucous membranes.

They are adhesive and act as grateful vehicles in which drugs may be administered locally.

Desirable as adjuvants in insufflations and antipruritic as dusting powders, they can be used to cover and protect the surface of the skin without soiling the clothing, and offer a very profitable field for therapeutic investigation, where the frequently rancid oleates and ointments, or the ordinary soluble and non-adhesive dusting and other powders for the skin and mucous membrane are not desirable.

McK. & R. COMPOUND STEARATE INSUFFLATIONS.

McK. & R. COMPOUND STEARATE OF ZINC WITH BORIC ACID. (Zinci Stearas Co. cum Acid Boric.—McK. & R.)

Employed in catarrhal rhinitis with hypersecretion.

McK. & R. COMPOUND STEARATE OF ZINC WITH ARISTOL. (Zinci Stearas Co. cum Aristol. —McK. & R.)

In atrophic rhinitis and ozœna.

McK. & R. COMPOUND STEARATE OF ZINC AND BISMUTH SUBGALLATE (Zinci Stearas Co. cum Bismuth. Subgall.—McK. & R.)

Especially after operations, and instead of iodoform.

McK. & COMPOUND STEARATE OF ZINC WITH BALSAM PERU (Zinci Stearas Co. cum Balsam. Peruv.—McK. & R.)

In ulcerative tubercular laryngitis.

FULL LIST, CONTAINING OVER TWENTY OTHER COMPOUNDS, SENT FREE.

Lapactic Pills.

A combination introduced by us and found in practice to possess superior advantages over other similar formulas. The well known mild action of Aloin on the lower portion of the intestinal canal, and its power of stimulating the hepatic functions, is supplemented by the action of Ipecac as a stomachic tonic and by increasing the gastric secretions; the Belladonna acts specially upon the involuntary muscular fibres of the bowels, increasing peristalsis, diminishing the harshness, and at the same time increasing the effectiveness of the laxative. The general tonic effect of Strychnine upon the stomach and bowels and its direct action upon the sympathetic, make it a valuable addition in the permanent cure of **habitual constipation and atonic dyspepsia.**

Since we first called attention to our Lapactic Pills, some four years ago—publishing the composition of the same—a number of manufacturers have adopted the formula and have furnished these pills under the same name. Should Physicians fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints from physicians by letter), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term "LAPACTIC PILLS, S. & D.'S." when prescribing these pills.

SAMPLES WILL BE MAILED ON APPLICATION.

SPECIAL FORMULAS MADE TO ORDER.

WHEN PURCHASING, PLEASE SPECIFY S. & D's.

Sharp & Dohme,

MANUFACTURING CHEMISTS,

Established 1860. Baltimore, Md.

"As a disinfectant for all the sanitary needs of the sick-room, Platt's Chlorides is especially recommended."

Endorsed by thousands of Physicians, and having commanded a large sale for many years, Platt's Chlorides can readily be procured from almost any druggist in any city, town or village in the United States. It is an odorless liquid, and is sold in quart bottles only.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

— *Landois and Sterling.*

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

— *Materia Medica and Therapeutics, Dr. Mitchell Bruce.*

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

— *Eustace Smith, M.D., F.R.C.S.*

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

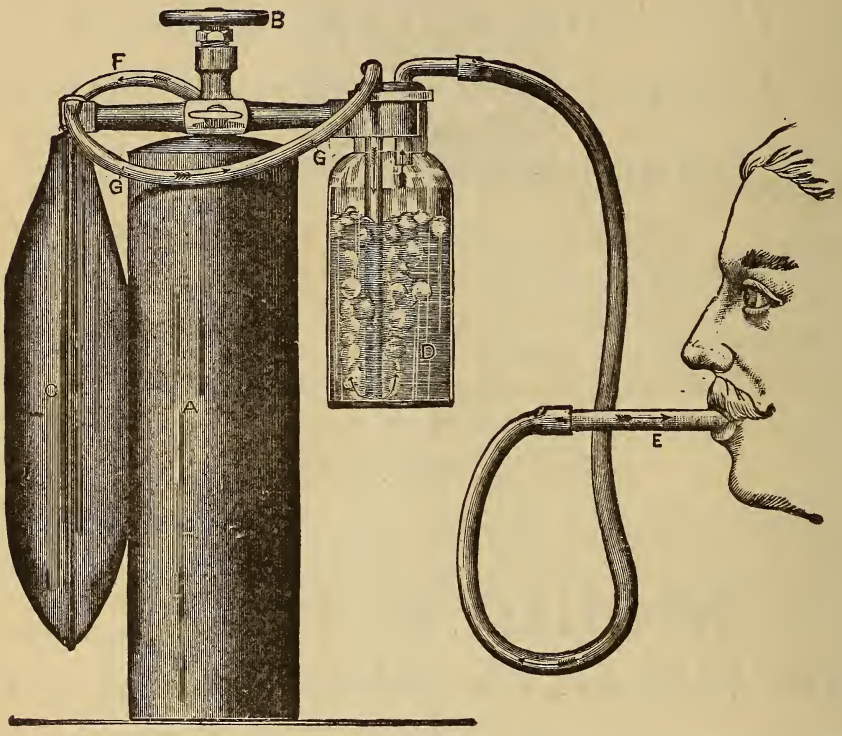
BOSTON, MASS.

INHALATION APPARATUS

FOR

THE THERAPEUTIC ADMINISTRATION OF OXYGEN.



In the treatment of lung troubles by Oxygen its exhibition by inhalation is preferred. The apparatus herewith shown is a modification of the Nitrous Oxide apparatus which we have supplied for many years. It is made in the best manner throughout, and is the outcome of years of experience in the manufacture of gas apparatus. It will be found to meet all the requirements.

We supply the gas in two sizes of cylinders, containing respectively forty and one hundred gallons, either pure Oxygen, or a mixture of Oxygen and Nitrous Oxide in definite proportions of 20 per cent., and forty per cent. of Nitrous Oxide.

Whether pure or mixed the gas is sold at the uniform price of 5 cents a gallon. The cost of the cylinders will be refunded on their return empty with the valves in good condition. Full description of Inhalation and Enema apparatuses with directions for use accompany each apparatus, or will be supplied on application.

PRICES.

Inhalation Apparatus	$5.00
Cylinder, 40 gallons' capacity	6.00
40 gallons Gas, either pure Oxygen or mixed Oxygen and Nitrous Oxide	2.00
Complete Apparatus, Cylinder, and 40 gallons Gas	$13.00
Inhalation Apparatus	$5.00
Cylinder, 100 gallons' capacity	15.00
100 gallons Gas, either pure or mixed	5.00
Complete Apparatus, Cylinder, and 100 gallons Gas	$25.00

THE S. S. WHITE DENTAL MFG. CO.

PHILADELPHIA, NEW YORK, BOSTON, CHICAGO, BROOKLYN, ATLANTA

ESTABLISHED 1855.

DR. STRONG'S SANITARIUM,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for TREATMENT, CHANGE, REST, OR RECREATION.

And places them under well-regulated hygienic conditions so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it has a Sun Parlor and Promenade on the roof. Turkish, Roman, Sulphur, Electro-Thermal, the French Douche, and all Hydropathic Baths; Vacuum Treatment, Swedish Movements, Massage, Pneumatic Cabinet Inhalations of Medicated, Compressed, and Rarefied Air, Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, with elevator, electric bells, open fire-places, steam, and thorough ventilation. With cheering influences and avoiding the pressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in winter tobogganing, elegant sleighing, etc.; in Summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience.

A liberal discount to physicians and their families for board or treatment. For illustrated Circular, Address:

ANÆMIA, CHLOROSIS, FEVERS, CONVALESCENCES

Vin de Bugeaud

prepared with **CINCHONA** and **COCOA**

BUGEAUD'S WINE is highly recommended to the medical profession for its active principles and the superior quality of the wine in which they are dissolved.

It is especially ordered to convalescents, weak children, delicate women and old persons enfeebled by age and infirmities.

P. LEBEAULT & Cie | PARIS: 5, Rue Bourg-l'Abbé
NEW-YORK: 6, Harrison Street (CH. TERTRAIS manager.)

DYSPEPSIA.

Deranged digestion is the most common of all human ailments. It is a truism that no organ of the body can preserve its normal integrity **when** its supplying nerve is disordered **by lowered tone.** But this fact is largely ignored in these modern pepsin days—the **cause** being lost sight of whilst trying to remedy the effect. It is well known that any unusual worry or anxiety will upset the digestion of **the neurotic** patient. Hence, in treating dyspepsia, particularly atonic dyspepsia, that form met with in persons of low vitality and poor appetite, there are **two distinct INDICATIONS.** One is to subserve the needs of general nutrition, the other is to subserve the needs of the nervous system. This can be done by giving the patient good nutritious food and a good nerve tonic. This explains why such remarkable results follow the daily use of **CELERINA** in all dyspeptic troubles.

PREFERABLE TO CORROSIVE SUBLIMATE

Because it is not poisonous

Because it possesses superior antiseptic properties

Because it forms no insoluble compounds with the animal fluids

Because it produces no pain or irritation even of abraded surfaces

For use in all cases and under all circumstances where CORROSIVE SUBLIMATE has hitherto been employed

APPLICABLE WHEREVER AN ANTISEPTIC IRRIGATION or Lotion is indicated and as a Prophylactic and Disinfectant under any and all circumstances

CHLORO PHÉNIQUE

PERFECTLY MISCIBLE WITH WATER

For washing out the cavities, or THE BLADDER IN CHRONIC CYSTITIS it has no equal

A Non-Irritant Non-Poisonous Antiseptic and Parasiticide of Great Energy

In FOUL WOUNDS, ABSCESSES, SUPPURATING SINUSES, BUBOES, etc., CHLORO-PHÉNIQUE is used to cleanse and to prepare the way for "Campho-Phenique," which latter as a permanent dressing, subdues pain, prevents the formation of pus, and hastens healing in a remarkable manner

PHENIQUE CHEMICAL COMPANY

2715 CASS AVENUE - - - ST. LOUIS, MO.

Dr. J. FEHR'S

"COMPOUND TALCUM" * *

* * "BABY POWDER,"

THE

'HYGIENIC DERMAL POWDER"

FOR

INFANTS AND ADULTS.

Introduced to the Medical and the Pharmaceutical professions by J. FEHR, in the year 1873.

COMPOSITION:—Silicate of Magnesia with Carbolic and Salicylic Acids.

PROPERTIES:—Antiseptic, Antizymotic, and Disinfectant.

Useful as a **GENERAL SPRINKLING POWDER,** with positive Hygienic, Prophylactic, and Therapeutic properties.

GOOD IN ALL AFFECTIONS OF THE SKIN.

PER BOX, PLAIN, 25 Cents; PERFUMED, 50 Cents.
PER DOZ., PLAIN, $1.75; PERFUMED, $3.50.

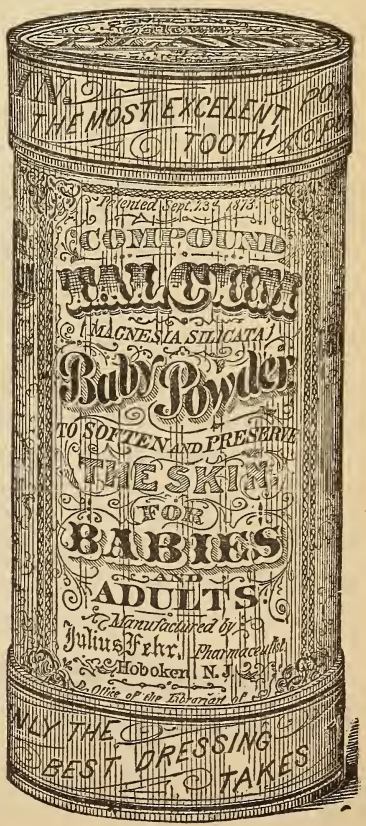
SOLD BY THE DRUG TRADE GENERALLY.

MANUFACTURER:

JULIUS FEHR, M.D.,

Ancient Pharmacist, HOBOKEN, N. J.

Only advertised in Medical and Pharmaceutical prints.



NEUROSINE

THE MOST POWERFUL NEUROTIC ATTAINABLE

ANODYNE AND HYPNOTIC.

A most efficient and permanent preparation, **REMARKABLE** for its efficacy and **THERAPEUTIC EFFECTS** in the treatment of those **NERVOUS AFFECTIONS** and morbid conditions of the System which so often tax the skill of the Physician.

A RELIABLE AND TRUSTWORTHY REMEDY FOR THE RELIEF OF

HYSTERIA, EPILEPSY, NEURASTHENIA, MANIA, CHOREA, UTERINE CONGESTION, MAGRAINE, NEURALGIA, ALL CONVULSIVE AND REFLEX NEUROSES
THE REMEDY PAR EXCELLENCE IN DELIRIUM AND RESTLESSNESS OF FEVERS.

FORMULA.—Each fluid-drachm contains 5 grains each, C. P. Bromides of Potassium, Sodium and Ammonium 1-8 gr. Bromide Zinc, 1-64 gr. each of Ext. Belladonna and Cannabis Indica, 4 grains Ext. Lupuli and 5 minims fluid Ext. Cascara Sagrada, with Aromatic Elixirs.

DOSE:—From one teaspoonful to a tablespoonful, in water, three or more times daily as may be directed by the Physician.

To any physician, unacquainted with the medicinal effect of Neurosine, we will mail pamphlet contain full information, suggestions, and various methods of treatment; also a variety of valuable prescriptions that have been thorougly tested in active practice, or to physicians desiring to try our preparation, and who will pay express charges, we will send on application a sample bottle free.

DIOS CHEMICAL CO.,

Scherff's Syrup of Hydriodic Acid.

A PERMANENT UNALTERABLE PREPARATION.

NON-IRRITANT. **PALATABLE.** **EFFICIENT**

Each fluid ounce of this Syrup represents the equivalent of 6.72 grains of absolute Hydroidic Acid. Particular stress is laid on the one great superiority: this Syrup will **not decompose**, and the danger (so common to other like preparations) of administering a preparation of free **iodine**, is absolutely avoided.

Descriptive Pamphlets and Clinical Reports mailed on request.

WESTERN PENNSYLVANIA MEDICAL COLLEGE
CITY OF PITTSBURGH.
SESSIONS OF 1892.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. MCKENNAN, 810 Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Ave., Pittsburg.

The Baltimore Medical College.

PRELIMINARY FALL COURSE begins Sept. 1, 1891.
REGULAR WINTER COURSE begins October 1, 1891.

Excellent Teaching Facilities, Capacious Hospital, Large Clinics.

Send for catalogue, and address

DAVID STREETT, M. D., Dean,
408 N. Exeter St., Baltimore, Md.

WALNUT LODGE HOSPITAL,
HARTFORD, CONNECTICUT.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish Bath, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefitted from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M. D.,
Sup't Walnut Lodge, Hartford, Conn.

DR. MASSEY'S
PRIVATE SANATORIUM.

Presenting the comforts of an elegant private residence, this institution is specially equipped for the use of electricity and allied remedial measures in the diseases of women and in diseases of the nervous system. For particulars address

G. BETTON MASSEY, M. D.,
212 S. Fifteenth St., Philadelphia.

Prickly Heat, Chafing, Dandruff,

Odors from Perspiration, etc. Speedy Relief by Using

Packer's Tar Soap

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

AN IDEAL PEPSIN!

PHYSICIANS PRESCRIBE

P., D. & CO.'S

ASEPTIC PEPSIN.

Pepsins as heretofore known have left very much to be desired, most of them indicating by their odor the putrescent mucus and other objectionable constituents which must necessarily prove irritating, especially to the delicate stomach of an infant, invalid or dyspeptic.

We now supply a new and improved Pepsin Product (ASEPTIC PEPSIN, 1 to 4000, P., D. & Co.'s), in the full confidence that it will at once recommend itself to the favorable attention of the Medical Profession.

It is twice as active as any other pepsin now on the market, and by the process of manufacture which we pursue, is deprived of all septic constituents. This process renders it very palatable so that the most fastidious palate could not possibly object to its taste.

Samples and literature will gladly be supplied upon application.

MANUFACTURED ONLY BY

PARKE, DAVIS & COMPANY,

DETROIT, NEW YORK AND KANSAS CITY.

Papoid costs less
than Pepsin

because
A much smaller quantity
produces
A much better result
in
A much shorter time.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{60}$ gr.), Atropiæ Sulph. ($\frac{1}{1000}$ gr.), Codeia ($\frac{1}{10}$ gr.), Antimony Tart. $\frac{1}{15}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{60}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

I. O. WOODRUFF & CO.,

MANUFACTURERS OF PHYSICIANS' SPECIALTIES,

36 Maiden Lane, New York City.

DECLINED WITH THANKS!

The following correspondence explains itself:

LONDONDERRY LITHIA SPRING WATER CO., March 17, 1892.

GENTLEMEN:—Having used the LONDONDERRY quite extensively, and seeing *you advertise in lay journals which we cannot do, the code of ethics prohibiting it*, we thought to write you to inquire if a *favorable mention* from us might not be *used* by you in *connection* with a *small cut of our "Home,"* mentioning in connection our location and class of cases received. Fraternally yours.

(Signed) ——— ——— ———

OUR REPLY!

DRS. ——— ———. NASHUA, N. H., March 19, 1892.

GENTLEMEN:—Your esteemed favor of the 17th inst. duly received and contents noted. We are happy to receive the confidence and compliments of all the medical fraternity, but fail to see how any good end can be served by publishing a cut of your well-known resort. As a question of "ethics," it would deceive no intelligent physician or layman. A testimonial carrying such *prima facie* evidence of the consideration for which it is given would be of no benefit to us and might injure you by demonstrating that your opinions, which are now counted very valuable, are not after all held so highly by yourselves.

We have never paid one penny for a professional or lay opinion of LONDONDERRY, nor, judging from the almost daily endorsements that we see in the medical and lay journals, and our enormous and rapidly increasing business, shall we be obliged to do so in the future. Trusting you will receive this in the spirit in which it is given, we are, Yours very truly,

LONDONDERRY LITHIA SPRING WATER CO.

N. B.—We refuse to publish the name of the above well-known Sanitarium, but will give $1000.00 to any charity if we cannot prove the genuineness of this correspondence. L. L. S. W. CO.

Professor of Therapeutics and Nervous Diseases, University of Pennsylvania.
8vo., pp. 501, Cloth, $4.

It is invaluable as a work of diagnosis.—*Virginia Medical Monthly.*

It is at once a substantive contribution to neurology and a trustworthy guide to what has already been done in the subject.—*Practitioner.*

As a whole, the work is one which cannot fail to be of great service to the practicing physician.—*Medical and Surgical Reporter.*

The volume is a distinct help to the student, and is a necessary supplement to the systematic works on diseases of the nervous system.—*Boston Med. Surg. Jour.*

The author's originality is evident to every reader of his work; and we trust, for the advancement of knowledge, his readers will be many.—*New England Med. Gaz.*

This work fills a long-felt need in this department.—*Buffalo Med. Surg. Jour.*

Dr. Wood is an able clinician, and this makes his book valuable. His observations are practical and to the point and show careful study of a large number of cases which have fallen under his care.—*N. Y. Med. Jour.*

The honest effort of one who never writes without teaching and who always writes and teaches well.—*Journal of Insanity.*

To students and practitioners who have read other works this production will prove extremely valuable in time of need, to the former just before examination; to the latter in everyday practice.—*London Lancet.*

Not a compilation, but rather the record of independent opinions and investigations.—*Canadian Practitioner.*

The book is written in the characteristic vigorous style of its able and versatile author.—*American Practitioner.*

Lucid language, clear type, a full index, and, above all, the presentation of the late advances in this department of science, constitute the truly great attractions of this book.—*Albany Med. Annals.*

It is not until the volume has been carefully read, and perhaps re-read, that its true excellence begins to dawn upon the reader.—*Maryland Med. Journal.*

"What a boon it would be to the Medical Profession if some reliable Chemist would bring out an Extract of Malt in combination with a well-digested or Peptonized Beef, giving us the elements of Beef and the stimulating and nutritious portions of Ale.—J. MILNER FOTHERGILL, M. D."

ALE & BEEF

"PEPTONIZED"

EXTRACT—BOVIS CUM MALTO.

IS THE IDENTICAL COMBINATION SUGGESTED BY THE LATE EMINENT FOTHERGILL.

Each Bottle Represents 1-4 Pound of Lean Beef Thoroughly Peptonized.

PREPARED BY

THE ALE & BEEF COMPANY,

DAYTON, OHIO, U. S. A.

Two full-sized bottles will be sent FREE to any physician who will pay express charges.

"Orders from all parts of the Dominion of Canada supplied by The Canadian Peptonized Beef & Ale Co., Limited, 153 Hollis Street, Halifax, N. S."

SYR. HYPOPHOS. CO., FELLOWS

Contains the Essential Elements of the Animal Organization—Potash and Lime;

The Oxidizing Agents—Iron and Manganese;

The Tonics—Quinine and Strychnine;

And the Vitalizing Constituent—Phosphorus; the whole combined in the form of a Syrup with a **Slightly Alkaline Reaction.**

It Differs in its Effects from all Analogous Preparations; and it possesses the important properties of being pleasant to the taste, easily borne by the stomach, and harmless under prolonged use.

It has Gained a Wide Reputation, particularly in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs. It has also been employed with much success in various nervous and debilitating diseases.

Its Curative Power is largely attributable to its stimulant, tonic, and nutritive properties, by means of which the energy of the system is recruited.

Its Action is Prompt; it stimulates the appetite and the digestion, it promotes assimilation, and it enters directly into the circulation with the food products.

The prescribed dose produces a feeling of buoyancy, and removes depression and melancholy; *hence the preparation is of great value in the treatment of mental and nervous affections.* From the fact, also, that it exerts a double tonic influence, and induces a healthy flow of the secretions, its use is indicated in a wide range of diseases.

NOTICE—CAUTION.

The success of Fellows' Syrup of Hypophosphites has tempted certain persons to offer imitations of it for sale. Mr. Fellows, who has examined samples of several of these, ***finds that no two of them are identical,*** and that all of them differ from the original in composition, in freedom from acid reaction, in susceptibility to the effects of oxygen when exposed to light or heat, ***in the property of retaining the strychnine in solution,*** and in the medicinal effects.

As these cheap and inefficient substitutes are frequently dispensed instead of the genuine preparation, physicians are earnestly requested, when prescribing the Syrup, to write "Syr. Hypophos. ***Fellows.***"

As a further precaution, it is advisable that the Syrup should be ordered in the original bottles; the distinguishing marks which the bottles (and the wrappers surrounding them) bear, can then be examined, and the genuineness—or otherwise—of the contents thereby proved.

Medical Letters may be addressed to:

Mr. FELLOWS, 48 Vesey Street, New York.

PHILLIPS' COD LIVER OIL

EMULSION.

A TRUE EMULSION WITHOUT SAPONIFICATION.

In all essential features, it represents the highest degree of perfection in the Emulsionizing of Cod Liver Oil.

This preparation is not advertised to the public, and enjoys Professional popularity because of its high standard of excellence, uniformity and reliability.

(*A pamphlet, with formula, Photo-Micrographic illustrations, etc., mailed upon application.*)

PHILLIPS' DIGESTIBLE COCOA.

A Peptonized Cocoa in which the fat of the bean is wholly retained and pre-digested by means of Pancreatine. It is a **delicious food beverage** rendered **assimilable,** and is **nourishing to a high degree.**

Besides its adaptability as a **substitute for tea and coffee** in daily use, and as a **convenient and reliable article of diet** in the sick room, it is **particularly recommended in many conditions of debility** where a supply of carbonaceous food is indicated, but where there is difficulty attending the digestion of ordinary fatty foods.

SOLD BY LEADING DRUGGISTS.

Laboratory, 28 Prince Street, New York.

Before the Medical Profession almost 30 years, and invariably gives uniform satisfaction.

We respectfully ask thorough testing, strictly UPON ITS OWN MERITS, to prove the exceptionally high reputation it holds.

Owing to correspondence on the subject, we regret being compelled to caution that inferior Coca preparations are frequently substituted upon patients, and as we do not advertise to the public, physicians will kindly be particular to insist on

VIN MARIANI

FORMULA: "VIN MARIANI" is the concentrated extractive of the fresh leaf Erythroxylon Coca, blended with a special quality of Bordeaux Wine. Each half-litre bottle contains the medicinal properties of two ounces of selected leaves.

DOSE: Usually a wine-glassful three times a day, half an hour before meals or immediately after. Increased or diminished, at discretion of the Physician.

INDICATED: As a pleasant, mild stimulant, without unpleasant reaction; a diffusible tonic; a strengthener of the Nervous system, with especial good effect on the digestive and respiratory organs; convalescence and enfeebled conditions. Effect is immediate and lasting.

NOTE: Extensively used in Hospitals, Cliniques and private practice, its merits are recorded by the medical press of Europe and America. Uniform excellence and recognized efficacy won the absolute confidence and esteem of every physician who subjected it to test, and it may be affirmed that wherever Coca is indicated "Vin Mariani" invariably receives the preference.

The continual increasing demand is a clear proof of the reliance placed in "Vin Mariani" by the Medical Profession, through whom it has been popularized.

WE WILL BE HAPPY TO FORWARD, POST-PAID, TO ANY PHYSICIAN MENTIONING THIS JOURNAL, A HANDSOMELY BOUND BOOK, DETAILING FORMLAE, DOSE, PHYSIOLOGICAL EFFECTS AND THERAPEUTIC INDICATIONS OF COCA, AS ALSO OTHER INTERESTING READING MATTER CONNECTED WITH THE SUBJECT BY EUROPEAN AND AMERICAN OBSERVERS.

DECLINED WITH THANKS!

The following correspondence explains itself:

LONDONDERRY LITHIA SPRING WATER CO., March 17, 1892.

GENTLEMEN:—Having used the LONDONDERRY quite extensively, and seeing *you advertise in lay journals which we cannot do, the code of ethics prohibiting it*, we thought to write you to inquire if a *favorable mention* from us might not be *used* by you in *connection* with a *small cut of our "Home,"* mentioning in connection our location and class of cases received. Fraternally yours.

(Signed) ——— ——— ———

OUR REPLY!

DRS. ——— ———. NASHUA, N. H., March 19, 1892.

GENTLEMEN:—Your esteemed favor of the 17th inst. duly received and contents noted. We are happy to receive the confidence and compliments of all the medical fraternity, but fail to see how any good end can be served by publishing a cut of your well-known resort. As a question of "ethics," it would deceive no intelligent physician or layman. A testimonial carrying such *prima facie* evidence of the consideration for which it is given would be of no benefit to us and might injure you by demonstrating that your opinions, which are now counted very valuable, are not after all held so highly by yourselves.

We have never paid one penny for a professional or lay opinion of LONDONDERRY, nor, judging from the almost daily endorsements that we see in the medical and lay journals, and our enormous and rapidly increasing business, shall we be obliged to do so in the future. Trusting you will receive this in the spirit in which it is given, we are, Yours very truly,

LONDONDERRY LITHIA SPRING WATER CO.

N. B.—We refuse to publish the name of the above well-known Sanitarium, but will give $1000.00 to any charity if we cannot prove the genuineness of this correspondence. L. L. S. W. CO.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK:)

Each fluid drachm represents 15 grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium and Lithium.

USES: EPILEPSY, UTERINE CONGESTION, HEADACHE, AND ALL CONGESTIVE, CONVULSIVE AND REFLEX NEUROSES.

This preparation produces results, which can not be obtained from the use of commercial Bromide substitutes.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK.)

From Sea Weed. **Uses: Malaria, Phthisis, Etc.**

An ALLY of quinine—quinine CHECKS the Malarial Chill, Fucus Marina ELIMINATES the Malarial CAUSE; and thus prevents the recurrence of the Chill *after* it has been *checked* by quinine.

An INVALUABLE REMEDY in the treatment of Phthisis—it arrests the decay of lung tissue, diminishes the fever, lessens the cough, abates the soreness in the lungs, improves the appetite, and impedes the progressive emaciation.

DOSE.—One Teaspoonful IN WATER, four times a day.

CHIONIA FROM CHIONANTHUS.

Uses: Biliousness, Jaundice, Dyspepsia, Constipation, and all Diseases Caused by Hepatic Torpor.

CHIONIA stimulates the Liver and restores it to a healthy condition, without debilitating the system by Catharsis; does not purge, per se, but under its use the Liver and Bowels gradually resume their normal functions.

DOSE.—One Fluid Drachm three times a day.

PEACOCK CHEMICAL CO., ST. LOUIS.

STRONTIUM, McK. & R.

Absolutely Free from Barium.

INDICATED IN

RHEUMATISM, EPILEPSY, INDIGESTION, BRIGHT'S DISEASE

AND IN THE PLACE OF THE

BROMIDE OF POTASSIUM,

THAN WHICH IT IS BETTER TOLERATED EVEN IN HIGH DOSES.

M. De Quatrefages.

Last July, M. LABORDE reported to *Societe de Biologie*, July 4, 1891, that he had found, contrary to the general opinion, that the salts of strontium might be safely employed, were beneficial to the animal economy, and that weight was increased under their use.

Some time after this report, July 28th, MM. G. SEE and CONSTANTIN PAUL stated before the *Academie de Medecine* that they had employed the bromide and lactate of strontium in rheumatism and Bright's disease, respectively, and could confirm the results of M. LABORDE in regard to the innocuousness and beneficial effects of the drug.

October 28th, M. DUJARDIN-BEAUMETZ, before the *Societe de Therapeutique* stated that he had obtained very good results in Bright's disease by the use of the lactate of strontium; that its action on the digestive functions was very favorable.

November 11th, MM. CONSTANTIN PAUL and DUJARDIN-BEAUMETZ made a further communication to the same society, and stated that they had still further used the lactate and bromide salts, and found them perfectly tolerated even in high doses.

M. FERE found the bromide of strontium of efficacy in in the treatment of epilepsy in the place of the potassium salt. He also found by numerous experiments that the toxicity of bromide of strontium, when given by intravenous injection, was far below that of the bromide of potassium.

All the authors insist on the necessity for a perfectly pure salt, one absolutely free from the presence of barium, such as those now offered to the medical profession, in the form of syrup and solution by McKesson & Robbins.

McK. & R. SYRUP OR SOLUTION OF LACTATE OF STRONTIUM, C. P.

McK. & R. SYRUP OR SOLUTION OF BROMIDE OF STRONTIUM, C. P.

In Original Pound Bottles,

Containing 60 grains to the ounce—7½ grains to the teaspoonful.

DOSE: One to two teaspoonfuls four to eight times a day.

LITERATURE SENT ON REQUEST.

DIURETIN-KNOLL IN INFANTILE PRACTICE.

BY DR. R. DEMME.

ACCORDING to the observations of Dr. R. Demme, Professor of Pædiatrics to the Faculty of Medicine of Berne, diuretin may be administered in the daily dose of ·50 to 1.50 grammes (7½ to 22 grains) to children of from two to five years old, and in daily doses of 22 to 45 grains in children of six to ten years. In infants less than a year old the drug is contra-indicated, as it easily provokes gastro-intestinal irritation in these young patients.

Care should be taken in prescribing diuretin, as it is liable to be decomposed by certain substances. M. Demme recommends the following:

Diuretin	gr. xxij
Distilled water	oz. iij
Brandy	gtt. x
Sugar	grs. xl

M. Sig. To be taken in the course of the twenty-four hours in doses of one tablespoonful.

Dr. Demme's observations have convinced him that diuretin is a good diuretic for children, exempt for the most part of all unpleasant influence, and probably acting on the renal epithelium.

Under the influence of diuretin, the dropsy of scarlatinal nephritis disappeared more quickly than by the action of any other medicament. It suppresses very rapidly the anasarca and serous effusions in cases of mitral disease, when the compensation has been previously established by means of digitalis:

The diuretin was generally well supported, and it had no cumulative action. However, in one case of generalized dropsy in a child of ten years, suffering from amyloid degeneration of the liver, spleen, and kidneys, Dr. Demme has seen a morbilliform eruption with abundant diarrhœa, after the injection of 90 grains of diuretin in the space of four days.—*La Semaine Medicale*, Feb. 24, 1892.

SEND FOR COMPLETE NOTES.

THE COMPOUND STEARATES, McK. & R.

THE Compound Stearates, introduced recently by McKESSON & ROBBINS, are now presented to the Medical Profession at large with confidence, as powders which are remarkable for their mollescence when applied to anoint or protect diseased conditions of the skin and mucous membranes.

They are adhesive, and act as grateful vehicles in which drugs may be administered locally.

Desirable as adjuvants in insufflations and antipruritic as dusting powders, they can be used to cover and protect the surface of the skin without soiling the clothing, and offer a very profitable field for therapeutic investigation, where the frequently rancid oleates and ointments, or the ordinary soluble and non-adhesive dusting and other powders for the skin and mucous membrane are not desirable.

McK. & R. COMPOUND STEARATE INSUFFLATIONS.

McK. & R. COMPOUND STEARATE OF ZINC WITH BORIC ACID. (Zinci Stearas Co. cum Acid Boric.—McK. & R.)

Employed in catarrhal rhinitis with hypersecretion.

McK. & R. COMPOUND STEARATE OF ZINC WITH ARISTOL. (Zinci Stearas Co. cum Aristol. —McK. & R.)

In atrophic rhinitis and ozœna.

McK. & R. COMPOUND STEARATE OF ZINC AND BISMUTH SUBGALLATE. (Zinci Stearas Co. cum Bismuth. Subgall.—McK. & R.)

Especially after operations, and instead of iodoform.

McK. & COMPOUND STEARATE OF ZINC WITH BALSAM PERU. (Zinci Stearas Co. cum Balsam. Peruv.—McK. & R.)

In ulcerative tubercular laryngitis.

FULL LIST, CONTAINING OVER TWENTY OTHER COMPOUNDS, SENT FREE.

Lapactic Pills.

A combination introduced by us and found in practice to possess superior advantages over other similar formulas. The well known mild action of Aloin on the lower portion of the intestinal canal, and its power of stimulating the hepatic functions, is supplemented by the action of Ipecac as a stomachic tonic and by increasing the gastric secretions; the Belladonna acts specially upon the involuntary muscular fibres of the bowels, increasing peristalsis, diminishing the harshness, and at the same time increasing the effectiveness of the laxative. The general tonic effect of Strychnine upon the stomach and bowels and its direct action upon the sympathetic, make it a valuable addition in the permanent cure of **habitual constipation and atonic dyspepsia.**

Since we first called attention to our Lapactic Pills, some four years ago—publishing the composition of the same—a number of manufacturers have adopted the formula and have furnished these pills under the same name. Should Physicians fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints from physicians by letter), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term "LAPACTIC PILLS, S. & D.'S." when prescribing these pills.

SAMPLES WILL BE MAILED ON APPLICATION.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

—*Landois and Sterling.*

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.
—*Materia Medica and Therapeutics, Dr. Mitchell Bruce.*

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

—*Eustace Smith, M.D., F.R.C.S.*

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

ABOUT GAS TREATMENT.

We make and sell oxygen and nitrogen monoxide for therapeutic use, and we guarantee them pure They are put up in compact form. (A cylinder containing 100 gallons of nitrogen monoxide or 40 gallons of oxygen measures 12 inches in length, has a diameter of 3½ inches, and weighs 10½ lbs. A cylinder containing 450 gallons of nitrogen monoxide or 100 gallons of oxygen measures 25 inches in length, has a diameter of 4½ inches, and weighs 34 lbs.)

INSOMNIA. Dr. Allan McLane Hamilton states that nitrogen monoxide, N_2O (nitrous oxide of the old nomenclature) has no equal in the treatment of this difficulty.

MELANCHOLIA. A short course of nitrogen monoxide is said to change the face of nature for such patients.

ANÆMIA. Where iron is not tolerated or proves inefficient, the addition of oxygen or a combination of oxygen and nitrogen monoxide has proven very beneficial.

For those who should, but cannot, go from home for rest or a change of air, or for those who, from any cause fail to get air enough into their lungs, the inhalation of one or other of these gases, or both in combination, promises great benefit. The testimony is that in cases of

ASTHMA, more than fifty per cent. of the cases yield to oxygen treatment, others are very greatly relieved, and a very small per cent. are not improved.

INDIGESTION and CONSTIPATION are said to be greatly relieved and very often conquered by continued treatment.

A highly esteemed New York physician has used more than twenty thousand gallons of nitrogen monoxide in his private practice. The letters received from his patients, largely from those who were afflicted with nervous disorders, are enthusiastic in their testimony as to the benefit received.

Regular practitioners who are using gas treatment testify that when *pure* oxygen and *pure* nitrogen monoxide, or a mixture of these, is used, no therapeutic agents are more uniformly successful when intelligently prescribed.

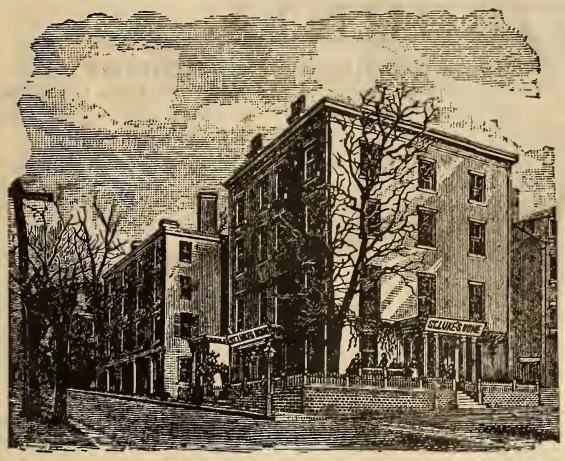
NEW-YORK: 6, Harrison Street (CH. TERTRAIS manager.)

SOLD BY HENRY C. BLAIR'S SONS, PHILADELPHIA.

PARTURITION.

Aletris Cordial (Rio), given in Teaspoonful doses every hour or two AFTER PARTURITION, is the best agent to prevent after-pains and hemorrhage. By its DIRECT tonic action on the uterus, it expels blood clots, closes the uterine sinuses, causes the womb to contract, and prevents subinvolution. In severe cases, it can be combined with ergot in the proportion of one ounce of fluid Ext. Ergot to three ounces Aletris Cordial. It is the experience of eminent practitioners, in all cases where ergot is indicated, that its action is rendered much more efficacious by combining it with Aletris Cordial in the proportions above stated.



St. Luke's Home for the Sick
Dr. Hunter McGuire's Private Hospital
Richmond, Virginia.

DR. HUNTER McGUIRE,

Richmond, Virginia, says:

"Whatever may be the published analysis of Spring No. 2, I know from the constant use of it personally, and in my practice during many years past, that the results obtained from the use of

BUFFALO LITHIA WATER

are far beyond those which would be warranted from the analysis given. I am of the opinion that it either contains some powerful remedial agent, as yet undiscovered by medical science, or

Its Elements are so Delicately Combined

in Nature's laboratory, that they defy the utmost skill of the chemist to solve the secret of their power."

"It has never failed me as a powerful Nerve Tonic. I sometimes think it must contain Hypophosphites of Lime and Soda."

Water in cases of one dozen half-gallon bottles, $5.00, f. o. b. here. For sale by all first-class druggists.

THOMAS F. GOODE, Proprietor

BUFFALO LITHIA SPRINGS, VA.

Dr. J. FEHR'S

"COMPOUND TALCUM" * * * * "BABY POWDER,"

THE

"HYGIENIC DERMAL POWDER"

FOR

INFANTS AND ADULTS.

Introduced to the Medical and the Pharmaceutical professions by J. FEHR, in the year 1873.

COMPOSITION:—Silicate of Magnesia with Carbolic and Salicylic Acids.

PROPERTIES:—Antiseptic, Antizymotic, and Disinfectant.

Useful as a **GENERAL SPRINKLING POWDER,** with positive Hygienic, Prophylactic, and Therapeutic properties.

GOOD IN ALL AFFECTIONS OF THE SKIN.

PER BOX, PLAIN, 25 Cents; PERFUMED, 50 Cents.
PER DOZ., PLAIN, $1.75; PERFUMED, $3.50.

SOLD BY THE DRUG TRADE GENERALLY.

JULIUS FEHR, M.D.,

Ancient Pharmacist, HOBOKEN, N. J.

Only advertised in Medical and Pharmaceutical prints.

DIOVIBURNIA

UTERINE TONIC, ANTISPASMODIC AND ANODYNE.

A reliable and trustworthy remedy for the relief of Dysmenorrhœa, Amenorrhœa, Menorrhagia Leucorrhœa, Subinvolution, THREATENED ABORTION, Vomiting in Pregnancy and Chlorosis; directing its action to the entire uterine system as a general tonic and antispasmodic.

FORMULA.

Every ounce contains 3-4 dram each of the fluid extracts: Viburnum Prunifolium, Viburnum Opulus, Dioscorea Villosa, Aletris Farinosa, Helonias Dioica, Mitchella Repens, Caulophyllum Thalictroides, Scutellaria Lateriflora.

DOSE.—For adults, a desertspoonful to a tablespoonful three times a day, after meals. In urgent cases, where there is much pain, dose may be given every hour or two, ALWAYS IN HOT WATER.

Jno. B. Johnson, M. D., Professor of the Principles and Practice of Medicine, St. Louis Medical College.

ST. LOUIS, June 20, '88.

I very cheerfully give my testimony to the virtues of a combination of vegetable remedies prepared by a well-known and able pharmacist of this city, and known as DIOVIBURNIA, the component parts of which are well known to any and all physicians who desire to know the same, and therefore have no relation to proprietary or quack remedies. I have employed this medicine in cases of dysmonorrhœa, suppression of the catemania and in excessive leucorrhœa, and have been much pleased with its use. I do not think its claims (as set forth in the circular accompanying it) to be at all excessive. I recommend its trial to all who are willing to trust to its efficacy, believing it will give satisfaction. Respectfully,

Jno. B. Johnson

L. Ch. Boisliniere, M. D., Prof. of Obstetrics, St. Louis Medical College. ST. LOUIS, June 18, 1888.

I have given DIOVIBURNIA a fair trial and found it useful as an uterine tonic and antispasmodic, relieving the pains of dysmenorrhœa, and regulator of the uterine functions. I feel authorized to give this recommendation of DIOVIBURNIA, as it is neither a patented nor a secret medicine, the formula of which have been communicated freely to the medical profession.

L Ch. Boisliniere M.D.

H. Tuholske, M. D., Professor Clinical Surgery and Surgical Pathology, Missouri Medical College; also Post-Graduate School of St. Louis. ST. LOUIS, June 23, 1888.

I have used DIOVIBURNIA quite a number of times—sufficiently frequently to satisfy myself of its merits. It is of unquestionable benefit in painful dysmenorrhœa; it possesses antispasmodic properties which seem especially to be exerted on the uterus.

Wm. H. Tuholske

To any physician, unacquainted with the medicinal effect of DIOVIBURNIA, we will mail pamphlet containing full information, suggestions, commendations of some of our most prominent professors and various methods of treatment; also a variety of valuable prescriptions that have been thoroughly tested in an active practice, or to physicians desiring to try our preparation, and who will pay express charges, we will send on application a sample bottle free.

DIOS CHEMICAL CO., ST. LOUIS, MO., U. S. A.

VACCINE MATTER.

For the accommodation of our Subscribers, we will supply both Bovine and Humanized Vaccine Virus.

Guaranteed to be fresh and in every respect first class.

PRICES:

Bovine Crusts, - - -	$1 50 each
Bovine Points or Quills, -	1.00 a dozen.
Humanized Crusts, - -	1.00, small.
Humanized Crusts, - -	2.00, large.

The Humanized Crusts are warranted to be from typical cases, and in every instance from healthy children, with unquestionable family histories.

PLEASE ACCOMPANY THE ORDER WITH THE MONEY.

Scherff's Syrup of Hydriodic Acid.

A PERMANENT UNALTERABLE PREPARATION.

NON-IRRITANT. **PALATABLE.** **EFFICIENT**

Each fluid ounce of this Syrup represents the equivalent of 6.72 grains of absolute Hydroidic Acid. Particular stress is laid on the one great superiority: this Syrup **will not decompose**, and the danger (so common to other like preparations) of administering a preparation of **free iodine**, is absolutely avoided.

Descriptive Pamphlets and Clinical Reports mailed on request.

WESTERN PENNSYLVANIA MEDICAL COLLEGE
CITY OF PITTSBURGH.
SESSIONS OF 1892.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. MCKENNAN, 810 Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Ave., Pittsburg.

The Baltimore Medical College.

PRELIMINARY FALL COURSE begins Sept. 1, 1891.
REGULAR WINTER COURSE begins October 1, 1891.

Excellent Teaching Facilities, Capacious Hospital, Large Clinics.

403 N. Exeter St., Baltimore, Md.

WALNUT LODGE HOSPITAL,
HARTFORD, CONNECTICUT.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish Bath, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefitted from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M. D.,
Sup't Walnut Lodge, Hartford, Conn.

DR. MASSEY'S
PRIVATE SANATORIUM.

Presenting the comforts of an elegant private residence, this institution is specially equipped for the use of electricity and allied remedial measures in the diseases of women and in diseases of the nervous system. For particulars address

Prickly Heat, Chafing, Dandruff,

Odors from Perspiration, etc. Speedy Relief by Using

Packer's Tar Soap

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

NERVOUS EXHAUSTION.

Horsford's Acid Phosphate.

Recommended as a restorative in all cases where the nervous system has been reduced below the normal standard, by overwork, as found in brain-workers, professional men, teachers, students, etc., in debility from seminal losses, dyspepsia of nervous origin, insomnia where the nervous system suffers.

It is readily assimilated and promotes digestion.

Dr. B. H. Boyd, Lafayette, Ind., says: "I have used it in several cases of nervous exhaustion, with uniformly good results.

Send for descriptive circular. Physicians who wish to test it will be furnished a bottle on application, without expense, except express charges.

Prepared under direction of Prof. E. N. Horsford, by the

RUMFORD CHEMICAL WORKS, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION:—Be sure the word "Horsford's" is printed on the label. All others are spurious. Never sold in Bulk.

"CURIOUS QUESTIONS."

An Encyclopaedia of the Rare and Curious.

Third Improved Edition Now Ready.

"Curious Questions" fills a niche wholly its own. Its mission is to tell you hundreds of things that you ought to know, and don't; to enlarge your conversational powers; to brighten your intellect, and lead you to further research in the best channels of thought, and to keep you from exposing your ignorance on many questions of daily recurrence.

Do not think you are too wise to profit by it, when Rev. Dr. Andrew Preston Peabody, of Harvard University, says of "Curious Questions:"

> **"I find that some of the questions are such as I could not have answered, or have known where to look for their answers. Such a book will be of inestimable service and value to any intelligent person, young or old."**

The new de luxe editions (25 full-page illustrations) are unexcelled for presentations. Prices, $4.00, $6.00 and $8.00 a set.

Sold by subscription through our regularly authorized solicitors, or supplied direct by the publishers. Illustrated descriptive catalogue and sample pages free. *Agents wanted.* Address the sole publishers,

Keystone Publishing Company,

Eighth and Locust Streets, Philadelphia, Pa.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{60}$ gr.), Atropiæ Sulph. ($\frac{1}{200}$ gr.), Codeia ($\frac{1}{50}$ gr.), Antimony Tart. $\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis. fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{60}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

To the Medical Profession.

During the past seven years we have been laboring assiduously to produce *Infant Foods* eady for use that would closely resemble healthy human milk. It has not been any easy task, as every physician knows who has taken a special interest in the subject. We have spared neither labor or expense to accomplish this object, which will be demonstrated to any Physician who will visit our factory. We have met the more recent demand for a *sterilized Food for Infants* by an expensive change in our machinery, under the supervision of the most eminent Bacteriologists in the country. This sterilization has been accomplished without rendering the casein of the milk less digestible, as is invariably done with the patented sterilizers in use.

It also insures, with the hermetically sealed cans, their perfect keeping qualities.

We do not think it possible that any *Infant Food* will ever be prepared that will excel **LACTO-PREPARATA** (an all milk food) for the feeding of young infants, and **CARNRICK'S FOOD** for their nourishment during the latter part of the nursing period. All other *Infant Foods* in the market are composed entirely of cereals; or they contain so little milk (about 8 per cent.) that it is a misnomer to call them Milk Foods. If such foods are used alone, the child will not be properly nourished, its flesh will be flabby, and it will quickly succumb to disease, because they are deficient in albuminoid constituents.

Send for circulars and samples.

KUMYSGEN

Make Your Own KUMYSS in one Minute.

A Product of Pure, Sweet Milk.

What is Kumysgen?

It is *Kumyss* in a dry form, containing all the constituents of the best *Kumyss*, and requires only the addition of water to produce an article superior in digestibility and palatability to the old form of *Kumyss*.

It is the *Ideal Food* in all cases where nutrition is an important factor, and digestion is feeble

When all other Foods fail try **Kumysgen**, but it is better to try it in the beginning and save time and strength.

Kumysgen is the only preparation of *Kumyss* that will keep. All liquid preparations of *Kumyss* will keep but a short time, and are constantly changing in the bottle, unless some deleterious preservative is used.

Kumyss made from **Kumysgen** is far more palatable, easier digested and 35 per cent. less expensive than the old Style **Kumyss.**

Our **Syphon Kumysgen Bottles** allow *Kumyss* to be drawn without loss of contents. One in every three bottles are *siphons*, containing same quantity of KUMYSGEN as the others. Send for samples and descriptive circulars.

Manufactured Only by

REED & CARNRICK, New York.

Much benefit has resulted from the universal discussion of tuberculosis brought out by announcements, in recent years, of proposed specific cures of the disease. Among other things, it has been instrumental in convincing the thoughtful members of the profession that this is not necessarily a fatal and incurable disease.

Phthisis pulmonalis is, preeminently, an insidious disease. In this fact lies the explanation of the prevalent views as to its absolute fatality. There is no distinct time when health ends and disease begins. Yet there comes a time when the patient and his friends awaken to a realization of the fact that he is a victim of pulmonary tuberculosis. By this time the coarse and graver lesions have become established that make the condition evident to all who observe, and the patient goes rapidly down to death. But long before this were the incipient conditions, which are now recognized by the more scientific means of accurate diagnosis developed in recent years. During this period the disease is quite amenable to curative treatment.

Another benefit produced by this general discussion has been the final acknowledgment of the value of a method of treatment which, although old, and established in the minds of a few advanced practitioners, yet was not hitherto sufficiently known to the general masses of the profession. This is the specific treatment by the use of the hypophosphites of lime and soda.

A few words as to the rationale of this cure will, we think, place it in a clear light.

It has been observed by the highest authority, that sufferers from rheumatism or gout are particularly immune from phthisis. This has been found to be a peculiarity of those possessing the arthritic diathesis, or who are subject to general fibrosis. Loomis observes that of 70 cases of cured phthisis coming under his personal observation, 52 presented well marked evidences of general fibrosis. Trudeau reports 21 cases of recovery in which arthritic fibrosis existed, either in the parents or the patients themselves. Now, a patient who has not the lithemic or arthritic diathesis, when attacked by tuberculosis, must be placed under such artificial conditions as favor the formation of calcareous deposits in all diseased areas, the throwing up of a fibrinous wall around the tubercular focus, and thus secure a complete limitation of the disease. This has been abundantly proven to be the result of the use of the hypophosphites of lime and soda. This may be regarded as the production, to a limited extent, of an artificial lithemic diathesis—a conservative fibrosis. Thus the disease is at once stopped in its ravages, and by the very process sought for by other methods of treatment—the cicatrization of cavities and the calcification of diseased foci and their complete isolation from the neighboring sound tissue by a protecting fibrinous wall, or capsule.

Thus we see the chemical researches of Churchill verified by modern pathology, and his conclusions finally accepted as true.

It now remains for you to be sure that you get the pure hypophosphites. Prescribe McArthur's Syrup, which consists of the chemically pure hypophosphites of lime and soda, incorporated in a wholesome syrup. A sample will be sent you, free, you paying express charges. Address, The McArthur Hypophosphite Co., Boston, Mass.

Before the Medical Profession almost 30 years, and invariably gives uniform satisfaction.

We respectfully ask thorough testing, strictly UPON ITS OWN MERITS, to prove the exceptionally high reputation it holds.

Owing to correspondence on the subject, we regret being compelled to caution that inferior Coca preparations are frequently substituted upon patients, and as we do not advertise to the public, physicians will kindly be particular to insist on

VIN MARIANI

FORMULA: "VIN MARIANI" is the concentrated extractive of the fresh leaf Erythroxylon Coca, blended with a special quality of Bordeaux Wine. Each half-litre bottle contains the medicinal properties of two ounces of selected leaves.

DOSE: Usually a wine-glassful three times a day, half an hour before meals or immediately after. Increased or diminished, at discretion of the Physician.

INDICATED: As a pleasant, mild stimulant, without unpleasant reaction; a diffusible tonic; a strengthener of the Nervous system, with especial good effect on the digestive and respiratory organs; convalescence and enfeebled conditions. Effect is immediate and lasting.

NOTE: Extensively used in Hospitals, Cliniques and private practice, its merits are recorded by the medical press of Europe and America. Uniform excellence and recognized efficacy won the absolute confidence and esteem of every physician who subjected it to test, and it may be affirmed that wherever Coca is indicated "Vin Mariani" invariably receives the preference.

The continual increasing demand is a clear proof of the reliance placed in "Vin Mariani" by the Medical Profession, through whom it has been popularized.

WE WILL BE HAPPY TO FORWARD, POST-PAID, TO ANY PHYSICIAN MENTIONING THIS JOURNAL, A HANDSOMELY BOUND BOOK, DETAILING FORMLAE, DOSE, PHYSIOLOGICAL EFFECTS AND THERAPEUTIC INDICATIONS OF COCA, AS ALSO OTHER INTERESTING READING MATTER CONNECTED WITH THE SUBJECT BY EUROPEAN AND AMERICAN OBSERVERS.

Definite Chemical Products

OF SUPERIOR THERAPEUTIC VALUE.

CHLORALAMID (Schering).

HYPNOTIC.—Dose, 15 to 45 Grains. A full descriptive pamphlet (64 pages) supplied on request.

PIPERAZIN (Schering).

URIC ACID SOLVENT. Will dissolve at least twelve times more uric acid than lithia. Dose, 15 Grains per day, with continuous treatment. Pamphlet (32 pages) sent on request.

PHENOCOLL (Schering).

ANTIPYRETIC, ANTI-RHEUMATIC, ANALGESIC, NERVINE. "The superior of all coal-tar antipyretics previously introduced." Dose, 7½ to 15 grains. Descriptive pamphlet (40 pages) supplied on request.

THIOL (Riedel.)

A synthetically produced body, chemically and therapeutically identical with ICHTHYOL, and superior in being odorless and non-toxic. Supplied in powder and liquid form. Circular reprint of clinical reports sent on request.

LYSOL.

"THE IDEAL DISINFECTANT." The latest and most perfect of the cresol-derivative antiseptic and disinfectant agents. A 16-page monograph mailed on request.

Our motto "DEFINITE CHEMICAL PRODUCTS" has proved a happy hit, and it bids fair to become at once a catch phrase and the standard by which new remedies will be gauged.

Physicians are invited to write us whenever desirous of obtaining information regarding any new remedies. We will promptly answer all such inquiries.

A Sample Copy of "NOTES ON NEW REMEDIES" mailed on request.

LEHN & FINK,

IMPORTERS, WHOLESALE DRUGGISTS AND MANUFACTURING CHEMISTS,

ADDRESS: P. O. BOX 3114. **NEW YORK.** OFFICE: 128 WILLIAM STREET.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK:)

Each fluid drachm represents 15 grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium and Lithium.

USES: EPILEPSY, UTERINE CONGESTION, HEADACHE, AND ALL CONGESTIVE, CONVULSIVE AND REFLEX NEUROSES.

This preparation produces results, which can not be obtained from the use of commercial Bromide substitutes.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK.)

From Sea Weed. **Uses: Malaria, Phthisis, Etc.**

An ALLY of quinine—quinine CHECKS the Malarial Chill, Fucus Marina ELIMINATES the Malarial CAUSE; and thus prevents the recurrence of the Chill *after* it has been *checked* by quinine.

An INVALUABLE REMEDY in the treatment of Phthisis—it arrests the decay of lung tissue, diminishes the fever, lessens the cough, abates the soreness in the lungs, improves the appetite, and impedes the progressive emaciation.

DOSE.—One Teaspoonful IN WATER, four times a day.

CHIONIA FROM CHIONANTHUS.

Uses: Biliousness, Jaundice, Dyspepsia, Constipation, and all Diseases Caused by Hepatic Torpor.

CHIONIA stimulates the Liver and restores it to a healthy condition, without debilitating the system by Catharsis; does not purge, per se, but under its use the Liver and Bowels gradually resume their normal functions.

DOSE.—One Fluid Drachm three times a day.

PEACOCK CHEMICAL CO., ST. LOUIS.

STRONTIUM, McK. & R.

Absolutely Free from Barium.

INDICATED IN

RHEUMATISM, EPILEPSY, INDIGESTION, BRIGHT'S DISEASE

AND IN THE PLACE OF THE

BROMIDE OF POTASSIUM,

THAN WHICH IT IS BETTER TOLERATED EVEN IN HIGH DOSES.

Geromorphism

Last July, M. LABORDE reported to *Societe de Biologie*, July 4, 1891, that he had found, contrary to the general opinion, that the salts of strontium might be safely employed, were beneficial to the animal economy, and that weight was increased under their use.

Some time after this report, July 28th, MM. G. SEE and CONSTANTIN PAUL stated before the *Academie de Medecine* that they had employed the bromide and lactate of strontium in rheumatism and Bright's disease, respectively, and could confirm the results of M. LABORDE in regard to the innocuousness and beneficial effects of the drug.

October 28th, M. DUJARDIN-BEAUMETZ, before the *Societe de Therapeutique* stated that he had obtained very good results in Bright's disease by the use of the lactate of strontium; that its action on the digestive functions was very favorable.

November 11th, MM. CONSTANTIN PAUL and DUJARDIN-BEAUMETZ made a further communication to the same society, and stated that they had still further used the lactate and bromide salts, and found them perfectly tolerated even in high doses.

M. FERE found the bromide of strontium of efficacy in in the treatment of epilepsy in the place of the potassium salt. He also found by numerous experiments that the toxicity of bromide of strontium, when given by intravenous injection, was far below that of the bromide of potassium.

All the authors insist on the necessity for a perfectly pure salt, one absolutely free from the presence of barium, such as those now offered to the medical profession, in the form of syrup and solution by McKesson & Robbins.

McK. & R. SYRUP OR SOLUTION OF LACTATE OF STRONTIUM, C. P.

McK. & R. SYRUP OR SOLUTION OF BROMIDE OF STRONTIUM, C. P.

In Original Pound Bottles,

Containing 60 grains to the ounce—7½ grains to the teaspoonful.

DOSE: One to two teaspoonfuls four to eight times a day.

LITERATURE SENT ON REQUEST.

DIURETIN-KNOLL IN INFANTILE PRACTICE.

BY DR. R. DEMME.

ACCORDING to the observations of Dr. R Demme, Professor of Pædiatrics to the Faculty of Medicine of Berne, diuretin may be administered in the daily dose of ·50 to 1.50 grammes (7½ to 22 grains) to children of from two to five years old, and in daily doses of 22 to 45 grains in children of six to ten years. In infants less than a year old the drug is contra-indicated, as it easily provokes gastro-intestinal irritation in these young patients.

Care should be taken in prescribing diuretin, as it is liable to be decomposed by certain substances. M. Demme recommends the following:

Diuretin	gr. xxij
Distilled water	oz. iij
Brandy	gtt. x
Sugar	grs. xl

M. Sig. To be taken in the course of the twenty-four hours in doses of one tablespoonful.

Dr. Demme's observations have convinced him that diuretin is a good diuretic for children, exempt for the most part of all unpleasant influence, and probably acting on the renal epithelium.

Under the influence of diuretin, the dropsy of scarlatinal nephritis disappeared more quickly than by the action of any other medicament. It suppresses very rapidly the anasarca and serous effusions in cases of mitral disease, when the compensation has been previously established by means of digitalis:

The diuretin was generally well supported, and it had no cumulative action. However, in one case of generalized dropsy in a child of ten years, suffering from amyloid degeneration of the liver, spleen, and kidneys, Dr. Demme has seen a morbilliform eruption with abundant diarrhœa, after the injection of 90 grains of diuretin in the space of four days.—*La Semaine Medicale*, Feb. 24, 1892.

SEND FOR COMPLETE NOTES.

THE COMPOUND STEARATES, McK. & R.

THE Compound Stearates, introduced recently by McKESSON & ROBBINS, are now presented to the Medical Profession at large with confidence, as powders which are remarkable for their mollescence when applied to anoint or protect diseased conditions of the skin and mucous membranes.

They are adhesive, and act as grateful vehicles in which drugs may be administered locally.

Desirable as adjuvants in insufflations and antipruritic as dusting powders, they can be used to cover and protect the surface of the skin without soiling the clothing, and offer a very profitable field for therapeutic investigation, where the frequently rancid oleates and ointments, or the ordinary soluble and non-adhesive dusting and other powders for the skin and mucous membrane are not desirable.

McK. & R. COMPOUND STEARATE INSUFFLATIONS.

McK. & R. COMPOUND STEARATE OF ZINC WITH BORIC ACID. (Zinci Stearas Co. cum Acid Boric.—McK. & R.)

Employed in catarrhal rhinitis with hypersecretion.

McK. & R. COMPOUND STEARATE OF ZINC WITH ARISTOL. (Zinci Stearas Co. cum Aristol. —McK. & R.)

In atrophic rhinitis and ozœna.

McK. & R. COMPOUND STEARATE OF ZINC AND BISMUTH SUBGALLATE (Zinci Stearas Co. cum Bismuth. Subgall.—McK. & R.)

Especially after operations, and instead of iodoform.

McK. & R. COMPOUND STEARATE OF ZINC WITH BALSAM PERU (Zinci Stearas Co. cum Balsam. Peruv.—McK. & R.)

In ulcerative tubercular laryngitis.

FULL LIST, CONTAINING OVER TWENTY OTHER COMPOUNDS, SENT FREE.

Lapactic Pills.

A combination introduced by us and found in practice to possess superior advantages over other similar formulas. The well known mild action of Aloin on the lower portion of the intestinal canal, and its power of stimulating the hepatic functions, is supplemented by the action of Ipecac as a stomachic tonic and by increasing the gastric secretions; the Belladonna acts specially upon the involuntary muscular fibres of the bowels, increasing peristalsis, diminishing the harshness, and at the same time increasing the effectiveness of the laxative. The general tonic effect of Strychnine upon the stomach and bowels and its direct action upon the sympathetic, make it a valuable addition in the permanent cure of **habitual constipation and atonic dyspepsia.**

Since we first called attention to our Lapactic Pills, some four years ago—publishing the composition of the same—a number of manufacturers have adopted the formula and have furnished these pills under the same name. Should Physicians fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints from physicians by letter), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term "LAPACTIC PILLS, S. & D.'S." when prescribing these pills.

SAMPLES WILL BE MAILED ON APPLICATION.

SPECIAL FORMULAS MADE TO ORDER.

WHEN PURCHASING, PLEASE SPECIFY S. & D's.

Sharp & Dohme,

MANUFACTURING CHEMISTS,

Established 1860. **Baltimore, Md.**

"As a disinfectant for all the sanitary needs of the sick-room, Platt's Chlorides is especially recommended."

Endorsed by thousands of Physicians, and having commanded a large sale for many years, Platt's Chlorides can readily be procured from almost any druggist in any city, town or village in the United States. It is an odorless liquid, and is sold in quart bottles only.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

— Landois and Sterling.

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

— Materia Medica and Therapeutics, Dr. Mitchell Bruce.

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

— Eustace Smith, M.D., F.R.C.S.

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

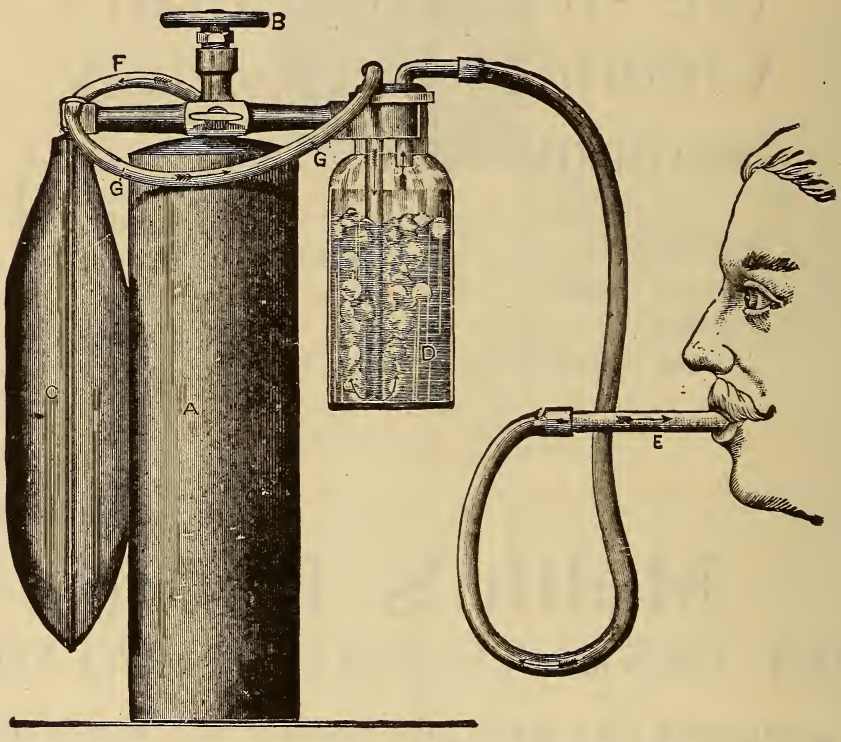
THE DOLIBER-GOODALE CO.,

BOSTON, MASS.

INHALATION APPARATUS

FOR

THE THERAPEUTIC ADMINISTRATION OF OXYGEN.



In the treatment of lung troubles by Oxygen its exhibition by inhalation is preferred. The apparatus herewith shown is a modification of the Nitrous Oxide apparatus which we have supplied for many years. It is made in the best manner throughout, and is the outcome of years of experience in the manufacture of gas apparatus. It will be found to meet all the requirements.

We supply the gas in two sizes of cylinders, containing respectively forty and one hundred gallons, either pure Oxygen, or a mixture of Oxygen and Nitrous Oxide in definite proportions of 20 per cent., and forty per cent. of Nitrous Oxide.

Whether pure or mixed the gas is sold at the uniform price of 5 cents a gallon. The cost of the cylinders will be refunded on their return empty with the valves in good condition. Full description of Inhalation and Enema apparatuses with directions for use accompany each apparatus, or will be supplied on application.

PRICES.

Inhalation Apparatus	$5.00
Cylinder, 40 gallons' capacity	6.00
40 gallons Gas, either pure Oxygen or mixed Oxygen and Nitrous Oxide	2.00
Complete Apparatus, Cylinder, and 40 gallons Gas	$13.00
Inhalation Apparatus	$5.00
Cylinder, 100 gallons' capacity	15.00
100 gallons Gas, either pure or mixed	5.00
Complete Apparatus, Cylinder, and 100 gallons Gas	$25.00

THE S. S. WHITE DENTAL MFG. CO.

PHILADELPHIA, NEW YORK, BOSTON, CHICAGO, BROOKLYN, ATLANTA

ESTABLISHED 1855.

DR. STRONG'S SANITARIUM,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for TREATMENT, CHANGE, REST, OR RECREATION.

And places them under well-regulated hygienic conditions so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it has a Sun Parlor and Promenade on the roof. Turkish, Roman, Sulphur, Electro-Thermal, the French Douche, and all Hydropathic Baths; Vacuum Treatment, Swedish Movements, Massage, Pneumatic Cabinet Inhalations of Medicated, Compressed, and Rarefied Air, Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, with elevator, electric bells, open fire-places, steam, and thorough ventilation. With cheering influences and avoiding the pressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in winter tobogganing, elegant sleighing, etc.; in Summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience.

A liberal discount to physicians and their families for board or treatment. For illustrated Circular, Address:

NERVES.

Suppose we find the patient a little giddy upon rising in the morning. This means that the nerves do not have perfect control of the muscular system. As a test for this, direct the patient to stand with his feet close together, shut his eyes, and if the tendency is to reel, it is another evidence of lowered nerve tone. Or, stand with the arms extended, shut the eyes, and then try to bring the tips of his forefingers together in front of him. If they pass by or meet imperfectly, it shows the same thing.

Or, the person may not be able to think as quickly as he should. To test this, ask the patient three simple questions in rapid succession, as, Where were you just before you came into this room? What were you doing? How long did you remain? The rapidity with which the answers are given indicate the rapidity of brain action.

All these things show that it is of the utmost importance that the nervous system should be kept in tone. Otherwise, every part of the body languishes.

This condition indicates the use of Celerina (Rio) in teaspoonful doses four times a day, *to increase the nerve capital of your patient.*

PREFERABLE TO CORROSIVE SUBLIMATE

Because it is not poisonous
Because it possesses superior antiseptic properties
Because it forms no insoluble compounds with the animal fluids
Because it produces no pain or irritation even of abraded surfaces

For use in all cases and under all circumstances where CORROSIVE SUBLIMATE has hitherto been employed

APPLICABLE WHEREVER AN ANTISEPTIC IRRIGATION or Lotion is indicated and as a Prophylactic and Disinfectant under any and all circumstances

CHLORO PHENIQUE

PERFECTLY MISCIBLE WITH WATER

For washing out the cavities, or THE BLADDER IN CHRONIC CYSTITIS it has no equal

A Non-Irritant Non-Poisonous Antiseptic and Parasiticide of Great Energy

In FOUL WOUNDS, ABSCESSES, SUPPURATING SINUSES, BUBOES, etc., CHLORO-PHÉNIQUE is used to cleanse and to prepare the way for "Campho-Phénique," which latter as a permanent dressing, subdues pain, prevents the formation of pus, and hastens healing in a remarkable manner

"COMPOUND TALCUM" * * * * "BABY POWDER,"

THE

"HYGIENIC DERMAL POWDER"

FOR

INFANTS AND ADULTS.

Introduced to the Medical and the Pharmaceutical professions by J. FEHR, in the year 1873.

COMPOSITION:—Silicate of Magnesia with Carbolic and Salicylic Acids.

PROPERTIES:—Antiseptic, Antizymotic, and Disinfectant.

Useful as a **GENERAL SPRINKLING POWDER,** with positive Hygienic, Prophylactic, and Therapeutic properties.

GOOD IN ALL AFFECTIONS OF THE SKIN.

PER BOX, PLAIN, 25 Cents; PERFUMED, 50 Cents.
PER DOZ., PLAIN, $1.75; PERFUMED, $3.50.

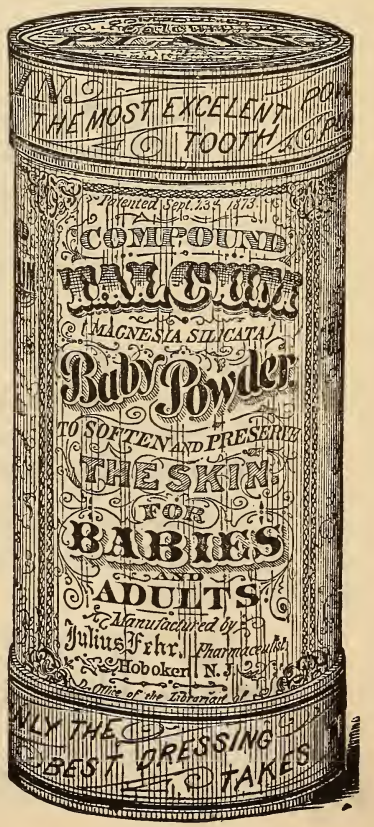
SOLD BY THE DRUG TRADE GENERALLY.

MANUFACTURER:

JULIUS FEHR, M.D.,

Ancient Pharmacist, HOBOKEN, N. J.

Only advertised in Medical and Pharmaceutical prints.



NEUROSINE

THE MOST POWERFUL NEUROTIC ATTAINABLE

ANODYNE AND HYPNOTIC.

A most efficient and permanent preparation, **REMARKABLE** for its efficacy and **THERAPEUTIC EFFECTS** in the treatment of those **NERVOUS AFFECTIONS** and morbid conditions of the System which so often tax the skill of the Physician.

A RELIABLE AND TRUSTWORTHY REMEDY FOR THE RELIEF OF

HYSTERIA, EPILEPSY, NEURASTHENIA, MANIA, CHOREA, UTERINE CONGESTION, MAGRAINE, NEURALGIA, ALL CONVULSIVE AND REFLEX NEUROSES
THE REMEDY PAR EXCELLENCE IN DELIRIUM AND RESTLESSNESS OF FEVERS.

FORMULA.—Each fluid-drachm contains 5 grains each, C. P. Bromides of Potassium, Sodium and Ammonium 1-8 gr. Bromide Zinc, 1-64 gr. each of Ext. Belladonna and Cannabis Indica, 4 grains Ext. Lupuli and 5 minims fluid Ext. Cascara Sagrada, with Aromatic Elixirs.

DOSE:—From one teaspoonful to a tablespoonful, in water, three or more times daily as may be directed by the Physician.

To any physician, unacquainted with the medicinal effect of Neurosine, we will mail pamphlet contain full information, suggestions, and various methods of treatment; also a variety of valuable prescriptions that have been thorougly tested in active practice, or to physicians desiring to try our preparation, and who will pay express charges, we will send on application a sample bottle free.

WESTERN PENNSYLVANIA MEDICAL COLLEGE
CITY OF PITTSBURGH.
SESSIONS OF 1892.

The Regular Session begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The Spring Session embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. McKennan, 810 Penn Ave.

Business correspondence should be addressed to
Prof. W. J. Asdale, 2107 Penn Ave., Pittsburg.

The Baltimore Medical College.

Preliminary Fall Course begins Sept. 1, 1891.
Regular Winter Course begins October 1, 1891.

Excellent Teaching Facilities, Capacious Hospital, Large Clinics.

Prickly Heat, Chafing, Dandruff,

Odors from Perspiration, etc. Speedy Relief by Using

Packer's Tar Soap

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

AN IDEAL PEPSIN!

PHYSICIANS PRESCRIBE

P., D. & CO.'S

ASEPTIC PEPSIN.

Pepsins as heretofore known have left very much to be desired, most of them indicating by their odor the putrescent mucus and other objectionable constituents which must necessarily prove irritating, especially to the delicate stomach of an infant, invalid or dyspeptic.

We now supply a new and improved Pepsin Product (ASEPTIC PEPSIN, 1 to 4000, P., D. & Co.'s), in the full confidence that it will at once recommend itself to the favorable attention of the Medical Profession.

It is twice as active as any other pepsin now on the market, and by the process of manufacture which we pursue, is deprived of all septic constituents. This process renders it very palatable so that the most fastidious palate could not possibly object to its taste.

Samples and literature will gladly be supplied upon application.

MANUFACTURED ONLY BY

PARKE, DAVIS & COMPANY,

DETROIT, NEW YORK AND KANSAS CITY.

"CURIOUS QUESTIONS."

An Encyclopaedia of the Rare and Curious.

Third Improved Edition Now Ready.

"Curious Questions" fills a niche wholly its own. Its mission is to tell you hundreds of things that you ought to know, and don't; to enlarge your conversational powers; to brighten your intellect, and lead you to further research in the best channels of thought, and to keep you from exposing your ignorance on many questions of daily recurrence.

Do not think you are too wise to profit by it, when Rev. Dr. Andrew Preston Peabody, of Harvard University, says of "Curious Questions:"

> **"I find that some of the questions are such as I could not have answered, or have known where to look for their answers. Such a book will be of inestimable service and value to any intelligent person, young or old."**

The new de luxe editions (25 full-page illustrations) are unexcelled for presentations. Prices, $4.00, $6.00 and $8.00 a set.

Sold by subscription through our regularly authorized solicitors, or supplied direct by the publishers. Illustrated descriptive catalogue and sample pages free. *Agents wanted.* Address the sole publishers,

Keystone Publishing Company,

Eighth and Locust Streets, Philadelphia, Pa.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{50}$ gr.), Atropiæ Sulph. ($\frac{1}{100}$ gr.), Codeia ($\frac{1}{30}$ gr.), Antimony Tart. $\frac{1}{15}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis. fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{50}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen. lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

MANUFACTURERS OF PHYSICIANS' SPECIALTIES,

88 Maiden Lane, **New York City.**

DECLINED WITH THANKS!

The following correspondence explains itself:

LONDONDERRY LITHIA SPRING WATER CO., March 17, 1892.

GENTLEMEN:—Having used the LONDONDERRY quite extensively, and seeing *you advertise in lay journals which we cannot do, the code of ethics prohibiting it*, we thought to write you to inquire if a *favorable mention* from us might not be *used* by you in *connection* with a *small cut of our "Home,"* mentioning in connection our location and class of cases received. Fraternally yours.

(Signed) ——— ——— ———

OUR REPLY!

DRS. ——— ———. NASHUA, N. H., March 19, 1892.

GENTLEMEN:—Your esteemed favor of the 17th inst. duly received and contents noted. We are happy to receive the confidence and compliments of all the medical fraternity, but fail to see how any good end can be served by publishing a cut of your well-known resort. As a question of "ethics," it would deceive no intelligent physician or layman. A testimonial carrying such *prima facie* evidence of the consideration for which it is given would be of no benefit to us and might injure you by demonstrating that your opinions, which are now counted very valuable, are not after all held so highly by yourselves.

We have never paid one penny for a professional or lay opinion of LONDONDERRY, nor, judging from the almost daily endorsements that we see in the medical and lay journals, and our enormous and rapidly increasing business, shall we be obliged to do so in the future. Trusting you will receive this in the spirit in which it is given, we are, Yours very truly,

LONDONDERRY LITHIA SPRING WATER CO.

N. B.—We refuse to publish the name of the above well-known Sanitarium but will give $1000.00 to any charity if we cannot prove the genuineness of this correspondence. L. L. S. W. CO.

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 67th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 21st of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Anatomy, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M. D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin October 1st, and continue until May. PRELIMINARY SESSION begins September 7th.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required Practical laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Bacteriology, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology is a part of the regular course. Special clinical facilities.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For announcement or information apply to

	$9.00

Nervous Diseases and Their Diagnosis

By H. C. WOOD, M. D., LL. D.,

Professor of Therapeutics and Nervous Diseases, University of Pennsylvania.
8vo., pp. 501, Cloth, $4.

It is invaluable as a work of diagnosis.—*Virginia Medical Monthly.*

It is at once a substantive contribution to neurology and a trustworthy guide to what has already been done in the subject.—*Practitioner.*

As a whole, the work is one which cannot fail to be of great service to the practicing physician.—*Medical and Surgical Reporter.*

The volume is a distinct help to the student, and is a necessary supplement to the systematic works on diseases of the nervous system.—*Boston Med. Surg. Jour.*

The author's originality is evident to every reader of his work; and we trust, for the advancement of knowledge, his readers will be many.—*New England Med. Gaz.*

This work fills a long-felt need in this department.—*Buffalo Med. Surg. Jour.*

Dr. Wood is an able clinician, and this makes his book valuable. His observations are practical and to the point and show careful study of a large number of cases which have fallen under his care.—*N. Y. Med. Jour.*

The honest effort of one who never writes without teaching and who always writes and teaches well.—*Journal of Insanity.*

To students and practitioners who have read other works this production will prove extremely valuable in time of need, to the former just before examination; to the latter in everyday practice.—*London Lancet.*

Not a compilation, but rather the record of independent opinions and investigations.—*Canadian Practitioner.*

The book is written in the characteristic vigorous style of its able and versatile author.—*American Practitioner.*

Lucid language, clear type, a full index, and, above all, the presentation of the late advances in this department of science, constitute the truly great attractions of this book.—*Albany Med. Annals.*

It is not until the volume has been carefully read, and perhaps re-read, that its true excellence begins to dawn upon the reader.—*Maryland Med. Journal.*

THE BEST FRENCH TONIC

Vin de Bugeaud

A TONIC AND NUTRITIVE WINE WITH CINCHONA AND COCOA

VIN DE BUGEAUD is prepared with the greatest care, with active substances of the very best quality, and chiefly with wild Bolivian Cinchona, the cultivated species being strictly discarded, and the proportions being precisely in accordance with the French pharmacopœa.

It is perfectly tolerated by the most delicate stomachs, owing to the emollient action of the Cocoa it contains, which favourably corrects the over exciting properties and the bitter taste of the Cinchona.

In preparing it, a full-bodied Spanish wine is employed, this wine being more than any other capable of dissolving the medicinal ingredients.

VIN DE BUGEAUD commends itself to the medical profession oth by its tonic and antiperiodic properties, and by the certainty nd continuity of its action in cases of

Anæmia, Chlorosis, Intermittent Fever, Chronic Diarrhœa, Gastralgia, Convalescences,

in a word to combat

Constitutional or Accidental Debility

no matter from what cause arising.

It is specially suitable for convalescents, debilitated children, delicate women and old persons enfeebled by age and infirmities.

VIN DE BUGEAUD has enjoyed since 1858 the high approbation of the New-York Academy of Medicine. Thousands of practitioners of all countries have spontaneously borne testimony to its efficacy.

Professionnal gentlemen are invited to apply for a copy of the pamphlet (sent free on demand) which contains, along with a few remarks on **VIN DE BUGEAUD** and the opinions of the French medical press on the subject, a number of the most recent testimonials.

VIN DE BUGEAUD may be obtained of all good Chemists and Druggists.

P. LEBEAULT & C^ie^

PARIS : 5, Rue Bourg-l'Abbé.

NEW-YORK : 6, Harrison Street.

CH. TERTRAIS manager.

Sold by Henry C. Blair's Sons, Philadelphia.

The only prominent Emulsion of Cod-Liver Oil introduced directly to the medical profession. It is advertised exclusively in medical journals.

HYDROLEINE.

(HYDRATED OIL.)

Produces rapid increase in Flesh and Strength.

FORMULA.—Each Dose contains:			
Pure Cod Liver Oil.....80 m. (drops)		Soda.....1-3 Grains.	
Distilled Water.....35 "		Salicylic Acid.....1-4 "	
Soluble Pancreatin..... 5 Grains.		Hyocholic Acid.....1-40 "	

Recommended and Prescribed by EMINENT PHYSICIANS Everywhere. It is pleasant to the Taste and acceptable to the most delicate Stomach.

IT IS ECONOMICAL IN USE AND CERTAIN IN RESULTS.

HYDROLEINE (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhuæ, but a hydro-pancreated preparation, containing acids and a small percentage of soda. Pancreatin is the digestive principle of fatty foods, and in the soluble form here used, readily converts the oleaginous material into assimilable matter, a change so necessary to the reparative process in all wasting diseases.

The following are some of the diseases in which HYDROLEINE is indicated:

Phthisis, Tuberculosis, Catarrh, Cough, Scrofula, Chlorosis, General Debility, etc.

TO BRAIN WORKERS of all classes, **HYDROLEINE** is invaluable, supplying as it does, the true brain-food, and being more easily assimilated by the digestive organs than any other emulsion.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," and "Consumption and Wasting Diseases," by two distinguished London physicians, which will be sent free on application.

SOLD BY DRUGGISTS GENERALLY.

C. N. CRITTENTON,

SOLE AGENT FOR THE UNITED STATES. 115 FULTON STREET, N. Y.

A Sample of Hydroleine will be sent free upon application, to any physician (enclosing business card) in the U. S.

Send for Book of Testimonials.

Why Thousands of Physicians Prescribe it.

Farbenfabriken vorm. Friedr. Bayer & Co.'s
Pharmaceutical Specialties

PHENACETINE=BAYER

Antipyretic
Analgesic, or
Anodyne

PHENACETINE-BAYER IS A TRUE AND DISTINCT ORGANIC DERIVATIVE, not a mechanical mixture. It is indicated in influenza (la grippe), in all fevers, with or without pain, rheumatism and rheumatoid maladies, neuralgia, bronchitis, phthisis, pertussis, and the gastralgias. Phenacetine-Bayer acts promptly, and is both safe and effective. It is supplied in ounces, tablets and pills.

SULFONAL=BAYER

Hypnotic
Antineurotic
Nerve Sedative

INSOMNIA OF ALL KINDS YIELDS PROMPTLY TO SULFONAL-BAYER. It is useful in simple insomnia and in the cerebral disturbances of insanity. It is a pure hypnotic, a safe and effective remedy, and it does not give rise to a drug habit. As its action is slower than that of the narcotics, it must be administered properly (*see pamphlet*). Sulfonal-Bayer is supplied in ounces, tablets and pills.

EUROPHEN

(A CRESOL=IODIDE IODOFORM SUBSTITUTE)

Antiseptic
Antisyphilitic
Local Stimulant

AS A SUBSTITUTE FOR IODOFORM, Europhen is winning an enviable place in therapeutics. It has a special value in specific lesions; while as a surgical dressing in ulceration, open wounds, and septic conditions of the cavities, it has given excellent results. It is supplied in ounces. Europhen-Aristol, a combined product consisting of equal parts of each medicament, is also supplied in ounces.

ARISTOL

(A THYMOL=IODIDE IODOFORM SUBSTITUTE)

Antisuppurative
Antiseptic
Cicatrisant

THE VALUE OF ARISTOL in all the morbid conditions formerly treated by iodoform is widely recognized. In all external traumatisms, in cavital lesions and in many of the dermatoses it has given very satisfactory results. As a surgical application, it is safe, inodorous and non-toxic. Aristol is supplied in ounces. Europhen-Aristol, a preparation consisting of equal parts of each medicament, is also supplied in ounces.

DESCRIPTIVE PAMPHLETS FORWARDED ON APPLICATION.

W. H. Schieffelin & Co., New York.

"COMING OUR WAY."

THE WM. S. MERRELL CHEMICAL CO., are the original, the largest and practically the ONLY manufacturers of True Salicylic Acid from Natural Wintergreen Oil; and the lack of faith—amounting to practical unbelief—in the necessity for careful specification, has enabled unprincipled or incompetent makers to market their product and supply that class of buyers who believe in something "cheap," especially if assured by interested distributors that "it is just as good."

READ THIS!

A Salicylic Uncertainty.

A warning key-note struck by an unprejudiced and disinterested writer in favor of high qualities and positive therapeutics.

The fact that a synthetic chemical gives reactions apparently identical with its native prototype does not establish indentity of physiological action. Even the natural alkaloid caffeine has been shown by clinical experiment to differ in its action when derived from different plants.

Charteris and others have shown that salicylic acid obtained from oil of wintergreen differs in its therapeutic effects from that made by synthesis, and physicians sometimes insist on having the former kind, which is much more expensive.

But artificial oil of wintergreen has become quite common. It is made by combining artificial salicylic acid with the methyl radical of methyl alcohol. Now, it is said that certain manufacturers have adopted the idea of using this artificial oil for the production of salicylic acid; that is, they juggle with what remnants of conscience they may have, by taking artificial salicylic acid out of a compound into which they or somebody else has put it, and calling this "acid from the oil."

This circumstance will lead to confusion as to the real source of a given salicylic acid and we regret to have to admit that there are probably some dealers who will resort to the subterfuge of supplying "acid from the oil," when they know that the oil was not the natural product. So where such acid is desired, the pharmacist must demand of his dealer a guarantee extending to the oil itself.

Editorial Druggist's Circular,
May, 1892.

The best dispensers always specify "MERRELL'S."

The **"Merrell Co."** do not sell, use or handle Synthetic Oil Wintergreen or acid made from it.

The **"Merrell Co."** do not "rub up" Commercial Salicylic Acid with a little Oil Wintergreen and call it Salicylic Acid from Wintergreen Oil, and recommend the "light feathery crystals" thus produced as the "proper thing."

The **"Merrell Co."** do not claim that True Salicylic Acid has "a slight odor of the oil"—for when pure and properly prepared, it has an odor peculiarly its own, but it is not a Wintergreen odor.

Crystals of True Salicylic Acid are large, firm and hard—from ¼ to ¾ inch long, of measurable thickness, and much heavier in a given bulk than acid prepared "in a mortar" from Synthetic Oil and Commercial Acid.

THE WM. S. MERRELL CHEMICAL CO.

NEW YORK. BOSTON. CINCINNATI.

OR MAY BE ORDERED THROUGH WHOLESALE DRUGGISTS IN ANY PROMINENT DISTRIBUTING CENTRE.

Before the Medical Profession almost 30 years, and invariably gives uniform satisfaction.

We respectfully ask thorough testing, strictly UPON ITS OWN MERITS, to prove the exceptionally high reputation it holds

Owing to correspondence on the subject, we regret being compelled to caution that inferior Coca preparations are frequently substituted upon patients, and, as we do not advertise to the public, physicians will kindly be particular to insist on

VIN MARIANI

FORMULA: "VIN MARIANI" is the concentrated extractive of the fresh leaf Erythroxylon Coca, blended with a special quality of Bordeaux Wine. Each half-litre bottle contains the medicinal properties of two ounces of selected leaves.

DOSE: Usually a wine-glassful three times a day, half an hour before meals or immediately after. Increased or diminished, at discretion of the Physician.

INDICATED: As a pleasant, mild stimulant, without unpleasant reaction; a diffusible tonic; a strengthener of the Nervous system, with especial good effect on the digestive and respiratory organs; convalescence and enfeebled conditions. Effect is immediate and lasting.

NOTE: Extensively used in Hospitals, Cliniques and private practice, its merits are recorded by the medical press of Europe and America. Uniform excellence and recognized efficacy won the absolute confidence and esteem of every physician who subjected it to test, and it may be affirmed that wherever Coca is indicated "Vin Mariani" invariably receives the preference.

The continual increasing demand is a clear proof of the reliance placed in "Vin Mariani" by the Medical Profession, through whom it has been popularized.

WE WILL BE HAPPY TO FORWARD, POST-PAID, TO ANY PHYSICIAN MENTIONING THIS JOURNAL, A HANDSOMELY BOUND BOOK, DETAILING FORMULÆ, DOSE, PHYSIOLOGICAL EFFECTS AND THERAPEUTIC INDICATIONS OF COCA, AS ALSO OTHER INTERESTING READING MATTER CONNECTED WITH THE SUBJECT BY EUROPEAN AND AMERICAN OBSERVERS.

MARIANI & CO.,

Definite Chemical Products

OF SUPERIOR THERAPEUTIC VALUE.

CHLORALAMID (Schering).

HYPNOTIC.—Dose, 15 to 45 Grains. A full descriptive pamphlet (64 pages) supplied on request.

PIPERAZIN (Schering).

URIC ACID SOLVENT. Will dissolve at least twelve times more uric acid than lithia. Dose, 15 Grains per day, with continuous treatment. Pamphlet (32 pages) sent on request.

PHENOCOLL (Schering).

ANTIPYRETIC, ANTI-RHEUMATIC, ANALGESIC, NERVINE. "The superior of all coal-tar antipyretics previously introduced." Dose, 7½ to 15 grains. Descriptive pamphlet (40 pages) supplied on request.

THIOL (Riedel).

A synthetically produced body, chemically and therapeutically identical with ICHTHYOL, and superior in being odorless and non-toxic. Supplied in powder and liquid form. Circular reprint of clinical reports sent on request.

LYSOL.

"THE IDEAL DISINFECTANT." The latest and most perfect of the cresol-derivative antiseptic and disinfectant agents. A 16-page monograph mailed on request.

Our motto "DEFINITE CHEMICAL PRODUCTS" has proved a happy hit, and it bids fair to become at once a catch phrase and the standard by which new remedies will be gauged.

Physicians are invited to write us whenever desirous of obtaining information regarding any new remedies. We will promptly answer all such inquiries.

A Sample Copy of "NOTES ON NEW REMEDIES" mailed on request.

LEHN & FINK,

IMPORTERS, WHOLESALE DRUGGISTS AND MANUFACTURING CHEMISTS,

ADDRESS: P. O. BOX 3114. **NEW YORK.** OFFICE: 128 WILLIAM STREET.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK:)

Each fluid drachm represents 15 grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium and Lithium.

USES: EPILEPSY, UTERINE CONGESTION, HEADACHE, AND ALL CONGESTIVE, CONVULSIVE AND REFLEX NEUROSES.

This preparation produces results, which can not be obtained from the use of commercial Bromide substitutes.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK.)

From Sea Weed. **Uses: Malaria, Phthisis, Etc.**

An ALLY of quinine—quinine CHECKS the Malarial Chill, Fucus Marina ELIMINATES the Malarial CAUSE; and thus prevents the recurrence of the Chill *after* it has been *checked* by quinine.

An INVALUABLE REMEDY in the treatment of Phthisis—it arrests the decay of lung tissue, diminishes the fever, lessens the cough, abates the soreness in the lungs, improves the appetite, and impedes the progressive emaciation.

DOSE.—One Teaspoonful IN WATER, four times a day.

CHIONIA FROM CHIONANTHUS.

Uses: Biliousness, Jaundice, Dyspepsia, Constipation, and all Diseases Caused by Hepatic Torpor.

CHIONIA stimulates the Liver and restores it to a healthy condition, without debilitating the system by Catharsis; does not purge, per se, but under its use the Liver and Bowels gradually resume their normal functions.

DOSE.—One Fluid Drachm three times a day.

PEACOCK CHEMICAL CO., ST. LOUIS.

STRONTIUM, McK. & R.

Absolutely Free from Barium.

INDICATED IN

RHEUMATISM, EPILEPSY, INDIGESTION, BRIGHT'S DISEASE

AND IN THE PLACE OF THE

BROMIDE OF POTASSIUM,

THAN WHICH IT IS BETTER TOLERATED EVEN IN HIGH DOSES.

Last July, M. LABORDE reported to *Societe de Biologie*, July 4, 1891, that he had found, contrary to the general opinion, that the salts of strontium might be safely employed, were beneficial to the animal economy, and that weight was increased under their use.

Some time after this report, July 28th, MM. G. SEE and CONSTANTIN PAUL stated before the *Academie de Medecine* that they had employed the bromide and lactate of strontium in rheumatism and Bright's disease, respectively, and could confirm the results of M. LABORDE in regard to the innocuousness and beneficial effects of the drug.

October 28th, M. DUJARDIN-BEAUMETZ, before the *Societe de Therapeutique* stated that he had obtained very good results in Bright's disease by the use of the lactate of strontium; that its action on the digestive functions was very favorable.

November 11th, MM. CONSTANTIN PAUL and DUJARDIN-BEAUMETZ made a further communication to the same society, and stated that they had still further used the lactate and bromide salts, and found them perfectly tolerated even in high doses.

M. FERE found the bromide of strontium of efficacy in in the treatment of epilepsy in the place of the potassium salt. He also found by numerous experiments that the toxicity of bromide of strontium, when given by intravenous injection, was far below that of the bromide of potassium.

All the authors insist on the necessity for a perfectly pure salt, one absolutely free from the presence of barium, such as those now offered to the medical profession, in the form of syrup and solution by McKesson & Robbins.

McK. & R. SYRUP OR SOLUTION OF LACTATE OF STRONTIUM, C. P.

McK. & R. SYRUP OR SOLUTION OF BROMIDE OF STRONTIUM, C. P.

In Original Pound Bottles,

Containing 60 grains to the ounce—7½ grains to the teaspoonful.

DOSE: One to two teaspoonfuls four to eight times a day.

LITERATURE SENT ON REQUEST.

DIURETIN-KNOLL IN INFANTILE PRACTICE.

BY DR. R. DEMME.

ACCORDING to the observations of Dr. R. Demme, Professor of Pædiatrics to the Faculty of Medicine of Berne, diuretin may be administered in the daily dose of ·50 to 1.50 grammes (7½ to 22 grains) to children of from two to five years old, and in daily doses of 22 to 45 grains in children of six to ten years. In infants less than a year old the drug is contra-indicated, as it easily provokes gastro-intestinal irritation in these young patients.

Care should be taken in prescribing diuretin, as it is liable to be decomposed by certain substances. M. Demme recommends the following:

Diuretin	gr. xxij
Distilled water	oz. iij
Brandy	gtt. x
Sugar	grs. xl

M. Sig. To be taken in the course of the twenty-four hours in doses of one tablespoonful.

Dr. Demme's observations have convinced him that diuretin is a good diuretic for children, exempt for the most part of all unpleasant influence, and probably acting on the renal epithelium.

Under the influence of diuretin, the dropsy of scarlatinal nephritis disappeared more quickly than by the action of any other medicament. It suppresses very rapidly the anasarca and serous effusions in cases of mitral disease, when the compensation has been previously established by means of digitalis:

The diuretin was generally well supported, and it had no cumulative action. However, in one case of generalized dropsy in a child of ten years, suffering from amyloid degeneration of the liver, spleen, and kidneys, Dr. Demme has seen a morbilliform eruption with abundant diarrhœa, after the injection of 90 grains of diuretin in the space of four days.—*La Semaine Medicale*, Feb. 24, 1892.

SEND FOR COMPLETE NOTES.

THE COMPOUND STEARATES, McK. & R.

THE Compound Stearates, introduced recently by McKESSON & ROBBINS, are now presented to the Medical Profession at large with confidence, as powders which are remarkable for their mollescence when applied to anoint or protect diseased conditions of the skin and mucous membranes.

They are adhesive, and act as grateful vehicles in which drugs may be administered locally.

Desirable as adjuvants in insufflations and antipruritic as dusting powders, they can be used to cover and protect the surface of the skin without soiling the clothing, and offer a very profitable field for therapeutic investigation, where the frequently rancid oleates and ointments, or the ordinary soluble and non-adhesive dusting and other powders for the skin and mucous membrane are not desirable.

McK. & R. COMPOUND STEARATE INSUFFLATIONS.

McK. & R. COMPOUND STEARATE OF ZINC WITH BORIC ACID. (Zinci Stearas Co. cum Acid Boric.—McK. & R.)

Employed in catarrhal rhinitis with hypersecretion.

McK. & R. COMPOUND STEARATE OF ZINC WITH ARISTOL. (Zinci Stearas Co. cum Aristol. —McK. & R.)

In atrophic rhinitis and ozœna.

McK. & R. COMPOUND STEARATE OF ZINC AND BISMUTH SUBGALLATE. (Zinci Stearas Co. cum Bismuth. Subgall.—McK. & R.)

Especially after operations, and instead of iodoform.

McK. & COMPOUND STEARATE OF ZINC WITH BALSAM PERU. (Zinci Stearas Co. cum Balsam. Peruv.—McK. & R.)

In ulcerative tubercular laryngitis.

FULL LIST, CONTAINING OVER TWENTY OTHER COMPOUNDS, SENT FREE.

Lapactic Pills.

A combination introduced by us and found in practice to possess superior advantages over other similar formulas. The well known mild action of Aloin on the lower portion of the intestinal canal, and its power of stimulating the hepatic functions, is supplemented by the action of Ipecac as a stomachic tonic and by increasing the gastric secretions; the Belladonna acts specially upon the involuntary muscular fibres of the bowels, increasing peristalsis, diminishing the harshness, and at the same time increasing the effectiveness of the laxative. The general tonic effect of Strychnine upon the stomach and bowels and its direct action upon the sympathetic, make it a valuable addition in the permanent cure of **habitual constipation and atonic dyspepsia.**

Since we first called attention to our Lapactic Pills, some four years ago—publishing the composition of the same—a number of manufacturers have adopted the formula and have furnished these pills under the same name. Should Physicians fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints from physicians by letter), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term "LAPACTIC PILLS, S. & D.'S." when prescribing these pills.

SAMPLES WILL BE MAILED ON APPLICATION.

SPECIAL FORMULAS MADE TO ORDER.

WHEN PURCHASING, PLEASE SPECIFY S. & D's.

Sharp & Dohme,

MANUFACTURING CHEMISTS,

Established 1860. **Baltimore, Md.**

"As a disinfectant for all the sanitary needs of the sick-room, Platt's Chlorides is especially recommended."

Endorsed by thousands of Physicians, and having commanded a large sale for many years, Platt's Chlorides can readily be procured from almost any druggist in any city, town or village in the United States. It is an odorless liquid, and is sold in quart bottles only.

CH. MARCHAND'S

PEROXIDE OF HYDROGEN.

(MEDICINAL) H_2O_2 (ABSOLUTELY HARMLESS.)

THE MOST POWERFUL BACTERICIDE AND PUS DESTROYER.
ENDORSED BY THE MEDICAL PROFESSION.
UNIFORM IN STRENGTH, PURITY, STABILITY.
RETAINS GERMICIDAL POWER FOR ANY LENGTH OF TIME.
TAKEN INTERNALLY OR APPLIED EXTERNALLY WITH PERFECT SAFETY.

Send for free book of 72 pages giving articles by the following contributors:

DR. JOHN AULDE, of Philadelphia, Pa. "Hydrogen Peroxide—Résumé." *New York Medical Journal.*

DR. E. CHAREST, of St. Cloud, Minn. "Peroxide of Hydrogen for Gonorrhœa." *Medical World* of Philadelphia, Pa.

NOTE.—Avoid substitutes—in shape of the commercial article bottled—unfit and unsafe to use as a medicine.

Ch. Marchand's Peroxide of Hydrogen (Medicinal) sold only in 4-oz., 8-oz., and 16-oz. bottles, bearing a blue label, white letters, red and gold border, with his signature. Never sold in bulk.

PHYSICIANS WILLING TO PAY EXPRESS CHARGES WILL RECEIVE FREE SAMPLE ON APPLICATION.

ABOUT GAS TREATMENT.

We make and sell oxygen and nitrogen monoxide for therapeutic use, and we guarantee them pure They are put up in compact form. (A cylinder containing 100 gallons of nitrogen monoxide or 40 gallons of oxygen measures 12 inches in length, has a diameter of 3½ inches, and weighs 10½ lbs. A cylinder containing 450 gallons of nitrogen monoxide or 100 gallons of oxygen measures 25 inches in length, has a diameter of 4½ inches, and weighs 34 lbs.)

INSOMNIA. Dr. Allan McLane Hamilton states that nitrogen monoxide, N_2O (nitrous oxide of the old nomenclature) has no equal in the treatment of this difficulty.

MELANCHOLIA. A short course of nitrogen monoxide is said to change the face of nature for such patients.

ANÆMIA. Where iron is not tolerated or proves inefficient, the addition of oxygen or a combination of oxygen and nitrogen monoxide has proven very beneficial.

For those who should, but cannot, go from home for rest or a change of air, or for those who, from any cause fail to get air enough into their lungs, the inhalation of one or other of these gases, or both in combination, promises great benefit. The testimony is that in cases of

ASTHMA, more than fifty per cent. of the cases yield to oxygen treatment, others are very greatly relieved, and a very small per cent. are not improved.

INDIGESTION and CONSTIPATION are said to be greatly relieved and very often conquered by continued treatment.

A highly esteemed New York physician has used more than twenty thousand gallons of nitrogen monoxide in his private practice. The letters received from his patients, largely from those who were afflicted with nervous disorders, are enthusiastic in their testimony as to the benefit received.

Regular practitioners who are using gas treatment testify that when *pure* oxygen and *pure* nitrogen monoxide, or a mixture of these, is used, no therapeutic agents are more uniformly successful when intelligently prescribed.

NEW-YORK: 6, Harrison Street (CH. TERTRAIS manager.)

SOLD BY HENRY C. BLAIR'S SONS, PHILADELPHA.

DÉVIATION DES RÈGLES.

ALETRIS CORDIAL (Rio) is, perhaps, the most important remedial agent yet known. It is *the* remedy for the wrongs of menstruation, by restoring normal functional activity to the uterine apparatus. Prolapsus, Menorrhagia, Leucorrhea, Amenorrhea, Dysmenorrhea, Subinvolution, Metritis, Ovarian Neuralgia, etc,, all yield to its beneficial influence. Physicians find a certainty in its action as a uterine tonic, that is peculiar to no other remedy. A special indication for its use

IS THE DRAGGING SENSATION

in the lower bowels. It quickly restores the strength and waning vitality of the chlorotic girls and pregnant women. Habitual miscarriage and the excessive nausea of early pregnancy are effectually prevented by its timely and continued use. In a word, it restores tone to the uterine system. and thus relieves all abnormal conditions.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

WESTERN PENNSYLVANIA MEDICAL COLLEGE
CITY OF PITTSBURGH.
SESSIONS OF 1892.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. MCKENNAN, 810 Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Ave., Pittsburg.

WALNUT LODGE HOSPITAL,
HARTFORD, CONNECTICUT.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish Bath, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefitted from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

DIOVIBURNIA

UTERINE TONIC, ANTISPASMODIC AND ANODYNE.

A reliable and trustworthy remedy for the relief of Dysmenorrhœa, Amenorrhœa, Menorrhagia Leucorrhœa, Subinvolution, THREATENED ABORTION, Vomiting in Pregnancy and Chlorosis; directing its action to the entire uterine system as a general tonic and antispasmodic.

FORMULA

Every ounce contains 3-4 dram each of the fluid extracts: Viburnum Prunifolium, Viburnum Opulus, Dioscorea Villosa, Aletris Farinosa, Helonias Dioica, Mitchella Repens, Caulophyllum Thalictroides, Scutellaria Lateriflora.

DOSE.—For adults, a desertspoonful to a tablespoonful three times a day, after meals. In urgent cases, where there is much pain, dose may be given every hour or two, ALWAYS IN HOT WATER.

Jno. B. Johnson, M. D., Professor of the Principles and Practice of Medicine, St. Louis Medical College.

ST. LOUIS, June 20, '88.

I very cheerfully give my testimony to the virtues of a combination of vegetable remedies prepared by a well-known and able pharmacist of this city, and known as DIOVIBURNIA, the component parts of which are well known to any and all physicians who desire to know the same, and therefore have no relation to proprietary or quack remedies. I have employed this medicine in cases of dysmonorrhœa, suppression of the catemania and in excessive leucorrhœa, and have been much pleased with its use. I do not think its claims (as set forth in the circular accompanying it) to be at all excessive. I recommend its trial to all who are willing to trust to its efficacy, believing it will give satisfaction. Respectfully,

Jno. B. Johnson

L. Ch. Boisliniere, M. D., Prof. of Obstetrics, St. Louis Medical College. ST. LOUIS, June 18, 1888.

I have given DIOVIBURNIA a fair trial and found it useful as an uterine tonic and antispasmodic, relieving the pains of dysmenorrhœa, and regulator of the uterine functions. I feel authorized to give this recommendation of DIOVIBURNIA, as it is neither a patented nor a secret medicine, the formula of which have been communicated freely to the medical profession.

L Ch. Boisliniere M.D.

H. Tuholske, M. D., Professor Clinical Surgery and Surgical Pathology, Missouri Medical College; also Post-Graduate School of St. Louis. ST. LOUIS, June 23, 1888.

I have used DIOVIBURNIA quite a number of times—sufficiently frequently to satisfy myself of its merits. It is of unquestionable benefit in painful dysmenorrhœa; it possesses antispasmodic properties which seem especially to be exerted on the uterus.

Wm. H. Tuholske

To any physician, unacquainted with the medicinal effect of DIOVIBURNIA, we will mail pamphlet containing full information, suggestions, commendations of some of our most prominent professors and various methods of treatment; also a variety of valuable prescriptions that have been thoroughly tested in an active practice, or to physicians desiring to try our preparation, and who will pay express charges, we will send on application a sample bottle free.

DIOS CHEMICAL CO., ST. LOUIS, MO., U. S. A.

VACCINE MATTER.

For the accommodation of our Subscribers, we will supply both Bovine and Humanized Vaccine Virus.

Guaranteed to be fresh and in every respect first class.

USEFUL IN

Nervous Headache, Sleeplessness, Excessive Study, Migraine, Nervous Debility, Mania, as a Remedy in Seasickness, and Epilepsy.

Dose and Composition.—A heaping teaspoonful, containing Bromide Soda 30 grains, and Caffein 1 grain, in half a glass of water, to be repeated once after an interval of 30 minutes, if necessary.

ANTI-RHEUMATIC. SEDATIVE.

EFFERVESCENT.

BROMO
(WARNER & CO.)
LITHIA.

EACH DESSERTSPOONFUL CONTAINS:

℞ Salicylate Lith a 10 grains, and Bromide Soda 10 grains.

A REMEDY IN THE TREATMENT OF

RHEUMATISM, GOUTY DIATHESIS, ETC.

Dr. A. Garrod, the well-known English authority on Gout, who was the first physician to introduce the Lithia Salts in the treatment of Gouty Diathesis, states that their action is materially increased by being administered in a *freely diluted form.*

This effervescing salt of Lithia furnishes an easy and elegant way of applying Dr. Garrod's methods.

INGLUVIN

A SPECIFIC FOR VOMITING IN PREGNANCY.

A POWDER:—PRESCRIBED IN THE SAME MANNER, DOSES & COMBINATION AS PEPSIN In Doses of from 10 to 20 Grains,

AND A POTENT AND RELIABLE REMEDY FOR THE CURE OF

Marasmus, Cholera Infantum, Indigestion, Dyspepsia and Sick Stomach,

caused from debility of that organ. It is superior to the Pepsin preparations, since it acts with more certainty, and effects cures where they fail.

Mellin's Food
FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

—*Landois and Sterling.*

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

—*Materia Medica and Therapeutics, Dr. Mitchell Bruce.*

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

—*Eustace Smith, M.D., F.R.C.S.*

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

"CURIOUS QUESTIONS."

An Encyclopaedia of the Rare and Curious.

Third Improved Edition Now Ready.

"Curious Questions" fills a niche wholly its own. Its mission is to tell you hundreds of things that you ought to know, and don't; to enlarge your conversational powers; to brighten your intellect, and lead you to further research in the best channels of thought, and to keep you from exposing your ignorance on many questions of daily recurrence.

Do not think you are too wise to profit by it, when Rev. Dr. Andrew Preston Peabody, of Harvard University, says of "Curious Questions:"

> "I find that some of the questions are such as I could not have answered, or have known where to look for their answers. Such a book will be of inestimable service and value to any intelligent person, young or old."

The new de luxe editions (25 full-page illustrations) are unexcelled for presentations. Prices, $4.00, $6.00 and $8.00 a set.

Sold by subscription through our regularly authorized solicitors, or supplied direct by the publishers. Illustrated descriptive catalogue and sample pages free. *Agents wanted.* Address the sole publishers,

Keystone Publishing Company,

Eighth and Locust Streets, Philadelphia, Pa.

Londonderry Lithia.

"The Most Wonderful American Water!"

—*Journal of Balneology.*

Lithia in solution as *nature* has *provided* is practically better than any chemist has yet made.

—*New York "Medical Times."*

"Best of all the natural waters as an anti-lithic."

—*G. Frank Lydston, M. D., Professor of Genito-urinary Diseases, Chicago College of Physicians and Surgeons.*

"I depend upon the 'Londonderry' invariably and often as a last resource."

—*Henry M. Field, M. D., Professor Therapeutics, Dartmouth Medical College.*

"Best of all the spring waters of an alkaline nature containing lithia and other *uric acid* solvents."

—*Morris H. Henry, A. M., M. D., LL. D., author Treatise on Gout, etc., N. Y.*

"Effects of the water speak more eloquently than any words which I might utter."

—*I. N. Danforth, M. D., Professor Pathology and Renal Diseases, Women's Medical College, Chicago.*

"If liquors are to be used no water is at once so agreeable for diluting them and so preventive of the bad consequences following their use."

—*H. M. Jernegan, M. D., late Professor Surgery, Boston University, Medical Department.*

OUR OFFER to any Physician suffering from any form of uric acid poisoning. We will furnish water gratis to cure you. If you have doubted the wonderful stories told of "Londonderry" we are very anxious to convince you. What more can we do? Write us at home office and we will supply you cheerfully.

GEORGE A. PIERSOL, M. D., Professor of Anatomy.
LEWIS A. DUHRING, M. D., Professor of diseases of the skin.

For Catalogue and announcement containing particulars, apply to DR. JAMES TYSON, Dean,
36th and Woodland Avenue, Philadelphia.

To the Medical Profession.

During the past seven years we have been laboring assiduously to produce *Infant Foods* eady for use that would closely resemble healthy human milk. It has not been any easy task, as every physician knows who has taken a special interest in the subject. We have spared neither labor or expense to accomplish this object, which will be demonstrated to any Physician who will visit our factory. We have met the more recent demand for a *sterilized Food for Infants* by an expensive change in our machinery, under the supervision of the most eminent Bacteriologists in the country. This sterilization has been accomplished without rendering the casein of the milk less digestible, as is invariably done with the patented sterilizers in use.

It also insures, with the hermetically sealed cans. their perfect keeping qualities.

We do not think it possible that any *Infant Food* will ever be prepared that will excel **LACTO-PREPARATA** (an all milk food) for the feeding of young infants, and **CARNRICK'S FOOD** for their nourishment during the latter part of the nursing period. All other *Infant Foods* in the market are composed entirely of cereals; or they contain so little milk (about 8 per cent.) that it is a misnomer to call them Milk Foods. If such foods are used alone, the child will not be properly nourished, its flesh will be flabby, and it will quickly succumb to disease, because they are deficient in albuminoid constituents.

Send for circulars and samples.

KUMYSGEN

Make Your Own KUMYSS in one Minute.

A Product of Pure, Sweet Milk.

What is Kumysgen?

It is *Kumyss* in a dry form, containing all the constituents of the best *Kumyss*, and requires only the addition of water to produce an article superior in digestibility and palatability to the old form of *Kumyss*.

It is the *Ideal Food* in all cases where nutrition is an important factor, and digestion is feeble

When all other Foods fail try **Kumysgen,** but it is better to try it in the beginning and save time and strength.

Kumysgen is the only preparation of *Kumyss* that will keep. All liquid preparations of *Kumyss* will keep but a short time, and are constantly changing in the bottle, unless some deleterious preservative is used.

Kumyss made from **Kumysgen** is far more palatable, easier digested and 35 per cent. less expensive than the old Style **Kumyss.**

Our **Syphon Kumysgen Bottles** allow *Kumyss* to be drawn without loss of contents. One in every three bottles are *siphons*, containing same quantity of KUMYSGEN as the others. Send for samples and descriptive circulars.

Manufactured Only by

REED & CARNRICK, New York.

Much benefit has resulted from the universal discussion of tuberculosis brought out by announcements, in recent years, of proposed specific cures of the disease. Among other things, it has been instrumental in convincing the thoughtful members of the profession that this is not necessarily a fatal and incurable disease.

Phthisis pulmonalis is, preeminently, an insidious disease. In this fact lies the explanation of the prevalent views as to its absolute fatality. There is no distinct time when health ends and disease begins. Yet there comes a time when the patient and his friends awaken to a realization of the fact that he is a victim of pulmonary tuberculosis. By this time the coarse and graver lesions have become established that make the condition evident to all who observe, and the patient goes rapidly down to death. But long before this were the incipient conditions, which are now recognized by the more scientific means of accurate diagnosis developed in recent years. During this period the disease is quite amenable to curative treatment.

Another benefit produced by this general discussion has been the final acknowledgment of the value of a method of treatment which, although old, and established in the minds of a few advanced practitioners, yet was not hitherto sufficiently known to the general masses of the profession. This is the specific treatment by the use of the hypophosphites of lime and soda.

A few words as to the rationale of this cure will, we think, place it in a clear light.

It has been observed by the highest authority, that sufferers from rheumatism or gout are particularly immune from phthisis. This has been found to be a peculiarity of those possessing the arthritic diathesis, or who are subject to general fibrosis. Loomis observes that of 70 cases of cured phthisis coming under his personal observation, 52 presented well marked evidences of general fibrosis. Trudeau reports 21 cases of recovery in which arthritic fibrosis existed, either in the parents or the patients themselves. Now, a patient who has not the lithemic or arthritic diathesis, when attacked by tuberculosis, must be placed under such artificial conditions as favor the formation of calcareous deposits in all diseased areas, the throwing up of a fibrinous wall around the tubercular focus, and thus secure a complete limitation of the disease. This has been abundantly proven to be the result of the use of the hypophosphites of lime and soda. This may be regarded as the production, to a limited extent, of an artificial lithemic diathesis—a conservative fibrosis. Thus the disease is at once stopped in its ravages, and by the very process sought for by other methods of treatment—the cicatrization of cavities and the calcification of diseased foci and their complete isolation from the neighboring sound tissue by a protecting fibrinous wall, or capsule.

Thus we see the chemical researches of Churchill verified by modern pathology, and his conclusions finally accepted as true.

It now remains for you to be sure that you get the pure hypophosphites. Prescribe McArthur's Syrup, which consists of the chemically pure hypophosphites of lime and soda, incorporated in a wholesome syrup. A sample will be sent you, free, you paying express charges. Address, The McArthur Hypophosphite Co., Boston, Mass.

AN IDEAL PEPSIN!

PHYSICIANS PRESCRIBE

P., D. & CO.'S

ASEPTIC PEPSIN.

Pepsins as heretofore known have left very much to be desired, most of them indicating by their odor the putrescent mucus and other objectionable constituents which must necessarily prove irritating, especially to the delicate stomach of an infant, invalid or dyspeptic.

We now supply a new and improved Pepsin Product (ASEPTIC PEPSIN, 1 to 4000, P., D. & Co.'s), in the full confidence that it will at once recommend itself to the favorable attention of the Medical Profession.

It is twice as active as any other pepsin now on the market, and by the process of manufacture which we pursue, is deprived of all septic constituents. This process renders it very palatable so that the most fastidious palate could not possibly object to its taste.

Samples and literature will gladly be supplied upon application.

MANUFACTURED ONLY BY

PARKE, DAVIS & COMPANY,

ESTABLISHED 16 YEARS. BEWARE OF IMITATIONS.

COLDEN'S LIQUID BEEF TONIC

AN INVALUABLE AID IN MEDICAL PRACTICE

ORIGINAL | COLDEN'S LIEBIG'S LIQUID EXTRACT OF BEEF AND TONIC INVIGORATOR. | LABEL.

ESSENTIALLY DIFFERENT FROM ALL OTHER BEEF TONICS. UNIVERSALLY ENDORSED BY LEADING PHYSICIANS.

This preparation, consisting of the Extract of Beef (prepared by Baron Liebig's process), the best Brandy obtainable, soluble Citrate of Iron, Cinchona and Gentian is offered to the Medical Profession upon its own merits. It is of inestimable value in the treatment of **Debility, Convalescence from Severe Illness Anæmia, Malarial Fever, Chlorosis, Incipient Consumption, Nervous Weakness,** and maladies requiring a Tonic and Nutrient. It is quickly absorbed by the Stomach and upper portion of the Alimentary Canal, and therefore finds its way into the circulation quite rapidly.

COLDEN'S LIQUID BEEF TONIC appeals to the judgment of intelligent Physicians in the treatment of

ALL CASES OF GENERAL DEBILITY.

By the urgent request of several eminent members of the medical profession, I have added to each wineglassful of this preparation two grains of Soluble Citrate of Iron, and which is designated on the label, "**With Iron, No. 1;**" while the same preparation, **Without Iron,** is designated on the label as "**No. 2.**"

In prescribing this preparation, physicians should be particular to mention "*COLDEN'S,*" viz., "*Ext. Carnis Fl. Comp. (Colden).*" A Sample of **COLDEN'S BEEF TONIC** will be sent free on application, to any physician (enclosing business card) in the United States. *Sold by druggists generally.*

C. N. CRITTENTON, General Agent, 115 Fulton St., New York.

THE ALE AND BEEF COMPANY, Dayton, Ohio.

"Orders from all parts of the Dominion of Canada supplied by The Canadian Peptonized Beef & Ale Co., Limited, 153 Hollis Street, Halifax, N. S."

SYR. HYPOPHOS. CO., FELLOWS

Contains the Essential Elements of the Animal Organization—Potash and Lime;

The Oxidizing Agents—Iron and Manganese;

The Tonics—Quinine and Strychnine;

And the Vitalizing Constituent—Phosphorus; the whole combined in the form of a Syrup with a **Slightly Alkaline Reaction.**

It Differs in its Effects from all Analogous Preparations; and it possesses the important properties of being pleasant to the taste, easily borne by the stomach, and harmless under prolonged use.

It has Gained a Wide Reputation, particularly in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs. It has also been employed with much success in various nervous and debilitating diseases.

Its Curative Power is largely attributable to its stimulant, tonic, and nutritive properties, by means of which the energy of the system is recruited.

Its Action is Prompt; it stimulates the appetite and the digestion, it promotes assimilation, and it enters directly into the circulation with the food products.

The prescribed dose produces a feeling of buoyancy, and removes depression and melancholy; *hence the preparation is of great value in the treatment of mental and nervous affections.* From the fact, also, that it exerts a double tonic influence, and induces a healthy flow of the secretions, its use is indicated in a wide range of diseases.

NOTICE—CAUTION.

The success of Fellows' Syrup of Hypophosphites has tempted certain persons to offer imitations of it for sale. Mr. Fellows, who has examined samples of several of these, ***finds that no two of them are identical,*** and that all of them differ from the original in composition, in freedom from acid reaction, in susceptibility to the effects of oxygen when exposed to light or heat, ***in the property of retaining the strychnine in solution,*** and in the medicinal effects.

As these cheap and inefficient substitutes are frequently dispensed instead of the genuine preparation, physicians are earnestly requested, when prescribing the Syrup, to write "Syr. Hypophos. ***Fellows.***"

As a further precaution, it is advisable that the Syrup should be ordered in the original bottles; the distinguishing marks which the bottles (and the wrappers surrounding them) bear, can then be examined, and the genuineness—or otherwise—of the contents thereby proved.

Medical Letters may be addressed to:

Mr. FELLOWS, 48 Vesey Street, New York.

MILK OF MAGNESIA.

A PURE HYDRATED OXIDE OF MAGNESIUM.—(MgH_2O_2.)

ANTACID.

Practically Magnesia in permanent solution—not mechanically suspended—Miscible with other fluids—A mild and pleasant laxative—Free from carbonic acid, and in a form easy of administration and absorption. No danger from concretions as with the calcined. It combines well with Syr. Rhubarb, Soda, Opium, the vegetable astringents, &c., and will be found superior to bulky Lime water and Chalk mixtures for addition to milk.

Especially applicable to disturbances of the gastro-intestinal tract in infant, child and adult life. Neutralizes the acrid acid secretions of diseased mucous surfaces. Indicated also in the Gouty and Rheumatic diathesis in combination with Salicylate of Soda, rendering the latter more efficient and less irritating to the stomach.

PHOSPHO-MURIATE OF QUININE,

COMPOUND.

A RELIABLE ALTERATO-CONSTRUCTIVE.

Particularly applicable to conditions of **mal-nutrition.**

A reliable **tonic** in **convalescence** from the exanthemata, and of obvious indication in these cases whose deficiency of the Phosphates results in **glandular enlargements, scrofulosis, imperfect bone formation** or **impairment of the central nervous system.** An easily appropriated and stable combination of the soluble **Wheat Phosphates** with **Muriate of Quinine, Iron** and **Strychnia.**

Of greater strength than the Various Hypophosphite compounds.

The above Preparations are put up in Dispensing and Trade Containers

SOLD BY LEADING DRUGGISTS.

Laboratory, 28 Prince Street, New York.

Before the Medical Profession almost 30 years, and invariably gives uniform satisfaction.

We respectfully ask thorough testing, strictly UPON ITS OWN MERITS, to prove the exceptionally high reputation it holds

Owing to correspondence on the subject, we regret being compelled to caution that inferior Coca preparations are frequently substituted upon patients, and, as we do not advertise to the public, physicians will kindly be particular to insist on

VIN MARIANI

FORMULA: "VIN MARIANI" is the concentrated extractive of the fresh leaf Erythroxylon Coca, blended with a special quality of Bordeaux Wine. Each half-litre bottle contains the medicinal properties of two ounces of selected leaves.

DOSE: Usually a wine-glassful three times a day, half an hour before meals or immediately after. Increased or diminished, at discretion of the Physician.

INDICATED: As a pleasant, mild stimulant, without unpleasant reaction; a diffusible tonic; a strengthener of the Nervous system, with especial good effect on the digestive and respiratory organs; convalescence and enfeebled conditions. Effect is immediate and lasting.

NOTE: Extensively used in Hospitals, Cliniques and private practice, its merits are recorded by the medical press of Europe and America. Uniform excellence and recognized efficacy won the absolute confidence and esteem of every physician who subjected it to test, and it may be affirmed that wherever Coca is indicated "Vin Mariani" invariably receives the preference.

The continual increasing demand is a clear proof of the reliance placed in "Vin Mariani" by the Medical Profession, through whom it has been popularized.

WE WILL BE HAPPY TO FORWARD, POST-PAID, TO ANY PHYSICIAN MENTIONING THIS JOURNAL, A HANDSOMELY BOUND BOOK, DETAILING FORMULÆ, DOSE, PHYSIOLOGICAL EFFECTS AND THERAPEUTIC INDICATIONS OF COCA, AS ALSO OTHER INTERESTING READING MATTER CONNECTED WITH THE SUBJECT BY EUROPEAN AND AMERICAN OBSERVERS.

Definite Chemical Products

OF SUPERIOR THERAPEUTIC VALUE.

CHLORALAMID (Schering).

HYPNOTIC.—Dose, 15 to 45 Grains. A full descriptive pamphlet (64 pages) supplied on request.

PIPERAZIN (Schering).

URIC ACID SOLVENT. Will dissolve at least twelve times more uric acid than lithia. Dose, 15 Grains per day, with continuous treatment. Pamphlet (32 pages) sent on request.

PHENOCOLL (Schering).

ANTIPYRETIC, ANTI-RHEUMATIC, ANALGESIC, NERVINE. "The superior of all coal-tar antipyretics previously introduced." Dose, 7½ to 15 grains. Descriptive pamphlet (40 pages) supplied on request.

THIOL (Riedel).

A synthetically produced body, chemically and therapeutically identical with ICHTHYOL, and superior in being odorless and non-toxic. Supplied in powder and liquid form. Circular reprint of clinical reports sent on request.

LYSOL.

"THE IDEAL DISINFECTANT." The latest and most perfect of the cresol-derivative antiseptic and disinfectant agents. A 16-page monograph mailed on request.

Our motto "DEFINITE CHEMICAL PRODUCTS" has proved a happy hit, and it bids fair to become at once a catch phrase and the standard by which new remedies will be gauged.

Physicians are invited to write us whenever desirous of obtaining information regarding any new remedies. We will promptly answer all such inquiries.

A Sample Copy of "NOTES ON NEW REMEDIES" mailed on request.

LEHN & FINK,

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK:)

Each fluid drachm represents 15 grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium and Lithium.

USES: EPILEPSY, UTERINE CONGESTION, HEADACHE, AND ALL CONGESTIVE, CONVULSIVE AND REFLEX NEUROSES.

This preparation produces results, which can not be obtained from the use of commercial Bromide substitutes.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK.)

From Sea Weed. **Uses: Malaria, Phthisis, Etc.**

An ALLY of quinine—quinine CHECKS the Malarial Chill, Fucus Marina ELIMINATES the Malarial CAUSE; and thus prevents the recurrence of the Chill *after* it has been *checked* by quinine.

An INVALUABLE REMEDY in the treatment of Phthisis—it arrests the decay of lung tissue, diminishes the fever, lessens the cough, abates the soreness in the lungs, improves the appetite, and impedes the progressive emaciation.

DOSE.—One Teaspoonful IN WATER, four times a day.

CHIONIA FROM CHIONANTHUS.

Uses: Biliousness, Jaundice, Dyspepsia, Constipation, and all Diseases Caused by Hepatic Torpor.

CHIONIA stimulates the Liver and restores it to a healthy condition, without debilitating the system by Catharsis; does not purge, per se, but under its use the Liver and Bowels gradually resume their normal functions.

DOSE.—One Fluid Drachm three times a day.

PEACOCK CHEMICAL CO., ST. LOUIS.

SUPERIOR TO THE MURIATE:

The Phenate of Cocaine

Not being absorbed into the organism when applied locally its anæsthetic effect is prolonged, and there is an absence of cocaine intoxication.

A NEW NON-TOXIC MEANS IN

PSORIASIS AND OTHER SKIN DISEASES.

GALLACETOPHENONE

FULL NOTES SENT FREE ON RECEIPT OF POSTAL CARD

THE PHENATE OF COCAINE.

Dr. Fournier.

"We know that phenic acid, from the point of view of its local action, presents certain analogies with cocaine; like the latter, it produces ischæmia and insensibility of the tissues. We would therefore expect that a combination of the two substances, under the form of phenate of cocaine, would have therapeutic properties, superior to those of the muriate of cocaine. This has been found to be the case by a Bavarian physician, DR. VON OEFELE, who has for some time past employed the phenate of cocaine exclusively in the place of the muriate."

He has found that the phenic salt exercises an analgesic action much more persistent than that of the muriate, while the chances of producing toxic effects are much less. Gluck was accustomed to add carbolic acid to his solutions of cocaine for the purpose of diminishing the chances of producing disagreeable results. These properties and advantages are explained by the fact that the phenic salt is almost entirely insoluble in water. Not being dissolved by the juices of the organism, the phenate of cocaine, employed as a local application, is absorbed but little or not at all, whence the absence of intoxication and the persistence of the analgesic action, which may last as long as thirty-six hours. Phenate of cocaine may be given internally as well as in hypodermic injection.—*La Semaine Med.*

GALLACETOPHENONE,

A NEW DERMATO-THERAPEUTIC AGENT.

BY HERMANN GOLDENBERG, M. D.

It is well known that pyrogallic acid is by no means a harmless drug. After its introduction into dermatological practice NEISSER lost a patient after one application. The patient died on the third day with symptoms of intoxication. VIDAL has likewise reported the death of a patient, eighteen years old, who had used a ten per cent. pyrogallic ointment for two weeks. This poisonous effect of pyrogallic acid is to be attributed to the great readiness with which it is oxidized in alkaline solutions (being so intensely reducing).

Gallacetophenone does not possess this quality and is absolutely harmless, as has been proven by experiments on animals.

It displays strong antiseptic qualities. A one per cent. solution added to chopped meat prevented its becoming putrid for twenty-one days, and destroyed the *Streptococcus aureus* within twenty-four hours.

Since the middle of October I have employed it, both in private and in dispensary practice, on at least thirty patients suffering from various skin diseases.

On account of its resemblance to pyrogallic acid, it seemed to be indicated in psoriasis. I have been so much more inclined to use it in that disease, since VON REKOWSKI, who tried it in a few cases only, maintains "that the effect of this new preparation (used as a ten per cent. ointment) is noticed within twelve hours."

Altogether, I have thus employed it in twelve cases of psoriasis—in all of them with good results. Within a few days the patches became paler and thinner, the desquamation ceased or became less, and involution took place in the centers. Usually after the lapse of from ten to twelve days only a slight hyperæmia was left. Within from two to three weeks the patches disappeared entirely without leaving any pigmentation.

A ten per cent. ointment did not produce any marked irritation or discolor the skin. It stains the clothes slightly yellowish, much less than pyrogallic acid or chrysarobin. In the case of psoriasis of the face and scalp it really acted like a specific. The eruption, which was quite profuse, disappeared within five days, A ten per cent. ointment was applied twice daily. There was no other treatment

Another patient with a universal psoriasis of sixteen years' standing, who applied to my department at Mount Sinai Dispensary for some other trouble, was induced to use a ten per cent. salve of gallacetophenone for the forehead and scalp, which were thickly covered with psoriatic patches. When he returned, two weeks later, there was nothing left but a pigmentat on of the forehead, while the psoriasis of the body which had not been treated was *in statu quo ante.*

My friend, DR. G.T. ELLIOT, has, at my request, used gallacetophenone on a patient with psoriasis of eight years' standing, distributed over the trunk, knees, elbows, scalp, and face in patches of various sizes. The case had been under treatment the whole time and had proved exceedingly rebellious. Arsenic caused an increase of inflammatory symptoms. Pyrogallic acid had been used with but moderate success. Chysarobin did well, if used persistently. At the time (November 21st) when the use of a ten per cent. gallacetophenone ointment was begun, the patches were bright red, burning, and with abundant desquamation. A week later the patches were paler and breaking up into small papules. The centers had undergone involution and the desquamation was very little Under the further use the improvement continued. DR. ELLIOT concludes his report with the following words: "From this slight experience, gallacetophenone appears to me to promise to be the most satisfactory local remedy for psoriasis and superior to all others. It produces no inflammatory reaction or pigmentation, but seems to influence immediately the lesions."

From my experience, I feel justified in recommending gallacetophenone as an excellent remedy for psoriasis, for it acts in some cases more promptly than chrysarobin—in all the cases which I have treated, as well if not better than the other remedies at our disposal. As it is harmless and does not discolor the skin or hair, I hope it will be found to be one of the best local remedies for psoriasis of the body, face, and scalp.

My results in a number of cases of eczema psoritiforme and seborrhoicum have been so gratifying and encouraging that I should like to include these affections in its field of usefulness.—*N. Y. Med. Jour.*

JULIA W. CARPENTER, M. D., (*Cinn. Lancet Clinic*), also speaks of the rapid, almost specific, action of GALLACETOPHENONE in a very rebellious case of psoriasis.

ABOUT GAS TREATMENT.

We make and sell oxygen and nitrogen monoxide for therapeutic use, and we guarantee them pure They are put up in compact form. (A cylinder containing 100 gallons of nitrogen monoxide or 40 gallons of oxygen measures 12 inches in length, has a diameter of 3½ inches, and weighs 10½ lbs. A cylinder containing 450 gallons of nitrogen monoxide or 100 gallons of oxygen measures 25 inches in length, has a diameter of 4½ inches, and weighs 34 lbs.)

INSOMNIA. Dr. Allan McLane Hamilton states that nitrogen monoxide, N_2O (nitrous oxide of the old nomenclature) has no equal in the treatment of this difficulty.

MELANCHOLIA. A short course of nitrogen monoxide is said to change the face of nature for such patients.

ANÆMIA. Where iron is not tolerated or proves inefficient, the addition of oxygen or a combination of oxygen and nitrogen monoxide has proven very beneficial.

For those who should, but cannot, go from home for rest or a change of air, or for those who, from any cause fail to get air enough into their lungs, the inhalation of one or other of these gases, or both in combination, promises great benefit. The testimony is that in cases of

ASTHMA, more than fifty per cent. of the cases yield to oxygen treatment, others are very greatly relieved, and a very small per cent. are not improved.

INDIGESTION and CONSTIPATION are said to be greatly relieved and very often conquered by continued treatment.

A highly esteemed New York physician has used more than twenty thousand gallons of nitrogen monoxide in his private practice. The letters received from his patients, largely from those who were afflicted with nervous disorders, are enthusiastic in their testimony as to the benefit received.

Regular practitioners who are using gas treatment testify that when *pure* oxygen and *pure* nitrogen monoxide, or a mixture of these, is used, no therapeutic agents are more uniformly successful when intelligently prescribed.

DYSPEPSIA.

Deranged digestion is the most common of all human ailments. It is a truism that no organ of the body can preserve its normal integrity **when** its supplying nerve is disordered **by lowered tone.** But this fact is largely ignored in these modern pepsin days—the **cause** being lost sight of whilst trying to remedy the effect. It is well known that any unusual worry or anxiety will upset the digestion of **the neurotic** patient. Hence, in treating dyspepsia, particularly atonic dyspepsia, that form met with in persons of low vitality and poor appetite, there are **two distinct INDICATIONS.** One is to subserve the needs of general nutrition, the other is to subserve the needs of the nervous system. This can be done by giving the patient good nutritious food and a good nerve tonic. This explains why such remarkable results follow the daily use of **CELERINA** in all dyspeptic troubles.

DIOVIBURNIA

UTERINE TONIC, ANTISPASMODIC AND ANODYNE.

A reliable and trustworthy remedy for the relief of Dysmenorrhœa, Amenorrhœa, Menorrhagia Leucorrhœa, Subinvolution, THREATENED ABORTION, Vomiting in Pregnancy and Chlorosis; directing its action to the entire uterine system as a general tonic and antispasmodic.

FORMULA.

Every ounce contains 3-4 dram each of the fluid extracts: Viburnum Prunifolium, Viburnum Opulus, Dioscorea Villosa, Aletris Farinosa, Helonias Dioica, Mitchella Repens, Caulophyllum Thalictroides, Scutellaria Lateriflora.

DOSE.—For adults, a desertspoonful to a tablespoonful three times a day, after meals. In urgent cases, where there is much pain, dose may be given every hour or two, ALWAYS IN HOT WATER.

Jno. B. Johnson, M. D., Professor of the Principles and Practice of Medicine, St. Louis Medical College.

ST. LOUIS, June 20, '88.

I very cheerfully give my testimony to the virtues of a combination of vegetable remedies prepared by a well-known and able pharmacist of this city, and known as DIOVIBURNIA, the component parts of which are well known to any and all physicians who desire to know the same, and therefore have no relation to proprietary or quack remedies. I have employed this medicine in cases of dysmonorrhœa, suppression of the catemania and in excessive leucorrhœa, and have been much pleased with its use. I do not think its claims (as set forth in the circular accompanying it) to be at all excessive. I recommend its trial to all who are willing to trust to its efficacy, believing it will give satisfaction. Respectfully,

Jno. B. Johnson

L. Ch. Boisliniere, M. D., Prof. of Obstetrics, St. Louis Medical College. ST. LOUIS, June 18, 1888.

I have given DIOVIBURNIA a fair trial and found it useful as an uterine tonic and antispasmodic, relieving the pains of dysmenorrhœa, and regulator of the uterine functions. I feel authorized to give this recommendation of DIOVIBURNIA, as it is neither a patented nor a secret medicine, the formula of which have been communicated freely to the medical profession.

L. Ch. Boisliniere M.D.

H. Tuholske, M. D., Professor Clinical Surgery and Surgical Pathology, Missouri Medical College; also Post-Graduate School of St. Louis. ST. LOUIS, June 23, 1888.

I have used DIOVIBURNIA quite a number of times—sufficiently frequently to satisfy myself of its merits. It is of unquestionable benefit in painful dysmenorrhœa; it possesses antispasmodic properties which seem especially to be exerted on the uterus.

Wm. H. Tuholske

To any physician, unacquainted with the medicinal effect of DIOVIBURNIA, we will mail pamphlet containing full information, suggestions, commendations of some of our most prominent professors and various methods of treatment; also a variety of valuable prescriptions that have been thoroughly tested in an active practice, or to physicians desiring to try our preparation, and who will pay express charges, we will send on application a sample bottle free.

DIOS CHEMICAL CO., ST. LOUIS, MO., U. S. A.

VACCINE MATTER.

For the accommodation of our Subscribers, we will supply both Bovine and Humanized Vaccine Virus.

Guaranteed to be fresh and in every respect first class.

PRICES:

Bovine Crusts, - - -	**$1 50 each**
Bovine Points or Quills, -	**1.00 a dozen.**
Humanized Crusts, - -	**1.00, small.**
Humanized Crusts, - -	**2.00, large.**

The Humanized Crusts are warranted to be from typical cases, and in every instance from healthy children, with unquestionable family histories.

PLEASE ACCOMPANY THE ORDER WITH THE MONEY.

Address, The Butler Publishing Company,

P. O. Box 843 PHILADELPHIA.

ST. LUKE'S HOME FOR THE SICK
DR. HUNTER MCGUIRE'S PRIVATE HOSPITAL
RICHMOND, VIRGINIA.

DR. HUNTER McGUIRE,

Richmond, Virginia, says:

"Whatever may be the published analysis of Spring No. 2, I know from the constant use of it personally, and in my practice during many years past, that the results obtained from the use of

BUFFALO LITHIA WATER

are far beyond those which would be warranted from the analysis given. I am of the opinion that it either contains some powerful remedial agent, as yet undiscovered by medical science, or

Its Elements are so Delicately Combined

in Nature's laboratory, that they defy the utmost skill of the chemist to solve the secret of their power."

"It has never failed me as a powerful Nerve Tonic. I sometimes think it must contain Hypophosphites of Lime and Soda."

Water in cases of one dozen half-gallon bottles, $5.00, f. o. b. here. For sale by all first-class druggists.

THOMAS F. GOODE, PROPRIETOR

BUFFALO LITHIA SPRINGS, VA.

Dr. J. FEHR'S

"COMPOUND TALCUM" * * * * "BABY POWDER,"

THE

"HYGIENIC DERMAL POWDER"

FOR

INFANTS AND ADULTS.

Introduced to the Medical and the Pharmaceutical professions by J. FEHR, in the year 1873.

COMPOSITION:—Silicate of Magnesia with Carbolic and Salicylic Acids.

PROPERTIES:—Antiseptic, Antizymotic, and Disinfectant.

Useful as a **GENERAL SPRINKLING POWDER**, with positive Hygienic, Prophylactic, and Therapeutic properties.

GOOD IN ALL AFFECTIONS OF THE SKIN.

PER BOX, PLAIN, 25 Cents; PERFUMED, 50 Cents.
PER DOZ., PLAIN, $1.75; PERFUMED, $3.50.

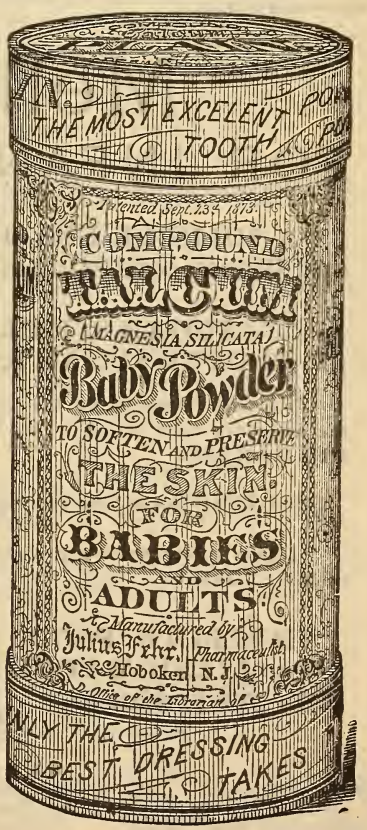
SOLD BY THE DRUG TRADE GENERALLY.

MANUFACTURER:

JULIUS FEHR, M.D.,

Ancient Pharmacist, HOBOKEN, N. J.

Only advertised in Medical and Pharmaceutical prints.



NERVOUS EXHAUSTION.

Horsford's Acid Phosphate.

Recommended as a restorative in all cases where the nervous system has been reduced below the normal standard, by overwork, as found in brain-workers, professional men, teachers, students, etc., in debility from seminal losses, dyspepsia of nervous origin, insomnia where the nervous system suffers.

It is readily assimilated and promotes digestion.

Dr. B. H. Boyd, Lafayette, Ind., says: "I have used it in several cases of nervous exhaustion, with uniformly good results.

Send for descriptive circular. Physicians who wish to test it will be furnished a bottle on application, without expense, except express charges.

Prepared under direction of Prof. E. N. Horsford, by the

RUMFORDCHEMICAL WORKS, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION:—Be sure the word "Horsford's" is printed on the label. All others are spurious Never sold in Bulk.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

—Landois and Sterling.

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

—Materia Medica and Therapeutics, Dr. Mitchell Bruce.

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

—Eustace Smith, M.D., F.R.C.S.

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

Scherff's Syrup of Hydriodic Acid.

A PERMANENT UNALTERABLE PREPARATION.

NON-IRRITANT. **PALATABLE.** **EFFICIENT**

Each fluid ounce of this Syrup represents the equivalent of 6.72 grains of absolute Hydriodic Acid. Particular stress is laid on the one great superiority: this Syrup **will not decompose**, and the danger (so common to other like preparations) of administering a preparation of free iodine, is absolutely avoided.

Descriptive Pamphlets and Clinical Reports mailed on request.

WESTERN PENNSYLVANIA MEDICAL COLLEGE
CITY OF PITTSBURGH.
SESSIONS OF 1892.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. McKENNAN, 810 Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Ave., Pittsburg.

The Baltimore Medical College.

PRELIMINARY FALL COURSE begins Sept. 1, 1892.
REGULAR WINTER COURSE begins October 1, 1892.

EXCELLENT TEACHING FACILITIES, CAPACIOUS HOSPITAL, LARGE CLINICS.

Send for catalogue, and address
DAVID STREETT, M. D., Dean,
403 N. Exeter St., Baltimore, Md.

WALNUT LODGE HOSPITAL,
HARTFORD, CONNECTICUT.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish Bath, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefitted from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY IS A DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed
T. D. CROTHERS, M. D.,
Sup't Walnut Lodge, Hartford, Conn.

DR. MASSEY'S
PRIVATE SANATORIUM.

Presenting the comforts of an elegant private residence, this institution is specially equipped for the use of electricity and allied remedial measures in the diseases of women and in diseases of the nervous system. For particulars address
G. BETTON MASSEY, M. D.,
212 S. Fifteenth St., Philadelphia.

Prickly Heat, Chafing, Dandruff,
Odors from Perspiration, etc. Speedy Relief by Using

Packer's Tar Soap

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{30}$ gr.), Atropiæ Sulph. ($\frac{1}{500}$ gr.), Codeia ($\frac{1}{60}$ gr.), Antimony Tart. $\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{30}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonial from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of th profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that th applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

"CURIOUS QUESTIONS."

An Encyclopaedia of the Rare and Curious.

Third Improved Edition Now Ready.

"Curious Questions" fills a niche wholly its own. Its mission is to tell you hundreds of things that you ought to know, and don't; to enlarge your conversational powers; to brighten your intellect, and lead you to further research in the best channels of thought, and to keep you from exposing your ignorance on many questions of daily recurrence.

Do not think you are too wise to profit by it, when Rev. Dr. Andrew Preston Peabody, of Harvard University, says of "Curious Questions:"

> **"I find that some of the questions are such as I could not have answered, or have known where to look for their answers. Such a book will be of inestimable service and value to any intelligent person, young or old."**

The new de luxe editions (25 full-page illustrations) are unexcelled for presentations. Prices, $4.00, $6.00 and $8.00 a set.

Sold by subscription through our regularly authorized solicitors, or supplied direct by the publishers. Illustrated descriptive catalogue and sample pages free. *Agents wanted.* Address the sole publishers,

Keystone Publishing Company,

Before the Medical Profession almost 30 years, and invariably gives uniform satisfaction.

We respectfully ask thorough testing, strictly UPON ITS OWN MERITS, to prove the exceptionally high reputation it holds

Owing to correspondence on the subject, we regret being compelled to caution that inferior Coca preparations are frequently substituted upon patients, and, as we do not advertise to the public, physicians will kindly be particular to insist on

VIN MARIANI

FORMULA: "VIN MARIANI" is the concentrated extractive of the fresh leaf Erythroxylon Coca, blended with a special quality of Bordeaux Wine. Each half-litre bottle contains the medicinal properties of two ounces of selected leaves.

DOSE: Usually a wine-glassful three times a day, half an hour before meals or immediately after. Increased or diminished, at discretion of the Physician.

INDICATED: As a pleasant, mild stimulant, without unpleasant reaction; a diffusible tonic; a strengthener of the Nervous system, with especial good effect on the digestive and respiratory organs; convalescence and enfeebled conditions. Effect is immediate and lasting.

NOTE: Extensively used in Hospitals, Cliniques and private practice, its merits are recorded by the medical press of Europe and America. Uniform excellence and recognized efficacy won the absolute confidence and esteem of every physician who subjected it to test, and it may be affirmed that wherever Coca is indicated "Vin Mariani" invariably receives the preference.

The continual increasing demand is a clear proof of the reliance placed in "Vin Mariani" by the Medical Profession, through whom it has been popularized.

WE WILL BE HAPPY TO FORWARD, POST-PAID, TO ANY PHYSICIAN MENTIONING THIS JOURNAL, A HANDSOMELY BOUND BOOK, DETAILING FORMULÆ, DOSE, PHYSIOLOGICAL EFFECTS AND THERAPEUTIC INDICATIONS OF COCA, AS ALSO OTHER INTERESTING READING MATTER CONNECTED WITH THE SUBJECT BY EUROPEAN AND AMERICAN OBSERVERS.

Definite Chemical Products

OF SUPERIOR THERAPEUTIC VALUE.

CHLORALAMID (Schering).

HYPNOTIC.—Dose, 15 to 45 Grains. A full descriptive pamphlet (64 pages) supplied on request.

PIPERAZIN (Schering).

URIC ACID SOLVENT. Will dissolve at least twelve times more uric acid than lithia. Dose, 15 Grains per day, with continuous treatment. Pamphlet (32 pages) sent on request.

PHENOCOLL (Schering).

ANTIPYRETIC, ANTI-RHEUMATIC, ANALGESIC, NERVINE. "The superior of all coal-tar antipyretics previously introduced." Dose, 7½ to 15 grains. Descriptive pamphlet (40 pages) supplied on request.

THIOL (Riedel).

A synthetically produced body, chemically and therapeutically identical with ICHTHYOL, and superior in being odorless and non-toxic. Supplied in powder and liquid form. Circular reprint of clinical reports sent on request.

LYSOL.

"THE IDEAL DISINFECTANT." The latest and most perfect of the cresol-derivative antiseptic and disinfectant agents. A 16-page monograph mailed on request.

Our motto "DEFINITE CHEMICAL PRODUCTS" has proved a happy hit, and it bids fair to become at once a catch phrase and the standard by which new remedies will be gauged.

Physicians are invited to write us whenever desirous of obtaining information regarding any new remedies. We will promptly answer all such inquiries.

A Sample Copy of "NOTES ON NEW REMEDIES" mailed on request.

LEHN & FINK,

IMPORTERS, WHOLESALE DRUGGISTS AND MANUFACTURING CHEMISTS,

ADDRESS: P. O. BOX 3114. **NEW YORK.** OFFICE: 128 WILLIAM STREET.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK:)

Each fluid drachm represents 15 grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium and Lithium.

USES: EPILEPSY, UTERINE CONGESTION, HEADACHE, AND ALL CONGESTIVE, CONVULSIVE AND REFLEX NEUROSES.

This preparation produces results, which can not be obtained from the use of commercial Bromide substitutes.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK.)

From Sea Weed. **Uses: Malaria, Phthisis, Etc.**

An ALLY of quinine—quinine CHECKS the Malarial Chill, Fucus Marina ELIMINATES the Malarial CAUSE; and thus prevents the recurrence of the Chill *after* it has been *checked* by quinine.

An INVALUABLE REMEDY in the treatment of Phthisis—it arrests the decay of lung tissue, diminishes the fever, lessens the cough, abates the soreness in the lungs, improves the appetite, and impedes the progressive emaciation.

DOSE.—One Teaspoonful IN WATER, four times a day.

CHIONIA FROM CHIONANTHUS.

Uses: Biliousness, Jaundice, Dyspepsia, Constipation, and all Diseases Caused by Hepatic Torpor.

CHIONIA stimulates the Liver and restores it to a healthy condition, without debilitating the system by Catharsis; does not purge, per se, but under its use the Liver and Bowels gradually resume their normal functions.

DOSE.—One Fluid Drachm three times a day.

PEACOCK CHEMICAL CO., ST. LOUIS.

STRONTIUM, McK. & R.

Absolutely Free from Barium.

INDICATED IN

RHEUMATISM, EPILEPSY, INDIGESTION, BRIGHT'S DISEASE

AND IN THE PLACE OF THE

BROMIDE OF POTASSIUM,

THAN WHICH IT IS BETTER TOLERATED EVEN IN HIGH DOSES.

J. Millner Fothergill.

Last July, M. LABORDE reported to *Societe de Biologie*, July 4, 1891, that he had found, contrary to the general opinion, that the salts of strontium might be safely employed, were beneficial to the animal economy, and that weight was increased under their use.

Some time after this report, July 28th, MM. G. SEE and CONSTANTIN PAUL stated before the *Academie de Medecine* that they had employed the bromide and lactate of strontium in rheumatism and Bright's disease, respectively, and could confirm the results of M. LABORDE in regard to the innocuousness and beneficial effects of the drug.

October 28th, M. DUJARDIN-BEAUMETZ, before the *Societe de Therapeutique* stated that he had obtained very good results in Bright's disease by the use of the lactate of strontium; that its action on the digestive functions was very favorable.

November 11th, MM. CONSTANTIN PAUL and DUJARDIN-BEAUMETZ made a further communication to the same society, and stated that they had still further used the lactate and bromide salts, and found them perfectly tolerated even in high doses.

M. FERE found the bromide of strontium of efficacy in in the treatment of epilepsy in the place of the potassium salt. He also found by numerous experiments that the toxicity of bromide of strontium, when given by intravenous injection, was far below that of the bromide of potassium.

All the authors insist on the necessity for a perfectly pure salt, one absolutely free from the presence of barium, such as those now offered to the medical profession, in the form of syrup and solution by McKesson & Robbins.

McK. & R. SYRUP OR SOLUTION OF LACTATE OF STRONTIUM, C. P.

McK. & R. SYRUP OR SOLUTION OF BROMIDE OF STRONTIUM, C. P.

In Original Pound Bottles,

Containing 60 grains to the ounce—7½ grains to the teaspoonful.

DOSE: One to two teaspoonfuls four to eight times a day.

LITERATURE SENT ON REQUEST.

DIURETIN-KNOLL IN INFANTILE PRACTICE.

BY DR. R. DEMME.

ACCORDING to the observations of Dr. R Demme, Professor of Pædiatrics to the Faculty of Medicine of Berne, diuretin may be administered in the daily dose of ·50 to 1.50 grammes (7½ to 22 grains) to children of from two to five years old, and in daily doses of 22 to 45 grains in children of six to ten years. In infants less than a year old the drug is contra-indicated, as it easily provokes gastro-intestinal irritation in these young patients.

Care should be taken in prescribing diuretin, as it is liable to be decomposed by certain substances. M. Demme recommends the following:

Diuretin	gr. xxij
Distilled water	oz. iij
Brandy	gtt. x
Sugar	grs. xl

M. Sig. To be taken in the course of the twenty-four hours in doses of one tablespoonful.

Dr. Demme's observations have convinced him that diuretin is a good diuretic for children, exempt for the most part of all unpleasant influence, and probably acting on the renal epithelium.

Under the influence of diuretin, the dropsy of scarlatinal nephritis disappeared more quickly than by the action of any other medicament. It suppresses very rapidly the anasarca and serous effusions in cases of mitral disease, when the compensation has been previously established by means of digitalis:

The diuretin was generally well supported, and it had no cumulative action. However, in one case of generalized dropsy in a child of ten years, suffering from amyloid degeneration of the liver, spleen, and kidneys, Dr. Demme has seen a morbilliform eruption with abundant diarrhœa, after the injection of 90 grains of diuretin in the space of four days.—*La Semaine Medicale*, Feb. 24, 1892.

SEND FOR COMPLETE NOTES.

THE COMPOUND STEARATES, McK. & R.

THE Compound Stearates, introduced recently by McKESSON & ROBBINS, are now presented to the Medical Profession at large with confidence, as powders which are remarkable for their mollescence when applied to anoint or protect diseased conditions of the skin and mucous membranes.

They are adhesive, and act as grateful vehicles in which drugs may be administered locally.

Desirable as adjuvants in insufflations and antipruritic as dusting powders, they can be used to cover and protect the surface of the skin without soiling the clothing, and offer a very profitable field for therapeutic investigation, where the frequently rancid oleates and ointments, or the ordinary soluble and non-adhesive dusting and other powders for the skin and mucous membrane are not desirable.

McK. & R. COMPOUND STEARATE INSUFFLATIONS.

McK. & R. COMPOUND STEARATE OF ZINC WITH BORIC ACID. (Zinci Stearas Co. cum Acid Boric.—McK. & R.)

Employed in catarrhal rhinitis with hypersecretion.

McK. & R. COMPOUND STEARATE OF ZINC WITH ARISTOL. (Zinci Stearas Co. cum Aristol. —McK. & R.)

In atrophic rhinitis and ozœna.

McK. & R. COMPOUND STEARATE OF ZINC AND BISMUTH SUBGALLATE. (Zinci Stearas Co. cum Bismuth. Subgall.—McK. & R.)

Especially after operations, and instead of iodoform.

McK. & COMPOUND STEARATE OF ZINC WITH BALSAM PERU. (Zinci Stearas Co. cum Balsam. Peruv.—McK. & R.)

In ulcerative tubercular laryngitis.

FULL LIST, CONTAINING OVER TWENTY OTHER COMPOUNDS, SENT FREE.

McKESSON & ROBBINS, MANUFACTURING CHEMISTS, NEW YORK.

ERGOTOLE S & D's

is a Concentrated (2½ grs. of select Spanish Ergot to each minim)
Purified (all inert and irritating matter is removed)
Permanent (it *keeps* perfectly without deterioration)
Preparation of Ergot that

Does not Produce Nausea

when given by the mouth, and does not produce irritation or abscess when exhibited *hypodermically*.

We will send samples and literature.

SHARP & DOHME, MANUFACTURING CHEMISTS ESTABLISHED 1860 Baltimore, Md.

"As a disinfectant for all the sanitary needs of the sick-room, Platt's Chlorides is especially recommended."

Endorsed by thousands of Physicians, and having commanded a large sale for many years, Platt's Chlorides can readily be procured from almost any druggist in any city, town or village in the United States. It is an odorless liquid, and is sold in quart bottles only.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

—*Landois and Sterling.*

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

—*Materia Medica and Therapeutics, Dr. Mitchell Bruce.*

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

—*Eustace Smith, M.D., F.R.C.S.*

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

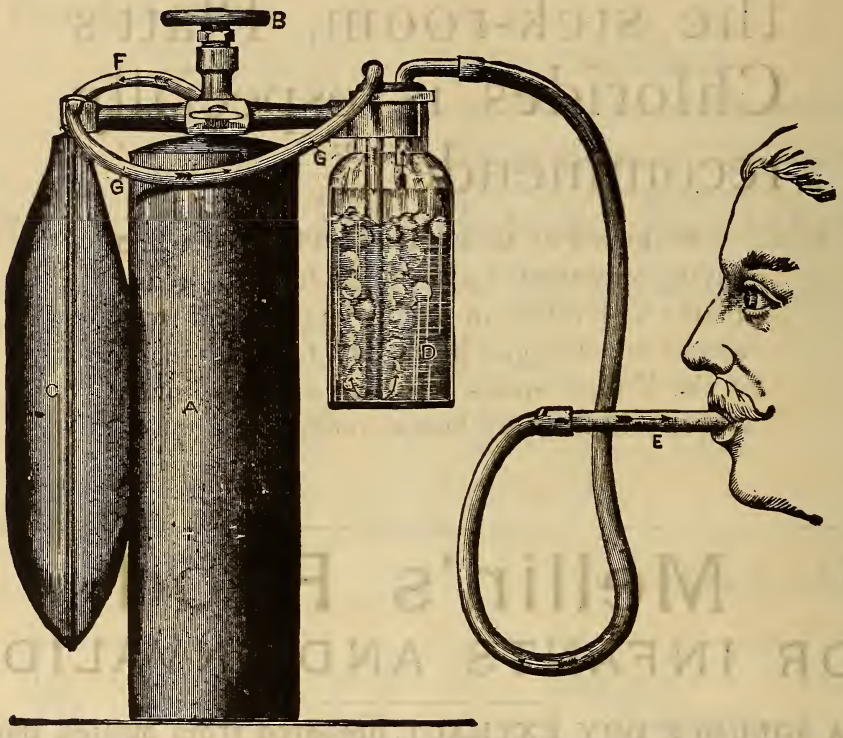
THE DOLIBER-GOODALE CO.,

BOSTON, MASS.

INHALATION APPARATUS

FOR

THE THERAPEUTIC ADMINISTRATION OF OXYGEN.



In the treatment of lung troubles by Oxygen its exhibition by inhalation is preferred. The apparatus herewith shown is a modification of the Nitrous Oxide apparatus which we have supplied for many years. It is made in the best manner throughout, and is the outcome of years of experience in the manufacture of gas apparatus. It will be found to meet all the requirements.

We supply the gas in two sizes of cylinders, containing respectively forty and one hundred gallons, either pure Oxygen, or a mixture of Oxygen and Nitrous Oxide in definite proportions of 20 per cent., and forty per cent. of Nitrous Oxide.

Whether pure or mixed the gas is sold at the uniform price of 5 cents a gallon. The cost of the cylinders will be refunded on their return empty with the valves in good condition. Full description of Inhalation and Enema apparatuses with directions for use accompany each apparatus, or will be supplied on application.

PRICES.

Inhalation Apparatus	$5.00
Cylinder, 40 gallons' capacity	6.00
40 gallons Gas, either pure Oxygen or mixed Oxygen and Nitrous Oxide	2.00
Complete Apparatus, Cylinder, and 40 gallons Gas	$13.00
Inhalation Apparatus	$5.00
Cylinder, 100 gallons' capacity	15.00
100 gallons Gas, either pure or mixed	5.00
Complete Apparatus, Cylinder, and 100 gallons Gas	$25.00

THE S. S. WHITE DENTAL MFG. CO.

PHILADELPHIA, NEW YORK, BOSTON, CHICAGO, BROOKLYN, ATLANTA

ESTABLISHED 1855.

DR. STRONG'S SANITARIUM,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for TREATMENT, CHANGE, REST, OR RECREATION.

And places them under well-regulated hygienic conditions so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it has a Sun Parlor and Promenade on the roof. Turkish, Roman, Sulphur, Electro-Thermal, the French Douche, and all Hydropathic Baths; Vacuum Treatment, Swedish Movements, Massage, Pneumatic Cabinet Inhalations of Medicated, Compressed, and Rarefied Air, Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, with elevator, electric bells, open fire-places, steam, and thorough ventilation. With cheering influences and avoiding the pressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in winter tobogganing, elegant sleighing, etc.; in Summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience.

A liberal discount to physicians and their families for board or treatment. For illustrated Circular, Address:

NOTE—We have a few dated Records left, which we will dispose of at half price if applied for immediately.

CELERINA

NERVE TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Loss of Nerve Power (so usual with Lawyers, Preachers, Writers and Business Men), Impotency, Spermatorrhea, Nervous Headache, Neuralgia, Paralysis, Hysteria, Opium Habit, Inebriety, Dyspepsia, and ALL LANGUID conditions of the System.

Indispensable to restore a patient after alcoholic excess.

DOSE.—One or two Teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One Teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation.

It Restores Normal Action to the Uterus, and Imparts Vigor to the Entire Uterine System.

Where Women have miscarried during previous pregnancies, or in any case where miscarriage is feared, ALETRI' CORDIAL is indicated, and should be continuously administered during entire gestation.

S. H. KENNEDY'S

CONCENTRATED EXTRACT OF

PINUS CANADENSIS

DARK. A NON-ALCOHOLIC LIQUID. WHITE.

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be used,

RECOMMENDED BY PROMINENT EUROPEAN AND AMERICAN PHYSICIANS.

The above preparations are prepared exclusively for Physicians' Prescriptions, and a sample of each or all of them will be sent to any Physician who wishes to test them, if he will pay the Express Charges.

RIO CHEMICAL CO., St. Louis, Mo., U. S. A.

WESTERN PENNSYLVANIA MEDICAL COLLEGE
CITY OF PITTSBURGH.
SESSIONS OF 1892.

The Regular Session begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The Spring Session embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. McKennan, 810 Penn Ave.

Business correspondence should be addressed to
Prof. W. J. Asdale, 2107 Penn Ave., Pittsburg.

WALNUT LODGE HOSPITAL,
HARTFORD, CONNECTICUT.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish Bath, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefitted from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that Inebriety is a disease, and curable, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M. D.,
Sup't Walnut Lodge, Hartford, Conn.

DR. MASSEY'S
PRIVATE SANATORIUM.

Presenting the comforts of an elegant private residence, this institution is specially equipped for the use of electricity and allied remedial measures in the diseases of women and in diseases of the nervous system. For particulars address

Prickly Heat, Chafing, Dandruff,

Odors from Perspiration, etc. Speedy Relief by Using

Packer's Tar Soap

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. Imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

"Its popularity is chiefly due to its irreproachable character."

"Invalids are recommended to drink it"

THE TIMES, LONDON.

THE APOLLINARIS CO., LD.

19 REGENT STREET, LONDON.

To the Medical Profession.

During the past seven years we have been laboring assiduously to produce *Infant Foods* eady for use that would closely resemble healthy human milk. It has not been any easy task, as every physician knows who has taken a special interest in the subject. We have spared neither labor or expense to accomplish this object, which will be demonstrated to any Physician who will visit our factory. We have met the more recent demand for a *sterilized Food for Infants* by an expensive change in our machinery, under the supervision of the most eminent Bacteriologists in the country. This sterilization has been accomplished without rendering the casein of the milk less digestible, as is invariably done with the patented sterilizers in use.

It also insures, with the hermetically sealed cans. their perfect keeping qualities.

We do not think it possible that any *Infant Food* will ever be prepared that will excel **LACTO-PREPARATA** (an all milk food) for the feeding of young infants, and **CARNRICK'S FOOD** for their nourishment during the latter part of the nursing period. All other *Infant Foods* in the market are composed entirely of cereals; or they contain so little milk (about 8 per cent.) that it is a misnomer to call them Milk Foods. If such foods are used alone, the child will not be properly nourished, its flesh will be flabby, and it will quickly succumb to disease, because they are deficient in albuminoid constituents.

Send for circulars and samples.

KUMYSGEN

Make Your Own KUMYSS in one Minute.

A Product of Pure, Sweet Milk.

What is Kumysgen?

It is *Kumyss* in a dry form, containing all the constituents of the best *Kumyss*, and requires only the addition of water to produce an article superior in digestibility and palatability to the old form of *Kumyss*.

It is the *Ideal Food* in all cases where nutrition is an important factor, and digestion is feeble

When all other Foods fail try **Kumysgen**, but it is better to try it in the beginning and save time and strength.

Kumysgen is the only preparation of *Kumyss* that will keep. All liquid preparations of *Kumyss* will keep but a short time, and are constantly changing in the bottle, unless some deleterious preservative is used.

Kumyss made from **Kumysgen** is far more palatable, easier digested and 35 per cent. less expensive than the old Style **Kumyss.**

Our **Syphon Kumysgen Bottles** allow *Kumyss* to be drawn without loss of contents. One in every three bottles are *siphons*, containing same quantity of KUMYSGEN as the others. Send for samples and descriptive circulars.

Manufactured Only by

REED & CARNRICK, New York.

NEW AND OLD CURES FOR CONSUMPTION.

Many plausible theories of pathology and promising systems of cure arise from time to time to excite the hopes of those afflicted with that dread disease, consumption.

Within the past few years we have seen several such systems run their course of popular enthusiasm, professional encouragement, thorough test and ultimate failure. The best that any exclusively germicidal treatment can do, if successful at all, is to destroy the germs, or dislodge the germ-bearing tissues, and leave the patient in his original condition, modified by the destructive lesions which have already taken place.

But especially must it be borne in mind that the new method of treatment put forth by Prof. Koch is, confessedly, not applicable to the vast majority of consumptive cases, where the disease has already made considerable advance, but only to those that are in the incipient stages. It is also contra-indicated in cases, of tuberculosis of the meninges, brain, larynx and other confined localities or narrow passages, where the hyperemia induced and the necrosed tissues will give rise to serious and generally fatal disturbances.

Even with the best of germicidal treatments, then, in pulmonary phthisis, the reconstructive measures will still be needed to aid in the process of repair. In fact, without them the patient would be left peculiarly pre-disposed to immediate re-infection with the disease. It is, then, safe to predict that no method of treating pulmonary consumption will ever be devised, however radical in its nature, which will supersede the well-known hygienic and reconstructive measures.

The reason for this is plain to every thinking man. Even before the patient was infected at all, before any anatomical lesion existed in the tissues, at an unguarded time of lowered vitality, the germs of disease made a successful lodgment, and the destructive process commenced.

Now, it is a well established fact that the chief of all reconstructive remedies is the combined hypophosphites of lime and soda—*And this very remedy has long been in successful use in the treatment of consumption.* It is of equal value as a prophylactic in those cases that are constitutionally predisposed to the disease, and as a curative agent in the incipient and even somewhat advanced stages. It alone has proven to be more successful in curing pulmonary tuberculosis than the Koch method, and without any of its dangers and complications. It accomplishes its work gradually and insensibly, replacing new tissues, cell by cell, for the broken-down, diseased tissues as they are removed in a true physiological process by the absorbent powers of the system. In this there is no sudden "reaction" or violent process, removing large and dangerous sloughs, leaving the patient prostrated by the shock, and the adjacent healthy tissues raw and exposed, liable to receive the disease germs anew, and to disseminate them throughout the system more rapidly than before.

So, then, whether any of the germicidal treatments be ultimately successful in removing the cause of the disease or not, the hypophosphites of lime and soda will be a necessity in the armamentarium against consumption. As a specific curative agent, it will outlive them all.

But it is of the utmost importance that you assure yourself of the chemical purity of the preparation of the Hypophosphites which you use, as it is peculiarly liable to deterioration unless properly prepared. The McArthur Hypophosphite Co., Boston, Mass., will send you valuable information upon the treatment of consumption, if you so request.

Before the Medical Profession almost 30 years, and invariably gives uniform satisfaction.

We respectfully ask thorough testing, strictly UPON ITS OWN MERITS, to prove the exceptionally high reputation it holds

Owing to correspondence on the subject, we regret being compelled to caution that inferior Coca preparations are frequently substituted upon patients, and, as we do not advertise to the public, physicians will kindly be particular to insist on

VIN MARIANI

FORMULA: "VIN MARIANI" is the concentrated extractive of the fresh leaf Erythroxylon Coca, blended with a special quality of Bordeaux Wine. Each half-litre bottle contains the medicinal properties of two ounces of selected leaves.

DOSE: Usually a wine-glassful three times a day, half an hour before meals or immediately after. Increased or diminished, at discretion of the Physician.

INDICATED: As a pleasant, mild stimulant, without unpleasant reaction; a diffusible tonic; a strengthener of the Nervous system, with especial good effect on the digestive and respiratory organs; convalescence and enfeebled conditions. Effect is immediate and lasting.

NOTE: Extensively used in Hospitals, Cliniques and private practice, its merits are recorded by the medical press of Europe and America. Uniform excellence and recognized efficacy won the absolute confidence and esteem of every physician who subjected it to test, and it may be affirmed that wherever Coca is indicated "Vin Mariani" invariably receives the preference.

The continual increasing demand is a clear proof of the reliance placed in "Vin Mariani" by the Medical Profession, through whom it has been popularized.

WE WILL BE HAPPY TO FORWARD, POST-PAID, TO ANY PHYSICIAN MENTIONING THIS JOURNAL, A HANDSOMELY BOUND BOOK, DETAILING FORMULÆ, DOSE, PHYSIOLOGICAL EFFECTS AND THERAPEUTIC INDICATIONS OF COCA, AS ALSO OTHER INTERESTING READING MATTER CONNECTED WITH THE SUBJECT BY EUROPEAN AND AMERICAN OBSERVERS.

1315 Massachusetts Avenue, N. W., Washington, D. C.

UNIVERSITY OF MARYLAND.—SCHOOL OF MEDICINE

The Eighty-Sixth Annual Session will begin October 1st, 1892, and will end in April, 1893. Didactic lectures are illustrated by daily clinical instruction in general medicine and surgery, and the various special branches. Laboratory instruction in chemistry and normal pathological histology. All candidates for graduation have personal experience in practical obstetrics.

For further information and circular apply to

I. E. ATKINSON, M. D., Dean,
605 Cathedral Street, Baltimore.

VACCINE MATTER.

For the accommodation of our Subscribers, we will supply both Bovine and Humanized Vaccine Virus.

Guaranteed to be fresh and in every respect first class.

PRICES:

Bovine Crusts, - - -	$1 50 each
Bovine Points or Quills, -	1.00 a dozen.
Humanized Crusts, - -	1.00, small.
Humanized Crusts, - -	2.00, large.

The Humanized Crusts are warranted to be from typical cases, and in every instance from healthy children, with unquestionable family histories.

PLEASE ACCOMPANY THE ORDER WITH THE MONEY.

Address, **The Butler Publishing Company,**
P. O. Box 843 PHILADELPHIA.

Definite Chemical Products

OF SUPERIOR THERAPEUTIC VALUE.

CHLORALAMID (Schering).

HYPNOTIC.—Dose, 15 to 45 Grains. A full descriptive pamphlet (64 pages) supplied on request.

PIPERAZIN (Schering).

URIC ACID SOLVENT. Will dissolve at least twelve times more uric acid than lithia. Dose, 15 Grains per day, with continuous treatment. Pamphlet (32 pages) sent on request.

PHENOCOLL (Schering).

ANTIPYRETIC, ANTI-RHEUMATIC, ANALGESIC, NERVINE. "The superior of all coal-tar antipyretics previously introduced." Dose, 7½ to 15 grains. Descriptive pamphlet (40 pages) supplied on request.

THIOL (Riedel.)

A synthetically produced body, chemically and therapeutically identical with ICHTHYOL, and superior in being odorless and non-toxic. Supplied in powder and liquid form. Circular reprint of clinical reports sent on request.

LYSOL.

"THE IDEAL DISINFECTANT." The latest and most perfect of the cresol-derivative antiseptic and disinfectant agents. A 16-page monograph mailed on request.

Our motto "DEFINITE CHEMICAL PRODUCTS" has proved a happy hit, and it bids fair to become at once a catch phrase and the standard by which new remedies will be gauged.

Physicians are invited to write us whenever desirous of obtaining information regarding any new remedies. We will promptly answer all such inquiries.

A Sample Copy of "NOTES ON NEW REMEDIES" mailed on request.

LEHN & FINK,

IMPORTERS, WHOLESALE DRUGGISTS AND MANUFACTURING CHEMISTS,

ADDRESS: P. O. BOX 3114. **NEW YORK.** OFFICE: 128 WILLIAM STREET.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK:)

Each fluid drachm represents 15 grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium and Lithium.

USES: EPILEPSY, UTERINE CONGESTION, HEADACHE, AND ALL CONGESTIVE, CONVULSIVE AND REFLEX NEUROSES.

This preparation produces results, which can not be obtained from the use of commercial Bromide substitutes.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK.)

From Sea Weed. **Uses: Malaria, Phthisis, Etc.**

An ALLY of quinine—quinine CHECKS the Malarial Chill, Fucus Marina ELIMINATES the Malarial CAUSE; and thus prevents the recurrence of the Chill *after* it has been *checked* by quinine.

An INVALUABLE REMEDY in the treatment of Phthisis—it arrests the decay of lung tissue, diminishes the fever, lessens the cough, abates the soreness in the lungs, improves the appetite, and impedes the progressive emaciation.

DOSE.—One Teaspoonful IN WATER, four times a day.

CHIONIA FROM CHIONANTHUS.

Uses: Biliousness, Jaundice, Dyspepsia, Constipation, and all Diseases Caused by Hepatic Torpor.

CHIONIA stimulates the Liver and restores it to a healthy condition, without debilitating the system by Catharsis; does not purge, per se, but under its use the Liver and Bowels gradually resume their normal functions.

DOSE.—One Fluid Drachm three times a day.

PEACOCK CHEMICAL CO., ST. LOUIS.

SUPERIOR TO THE MURIATE:

The Phenate of Cocaine

Not being absorbed into the organism when applied locally its anæsthetic effect is prolonged, and there is an absence of cocaine intoxication.

A NEW NON-TOXIC MEANS IN

PSORIASIS AND OTHER SKIN DISEASES.

GALLACETOPHENONE

FULL NOTES SENT FREE ON RECEIPT OF POSTAL CARD

THE PHENATE OF COCAINE.

Geromorphism.

"We know that phenic acid, from the point of view of its local action, presents certain analogies with cocaine; like the latter, it produces ischæmia and insensibility of the tissues. We would therefore expect that a combination of the two substances, under the form of phenate of cocaine, would have therapeutic properties, superior to those of the muriate of cocaine. This has been found to be the case by a Bavarian physician, DR VON OEFELE, who has for some time past employed the phenate of cocaine exclusively in the place of the muriate."

He has found that the phenic salt exercises an analgesic action much more persistent than that of the muriate, while the chances of producing toxic effects are much less. Gluck was accustomed to add carbolic acid to his solutions of cocaine for the purpose of diminishing the chances of producing disagreeable results. These properties and advantages are explained by the fact that the phenic salt is almost entirely insoluble in water. Not being dissolved by the juices of the organism, the phenate of cocaine, employed as a local application, is absorbed but little or not at all, whence the absence of intoxication and the persistence of the analgesic action, which may last as long as thirty-six hours. Phenate of cocaine may be given internally as well as in hypodermic injection.—*La Semaine Med.*

GALLACETOPHENONE,

A NEW DERMATO-THERAPEUTIC AGENT.

BY HERMANN GOLDENBERG, M. D.

It is well known that pyrogallic acid is by no means a harmless drug. After its introduction into dermatological practice NEISSER lost a patient after one application. The patient died on the third day with symptoms of intoxication. VIDAL has likewise reported the death of a patient, eighteen years old, who had used a ten per cent. pyrogallic ointment for two weeks. This poisonous effect of pyrogallic acid is to be attributed to the great readiness with which it is oxidized in alkaline solutions (being so intensely reducing).

Gallacetophenone does not possess this quality and is absolutely harmless, as has been proven by experiments on animals.

It displays strong antiseptic qualities. A one per cent. solution added to chopped meat prevented its becoming putrid for twenty-one days, and destroyed the *Streptococcus aureus* within twenty-four hours.

Since the middle of October I have employed it, both in private and in dispensary practice, on at least thirty patients suffering from various skin diseases.

On account of its resemblance to pyrogallic acid, it seemed to be indicated in psoriasis. I have been so much more inclined to use it in that disease, since VON REKOWSKI, who tried it in a few cases only, maintains "that the effect of this new preparation (used as a ten per cent. ointment) is noticed within twelve hours."

Altogether, I have thus employed it in twelve cases of psoriasis—in all of them with good results. Within a few days the patches became paler and thinner, the desquamation ceased or became less, and involution took place in the centers. Usually after the lapse of from ten to twelve days only a slight hyperæmia was left. Within from two to three weeks the patches disappeared entirely without leaving any pigmentation.

A ten per cent. ointment did not produce any marked irritation or discolor the skin. It stains the clothes slightly yellowish, much less than pyrogallic acid or chrysarobin. In the case of psoriasis of the face and scalp it really acted like a specific. The eruption, which was quite profuse, disappeared within five days. A ten per cent. ointment was applied twice daily. There was no other treatment

Another patient with a universal psoriasis of sixteen years' standing, who applied to my department at Mount Sinai Dispensary for some other trouble, was induced to use a ten per cent. salve of gallacetophenone for the forehead and scalp, which were thickly covered with psoriatic patches. When he returned, two weeks later, there was nothing left but a pigmentation of the forehead, while the psoriasis of the body which had not been treated was *in statu quo ante.*

My friend, DR. G.T. ELLIOT, has, at my request, used gallacetophenone on a patient with psoriasis of eight years' standing, distributed over the trunk, knees, elbows, scalp, and face in patches of various sizes. The case had been under treatment the whole time and had proved exceedingly rebellious. Arsenic caused an increase of inflammatory symptoms. Pyrogallic acid had been used with but moderate success. Chrysarobin did well, if used persistently. At the time (November 21st) when the use of a ten per cent. gallacetophenone ointment was begun, the patches were bright red, burning, and with abundant desquamation. A week later the patches were paler and breaking up into small papules. The centers had undergone involution and the desquamation was very little Under the further use the improvement continued. DR. ELLIOT concludes his report with the following words: "From this slight experience, gallacetophenone appears to me to promise to be the most satisfactory local remedy for psoriasis and superior to all others. It produces no inflammatory reaction or pigmentation, but seems to influence immediately the lesions."

From my experience, I feel justified in recommending gallacetophenone as an excellent remedy for psoriasis, for it acts in some cases more promptly than chrysarobin—in all the cases which I have treated, as well if not better than the other remedies at our disposal. As it is harmless and does not discolor the skin or hair, I hope it will be found to be one of the best local remedies for psoriasis of the body, face, and scalp.

My results in a number of cases of eczema psoriti-forme and seborrhoicum have been so gratifying and encouraging that I should like to include these affections in its field of usefulness.—*N. Y. Med. Jour.*

JULIA W. CARPENTER, M. D., (*Cinn. Lancet Clinic*), also speaks of the rapid, almost specific, action of GALLACETOPHENONE in a very rebellious case of psoriasis.

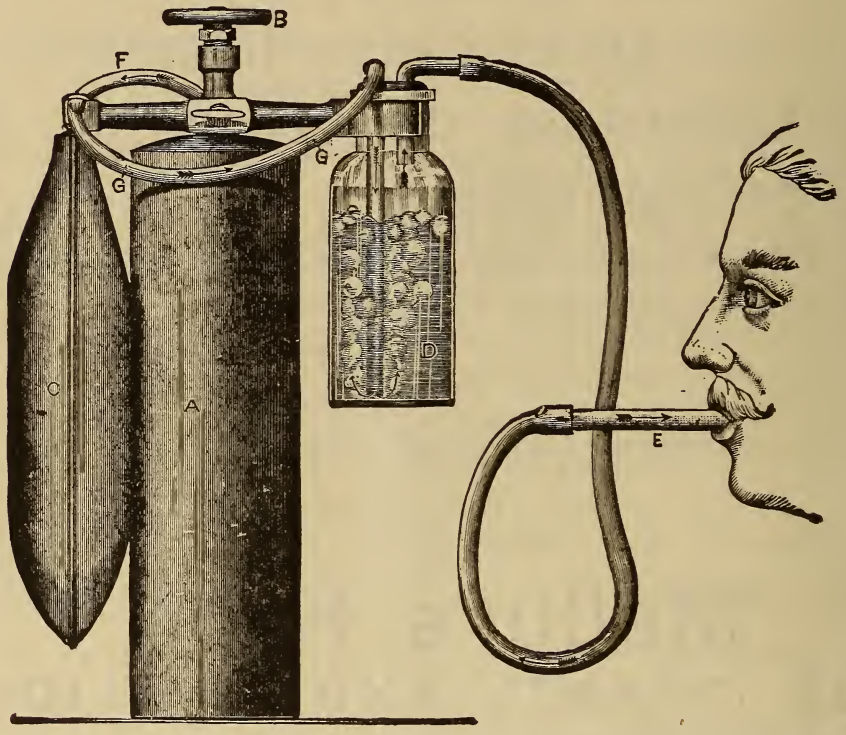
INHALATION APPARATUS

FOR

THE THERAPEUTIC ADMINISTRATION OF OXYGEN.



In the treatment of lung troubles by Oxygen its exhibition by inhalation is preferred. The apparatus herewith shown is a modification of the Nitrous Oxide apparatus which we have supplied for many years. It is made in the best manner throughout, and is the outcome of years of experience in the manufacture of gas apparatus. It will be found to meet all the requirements.

We supply the gas in two sizes of cylinders, containing respectively forty and one hundred gallons, either pure Oxygen, or a mixture of Oxygen and Nitrous Oxide in definite proportions of 20 per cent., and forty per cent. of Nitrous Oxide.

Whether pure or mixed the gas is sold at the uniform price of 5 cents a gallon. The cost of the cylinders will be refunded on their return empty with the valves in good condition. Full description of Inhalation and Enema apparatuses with directions for use accompany each apparatus, or will be supplied on application.

PRICES.

Inhalation Apparatus	$5.00
Cylinder, 40 gallons' capacity	6.00
40 gallons Gas, either pure Oxygen or mixed Oxygen and Nitrous Oxide	2.00
Complete Apparatus, Cylinder, and 40 gallons Gas	$13.00
Inhalation Apparatus	$5.00
Cylinder, 100 gallons' capacity	15.00
100 gallons Gas, either pure or mixed	5.00
Complete Apparatus, Cylinder, and 100 gallons Gas	$25.00

THE S. S. WHITE DENTAL MFG. CO.,

, BOSTON, CHICAGO, BROOKLYN ATLANTA

ESTABLISHED 1855.

DR. STRONG'S SANITARIUM,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for TREATMENT, CHANGE, REST, OR RECREATION.

And places them under well-regulated hygienic conditions so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it has a Sun Parlor and Promenade on the roof. Turkish, Roman, Sulphur, Electro-Thermal, the French Douche, and all Hydropathic Baths; Vacuum Treatment, Swedish Movements, Massage, Pneumatic Cabinet Inhalations of Medicated, Compressed, and Rarefied Air, Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, with elevator, electric bells, open fire-places, steam, and thorough ventilation. With cheering influences and avoiding the pressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in winter tobogganing, elegant sleighing, etc.; in Summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience.

A liberal discount to physicians and their families for board or treatment. For illustrated Circular, Address:

PARTURITION.

Aletris Cordial (Rio), given in Teaspoonful doses every hour or two AFTER PARTURITION, is the best agent to prevent after-pains and hemorrhage. By its DIRECT tonic action on the uterus, it expels blood clots, closes the uterine sinuses, causes the womb to contract, and prevents subinvolution. In severe cases, it can be combined with ergot in the proportion of one ounce of fluid Ext. Ergot to three ounces Aletris Cordial. It is the experience of eminent practitioners, in all cases where ergot is indicated, that its action is rendered much more efficacious by combining it with Aletris Cordial in the proportions above stated.

PREFERABLE TO CORROSIVE SUBLIMATE

Because it is not poisonous

Because it possesses superior antiseptic properties

Because it forms no insoluble compounds with the animal fluids

Because it produces no pain or irritation even of abraded surfaces

For use in all cases and under all circumstances where CORROSIVE SUBLIMATE has hitherto been employed

APPLICABLE WHEREVER AN ANTISEPTIC IRRIGATION or Lotion is indicated and as a Prophylactic and Disinfectant under any and all circumstances

CHLORO PHENIQUE

PERFECTLY MISCIBLE WITH WATER

For washing out the cavities, or THE BLADDER IN CHRONIC CYSTITIS it has no equal

A Non-Irritant Non-Poisonous Antiseptic and Parasiticide of Great Energy

In FOUL WOUNDS, ABSCESSES, SUPPURATING SINUSES, BUBOES, etc., CHLORO-PHÉNIQUE is used to cleanse and to prepare the way for "Campho-Phenique," which latter as a permanent dressing, subdues pain, prevents the formation of pus, and hastens healing in a remarkable manner

Nervous Diseases and Their Diagnosis

By H. C. WOOD, M. D., LL. D.,

Professor of Therapeutics and Nervous Diseases, University of Pennsylvania.
8vo., pp. 501, Cloth, $4.

It is invaluable as a work of diagnosis.—*Virginia Medical Monthly.*

It is at once a substantive contribution to neurology and a trustworthy guide to what has already been done in the subject.—*Practitioner.*

As a whole, the work is one which cannot fail to be of great service to the practicing physician.—*Medical and Surgical Reporter.*

The volume is a distinct help to the student, and is a necessary supplement to the systematic works on diseases of the nervous system.—*Boston Med. Surg. Jour.*

The author's originality is evident to every reader of his work; and we trust, for the advancement of knowledge, his readers will be many.—*New England Med. Gaz.*

This work fills a long-felt need in this department.—*Buffalo Med. Surg. Jour.*

Dr. Wood is an able clinician, and this makes his book valuable. His observations are practical and to the point and show careful study of a large number of cases which have fallen under his care.—*N. Y. Med. Jour.*

The honest effort of one who never writes without teaching and who always writes and teaches well.—*Journal of Insanity.*

To students and practitioners who have read other works this production will prove extremely valuable in time of need, to the former just before examination; to the latter in everyday practice.—*London Lancet.*

Not a compilation, but rather the record of independent opinions and investigations.—*Canadian Practitioner.*

The book is written in the characteristic vigorous style of its able and versatile author.—*American Practitioner.*

Lucid language, clear type, a full index, and, above all, the presentation of the late advances in this department of science, constitute the truly great attractions of this book.—*Albany Med. Annals.*

It is not until the volume has been carefully read, and perhaps re-read, that its true excellence begins to dawn upon the reader.—*Maryland Med. Journal.*

WESTERN PENNSYLVANIA MEDICAL COLLEGE
CITY OF PITTSBURGH.

SESSIONS OF 1892.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. MCKENNAN, 810 Penn Ave.

Business correspondence should be addressed to

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish Bath, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefitted from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY IS A DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

DR. MASSEY'S
PRIVATE SANATORIUM.

Presenting the comforts of an elegant private residence, this institution is specially equipped for the use of electricity and allied remedial measures in the diseases of women and in diseases of the nervous system. For particulars address

G. BETTON MASSEY, M. D.,
212 S. Fifteenth St., Philadelphia.

Prickly Heat, Chafing, Dandruff,

Odors from Perspiration, etc. Speedy Relief by Using

Packer's Tar Soap

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

BARGAINS FOR SUBSCRIBERS.

WE offer a number of first-class and very valuable books (latest editions), together with a year's subscription to the REPORTER, at the following very low rates:

For $10.00 we will send

	The REPORTER for one year,	price alone,		$5.00
	Pocket Record,	"	"	1.00
	Thomas—Medical Dictionary,	"	"	5.00
And one of the following:				
(1)	Mills—The Nursing and Care of the Insane,	"	"	1.00
(2)	Keating—Maternity, Infancy, Childhood,	"	"	1.00
(3)	Bruen—Outlines for the Management of Diet,	"	"	1.00
(4)	Wilson—Fever Nursing,	"	"	1.00
(5)	Powell—Pocket Medical Formulary,	"	"	1.50

For $9.00 we will send

	The REPORTER for one year,	price alone,		$5.00
And one of the following:				
(1)	Heath—Dictionary of Practical Surgery,	"	"	7.50
(2)	Wood—Therapeutics: Its Principles and Practice,	"	"	6.00
(3)	DaCosta—Medical Diagnosis,	"	"	6.00
(4)	Leidy—Human Anatomy,	"	"	6.00

For $8.00 we will send

	The REPORTER for one year,	price alone,		$5.00
(1)	Thomas—Medical Dictionary,	"	"	5.00
Or, (2)	The Physician's Model Ledger,	"	"	5.00
Or, (3)	Vierordt—Medical Diagnosis, and Pocket Record,	"	"	5.00

For $7.00 we will send

	The REPORTER for one year,	price alone,		$5.00
And any three of the following:				
(1)	Mills—The Nursing and Care of the Insane,	"	"	1.00
(2)	Keating—Maternity, Infancy, Childhood,	"	"	1.00
(3)	Bruen—Outlines for the Management of Diet,	"	"	1.00
(4)	Wilson—Fever Nursing,	"	"	1.00
(5)	Powell—Pocket Medical Formulary,	"	"	1.50
(6)	Pocket Record,	"	"	1.00

For $6.00 we will send

	The REPORTER for one year,	price alone,		$5.00
And any two of the books under the $7.00 offer,		"	"	2.00

AN IDEAL PEPSIN!

PHYSICIANS PRESCRIBE

P., D. & CO.'S

ASEPTIC PEPSIN.

Pepsins as heretofore known have left very much to be desired, most of them indicating by their odor the putrescent mucus and other objectionable constituents which must necessarily prove irritating, especially to the delicate stomach of an infant, invalid or dyspeptic.

We now supply a new and improved Pepsin Product (ASEPTIC PEPSIN, 1 to 4000, P., D. & Co.'s), in the full confidence that it will at once recommend itself to the favorable attention of the Medical Profession.

It is twice as active as any other pepsin now on the market, and by the process of manufacture which we pursue, is deprived of all septic constituents. This process renders it very palatable so that the most fastidious palate could not possibly object to its taste.

Samples and literature will gladly be supplied upon application.

MANUFACTURED ONLY BY

PARKE, DAVIS & COMPANY,

DETROIT, NEW YORK AND KANSAS CITY.

"CURIOUS QUESTIONS."

An Encyclopaedia of the Rare and Curious.

Third Improved Edition Now Ready.

"Curious Questions" fills a niche wholly its own. Its mission is to tell you hundreds of things that you ought to know, and don't; to enlarge your conversational powers; to brighten your intellect, and lead you to further research in the best channels of thought, and to keep you from exposing your ignorance on many questions of daily recurrence.

Do not think you are too wise to profit by it, when Rev. Dr. Andrew Preston Peabody, of Harvard University, says of "Curious Questions:"

> **"I find that some of the questions are such as I could not have answered, or have known where to look for their answers. Such a book will be of inestimable service and value to any intelligent person, young or old."**

The new de luxe editions (25 full-page illustrations) are unexcelled for presentations. Prices, $4.00, $6.00 and $8.00 a set.

Sold by subscription through our regularly authorized solicitors, or supplied direct by the publishers. Illustrated descriptive catalogue and sample pages free. *Agents wanted.* Address the sole publishers,

Keystone Publishing Company,

Eighth and Locust Streets, Philadelphia, Pa.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{60}$ gr.), Atropiæ Sulph. ($\frac{1}{120}$ gr.), Codeia ($\frac{1}{30}$ gr.), Antimony Tart. $\frac{1}{15}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis. fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{60}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonial from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of th profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that th applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

THE SANITARIUM, BATTLE CREEK, MICHIGAN.

INCORPORATED, 1867.

The largest, most thoroughly equipped and one of the most favorably located in the United States. It is under strictly regular management. Eight physicians, well-trained and of large experience. A quiet, home-like place, where "trained nurses," "rest cure," "massage," "faradization," "galvanization," "static electrization," "Swedish movements," "dieting," "baths," "physical training," and all that pertains to modern rational medical treatment can be had in perfection at reasonable prices. **A special Hospital Building (150 Beds) for surgical cases with finest hospital facilities and appliances.**

Large Fan for Winter and Summer Ventilation. Absolutely Devoid of Usual Hospital Odors. Delightful Surroundings. Lake-side Resort. Pleasure Grounds. Steamers, Sail-boats, etc.

J. H. KELLOGG, M. D., Sup't, Battle Creek, Mich.

PURE GLUTEN BISCUIT

The undersigned have for several years been manufacturing a pure gluten for a few physicians. We are now prepared to furnish to the medical profession **the only pure gluten biscuit manufactured in America.** For samples and prices address

SANITARIUM FOOD CO., Battle Creek, Mich.

The only prominent Emulsion of Cod-Liver Oil introduced directly to the medical profession. It is advertised exclusively in medical journals.

HYDROLEINE.

(HYDRATED OIL.)

Produces rapid increase in Flesh and Strength.

FORMULA.—Each Dose contains:

Pure Cod Liver Oil.....80 m. (drops)	Soda.....1-3 Grains
Distilled Water.....35 "	Salicylic Acid.....1-4 "
Soluble Pancreatin..... 5 Grains.	Hyocholic Acid.....1-50 "

Recommended and Prescribed by EMINENT PHYSICIANS Everywhere. It is pleasant to the Taste and acceptable to the most delicate Stomach.

IT IS ECONOMICAL IN USE AND CERTAIN IN RESULTS.

HYDROLEINE (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhuæ, but a hydro-pancreated preparation, containing acids and a small percentage of soda. Pancreatin is the digestive principle of fatty foods, and in the soluble form here used, readily converts the oleaginous material into assimilable matter, a change so necessary to the reparative process in all wasting diseases.

The following are some of the diseases in which **HYDROLEINE** is indicated:

Phthisis, Tuberculosis, Catarrh, Cough, Scrofula, Chlorosis, General Debility, etc.

TO BRAIN WORKERS of all classes, **HYDROLEINE** is invaluable, supplying as it does, the true brain-food, and being more easily assimilated by the digestive organs than any other emulsion.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," and "Consumption and Wasting Diseases," by two distinguished London physicians, which will be sent free on application.

SOLD BY DRUGGISTS GENERALLY.

C. N. CRITTENTON,

SOLE AGENT FOR THE UNITED STATES. 115 FULTON STREET, N. Y.

A Sample of Hydroleine will be sent free upon application, to any physician (enclosing business card) in the U. S.

Send for Book of Testimonials.

Uniformity in Activity and Identity

Essential to the Perfect Pill.

From Time Immemorial up to the day when advanced pharmacy gave us improved preparations, physicians complained of the imperfect nature of their medicaments. "To-day inert and to-morrow toxic," said an eminent therapeutist, "how are we to depend upon these drugs when promptness and certainty of action are pre-requisite?" The speaker referred to inexact preparations, made without testing their strength and soundness.

In Previous Notes we have characterized, as follows, the requisites of a well-made pill:

PURITY of medicaments and excipients.
PRECISION as to weight and division.
PERFECT UNIFORMITY as to activity and identity.
PROMPT SOLUBILITY of mass and coating.
PERMANENCE as to conservation.
PALATABILITY; and ELEGANCE of appearance.

Perfect Uniformity as to activity and identity is largely dependent upon the two points in the above list—purity and precision—which immediately precede our present theme, and to them we have referred in other notices. Purity aids in securing uniformity as to activity, for unsound materials are subject to progressive chemical changes which give rise to wide variations in strength. Uniformity as to weight is to be obtained only by using the greatest care in mixing and dividing the pill mass. Stability is so important a factor, not only in securing uniformity, but for still more obvious reasons, that we will refer to it in a future note.

Meanwhile we ask attention to the following preparations, which, with many others in our list, will be found to realize the conditions we have described. Among the pills here cited are some useful preparations for this season:

Pil. Quiniæ, Ferri et Zinci Valerianat, "W. H. S. & Co."

Prescribed in Nervous Strain, Neurasthenia, Melancholia, Epilepsy, Hysteria, Delirium Tremens, Dysmenorrhœa and Neuroses, dependent upon the cares of life. It is especially valuable to women. (Pills of three grains.)

Pil. Tinct. Warburgi, "W. H. S. & Co."

Prescribed in Malarial Fever. Our Formula is that of the original tincture except that theriac is substituted for damocratis, which is unobtainable. (The pill equals one drachm of the tincture.)

Pil. Phenacetine et Caffiæ Citrat., "W. H. S. & Co."

Prescribed in all forms of Nervous Headache. In Migraine it acts promptly, while it also lessens the frequency of the attacks. (Formula: Phenacetine, 3 gr.; Caff. cit., 1½ gr.)

Pil. Arsenici Sulphidi, "W. H. S. & Co."

Prescribed in the Dermatoses. It has been successfully used in Eczema, Acne, Furunculus, etc., is highly beneficial in Psoriasis. (Pills of 1-100 gr., 1-50 gr. and 1-30 gr.)

W. H. Schieffelin & Co., New York.

"COMING OUR WAY."

THE WM. S. MERRELL CHEMICAL CO., are the original, the largest and practically the ONLY manufacturers of True Salicylic Acid from Natural Wintergreen Oil; and the lack of faith—amounting to practical unbelief—in the necessity for careful specification, has enabled unprincipled or incompetent makers to market their product and supply that class of buyers who believe in something "cheap," especially if assured by interested distributors that "it is just as good."

READ THIS!

A Salicylic Uncertainty.

A warning key-note struck by an unprejudiced and disinterested writer in favor of high qualities and positive therapeutics.

The fact that a synthetic chemical gives reactions apparently identical with its native prototype does not establish indentity of physiological action. Even the natural alkaloid caffeine has been shown by clinical experiment to differ in its action when derived from different plants.

Charteris and others have shown that salicylic acid obtained from oil of wintergreen differs in its therapeutic effects from that made by synthesis, and physicians sometimes insist on having the former kind, which is much more expensive.

But artificial oil of wintergreen has become quite common. It is made by combining artificial salicylic acid with the methyl radical of methyl alcohol. Now, it is said that certain manufacturers have adopted the idea of using this artificial oil for the production of salicylic acid; that is, they juggle with what remnants of conscience they may have, by taking artificial salicylic acid out of a compound into which they or somebody else has put it, and calling this "acid from the oil."

This circumstance will lead to confusion as to the real source of a given salicylic acid and we regret to have to admit that there are probably some dealers who will resort to the subterfuge of supplying "acid from the oil," when they know that the oil was not the natural product. So where such acid is desired, the pharmacist must demand of his dealer a guarantee extending to the oil itself.

Editorial Druggist's Circular,
May, 1892.

The best dispensers always specify "MERRELL'S."

True Salicylic Acid } From Natural
True Salicylate Sodium } Wintergreen Oil.

The "**Merrell Co.**" do not sell, use or handle Synthetic Oil Wintergreen or acid made from it.

The "**Merrell Co.**" do not "rub up" Commercial Salicylic Acid with a little Oil Wintergreen and call it Salicylic Acid from Wintergreen Oil, and recommend the "light feathery crystals" thus produced as the "proper thing."

The "**Merrell Co.**" do not claim that True Salicylic Acid has "a slight odor of the oil"—for when pure and properly prepared, it has an odor peculiarly its own, but it is not a Wintergreen odor.

Crystals of True Salicylic Acid are large, firm and hard—from ¼ to ¾ inch long, of measurable thickness, and much heavier in a given bulk than acid prepared "in a mortar" from Synthetic Oil and Commercial Acid.

THE WM. S. MERRELL CHEMICAL CO.

NEW YORK. BOSTON. CINCINNATI.

OR MAY BE ORDERED THROUGH WHOLESALE DRUGGISTS IN ANY PROMINENT DISTRIBUTING CENTRE.

Before the Medical Profession almost 30 years, and invariably gives uniform satisfaction.

We respectfully ask thorough testing, strictly UPON ITS OWN MERITS, to prove the exceptionally high reputation it holds

Owing to correspondence on the subject, we regret being compelled to caution that inferior Coca preparations are frequently substituted upon patients, and, as we do not advertise to the public, physicians will kindly be particular to insist on

VIN MARIANI

FORMULA: "VIN MARIANI" is the concentrated extractive of the fresh leaf Erythroxylon Coca, blended with a special quality of Bordeaux Wine. Each half-litre bottle contains the medicinal properties of two ounces of selected leaves.

DOSE: Usually a wine-glassful three times a day, half an hour before meals or immediately after. Increased or diminished, at discretion of the Physician.

INDICATED: As a pleasant, mild stimulant, without unpleasant reaction; a diffusible tonic; a strengthener of the Nervous system, with especial good effect on the digestive and respiratory organs; convalescence and enfeebled conditions. Effect is immediate and lasting.

NOTE: Extensively used in Hospitals, Cliniques and private practice, its merits are recorded by the medical press of Europe and America. Uniform excellence and recognized efficacy won the absolute confidence and esteem of every physician who subjected it to test, and it may be affirmed that wherever Coca is indicated "Vin Mariani" invariably receives the preference.

The continual increasing demand is a clear proof of the reliance placed in "Vin Mariani" by the Medical Profession, through whom it has been popularized.

WE WILL BE HAPPY TO FORWARD, POST-PAID, TO ANY PHYSICIAN MENTIONING THIS JOURNAL, A HANDSOMELY BOUND BOOK, DETAILING FORMULÆ, DOSE, PHYSIOLOGICAL EFFECTS AND THERAPEUTIC INDICATIONS OF COCA, AS ALSO OTHER INTERESTING READING MATTER CONNECTED WITH THE SUBJECT BY EUROPEAN AND AMERICAN OBSERVERS.

Definite Chemical Products

OF SUPERIOR THERAPEUTIC VALUE.

CHLORALAMID (Schering).

HYPNOTIC.—Dose, 15 to 45 Grains. A full descriptive pamphlet (64 pages) supplied on request.

PIPERAZIN (Schering).

URIC ACID SOLVENT. Will dissolve at least twelve times more uric acid than lithia. Dose, 15 Grains per day, with continuous treatment. Pamphlet (32 pages) sent on request.

PHENOCOLL (Schering).

ANTIPYRETIC, ANTI-RHEUMATIC, ANALGESIC, NERVINE. "The superior of all coal-tar antipyretics previously introduced." Dose, 7½ to 15 grains. Descriptive pamphlet (40 pages) supplied on request.

THIOL (Riedel.)

A synthetically produced body, chemically and therapeutically identical with ICHTHYOL, and superior in being odorless and non-toxic. Supplied in powder and liquid form. Circular reprint of clinical reports sent on request.

LYSOL.

"THE IDEAL DISINFECTANT." The latest and most perfect of the cresol-derivative antiseptic and disinfectant agents. A 16-page monograph mailed on request.

Our motto "DEFINITE CHEMICAL PRODUCTS" has proved a happy hit, and it bids fair to become at once a catch phrase and the standard by which new remedies will be gauged.

Physicians are invited to write us whenever desirous of obtaining information regarding any new remedies. We will promptly answer all such inquiries.

A Sample Copy of "NOTES ON NEW REMEDIES" mailed on request.

LEHN & FINK,

IMPORTERS, WHOLESALE DRUGGISTS AND MANUFACTURING CHEMISTS,

ADDRESS: P. O. BOX 3114. **NEW YORK.** OFFICE: 128 WILLIAM STREET.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK:)

Each fluid drachm represents 15 grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium and Lithium.

USES: EPILEPSY, UTERINE CONGESTION, HEADACHE, AND ALL CONGESTIVE, CONVULSIVE AND REFLEX NEUROSES.

This preparation produces results, which can not be obtained from the use of commercial Bromide substitutes.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK.)

From Sea Weed. **Uses: Malaria, Phthisis, Etc.**

An ALLY of quinine—quinine CHECKS the Malarial Chill, Fucus Marina ELIMINATES the Malarial CAUSE; and thus prevents the recurrence of the Chill *after* it has been *checked* by quinine.

An INVALUABLE REMEDY in the treatment of Phthisis—it arrests the decay of lung tissue, diminishes the fever, lessens the cough, abates the soreness in the lungs, improves the appetite, and impedes the progressive emaciation.

DOSE.—One Teaspoonful IN WATER, four times a day.

CHIONIA FROM CHIONANTHUS.

Uses: Biliousness, Jaundice, Dyspepsia, Constipation, and all Diseases Caused by Hepatic Torpor.

CHIONIA stimulates the Liver and restores it to a healthy condition, without debilitating the system by Catharsis; does not purge, per se, but under its use the Liver and Bowels gradually resume their normal functions.

DOSE.—One Fluid Drachm three times a day.

PEACOCK CHEMICAL CO., ST. LOUIS.

SUPERIOR TO THE MURIATE:

The Phenate of Cocaine

Not being absorbed into the organism when applied locally its anæsthetic effect is prolonged, and there is an absence of cocaine intoxication.

A NEW NON-TOXIC MEANS IN

PSORIASIS AND OTHER SKIN DISEASES.

GALLACETOPHENONE

FULL NOTES SENT FREE ON RECEIPT OF POSTAL CARD

THE PHENATE OF COCAINE.

"We know that phenic acid, from the point of view of its local action, presents certain analogies with cocaine; like the latter, it produces ischæmia and insensibility of the tissues. We would therefore expect that a combination of the two substances, under the form of phenate of cocaine, would have therapeutic properties, superior to those of the muriate of cocaine. This has been found to be the case by a Bavarian physician, DR VON OEFELE, who has for some time past employed the phenate of cocaine exclusively in the place of the muriate."

He has found that the phenic salt exercises an analgesic action much more persistent than that of the muriate, while the chances of producing toxic effects are much less. Gluck was accustomed to add carbolic acid to his solutions of cocaine for the purpose of diminishing the chances of producing disagreeable results. These properties and advantages are explained by the fact that the phenic salt is almost entirely insoluble in water. Not being dissolved by the juices of the organism, the phenate of cocaine, employed as a local application, is absorbed but little or not at all, whence the absence of intoxication and the persistence of the analgesic action, which may last as long as thirty-six hours. Phenate of cocaine may be given internally as well as in hypodermic injection.—*La Semaine Med.*

GALLACETOPHENONE,

A NEW DERMATO-THERAPEUTIC AGENT.

BY HERMANN GOLDENBERG, M. D.

It is well known that pyrogallic acid is by no means a harmless drug. After its introduction into dermatological practice NEISSER lost a patient after one application. The patient died on the third day with symptoms of intoxication. VIDAL has likewise reported the death of a patient, eighteen years old, who had used a ten per cent. pyrogallic ointment for two weeks. This poisonous effect of pyrogallic acid is to be attributed to the great readiness with which it is oxidized in alkaline solutions (being so intensely reducing).

Gallacetophenone does not possess this quality and is absolutely harmless, as has been proven by experiments on animals.

It displays strong antiseptic qualities. A one per cent. solution added to chopped meat prevented its becoming putrid for twenty-one days, and destroyed the *Streptococcus aureus* within twenty-four hours.

Since the middle of October I have employed it, both in private and in dispensary practice, on at least thirty patients suffering from various skin diseases.

On account of its resemblance to pyrogallic acid, it seemed to be indicated in psoriasis. I have been so much more inclined to use it in that disease, since VON REKOWSKI, who tried it in a few cases only, maintains "that the effect of this new preparation (used as a ten per cent. ointment) is noticed within twelve hours."

Altogether, I have thus employed it in twelve cases of psoriasis—in all of them with good results. Within a few days the patches became paler and thinner, the desquamation ceased or became less, and involution took place in the centers. Usually after the lapse of from ten to twelve days only a slight hyperæmia was left. Within from two to three weeks the patches disappeared entirely without leaving any pigmentation.

A ten per cent. ointment did not produce any marked irritation or discolor the skin. It stains the clothes slightly yellowish, much less than pyrogallic acid or chrysarobin. In the case of psoriasis of the face and scalp it really acted like a specific. The eruption, which was quite profuse, disappeared within five days, A ten per cent. ointment was applied twice daily. There was no other treatment

Another patient with a universal psoriasis of sixteen years' standing, who applied to my department at Mount Sinai Dispensary for some other trouble, was induced to use a ten per cent. salve of gallacetophenone for the forehead and scalp, which were thickly covered with psoriatic patches. When he returned, two weeks later, there was nothing left but a pigmentation of the forehead, while the psoriasis of the body which had not been treated was *in statu quo ante.*

My friend, DR. G.T. ELLIOT, has, at my request, used gallacetophenone on a patient with psoriasis of eight years' standing, distributed over the trunk, knees, elbows, scalp, and face in patches of various sizes. The case had been under treatment the whole time and had proved exceedingly rebellious. Arsenic caused an increase of inflammatory symptoms. Pyrogallic acid had been used with but moderate success. Chrysarobin did well, if used persistently. At the time (November 21st) when the use of a ten per cent. gallacetophenone ointment was begun, the patches were bright red, burning, and with abundant desquamation. A week later the patches were paler and breaking up into small papules. The centers had undergone involution and the desquamation was very little Under the further use the improvement continued. DR. ELLIOT concludes his report with the following words: "From this slight experience, gallacetophenone appears to me to promise to be the most satisfactory local remedy for psoriasis and superior to all others. It produces no inflammatory reaction or pigmentation, but seems to influence immediately the lesions."

From my experience, I feel justified in recommending gallacetophenone as an excellent remedy for psoriasis, for it acts in some cases more promptly than chrysarobin—in all the cases which I have treated, as well if not better than the other remedies at our disposal. As it is harmless and does not discolor the skin or hair, I hope it will be found to be one of the best local remedies for psoriasis of the body, face, and scalp.

My results in a number of cases of eczema psoriti-forme and seborrhoicum have been so gratifying and encouraging that I should like to include these affections in its field of usefulness.—*N. Y. Med. Jour.*

JULIA W. CARPENTER, M. D., (*Cinn. Lancet Clinic*), also speaks of the rapid, almost specific, action of GALLACETOPHENONE in a very rebellious case of psoriasis.

ABOUT GAS TREATMENT.

We make and sell oxygen and nitrogen monoxide for therapeutic use, and we guarantee them pure They are put up in compact form. (A cylinder containing 100 gallons of nitrogen monoxide or 40 gallons of oxygen measures 12 inches in length, has a diameter of 3½ inches, and weighs 10½ lbs. A cylinder containing 450 gallons of nitrogen monoxide or 100 gallons of oxygen measures 25 inches in length, has a diameter of 4½ inches, and weighs 34 lbs.)

INSOMNIA. Dr. Allan McLane Hamilton states that nitrogen monoxide, N_2O (nitrous oxide of the old nomenclature) has no equal in the treatment of this difficulty.

MELANCHOLIA. A short course of nitrogen monoxide is said to change the face of nature for such patients.

ANÆMIA. Where iron is not tolerated or proves inefficient, the addition of oxygen or a combination of oxygen and nitrogen monoxide has proven very beneficial.

For those who should, but cannot, go from home for rest or a change of air, or for those who, from any cause fail to get air enough into their lungs, the inhalation of one or other of these gases, or both in combination, promises great benefit. The testimony is that in cases of

ASTHMA, more than fifty per cent. of the cases yield to oxygen treatment, others are very greatly relieved, and a very small per cent. are not improved.

INDIGESTION and CONSTIPATION are said to be greatly relieved and very often conquered by continued treatment.

A highly esteemed New York physician has used more than twenty thousand gallons of nitrogen monoxide in his private practice. The letters received from his patients, largely from those who were afflicted with nervous disorders, are enthusiastic in their testimony as to the benefit received.

Regular practitioners who are using gas treatment testify that when *pure* oxygen and *pure* nitrogen monoxide, or a mixture of these, is used, no therapeutic agents are more uniformly successful when intelligently prescribed.

NOTE—We have a few dated Records left, which we will dispose of at half price if applied for immediately.

NERVES.

Suppose we find the patient a little giddy upon rising in the morning. This means that the nerves do not have perfect control of the muscular system. As a test for this, direct the patient to stand with his feet close together, shut his eyes, and if the tendency is to reel, it is another evidence of lowered nerve tone. Or, stand with the arms extended, shut the eyes, and then try to bring the tips of his forefingers together in front of him. If they pass by or meet imperfectly, it shows the same thing.

Or, the person may not be able to think as quickly as he should. To test this, ask the patient three simple questions in rapid succession, as, Where were you just before you came into this room? What were you doing? How long did you remain? The rapidity with which the answers are given indicate the rapidity of brain action.

All these things show that it is of the utmost importance that the nervous system should be kept in tone. Otherwise, every part of the body languishes.

This condition indicates the use of Celerina (Rio) in teaspoonful doses four times a day, *to increase the nerve capital of your patient.*

Nervous Diseases and Their Diagnosis

By H. C. WOOD, M. D., LL. D.,

Professor of Therapeutics and Nervous Diseases, University of Pennsylvania.
8vo., pp. 501, Cloth, $4.

It is invaluable as a work of diagnosis.—*Virginia Medical Monthly.*

It is at once a substantive contribution to neurology and a trustworthy guide to what has already been done in the subject.—*Practitioner.*

As a whole, the work is one which cannot fail to be of great service to the practicing physician.—*Medical and Surgical Reporter.*

The volume is a distinct help to the student, and is a necessary supplement to the systematic works on diseases of the nervous system.—*Boston Med. Surg. Jour.*

The author's originality is evident to every reader of his work; and we trust, for the advancement of knowledge, his readers will be many.—*New England Med. Gaz.*

This work fills a long-felt need in this department.—*Buffalo Med. Surg. Jour.*

Dr. Wood is an able clinician, and this makes his book valuable. His observations are practical and to the point and show careful study of a large number of cases which have fallen under his care.—*N. Y. Med. Jour.*

The honest effort of one who never writes without teaching and who always writes and teaches well.—*Journal of Insanity.*

To students and practitioners who have read other works this production will prove extremely valuable in time of need, to the former just before examination; to the latter in everyday practice.—*London Lancet.*

Not a compilation, but rather the record of independent opinions and investigations.—*Canadian Practitioner.*

The book is written in the characteristic vigorous style of its able and versatile author.—*American Practitioner.*

Lucid language, clear type, a full index, and, above all, the presentation of the late advances in this department of science, constitute the truly great attractions of this book.—*Albany Med. Annals.*

It is not until the volume has been carefully read, and perhaps re-read, that its true excellence begins to dawn upon the reader.—*Maryland Med. Journal.*

Dysmenorrhœa

AND ITS ALLEVIATION.

OVARIAN. SPASMODIC. INTERMENSTRUAL. NEURALGIC. EMBRANOUS. TUBAL.

The prominent symptom in all cases of dysmenorrhœa, is the severe pain which demands relief, and which in nearly every instance, is mitigated by the use of whiskey or morphia, both of which are very injurious. A succedaneum for whiskey and morphia is a great desideratum, and this we find in ANTIKAMNIA (opposed to pain). Samples in powder and tablet form, sent free on application.

ADDRESS: THE ANTIKAMNIA CHEMICAL COMPANY, ST. LOUIS, MO., U. S. A.

Scherff's Syrup of Hydriodic Acid.

A PERMANENT UNALTERABLE PREPARATION.

NON-IRRITANT. PALATABLE. EFFICIENT

Each fluid ounce of this Syrup represents the equivalent of 6.72 grains of absolute Hydriodic Acid. Particular stress is laid on the one great superiority; this Syrup will not decompose, and the danger (so common to other like preparations) of administering a preparation of free iodine, is absolutely avoided.

Descriptive Pamphlets and Clinical Reports mailed on request.

WESTERN PENNSYLVANIA MEDICAL COLLEGE
CITY OF PITTSBURGH.
SESSIONS OF 1892.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. MCKENNAN, 810 Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Ave., Pittsburg.

The Baltimore Medical College.

PRELIMINARY FALL COURSE begins Sept. 1, 1892.

WALNUT LODGE HOSPITAL,
HARTFORD, CONNECTICUT.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish Bath, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefitted from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M. D.,
Sup't Walnut Lodge, Hartford, Conn.

DR. MASSEY'S
PRIVATE SANATORIUM.

Presenting the comforts of an elegant private residence, this institution is specially equipped for the use of electricity and allied remedial measures in the diseases of women and in diseases of the nervous system. For particulars address

212 S. Fifteenth St., Philadelphia.

Prickly Heat, Chafing, Dandruff,

Odors from Perspiration, etc. Speedy Relief by Using

Packer's Tar Soap

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

SEDATIVE. ANODYNE.

EFFERVESCENT

BROMO
(WARNER & CO.)
SODA.

Caffein 1 Grain, Bromide Soda 30 Grains in each heaping teaspoonful.

USEFUL IN

Nervous Headache, Sleeplessness, Excessive Study, Migraine, Nervous Debility, Mania, as a Remedy in Sea-sickness, and Epilepsy.

Dose and Composition.—A heaping teaspoonful, containing Bromide Soda 30 grains, and Caffein 1 grain, in half a glass of water, to be repeated once after an interval of 30 minutes, if necessary.

ANTI-RHEUMATIC. SEDATIVE.

EFFERVESCENT.

BROMO
(WARNER & CO.)
LITHIA.

EACH DESSERTSPOONFUL CONTAINS:

℞ **Salicylate Lith a 10 grains, and Bromide Soda 10 grains.**

A REMEDY IN THE TREATMENT OF

RHEUMATISM, GOUTY DIATHESIS, ETC.

Dr. A. Garrod, the well-known English authority on Gout, who was the first physician to introduce the Lithia Salts in the treatment of Gouty Diathesis, states that their action is materially increased by being administered in a *freely diluted form.*

This effervescing salt of Lithia furnishes an easy and elegant way of applying Dr. Garrod's methods.

INGLUVIN

A SPECIFIC FOR VOMITING IN PREGNANCY.

A POWDER:—PRESCRIBED IN THE SAME MANNER, DOSES & COMBINATION AS PEPSIN

In Doses of from 10 to 20 Grains,

AND A POTENT AND RELIABLE REMEDY FOR THE CURE OF

Marasmus, Cholera Infantum, Indigestion, Dyspepsia and Sick Stomach,

caused from debility of that organ. It is superior to the Pepsin preparations, since it acts with more certainty, and effects cures where they fail.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

—*Landois and Sterling.*

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

—*Materia Medica and Therapeutics, Dr. Mitchell Bruce.*

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

—*Eustace Smith, M.D., F.R.C.S.*

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

THE DOLIBER-GOODALE CO.,

BOSTON, MASS.

AN IDEAL PEPSIN!

PHYSICIANS PRESCRIBE

P., D. & CO.'S

ASEPTIC PEPSIN.

Pepsins as heretofore known have left very much to be desired, most of them indicating by their odor the putrescent mucus and other objectionable constituents which must necessarily prove irritating, especially to the delicate stomach of an infant, invalid or dyspeptic.

We now supply a new and improved Pepsin Product (ASEPTIC PEPSIN, 1 to 4000, P., D. & Co.'s), in the full confidence that it will at once recommend itself to the favorable attention of the Medical Profession.

It is twice as active as any other pepsin now on the market, and by the process of manufacture which we pursue, is deprived of all septic constituents. This process renders it very palatable so that the most fastidious palate could not possibly object to its taste.

Samples and literature will gladly be supplied upon application.

MANUFACTURED ONLY BY

PARKE, DAVIS & COMPANY,

DETROIT, NEW YORK AND KANSAS CITY.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{30}$ gr.), Atropiæ Sulph. ($\frac{1}{600}$ gr.), Codeia ($\frac{1}{60}$ gr.), Antimony Tart. ($\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{60}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonial from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of th profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that th applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address.

"CURIOUS QUESTIONS."

An Encyclopaedia of the Rare and Curious.

Third Improved Edition Now Ready.

"Curious Questions" fills a niche wholly its own. Its mission is to tell you hundreds of things that you ought to know, and don't; to enlarge your conversational powers; to brighten your intellect, and lead you to further research in the best channels of thought, and to keep you from exposing your ignorance on many questions of daily recurrence.

Do not think you are too wise to profit by it, when Rev. Dr. Andrew Preston Peabody, of Harvard University, says of "Curious Questions:"

> **"I find that some of the questions are such as I could not have answered, or have known where to look for their answers. Such a book will be of inestimable service and value to any intelligent person, young or old."**

The new de luxe editions (25 full-page illustrations) are unexcelled for presentations. Prices, $4.00, $6.00 and $8.00 a set.

Sold by subscription through our regularly authorized solicitors, or supplied direct by the publishers. Illustrated descriptive catalogue and sample pages free. *Agents wanted.* Address the sole publishers,

Keystone Publishing Company,

Eighth and Locust Streets, Philadelphia, Pa.

CH. MARCHAND'S

PEROXIDE OF HYDROGEN.

(MEDICINAL) H_2O_2 (ABSOLUTELY HARMLESS.)

THE MOST POWERFUL BACTERICIDE AND PUS DESTROYER.
ENDORSED BY THE MEDICAL PROFESSION.
UNIFORM IN STRENGTH, PURITY, STABILITY.
RETAINS GERMICIDAL POWER FOR ANY LENGTH OF TIME.
TAKEN INTERNALLY OR APPLIED EXTERNALLY WITH PERFECT SAFETY.

Send for free book of 72 pages giving articles by the following contributors:

DR. E. R. SQUIBB, of Brooklyn, N. Y. "On the Medicinal Uses of Hydrogen Peroxide." *Gaillard's Medical Journal*, N. Y.

DR. J. H. DeWOLF, of Baltimore, Md. "Medicinal Peroxide of Hydrogen and Glycozone." *Southern Medical and Surgical World* of Baltimore, Md.

NOTE.—Avoid substitutes—in shape of the commercial article bottled—unfit and unsafe to use as a medicine.

Ch. Marchand's Peroxide of Hydrogen (Medicinal) sold only in 4-oz., 8-oz., and 16-oz. bottles, bearing a blue label, white letters, red and gold border, with his signature. Never sold in bulk.

PHYSICIANS WILLING TO PAY EXPRESS CHARGES WILL RECEIVE FREE SAMPLE ON APPLICATION.

PREPARED ONLY BY

Charles Marchand

UNIVERSITY OF MARYLAND—SCHOOL OF MEDICINE
BALTIMORE, MD.

DR. WM. T. HOWARD,

Professor of Diseases of Women and Children in the University of Maryland, says:

After comparing the water of SPRING NO. 1 with that of a very celebrated water

"Indeed, in a certain class of cases, it is much superior to the latter. I allude to the abiding debility attendant upon the tardy convalescence from grave acute diseases, and more especially to the Cachexia and Sequelæ incident to Malarious Fevers in all their grades and varieties, to certain forms of Atonic Dyspepsia and

All the Affections Peculiar to Women

that are remediable at all by mineral waters. In short, were I called upon to state from what Mineral Waters I have seen the greatest and most unmistakable amount of good accrue in the largest number of cases in a general way, I would unhesitatingly say the Buffalo Springs, in Mecklenburg County, Virginia."

Water in cases of one dozen half-gallon bottles, $5.00, f. o. b. here. For sale by all first-class druggists.

THOMAS F. GOODE, PROPRIETOR
BUFFALO LITHIA SPRINGS, VA.

TECHNICAL BOOKS.

Correspondence solicited.

Address the business offices,

29 to 35 NORTH 10th STREET,

PHILADELPHIA.

To the Medical Profession.

During the past seven years we have been laboring assiduously to produce *Infant Foods* eady for use that would closely resemble healthy human milk. It has not been any easy task, as every physician knows who has taken a special interest in the subject. We have spared neither labor or expense to accomplish this object, which will be demonstrated to any Physician who will visit our factory. We have met the more recent demand for a *sterilized Food for Infants* by an expensive change in our machinery, under the supervision of the most eminent Bacteriologists in the country. This sterilization has been accomplished without rendering the casein of the milk less digestible, as is invariably done with the patented sterilizers in use.

It also insures, with the hermetically sealed cans, their perfect keeping qualities.

We do not think it possible that any *Infant Food* will ever be prepared that will excel **LACTO-PREPARATA** (an all milk food) for the feeding of young infants, and **CARNRICK'S FOOD** for their nourishment during the latter part of the nursing period. All other *Infant Foods* in the market are composed entirely of cereals; or they contain so little milk (about 8 per cent.) that it is a misnomer to call them Milk Foods. If such foods are used alone, the child will not be properly nourished, its flesh will be flabby, and it will quickly succumb to disease, because they are deficient in albuminoid constituents.

Send for circulars and samples.

KUMYSGEN

Make Your Own KUMYSS in one Minute.

A Product of Pure, Sweet Milk.

What is Kumysgen?

It is *Kumyss* in a dry form, containing all the constituents of the best *Kumyss*, and requires only the addition of water to produce an article superior in digestibility and palatability to the old form of *Kumyss*.

It is the *Ideal Food* in all cases where nutrition is an important factor, and digestion is feeble

When all other Foods fail try **Kumysgen,** but it is better to try it in the beginning and save time and strength.

Kumysgen is the only preparation of *Kumyss* that will keep. All liquid preparations of *Kumyss* will keep but a short time, and are constantly changing in the bottle, unless some deleterious preservative is used.

Kumyss made from **Kumysgen** is far more palatable, easier digested and 35 per cent. less expensive than the old Style **Kumyss.**

Our **Syphon Kumysgen Bottles** allow *Kumyss* to be drawn without loss of contents. One in every three bottles are *siphons*, containing same quantity of KUMYSGEN as the others. Send for samples and descriptive circulars.

Manufactured Only by

REED & CARNRICK, New York.

NEW AND OLD CURES FOR CONSUMPTION.

Many plausible theories of pathology and promising systems of cure arise from time to time to excite the hopes of those afflicted with that dread disease, consumption.

Within the past few years we have seen several such systems run their course of popular enthusiasm, professional encouragement, thorough test and ultimate failure. The best that any exclusively germicidal treatment can do, if successful at all, is to destroy the germs, or dislodge the germ-bearing tissues, and leave the patient in his original condition, modified by the destructive lesions which have already taken place.

But especially must it be borne in mind that the new method of treatment put forth by Prof. Koch is, confessedly, not applicable to the vast majority of consumptive cases, where the disease has already made considerable advance, but only to those that are in the incipient stages. It is also contra-indicated in cases, of tuberculosis of the meninges, brain, larynx and other confined localities or narrow passages, where the hyperemia induced and the necrosed tissues will give rise to serious and generally fatal disturbances.

Even with the best of germicidal treatments, then, in pulmonary phthisis, the reconstructive measures will still be needed to aid in the process of repair. In fact, without them the patient would be left peculiarly pre-disposed to immediate re-infection with the disease. It is, then, safe to predict that no method of treating pulmonary consumption will ever be devised, however radical in its nature, which will supersede the well-known hygienic and reconstructive measures.

The reason for this is plain to every thinking man. Even before the patient was infected at all, before any anatomical lesion existed in the tissues, at an unguarded time of lowered vitality, the germs of disease made a successful lodgment, and the destructive process commenced.

Now, it is a well established fact that the chief of all reconstructive remedies is the combined hypophosphites of lime and soda—*And this very remedy has long been in successful use in the treatment of consumption.* It is of equal value as a prophylactic in those cases that are constitutionally predisposed to the disease, and as a curative agent in the incipient and even somewhat advanced stag[illegible]. It alone has proven to be more [illegible] curing pulmonary tubercul[illegible] Koch method, and without [illegible] dangers and complications. It accomplishes its work gradually and insensibly, replacing new tissues, cell by cell, for the broken-down, diseased tissues as they are removed in a true physiological process by the absorbent powers of the system. In this there is no sudden "reaction" or violent process, removing large and dangerous sloughs, leaving the patient prostrated by the shock, and the adjacent healthy tissues raw and exposed, liable to receive the disease germs anew, and to disseminate them throughout the system more rapidly than before.

So, then, whether any of the germicidal treatments be ultimately successful in removing the cause of the disease or not, the hypophosphites of lime and soda will be a necessity in the armamentarium against consumption. As a specific curative agent, it will outlive them all.

But it is of the utmost importance that you assure yourself of the chemical purity of the preparation of the Hypophosphites which you use, as it is peculiarly liable to deterioration unless properly prepared. The McArthur Hypophosphite Co., Boston, Mass., will send [illegible] aluable information upon the treatment of consumption, if you so request.
